III. Modern urban developments

1. Christian religious music. 2. Dramatic genres. 3. Music of Cultural Animation. 4. Popular music: (i) The formative years in Kinshasa (ii) The first generation of bands (iii) The second generation of bands.

1. Christian religious music. The first Western contacts came from explorers, traders, travellers and missionaries; the last, at an early date, attempted to substitute Christian hymns for traditional music, sometimes with considerable success. In 1937 Anschaire Lamoral, a priest, founded the Chorale Indigène d'Elisabethville from among his students at the Mission Bénédictine St-Jean. In the late 1930s, Joseph Kiwele, who was attached to the Chorale, revised and rewrote the score to an epic poem, *Chant en l'honneur des Martyrs de l'Uganda*, which had been composed and set to music in 1921 by l'Abbé Stephano Kaoze. The music was based upon traditional melodies and performed by the Chorale. In 1944, Kiwele composed the *Cantate à la gloire de la Belgique* to celebrate the end of World War II; this work, accompanied by drums, was given an open-air performance in Elisabethville by 1200 Africans. Such activities led to the composition of the well-known *Missa luba*, first performed by Les Troubadours du Roi Baudouin, a choir of children and teachers formed in the Kamina area of the Democratic Republic of the Congo in 1953 by a priest, Guido Haazen. The mass is said to be based on traditional melodies of the Luba, Kasala and Bena Lulua peoples; drums and rattles are used in what is essentially a popular music idiom. The *Missa luba* has been a model for subsequent Christian-African music.

More recently, the recognition by the Pope on 30 April 1988 of the 'Zaïrian Rite' of the Mass has conferred legitimacy on works created since Vatican Council II and has given extra momentum to efforts to implant the Christian message. Composers have become numerous and their styles diverse: there are chants of Gregorian or traditional inspiration, and even some inspired by variety shows. However, most of this sacred music is the result of creation by individual composers and does not adapt earlier melodies or rhythms.

The field of religious music has been extended. Such music is played at funeral ceremonies even where there was no previous tradition of funerary songs. It also accompanies celebratory ceremonies such as weddings. Religious music is broadcast daily by the national radio and televison stations, which have given it considerable space in their programmes.

Beginning in 1971 the former conservatory, now the Institut Supérieur and part of the university, has offered not only a training in Western art music but courses in the playing of traditional instruments (the xylophone, lamellophone, harp etc.). The repertory of the Experimental Orchestra includes compositions and arrangements by some of its members.

2. Dramatic genres. After the establishment of professional ballet and theatre in the Democratic Republic of the Congo, it has proved necessary to adapt or create music to suit such performances. The same has been the case for the few films that have been made in the country, mostly by Dieudonné Ngangura.

The National Ballet was set up after the visit of the Guinean Ballet in November 1972. The admiration it aroused in the political authorities led to a plan to follow the example of Guinea. Audio and video recordings of

various musical spectacles of the traditional type were made all over the country. The best dancers and musicians of existing ethnic choreographic groups were recruited. However, within the new ballet company these artists excelled only in the works of their own ethnic groups. The new ballet company thus became a music school teaching traditional music and dance. The first show staged, *Lianya*, brought together some 30 well-known songs and dances from the following ethnic groups: the Ekonda, Mongo, Pende, Nyarwanda, Nianga, Yombe, Bunda, Kongo, Boma, Lulua and Luba (Mananga, 1977, pp.49–84).

3. Music of Cultural Animation. The traditional ritual of welcome in rural areas reserved for provincial or colonial dignitaries, which comprised songs, dances and ululations, was turned by the Mobutu régime into an ideological spectacle known as 'Music of Cultural Animation'. These spectacles were designed to animate party meetings and to convey the ideas and messages of the head of state. They were an amalgamation of various kinds of spectacle, including 'choruses in movement, a succession of songs and slogans, sketches ... animation ballets, collective creations ... dramatic forms, popular shows, the poetic montages of animation' (Kapalanga, 1989, pp.261–2), all with musical accompaniment. Most of these songs and dances were taken from the traditional repertory, with modifications to the original words. Animation music set a fashion and was imitated in Rwanda, Gabon, Chad and the Central African Republic. With the movement towards democracy, its practice was severely restricted.

4. Popular music. *Musique congolaise moderne*, the urban music of the Democratic Republic of the Congo is recognized throughout the world as one of Africa's most representative styles of guitar-led urban music. Throughout Africa, this music is best known as 'Congo music' or simply 'guitar music'. In the 1980s, it began to be incorrectly referred to outside Africa as *soukous*, a term first used in the 1960s to designate a variant of the Congolese *rumba* dance characterized by the quasi-circular motion of the hips from traditional Luba *mutwashi* dances.

(i) The formative years in Kinshasa. Before and after the colonial period, explorers, missionaries and armed forces introduced foreign musical instruments to Africa, bringing changes to the musical expressions in newly founded urban centres. In some of these, the use of foreign musical elements (instruments, dances, harmonic implications etc.) resulted in the decline and downplay of traditional musical genres, as well as changes in the attitudes of African musicians to their own music. In Kinshasa, for instance, this gave rise to an urban musical expression that fed on traditional music for its content yet relied heavily on foreign musical instruments as a medium of interpretation. This phase of guitar music history lasted from the 1930s to 1965.

Like many cities in the Democratic Republic of the Congo, Kinshasa started as a migrant workers' camp. This seasonal status began to change in 1929 with the implementation of the Stabilization Policy by major exploitative companies in the country, whereby workers were hired for a renewable three-year period and were allowed to have their families accompany them. The Stabilization Policy helped transform workers' camps into detribalized centres, which in turn grew into urban nuclei, with the introduction of the necessary infrastructure of schools, hospitals and secondary support services.

To satisfy their need for manpower, companies attracted workers from within the country and elsewhere, voluntarily or by force. One result of these hiring practices was to introduce a sizeable West African population into Kinshasa, collectively called '*haoussa*' by the Congolese. The concentration of West Africans brought changes to the social fabric and musical activities in Kinshasa, where *haoussa* organized themselves into social groups. One of these groups, the Association des Originaires du Cameroon, du Dahomey et du Togo (CAMDATO), also known as 'the Coastmen', was the most influential. It provided a model for Congolese social groups beginning in 1939 with L'Harmonie Kinoise, an all-male group, followed in 1943 by Diamant, an all-female association.

To minimize the cost of entertainment required at events such as weddings, baptisms or the closing of a mourning period (organized by an association on behalf of its members), each social group maintained a musical ensemble composed primarily of brass instruments. As a result, the brass band tradition and its repertory flourished in Kinshasa from the 1940s to the end of the 1960s. After adapting Ghanaian Highlife and European waltzes and polkas, Congolese musicians applied their knowledge of brass technique to the interpretation of traditional melodies and original *maringa* and *agbaya* tunes.

Little is known about the rhythmic pattern of *agbaya* music, as it lost its popularity to the *maringa* before the establishment of recording companies in Kinshasa (1947). Those who danced and witnessed the performance of *agbaya* describe it as a repertory of couple dances performed without touching the partner. The term *agbaya* is probably a Congolese mutation of a Ghanaian word interjected while dancing at social gatherings of the *haoussa* in Kinshasa. Unlike the *agbaya*, *maringa* music was preserved on sound recordings, such as the *Anthologie de la vie africaine* (1958) by Herbert Pepper and the *Sound of Africa* series (1958) by Hugh Tracey. Traces of the *maringa* can be found in many tribal repertories, particularly in the areas around centres of economic exploitation. Among the Luba-Shankadi (Samba), for instance, the *maringa* is a children's song. In Katanga, the *maringa* was a mixed dance performed in a circle without partners, whereas in Kinshasa it was a couple dance. Its characteristic feature – hip movements shifting the body weight from one leg to another – is similar to that of the rumba. The *maringa* rhythmic pattern is illustrated in ex.1.

Ex.1 *Maringa* rhythmic pattern

By the late 1940s, the brass band tradition had reached its peak and began to be overshadowed by Latin American sounds introduced to the populace through travelling musical groups, imported 78 r.p.m recordings and radio broadcasts such as those of Radio Congolia. During its eight and a half years of broadcasting to the black population (1939–48), about a third of Radio Congolia's air time (60–90 minutes per day) was devoted to *musique congolaise moderne*. The radio station became instrumental in promoting urban music in its embryonic state, also

broadcasting successful local bands and individual musicians live from the studio.

These live broadcasts stimulated the rise of troubadour-like musicians, singing *maringa* tunes to their own accompaniment on traditional musical instruments (the *likembe*, lamellophone and xylophone) or foreign instruments such as the accordion and guitar, accompanied by one or two musicians playing rhythmic patterns on an empty beer bottle and a rectangular frame drum called *patenge*. The troubadour period, commonly known to Congolese as *tango ya ba-wendo*, reached its peak in the 1950s with the artistry of Mwenda Mukanda Bantu (MWENDA JEAN BOSCO, *d* 1991), Anatole Kaseya, Antoine Mundanda, Paul Kamba and Antoine 'Wendo' Kolosoy, to name a few. The guitar, which was still being learnt by local musicians, provided the harmonic accompaniment of I–IV–V–I progressions played in a picking style called PALM WINE, which was introduced in Kinshasa by the *haoussa*.

The dissemination of Latin American musical expression led to the demise of the brass bands in favour of the new instrumentation of string instruments (lead guitar, rhythm guitar and double bass), wind instruments (preferably the clarinet and trumpet) and an assortment of percussion instruments (conga drums, maracas, *guiros* and claves). L'Harmonie Kinoise survived by adapting its instrumentation, in 1949 changing its name to La Joie Kinoise and under the leadership of the vocalist Kabasele 'Grand Kale' Tshamala (Kabasele Joseph, *b* 1930, *d* 1983) making its first official appearance in Kinshasa in 1953 under the name African Jazz. Within a ten-year period, several other Latin American-modelled ensembles were created, notably O.K. Jazz (1956), Rock-a-Mambo and Ry-Co Jazz (1958).

The popularity of the new style of music was sustained by radio broadcasts and nurtured in outdoor beer gardens (known as 'bars'). By the end of the 1960s, bars had become the meeting-ground for musical traditions, the crossroads of cultural activities and laboratories for musical experiments. The increase in the number of bars throughout the country, coupled with recording studios, stimulated an increase in the number of new ensembles using Latin American instrumentation. Bars provided stages shared by ensembles with a diversity of musical expressions in major cities and in small detribalized centres in the interior. Often foreign tunes heard on the radio were quickly learnt by rote and played at night in the bars. One of the most influential tunes was the 1939 melody *El Manisero* by Moises Simons, made popular in Kinshasa by gramophone recordings, radio broadcasts and travelling Cuban ensembles. *El Manisero* became a fixed part of local bands' repertory (ex.2).

Ex.2 *El Manisero* melody

(ii) The first generation of bands. The rise of the first generation of musical ensembles modelled after Cuban ensembles began in Kinshasa contemporaneously with the introduction of Latin American dance forms (cha-cha-cha, *charanga*, mambo, *merengue*, rumba, *patachanga* and others) with their musical elements (rhythm, vocal production, singing style) and extra-musical practices (e.g. stage presentation, clothing, 'latinization' of artists' names). For more than a decade (1953–1965), the popularity of these imported musical models was nurtured throughout the country by radio broadcasts and the newly established recording studios.

From 1948 to 1960, recording companies provided musical instruments to promising young local musicians, hiring European professionals to strengthen their studios and to serve as instructors for young Congolese, in order to create a pool of local musicians capable of accompanying *maringa* and rumba music on European instruments (guitar, saxophone, clarinet and flute). Musicians identified themselves with the studio (often Greek-owned) where they received their training and recorded. Several first-generation musicians began their careers as studio musicians, occasionally playing in ensembles created by musicians from the same studio. As they gained fame through recordings and performances in bars, some ensembles broke their ties with the studios and became independent. Two of the most significant ensembles that came into existence in this way were African Jazz (1953), which was composed of musicians from the Opika studios, and O.K. Jazz (1956) composed of musicians from the Loningisa studios.

Of the diverse musical instruments (accordion, guitar, violin, kazoo and others) experimented with during the formative years, the guitar was adopted as lead instrument for its flexibility in adapting to the various nuances of traditional musical instruments and style. Rhythm guitar provided the accompanying harmonic framework, often in palm wine style, in which the double bass outlined the bass line of the harmonic progression while following the clave pattern. To this, the lead guitar added melodic interludes and ornamental melodic improvisations, while wind instruments provided melodic embellishments in the interludes and in an all-instrumental section called *sebene*.

Although the musical style of the first generation bands is rooted in imitating and interpreting 1950s Latin dance music, its focus also shifted back to the *maringa*, which could easily be interpreted with the newly acquired instrumentation and adapted to traditional rhythmic combinations. The new instruments provided harmonic possibilities and a different timbre, although their function was at first limited to that of the traditional instruments they replaced. In order to emulate the xylophone sound on the guitar, for instance, Congolese musicians modified the instrument by replacing the *d* string with an additional *e′* string and tuning it to *d* pitch. Known as *mi-compose*, this tuning is still used in the rhythm guitar to accompany tunes from the Luba tradition.

The shift in musical style gave rise to two stylistic trends, characterized by the lead-guitarist's playing technique. Lwambo 'Franco' Makiadi (1936–89) played melodies and their improvisations in parallel 6ths while Kasanda 'Dr. Nico' wa Mikalayi (*d* 1984) avoided harmonic implications in his melodic improvisations. These two stylistic camps continue to co-exist, in spite of the introduction of a new guitar style called *mi-solo* or *mediane*, between the lead and rhythm guitars. The advent of the electric guitar introduced new functions for the

instrument in the band, primarily involving accompanying the borrowed traditional dances.

Schematically this structure can be represented as follows: *A*, instrumental prelude; *B*, verse; *C*, instrumental interlude; *B′*, the repetition of the verse with a change in the final cadence of the section; leading into *D*, the refrain, where elements of the verse undergo call-and-response treatment between the lead singer and the chorus, the latter of which is often composed of two to four individuals singing in harmony; and *E*, instrumental improvisation, which is sometimes referred to as the *sebene*section. *D′* is the coda section, often based on material derived from the refrain section.

The structure of Congolese rumba music provided a wide range of possibilities for changes and modification in the improvisation section, where composers introduced new rhythmic and melodic elements. Among the most prominent varieties of rumba have been: *soukous* (1966), *kiri-kiri* (1969), *cavacha* and *ekonda sacade* (1972), *mokonyonyon* (1977), *n'goss* and its variant *zekete-zekete* (1977–87), *kwasa-kwasa* (1986), *madiaba* (1988), *may-ebo* (1990), *mayeno* (1991), *sundama*, *kintekuna* (1992), *moto* (1994) and *ndombolo* (1997).

Unlike the original rumba form borrowed from Latin America, Congolese rumba continues to be governed by a set of traditionally defined aesthetic norms, drawing upon compatible rhythmic formulas, dance steps and body movements from the musicians' respective ethnic groups. For example, *mokonyonyon*, introduced in 1977 by singer Shungu Wembadio (Papa Wemba) and his ensemble Viva la Musica, contains movements from the traditional dance of his Tetela ethnic group. Similarly, the movements of *ekonda sacade*, introduced in Kinshasa by the singer Lita Bembo (1972) and the Stukas ensemble, and those of *sundama* popularized by the Swede-Swede ensemble, are derived from traditional Mongo dances. The *kwasa-kwasa* dance, presented to the public in 1986 by the Empire Bakuba ensemble, is reminiscent of a Kongo social dance.

(iii) The second generation of bands. By 1975, urban music was dominated by a second generation of musicians and ensembles. Unlike the first generation of musicians, who initiated their careers under studio conditions, these players started as street musicians, who generally could not afford to purchase an instrument and practised instead on homemade guitars and drums. These conditions contributed to a style characterized by several factors: the supremacy of rhythm over melody; the prominence of rhythmic patterns borrowed from the traditional music of the composer's ethnic background; instrumentation in which wind instruments are deliberately omitted; compositional structure in which the *sebene* is proportionally longer than the singing section; and an emphasis on dancing rather than topical message songs.

One of the most celebrated ensembles was Zaiko Langa-Langa, which dominated the urban musical scene during its first ten years (1974–84) and was regarded as the index of the musical style of its generation. Zaiko Langa-Langa developed the characteristic rhythmic motif associated with second generation bands (ex.3), dance movements, stage presentation, and the *atalaku*, who initially called dance movements, but whose role was later expanded to incorporate elements of comedy and social commentary.

Ex.3 Characteristic rhythmic motif of the second generation bands

(iv) The third generation of bands. The musical style of the third generation of bands is based on the second generation and has been affected by the Kinshasa recording industry's demise, which triggered the migration of a large number of musicians and ensembles to Europe and other African capitals, thus undermining band structures and dismantling ephemeral ensembles. Musicians such as vocalists Shungu 'Papa Wemba' Wembadio and Bialu Jean-de-Dieu, lead guitar players Dali Kimoko, Diblo Dibala, Bamundele 'Rigo Star' Ifuli and Mose Sesengo 'Fan Fan' Kunsongi have achieved stardom as individual artists, recording and touring with make-shift ensembles composed of freelancers. At the peak of the third generation period, which coincided with the twilight of the Second Republic (1994), lead guitar players were in great demand, as the role of the guitar had become more challenging than before, involving capturing the rhythmic aspects of various ethnic musics to accompany new dances. The demise of the Zaiko ensemble in 1984 opened an undeclared competition between third generation ensembles. This resulted in an innovation of an array of dances (e.g. *kwasa-kwasa*, *madiaba*, *mayeno*, *sundama*, *isankele* and *moto*), which were introduced within the short span of a decade. In 1997, marking the beginning of the Third Republic with Laurent Kabila's liberation of the country from Mobutu's reign, a new dance called *ndombolo* was added to the never-ending list of dances for which musicians are expected to provide appropriate accompaniment.

Congo, Republic of the (Fr. République du Congo). Country in West Central Africa. Proclaiming its independence from France in 1960, the Republic of the Congo

retains relations with the former colonial power and continues an economic partnership. The country is situated in the equatorial zone of Africa bordering the Atlantic Ocean in the south-west, with approximately 170 km of coastline. Its land and river-marked borders are Gabon to the west, Cameroon to the north-west, the Central African Republic to the north-east and the Democratic Republic of the Congo to the south-east. There is also a small border with the Cabinda region of Angola to the south-west. The country covers a surface area of 341,821 km². In 2000 the population was estimated to be approximately 2.98 million inhabitants, with close to one million living in the capital, Brazzaville, and about 600,000 living in the port city Pointe Noire. Rural flight has become one of the biggest problems in the country because outside of the cities there is almost no work available for young people. In the sparsely populated rural areas, people live by fishing, hunting and gathering. A small number of people, mostly women, practice agriculture in these areas.

1. Languages and ethnic groups. 2. Main musical traditions. 3. Modern developments.

1. LANGUAGES AND ETHNIC GROUPS. While the official language is French, Monokotuba (Munukutuba) and Lingala are used by the media and by politicians to address and inform the general public. Many local and regional dialects exist in each of these two large Bantu language groups, including Kongo and Bembe (Beembe; Monokotuba) and Sangha, M'Bochi (Mbosi), Teke and Pomo (Pol; Lingala). Two other languages, Sango (the lingua franca of the Central African Republic to the north) and Diaka (the language of the BaAka or Baaka 'pygmies'), are spoken by comparatively small numbers of people in the north. Both before and after independence, religion has played a major role, including the creation of two Christian-derived sects, Kibanguism and Lassyism, based on the lives of two African prophets. These religions, though fuelled initially by missionary influence, became indigenized African religions that are now expressed within a repertory of unique songs and drum rhythms played by adherents during worship, which includes aspects of spirit possession.

2. MAIN MUSICAL TRADITIONS. Much traditional music and dance in the Congo is linked to ritual contexts: homage to the ancestors, songs for healing, funeral chants and songs for fertility. There are also many varieties of songs for daily life, work and recreation, such as labourers' and boatmen's songs.

There is a wide variety of musical instruments. Among the Bateke (Teke), one of the largest Bantu groups in the south-west of the country, there is a long *sanze* (*sanza*; lamellophone) tradition. This instrument is played during a variety of celebratory occasions and also, as it is easily portable, for personal entertainment on long walking trips. Among the Mongala (Mangala) people in the north of the country, one well-known instrument is the *mokoto*, a wooden slit-drum in the shape of an antelope. A rectangular opening at the top (on the 'back' of the antelope) releases the sound of the strokes played with two heavy wooden sticks. This drum is often played in ensembles of three or four different sizes. Each clan or subclan has a special carved design that identifies their drums. Before the colonial administration regrouped the rural villages (to control and exploit the population more easily), these drums played important roles as the centre of social music and dance recreation and as public address systems that announced upcoming events to neighbouring villages or alerted them to imminent danger. Although during the pre-colonial era, everyone knew how to interpret the drum signals, this knowledge has been lost and the *mokoto* (which was denounced by missionaries) is now rare.

Colonial and post-colonial missionaries denounced and degraded not only musical practice, but also traditional ancestral charms for aiding hunting, fishing and health. In the north of the country, however, there is an ethnic minority, the Kaka (Kako), who share certain songs and dance rhythms with the BaAka 'pygmies'. They also share the 'pygmies'' rejection of Christianity and continue to worship their own Kaka creator, named Ngakola. The BaAka 'pygmies' of the Congo, who live in the northern forested region of the country, are regarded by Congolese to be excellent musicians. The Congolese BaAka also create songs and dances and teach them to BaAka across the border in the Central African Republic. From time to time, masters of particular dances also journey into the Central African Republic to teach their brethren, bringing back payment in the form of hunting nets and other goods. As one of the purposes of these dances is to enhance the efficacy of the net hunt, the dances are valuable as both cultural and economic currency.

See also PYGMY MUSIC.

3. MODERN DEVELOPMENTS. Urban music in the Republic of the Congo began to develop only after independence. Initially, however, in 1957 several young musicians from Brazzaville (Jean Serge Essou, Eddo Nganga and Michel Boyibanda) moved to Kinshasa in the Democratic Republic of the Congo to join FRANCO (Luambo Makiadi) to form the famous band O.K. Jazz. When the Republic of the Congo became independent several years later, the new government insisted that their musicians return home, so back in Brazzaville they formed the band Bantous de la Capitale, which was an immediate and long-lived success. Their songs, such as *Makambo, Mibale* ('Money and Women'), *Massoua* ('The Boat that Took My Love away') and *Marie Jeanne*, contained elements of social commentary. Bantous de la Capitale earned the nickname 'Mokolo ya Mboka' ('The Roots of the Country'), because young musicians would play with the band to learn their style and then depart to form their own offshoot bands. Though Bantous de la Capitale and O.K. Jazz had their own distinctive and inimitable sound, the fact that the Bantous were trained under Franco provided a certain unity of style, essentially forming the basis of the popular musical genre *Congo rumba*, which branched into contemporary forms such as *soukous* and *ndombolo*.

During this same period L'Orchestre Super Bo Boto ('Super Heart Band'), also known as SBB, was active in Brazzaville. Hit songs included the group's *C'est toi que je préfère* and *La patience a ses limites*, songs that reign supreme in the memories of people who lived in the Central African region during that time. During this period, there was yet another intrepid figure who shaped the musical and political scene, Franklin Boukaka. Several of his songs were written in Sango, the national language of the Central African Republic. Boukaka was called 'the voice and the ear of the people' because he did not hesitate to comment (often critically) on any issue and because his

performances in city clubs would immediately incorporate the current events of the day. Many of his songs, recordings of which were destroyed by the government of the period, criticized the presidential regime and proved such a threat that they led to Boukaka's murder by government agents.

Several years later, around 1970, there were many small bands playing around the country, developing the *Congo rumba* style. These included Bana Mai ('Children of the Water') in the city of Ouesso in the north, and L'Orchestre de la Jeunesse in Brazzaville, who continued Boukaka's role as social critic. At first L'Orchestre de la Jeunesse couched its songs of critique in such subtle wordplay that it was protected from government retaliation. Later, when President Marien Ngouabi took power in 1969, it became a voice of the Socialist Party, touring all over the country to inform and educate the public, raising national political and cultural awareness. The group continued to perform even after President Ngouabi's assassination in 1977 and his replacement by the pseudo-Socialist regime that lasted into the early 1990s.

Around 1976, Youlou Mabiala founded the band Les Trois Frères, which had brief success. His songs, like those of Franco, were abstract and difficult to pin down as politically subversive. After the death of Franco in 1989, Mabiala joined O.K. Jazz in Kinshasa and helped rejuvenate the band. One of their hits of the late 1990s was *Sylvain*, which parallels in subject matter and style one of Franco's biggest hits, *Mario*. Both these songs, which criticize men who live the high life but do not earn their keep, are now part of pan-African popular culture and are familiar to middle-aged people from Dakar to Nairobi and Harare, as well as to expatriate Africans worldwide.

Unlike many other African nations, in the Republic of the Congo today there is little interplay between traditional or rural musical styles and the popular music emanating from the cities. This is largely because the rejection of tradition (a result of Christian missions and French cultural hegemony) introduced a split between 'modern' and rural (or traditional) culture; in other words it separated many urban Congolese from their indigenous past in favour of the idea of modernity.

Congregational church, music of the. Congregationalism is a Protestant Christian denomination found chiefly in English-speaking countries. Its beliefs and practices are derived from the Reformed tradition of Jean Calvin (*see* REFORMED AND PRESBYTERIAN CHURCH MUSIC).

1. Introduction. 2. Early history. 3. 18th-century reforms. 4. Organization and expansion after 1800. 5. Music in Britain and the USA since 1800.

1. INTRODUCTION. The theology of early Congregationalists, who were more usually known as Independents or Separatists, differed in no important respect from that of the Church of England (as expressed in the Thirty-Nine Articles) or from that of Puritans or Presbyterians. Like the latter, they disliked forms and ceremonies in worship, especially those that had survived from Catholic tradition, and wished for a more complete Reformation.

Their distinctive belief was in the matter of church polity. They insisted that each congregation of true believers should be the master of its own destiny, choosing its minister, controlling admission of members to full communion and deciding on forms of worship. They deferred only to God, and to his laws as revealed in the Bible. They rejected all interference from outside authorities, whether imposed from above, as in the Church of England, or elected by participating ministers, as in the Presbyterian system. This is the meaning of Independency. They shared it with Baptists (*see* BAPTIST CHURCH MUSIC) and Quakers, and with radical groups in Continental Europe, such as the Anabaptists and their Amish and Mennonite descendants (*see* AMISH AND MENNONITE MUSIC. Because they disputed the prevailing notion of a state church and denied the right of the sovereign, parliament or local magistrates to interfere in their religious affairs, they were considered a political threat and were oppressed by government with a severity that was generally withheld from mere Puritans. The association of Congregationalism with democracy and with progressive political movements has been renewed at many stages in its history.

2. EARLY HISTORY. Sporadic Separatist movements occurred at various times in the reign of Elizabeth I (1558–1603). The first clearly articulated statement of Congregational beliefs was made by Robert Browne, who organized a congregation in Middelburg, Holland, in 1581, but later returned to England and accepted ordination in the established church. Henry Ainsworth, preferring exile to conformity or execution, joined a group of Brownists at Amsterdam and then became their pastor. He published there, in English, a series of learned and polemic works, including a metrical version of psalms with tunes. Another group, from northern England, emigrated to Leiden in 1609 and chose John Robinson as their pastor. About half of this community eventually formed the 'Pilgrims', who sailed on the *Mayflower* in 1620 to found a colony at Plymouth, New England.

The Puritans who established the larger Massachusetts Bay colony in 1629 and its church at Salem were not Separatists but loyal Anglicans who still hoped to reform the Church to their taste (*see* ANGLICAN AND EPISCOPALIAN CHURCH MUSIC, §6). However, they adopted the same order of worship that was practised at Plymouth, and it was not long before they became essentially Congregationalists. The same was true of the later settlements at Hartford, New Haven, and elsewhere.

It was only in the colonies that a sustained growth of Congregationalism was possible. The Cambridge Platform of 1648 is a mature statement of its beliefs and polity. In the mother country Independent worship was suppressed until 1689, even under the Long Parliament of 1640–53; persecution was especially severe in 1628–40, 1661–72 and 1685–8. It is unlikely that any music was used at clandestine gatherings during the years of oppression. There was a period of favour in the 1650s, during the ascendancy of Cromwell and the army, when Independent ministers were placed in charge of many parish churches.

A typical Sunday service consisted of opening extempore prayers by the pastor; a metrical psalm, lined out by an elder and sung congregationally without instrumental accompaniment (which was thought to have been condemned in *Amos* v.23 and *Daniel* iii.5, 7, 15); a sermon; and concluding prayers and blessing. No bible readings were included and no set prayers – not even the Lord's Prayer. Another psalm was sung after the Lord's Supper, which was administered about once a month. So the whole service was spontaneous (and thus open to the inspiration of the Holy Spirit) except the psalms. This fact made singing in worship a bone of contention among Independents in the early 17th century.

Psalm singing was defended not for its effect on the singer or listener but on the ground of obedience to God's command as expressed in biblical texts such as Psalm cxlviii.12 and *James* v.13. But some believed that it was unlawful to sing a prescribed text. John Smyth, who later seceded from Ainsworth's congregation to lead the General Baptists, would admit only 'singing such psalms as the Spirit declares to any person immediately, without book', a position that obviously ruled out unified singing by a congregation. This extreme was refuted by Ainsworth in 1609; by John Cotton, a leading minister in Massachusetts and one of the editors of the Bay Psalm Book, in 1649; and by Thomas Ford, Independent minister of St Lawrence, Exeter (England), in 1653. Cotton also discussed such matters as whether women and 'carnal men' should be allowed to join the singing: in both cases the answer was yes.

In the end the practice of singing psalms was generally adopted by Independents. The Savoy Declaration of 1658 mentions it as one of the 'parts of religious Worship of God, to be performed in obedience unto God with understanding, faith, reverence, and godly fear' (Walker, 1893, p.390). At Beccles, Suffolk, singing was newly introduced in 1657, as the following record shows:

> It was agreed by the Church that they doe put in practice the ordinance of singing in the publique upon the forenoone and afternoone on the Lord's daies, and that it be between praier and sermon, and also it was agreed that the New England translation of the Psalmes be made use of by the Church at their times of breaking of bread: and it was agreed that the next Lord's day seventh night be the day to enter upon the work of singinge in publique.

Ainsworth's *Book of Psalmes* (1612) was used by the Leiden-Plymouth community. In the preface Ainsworth stated that as he had found no tunes 'set of God', it was appropriate for 'each people to use the most grave, decent, and comfortable manner of singing that they know'. He provided 40 monophonic tunes, of which all but three came from the English or French metrical psalm books: the French tunes, no doubt, had become known to the exiles in Holland, where they were in regular use in the Dutch Reformed Church. The Salem church also adopted this book. Other New England settlements probably used the Old Version of Sternhold and Hopkins, which was revised in the direction of greater literalness and published as the 'Bay Psalm Book' in 1640. There were no tunes until the 9th edition of 1698. (For further details *see* PSALMS, METRICAL, §V, 2.) Salem changed to the Bay Psalm Book in 1667 and Plymouth did so in 1692, in both cases because the tunes in Ainsworth were too difficult to sing.

Not a single new tune emerges from either American or English Congregationalist sources before 1719. They continued to use tunes developed in Anglican parish churches, chiefly between 1558 and 1621, which included a few of French, German, Welsh or Scottish origin. This is indeed confirmed, on the American side, by the 13 tunes that were eventually printed as a supplement to the Bay Psalm Book in 1698 (*see* PSALMS, METRICAL, §V, 2(ii), Table 1) and by entries in Samuel Sewall's diary (see Music, 1990). On the English side, the very same 13 tunes (some differently named), plus two others, comprised the supplement to John Patrick's *Psalms of David*, also first printed in 1698: Patrick, though an Anglican, had published a metrical version which was adopted by many Independent congregations (*see* PSALMS, METRICAL, §III, 2(ii)). Only minor changes were made in later editions of either tune supplement (until the 1737 edition of the Bay Psalm Book).

These tunes were sung unaccompanied, and with 'lining out' (the reading of each line or pair of lines before it was sung) by a minister or elder. Another official, sometimes termed the precentor, would 'set the tune', which involved choosing what tune was to be sung, setting the pitch and leading the congregation. The singing itself was very slow, heterophonous and lacking in rhythmic precision (*see* OLD WAY OF SINGING).

3. 18TH-CENTURY REFORMS. The 18th century saw a gradual loosening of some of the strict doctrines of Calvinism and a liberalization of Congregational thinking, although every step met with stout resistance. New England had colleges – Harvard (founded 1636) and Yale (1701) – where Congregationalists were free to conduct intellectual inquiry and disputation, though under some pressure to conform to accepted views. In England the Toleration Act (1689) allowed Dissenters to worship in licensed meeting houses (over 2000 licences were granted before 1700). But the universities remained closed to all except Anglicans. Therefore Congregationalists, along with other Dissenters (of whom the most numerous were Presbyterians and Baptists), began to set up their own educational institutions, usually called academies, which became centres for advanced religious ideas.

A product of one of these (at Stoke Newington) was Isaac Watts (1674–1748), who became through his hymns perhaps the most influential Congregationalist in history. He challenged Calvin's doctrine of eternal damnation and maintained that belief in the Trinity was not essential to salvation. In the matter of singing, he questioned the exclusive and literal use of the psalms as the sources of the metrical texts sung in worship, an idea that could also be traced back to Calvin. It had already been breached in English usage from the 1670s, when some Independent congregations began to sing original hymns.

Watts set out his philosophy in an important Essay published with his hymns in 1707. He 'believed that Congregational Song should represent not God's word to

us, but our word to God' (Benson, 1915, p.111), and on this basis he advocated songs that interpreted the scriptures in the light of the Gospel, in a mode that expressed the thoughts and feelings of the singers rather than those of David or any other biblical author. His *Hymns and Spiritual Songs* (1707) and *Psalms of David Imitated in the Language of the New Testament* (1719) were quickly accepted in many Congregational meeting-houses in England and, in course of time, in most Christian churches.

Watts generally avoided partisan or controversial language in his hymns, and for practical reasons he wrote in the standard metres, for which tunes were already known. But his use of the first person (singular and plural), of a natural and homely mode of expression that was readily understood, and of images and metaphors that touched the heart, brought an entirely new warmth and spirit to what had become the tedious dryness of the services. To the same purpose, he criticized lining out and the 'old way', and urged congregations to stand up while singing.

It is not too much to say that Watts set the style for English hymns of the next two centuries. *O God, our help in ages past*, *When I survey the wondrous cross* and *Jesus shall reign where'er the sun* are as well known as any hymns in the language. Among his immediate Congregationalist successors, Philip Doddridge stands out as the most gifted.

After Watts, singing in worship had a new meaning. It was not merely obedience to God on the part of each individual worshipper but also a corporate expression of devotion; as such it should be couched in language that had aesthetic and emotional appeal. The same ideas were naturally extended to the music. Among Congregationalists in England and in New England, efforts were made to raise the artistic level of singing by instructing some members of each congregation in matters of rhythm, intonation and part-singing.

The model for this was found in the Church of England, where, from the 1680s onwards, religious societies of young men were instructed in psalmody (*see* ANGLICAN AND EPISCOPALIAN CHURCH MUSIC, §5). In the early 1700s a similar society was formed by the Presbyterian Meeting at the King's Weigh House, Little Eastcheap, London, in which Independents also took part. It employed a singing teacher, William Lawrence, and established a course of lectures, published in 1708. Lawrence's manuscript collection of tunes was later adapted to Watts's *Psalms*, and was published in association with it in 1719. It had 62 tunes for two voices, of which 13 were new (one, 'Wantage', was to achieve some popularity). In the following year Simon Browne, pastor of the Independent meeting house at Old Jewry, London, brought out a collection of his own hymns with a supplement of 25 tunes in three parts, of which seven were new: one, 'Middlesex' (later named 'Mear'), became a standard tune in New England. These anonymous tunes are the first known musical compositions of Congregationalist origin, other than the three in Ainsworth (1612).

In New England musical reform came before textual change. Beginning with Thomas Symmes in 1720, a series of well-educated ministers, mostly Harvard graduates, published tracts urging the superiority of 'singing by note' or 'regular singing' to the inherited oral tradition, which they called the 'old way', the 'usual way' or the 'common way'. They appealed to biblical authority, common sense and a mythical decline of singing in New England from the early days of the colonies. The opposition was no doubt widespread but largely inarticulate. A writer in the *New England Chronicle* (1723) said: 'I have great jealousy that if we once begin to sing by note, the next thing will be to pray by rote, and then comes Popery'. Because of the independence of each congregation, reform was piecemeal and was long delayed in many places. In Hanover, Massachusetts, the church voted to sing 'in the new way' on 7 May 1742.

Practical support came in 1721 from singing tutors produced by two other ministers, John Tufts (of the Second Church at Newbury, VT) and Thomas Walter (of the First Church at Roxbury, MA). Each contained a set of tunes for two or three voices; among these are the first known American compositions, 'Southwel New' and '100 Psalm New'. Tufts introduced a notational system of letters on the staff, which was both an adaptation of John Day's of 1569 and a precursor of Little and Smith's shape-note system of 1801. Both books went into many editions and were undoubtedly used in the singing schools that had been steadily spreading in the colonies of New England since at least 1714. Cotton Mather, a strong supporter, wrote to a friend in London in 1723:

> A mighty Spirit came Lately upon abundance of our people, to Reform their singing which was degenerated in our Assemblies to an Irregularity, which made a Jar in the ears of the more curious and skilful singers. Our Ministers generally Encouraged the people, to accomplish themselves for a Regular singing, and a more beautiful Psalmody.

But it was the 'Great Awakening', started by Jonathan Edwards, minister of Northampton, Massachusetts, in 1734, that aroused congregations to the need for a warmer language of praise. George Whitefield, who came from England to play a leading part in the revival, introduced many of Watts's hymns at the meetings, and so they became widely known. It took several decades before they were admitted to the majority of Congregational churches. Again, the principle of Independency was strong, and many debated for years the relative merits of Watts, Tate & Brady's *New Version of Psalms* (1696), and the Bay Psalm Book (for details see Benson, 1915, pp.163–8). In some cases a split resulted, and the 'Separates' often joined forces with the Baptists. But Watts gained ground inexorably. The height of his hegemony was reached at the turn of the century. Samuel Holyoke in *The Columbian Repository* (Exeter, NH, 1803) produced nothing less than a complete edition of Watts's psalms and hymns, each set to a different tune or set-piece harmonized in four parts (729 compositions in all). Most hymn collections until about 1830 were presented as supplements to Watts.

The singing schools supported choirs to lead singing in worship, where, increasingly after 1760, they were often given a gallery or seat that separated them from the congregation. But they also took on an independent existence, especially in America. They naturally looked for ever greater musical challenges, and tunes became more elaborate, introducing solos, duets and, eventually, fugal sections, while anthems, set pieces and canons were also explored. These developments drew freely on English country psalmody of a slightly earlier date (*see* ANGLICAN AND EPISCOPALIAN CHURCH MUSIC, §6). The great flowering of American psalmody from 1770 to about 1810 was focussed on the singing school and the singing society

rather than the church (*see* PSALMODY (ii), §II, 2). Plain congregational tunes, led by the tenor voice, were still preferred in churches that had retained a strict Calvinist theology. The gradual trend towards Unitarianism, which had overtaken all but one of Boston's Congregational churches by 1800, removed the theological objections to choir music in worship. But the anonymous preface to *The Salem Collection* (1805) asserts that psalm tunes should be simple and goes on to say:

> It never could have been intended (as might be erroneously inferred from the *general practice* in our own country) that the *choir of singers alone* should perform this part of divine service. Their province originally was ... *to lead the congregation* ... And yet how few societies [i.e. churches] do we find, where any but a professed singer is able to follow the choir through the rambling tunes that are now in common use.

This collection contained 84 compositions, all by European composers. And in 1808 John Hubbard declared that the 'chaos of words' produced by the 'common fuge' had led 'many respectable clergymen in New England ... almost ... to omit music in public worship'. Richard Crawford's *Core Repertory* (1984) shows that the most favoured tunes were generally the plain ones. Of 13 tunes that had achieved 100 or more American printings by 1810, nine were plain and only four fuging (Joseph Stephenson's 'Psalm 34' and Lewis Edson's 'Lenox', 'Greenfield' and 'Bridgewater').

In England also, the fuging tune and parochial anthem had attracted some Congregational imitators at mid-century, such as Abraham Milner and Aaron Williams. Later, a more distinctive, treble-based, and floridly melodious style was developed by such compilers as Isaac Smith (composer of 'Abridge'), Thomas Williams and Stephen Addington. Addington was a Congregational minister, first at Market Harborough (Leicestershire), then at Mile End (Essex), finally at the Minories, London. His *Collection of Psalm Tunes for Publick Worship*, which went into 15 editions from 1777 to 1815, eventually had 443 tunes in from one to three vocal parts, and is a representative collection of its time. It introduced such enormously popular tunes as John Randall's 'Cambridge New' and Isaac Tucker's 'Devizes'. Some are of the 'Old Methodist' type (*see* METHODIST CHURCH MUSIC, §4). Congregationalists in this period followed Methodists not only in accepting the influence of concert and theatre music, but also in making 'parody' hymn tunes out of popular and national songs, and out of arias and instrumental melodies by Handel, Haydn, and other famous composers.

4. ORGANIZATION AND EXPANSION AFTER 1800. Despite the principle of Independency, representatives of congregations had convened, from the earliest times, in conferences, associations or synods. In Connecticut these had assumed so much authority that by the time of American independence Congregationalism had become virtually a state church. In the course of the 19th century other state associations increased their control over local churches and joined from time to time in national discourse. A permanent National Council was constituted at Oberlin, Ohio, in 1871, although inevitably there were many local secessions. In England a Congregational Union of England and Wales was formed in 1832, but it remained a strictly advisory body; local congregations were more truly Congregational than American ones at this date (Dexter, 1880, p.673).

Congregationalism has tended to associate with political liberalism, opposing slavery and racism and promoting the welfare of the poor and working classes. It has also moved towards liberal theology, gradually discarding the tenets of Calvinism and playing a strong part in the 'social gospel' and ecumenical movements. Mergers with other Protestant denominations have produced the United Church of Canada, 1925; the United Church of Christ (USA), 1961; the United Reformed Church (UK), 1972; and the Uniting Church in Australia, 1977.

Congregationalism had been well established in Scotland, Ireland and Wales by the 18th century. In the expansion of the American frontier it fell behind other Protestant denominations because of its organizational weakness. It played relatively little part in the camp meetings of the Second Great Awakening (*c*1800), but was deeply affected by later urban revivals. In the course of time Congregational churches were established in all the states, although New England tended to retain ideological and cultural leadership.

The London Missionary Society, founded in 1795, was at first interdenominational but was soon dominated by Congregationalists; it was active in spreading the faith among non-European peoples during the 19th and early 20th centuries, especially in Africa, India, Madagascar, China, Papua and the South Sea Islands. One of the most remarkable developments was in Tahiti and the Cook Islands, where fuging-tunes introduced by the missionaries were imitated by the indigenous peoples and developed into a type of polyphonic song called a *himene* (hymn). This became a leading feature of the mission and made the South Sea choirs famous.

The corresponding American organization was the Board of Commissioners for Foreign Missions (1810), followed by the American Missionary Association (1845). It has concentrated on Latin America, China and the Near East. For a long time the music of missions tended to consist of Western hymns translated into local languages and sung to the same tunes. The indigenization of worship music, especially in Africa and Polynesia, accelerated during the second half of the 20th century, while any remaining distinctions between Protestant denominations have lost much of their meaning in the Third World.

5. MUSIC IN BRITAIN AND THE USA SINCE 1800. British and American Congregationalism have followed similar patterns since the beginning of the 19th century, and the musical links have remained strong. The combination of increasing affluence with declining Calvinism changed the character of the denomination after 1800: it became a church (or in Britain, a chapel) rather than a congregation or meeting. There was a parallel concern for refined musical taste. Organs were introduced in the larger town churches; the opposition had almost faded out by 1840. William Cole, an Independent schoolmaster at Colchester, Essex, wrote in 1819 that most of the disorders of modern psalmody could be remedied by getting an organ; Lowell Mason of Boston, Massachusetts, expressed the same view in 1826. Smaller communities had to manage for a few more decades with a band, barrel organ or (later) harmonium. Choirs of mixed voices increasingly dominated the scene, sometimes reduced to a quartet. Purely congregational singing became a rarity. Lining out, tenor-led harmony, and the fuging tune were criticized out of existence. Set pieces, anthems and Anglican chants (often with metrical texts) became the staple fare of choirs. The

older psalmody was replaced, at least in urban churches, by a by-product of European art music that increasingly approximated the style now known as 'Victorian'.

More in the USA than in Britain, these changes were seen as part of a conscious reform movement, anticipated by those such as Andrew Law and Samuel Holyoke, who had opposed the psalmodists of the Billings-Read-Edson school. At its height it was dominated by Lowell Mason (1792–1872), a Congregationalist by upbringing (*see* MASON family, (1)). His endeavours as organist, educationist, arranger, and composer were consistently focussed on finding a suitable style for American church music. His guiding principle was that church music should be cultivated and 'scientific', but chaste and restrained: he eschewed vulgarity of rhythm, melodic elaboration and advanced chromatic harmony. His models were German rather than English or American. His own hymn tunes, smooth and bland as they are, have been more successful than those of any other American composer (although it should be noted that some tunes often ascribed to Mason were not his own). 'Missionary Hymn', 'Olivet' and 'Bethany' are representative. In the course of a long career he was increasingly concerned to encourage congregations to sing, although he never ceased to believe that they needed an organ and a trained choir to lead them.

The opposing school was represented by Thomas Leavitt's *Christian Lyre* (1831), which supported the evangelical revival of Thomas Finney, with lighthearted camp-meeting tunes based on popular music of a kind that Mason deplored. If Leavitt and shape-notes prevailed on the frontier and in rural communities (*see* METHODIST CHURCH MUSIC, §5), the choir-based music of Mason and his colleagues Thomas Hastings and William Bradbury was all-powerful in the big cities and on the East Coast.

In England, also, choral music prevailed. It was greatly assisted by the singing method of a Congregational minister, John Curwen (1816–80), whose modification of Sarah Glover's fixed-doh solmization system, known as TONIC SOL-FA, placed the singing of choir music within the reach of any diligent member of a congregation. The result was that in many chapels the congregation almost became a choir, singing in four-part harmony with organ and able to 'perform' chants and simple anthems. Curwen himself published a *Sabbath Hymn and Tune Book* (1859). In London, the Weigh-House Chapel was once more prominent in the improvement of psalmody, as was Union Chapel, Islington (*see* LONDON §I, 7 (ii) and (iii)). In 1858 Henry Allon and Henry Gauntlett, respectively pastor and organist of Union Chapel, brought out *The Congregational Psalmist*, a most influential book that was gradually expanded until 1886. Both texts and tunes drew heavily on Anglican and Lutheran sources, and it may be said that the domination of Watts was now at an end.

Meanwhile the Congregational Union had been putting out a series of 'official' hymnals. In 1887–8 came the first with tunes, *The Congregational Church Hymnal*: the musical editors were E.J. Hopkins and Josiah Booth. It had no less than 775 hymns with tunes, 64 anthems, 12 canticle settings and 8 collects, all largely homophonic and designed for congregational singing. It became the standard Congregational book for several decades. One of its most popular pieces, Booth's 'Commonwealth' for the text 'When wilt thou save thy people?' (reproduced in Rainbow, 1981, p.160), reinforced Congregationalism's strong links with the political left. David Lloyd George declared that he had heard it sung 'with great effect by many thousands and tens of thousands at Liberal gatherings throughout the country'. The Liberal victory in the general election of 1906 is regarded as the height of Nonconformist political power in Britain.

An American movement to restore congregational participation was begun by Henry Ward Beecher, the famous pastor of Plymouth, who wrote in the preface to his *Plymouth Collection of Hymns and Tunes* (1855): 'We do not think that Congregational Singing will ever prevail with power, until *Pastors of Churches* appreciate its importance'. Like Mason, he opposed the 'quartet choir' that presided in many city churches. As Benson says (1915, p.474), 'the hearty singing of [Beecher's] vast congregation became almost as much of an attraction as his preaching'. It is difficult to know whether they were singing in unison led by harmony of choir and organ, or forming a 'congregational choir' in four parts. Somewhere between the two was probably the norm in large Congregational churches in the later 19th and early 20th centuries. Certainly there was enormous enthusiasm for choral music in both Britain and America; it was the heyday of choral festivals, competitions, and massive oratorio performances by combined Anglican and Nonconformist choirs. In London the Free Church Choir Union, founded in 1877 by Ebenezer Minshall, organist of the City Temple, held an annual festival up to World War II.

It was after that war that Congregational hymnody began to move in new directions. As the editors put it in the preface to the 1958 revision of *The Pilgrim Hymnal* (earlier editions 1904, 1913, 1931), 'the recent developments in hymnody, in church life, and in world history have made it necessary to plan our work in larger terms'. Similar sentiments guided the editors of *Congregational Praise* (London, 1953). Erik Routley, its musical editor, was an important influence in both British and American thinking about hymnody. The growing secularization of Anglo-American society made it difficult to maintain efficient choirs, let alone congregational rehearsals. Unison singing with organ has increasingly taken over the music of the services, resulting in hymn tunes specifically designed for the purpose: Vaughan Williams's 'Sine Nomine' (1906) has been the first and best model. Anthems and chants have tended to depart with the choirs, although many American churches still have large choirs and musical staffs. *New Church Praise* (1975), edited by Routley as a supplement to *Congregational Praise*, introduced an order of worship for the Lord's Supper, with newly commissioned musical settings for congregational use. A 'hymn explosion' occurred in the 1970s, more especially in Britain: two of the leading writers, Brian Wren and Fred Kaan, are United Reformed Church ministers.

The union of the Congregational Church with other bodies (as detailed in §5 above) has tended to dilute further the specific historical tradition discussed in this article. The music of the new hymnbooks, such as *Rejoice and Sing* (London, 1991), comes from a wider range of sources than ever before, including urban popular, commercial folk, and non-Western music. The newly composed tunes are often self-consciously 'user-friendly' and unchallenging. In the hymn texts, gender-specific and archaic wording has frequently been replaced.

The most radical effort in this direction is *The New Century Hymnal* (1995) of the United Church of Christ (USA), where all masculine names and pronouns for God, Jesus or the worshippers have been eliminated (the one exception is 'Lord', restored after protest by the General Synod), archaic language has been ruthlessly excised, and attempts have been made to avoid all politically sensitive topics. The music is also notably progressive, in the American context. Young (1997) commends the editors for 'carefully selecting and presenting the finest and most inclusive repertory of African-American, Spanish-language, Native American, Asian American, global and Third World song to appear in any mainline hymnal'. Despite the denomination's sincere efforts at inclusivity, many black Americans find that the Congregationalist tradition of restrained and formal singing does not suit their cultural habits of more uninhibited participation (see Aghahowa, 1996).

NICHOLAS TEMPERLEY

Congress reports. The musical congress report has its origins in the second half of the 19th century, specifically in the publication of papers given at three conferences on sacred music (1860–64 PARIS and MECHELEN), and more generally in the rapid growth of musicology in the second half of the century; this followed Chrysander's proposal

in 1863 that musicology should be considered as a separate area of scientific enquiry, and its codification by Guido Adler in 1885. Congress reports usually comprise all or most of the papers delivered on a particular occasion (sometimes on two or more related occasions), often in a considerably expanded and revised form more suitable for publication. Such reports serve as a useful barometer of the trends and developments current in musicological thinking and have embraced work on almost every branch of academic musical study, including aesthetics, bibliography, ethnomusicology, organology, psychology, music theory, studies of music in a particular city or region and, more recently, issues of performing practice, reception history, analysis, iconography, recordings and the use of computers. A significant number of congress reports have been devoted to papers on biographical, bibliographical and analytical study on (or related to) a single composer. While congress reports of a general musical nature have continued to be published since 1945, an important development has been the increased specialization of many reports, including those devoted to a particular aspect of a composer's output. There has been a very substantial overall growth in the number of congress reports published from the 1970s onwards.

For complete listing of Congress reports *see* Appendix. Individual reports are referred to in small capitals in this article.

1. To 1945. 2. Since 1945.

1. To 1945. There was an upsurge in the publication of specifically musical congress reports around 1900, in particular from the wide variety of musicological activity which took place in connection with the Exposition Universelle in Paris, and the congress on sacred music held at the Schola Cantorum in Paris that year. The International Musical Society, founded in 1899, published reports for several of its earliest congresses (e.g. 1906 BASLE, 1909 VIENNA and 1911 LONDON). The papers given on these occasions covered a broad range of research interests, were international in scope (a feature which was to become characteristic of the congress report), and were usually without any particular focus of attention beyond the history and theory of music. From early in the 20th century, however, more specialized reports began to appear, including a significant publication devoted to Gregorian chant (1905 STRASBOURG) and others concerned with pre-Renaissance music. In addition, musicological papers were frequently delivered at congresses of a general nature (especially those devoted to the historical sciences, folklore or aesthetics).

Ethnomusicology was well represented in some of the earliest congress reports to include papers on music. In the last years of the 19th century these included interdisciplinary conferences devoted to traditional American studies, folklore and oriental studies. As well as two musicology conferences, the Paris Exposition of 1900 included the second *Congrès international des traditions populaires*. Studies of traditional music continued to form an important part of many such congresses in the early years of the 20th century, a number of which resulted in published reports. Notable among early congresses devoted solely to ethnomusicology were those on Arab music (1932 CAIRO) and Maghrib music (1939 FEZ). In both cases, the papers were published. The earliest organological congress reports (e.g. 1926 and 1938 FREIBURG) concentrated on aspects of organ building. Sacred music was one of the subjects with which congresses were most often concerned in the first half of the 20th century, and the reports of several of these meetings were published.

Many congresses were arranged to coincide with composers' anniversaries (including centenaries of Chopin in 1911, Beethoven in 1927 and Schubert in 1928, all of which were marked by special conferences largely devoted to their respective composers with reports published shortly afterwards). Other congresses were connected with international events such as a World Fair (two musicological congresses were organized during the 1937 Exposition International des Arts et Techniques in Paris). Before World War II the vast majority of these meetings took place in European university towns (with the exception of some ethnographic congresses held in Africa and the Americas). The International Congress of Musicology (1939 NEW YORK) organized by the AMS, founded five years previously, produced one of the earliest American congress reports to concern itself entirely with musical scholarship.

2. Since 1945. After World War II, it became increasingly common to organize conferences concerned with specific musicological, organological, theoretical and bibliographical subjects, with a growing interest in hitherto less well-explored issues such as reception history and performing practice. Other concerns of congress reports from the 1950s included film music (1950 FLORENCE) and music libraries (1950 LÜNEBURG; 1951 PARIS), while an increasing number were devoted to individual composers such as Spontini (1951 IESI, MAIOLATI, FABRIANO and ANCONA), Mozart (1956 PARIS; 1956 PRAGUE), Janáček (1958 BRNO), Haydn (1959 BUDAPEST) and Handel (1959 HALLE). The 1958 Janáček congress *Leoš Janáček a soudobá hudba* produced a report which is characteristic of several to be published in Eastern Europe. This was an international and multilingual gathering, and the report includes not only formal papers but also transcripts of extended remarks made as part of subsequent discussions, in four languages: Czech, French, German and Russian.

In the 1970s and 80s what had previously been a steady flow of publications derived from musical conferences became something of a deluge, with many scholars choosing to publish important work through the medium of the congress report. The trend towards ever-increasing specialization continued, with a tendency for single-composer conferences to focus on particular aspects of a composer's activity. The published papers from such meetings at times resulted in a thoroughly coherent contribution to the literature, providing a forum for recent researches on repertory such as Beethoven's piano trios (1990 MUNICH). Areas which had hitherto been largely (or completely) unconsidered by musicologists were also examined in the context of conferences, including the stage works of Martinů (1966 BRNO), Malipiero's work as a writer and critic (1982 VENICE and ASOLO), Rameau in the Auvergne (1983 CLERMONT-FERRAND), performing practice in Handel's operas (1988–9 KARLSRUHE), music in Terezin (1991 DRESDEN) and innovative studies of individual works from a number of different authors and perspectives, such as the reports on Verdi's *Ernani* (1984 MODENA) or *Stiffelio* (1985 VENICE). An outstanding example of a congress devoted to detailed consideration of musical life in a particular time and place was that devoted to music in Paris during

the 1830s (1982 NORTHAMPTON, MA). Like those concerned with single Verdi operas, this produced a congress report which could also lay claim to being a standard work of reference on the subject. Conferences of this nature actively encouraged and generated a substantial body of new work on subjects in which research activity had previously been sporadic or disparate.

Important developments in music analysis can also be traced through congress reports, including such landmarks as the collection of papers on the analysis of opera (1984 ITHACA, NY). A growing interest in the use of computers in musicology, bibliography and composition resulted in a number of congress reports from the 1960s onwards. From the 1970s an important series of organological meetings in Blankenburg, Harz, attempted a systematic exploration of instrumental families which paralleled the increasing interest in historically informed performance. These included conferences on string instruments in the first half of the 18th century (1978 BLANKENBURG), brass instruments in the 17th and 18th centuries (1983 BLANKENBURG), woodwind instruments in the same period (1985 and 1991 BLANKENBURG), plucked and percussion instruments (1986 BLANKENBURG), the history of the harp from the Middle Ages to the 19th century (1992 BLANKENBURG), the fortepiano (1993 BLANKENBURG) and a congress concerned exclusively with the work of the piano and harp manufacturer Sébastien Erard (1994 BLANKENBURG). Aspects of reception history were examined in greater depth in congresses such as one devoted to critical responses to 19th-century Italian opera in the contemporary press (articles from 1987 BOLOGNA published in *Periodica musica*). A clear demonstration of the proliferation in congresses (and their published reports) can be seen in the anniversary years of composers such as Brahms (1983) and Mozart (1991). These were occasions for several major international meetings, and several substantial volumes of studies were published as a result. From the 1980s, conferences were held on other subjects which were attracting an increasing amount of scholarly interest, including musical iconography, dance history, recording and jazz.

For a comprehensive list of musical congress reports, see vol. 28 (APPENDIX B).

NIGEL SIMEONE

Congreve, William (*b* Bardsley, Yorks., 24 Jan 1670; *d* London, 19 Jan 1729). English dramatist and librettist. His stage career began with two comedies for the United Company at the Theatre Royal, *The Old Batchelour* (1693) and *The Double-Dealer* (1694), both with music by Henry Purcell. He left the company with the senior actors in 1695, and their makeshift theatre in Lincoln's Inn Fields opened with his *Love for Love*, one of the biggest successes of the period. He became close friends with the house composer, John Eccles, and his protégée, the actress-singer Anne Bracegirdle. Two further plays followed, *The Mourning Bride* (1697) and *The Way of the World* (1700), but after the latter's disappointing reception he wrote no more straight plays.

In 1700 a group of noblemen organized a contest to encourage English opera composers and commissioned Congreve to write a libretto, *The Judgment of Paris*, for all the contestants to set. The competition was held between 27 March and 3 June 1701. Congreve expected Eccles to win, aided by Mrs Bracegirdle's performance as Venus, but a rank outsider, John Weldon, received the first prize, Eccles the second, Daniel Purcell the third and Gottfried Finger the fourth. In November 1701 Congreve wrote *A Hymn to Harmony in Honour of St. Cecilia's Day*, which was set by Eccles. Shortly thereafter, he formed a partnership with the playwright and architect John Vanbrugh to build a replacement for the tiny Lincoln's Inn Fields playhouse. The result was the magnificent Queen's Theatre in the Haymarket, which opened in April 1705. Congreve, however, dropped out of the partnership after the financially disastrous first season. During the period 1705–6 he wrote *Semele*, possibly the finest libretto in the English language. Eccles's setting of this was stated in *The Muses' Mercury* for January 1707 'to be ready to be practis'd', but it was never performed, being pushed aside by *Thomyris*, an Italian pasticcio. The libretto, published in 1710, was transformed into a secular oratorio and set by Handel in 1744. Congreve's *The Mourning Bride* formed the basis of Marco Coltellini's *Almeria*, set by Gian Francesco de Majo in 1761.

CURTIS PRICE/MARGARET LAURIE

Coni, Paolo (*b* Perugia, 1 Aug 1957). Italian baritone. After early studies he won the Mattia Battistini Prize at Rieti, where he made his début in 1983 as Enrico in *Lucia di Lammermoor*. In the following years he sang in a wide repertory throughout Italy, coming to La Scala in 1988. This was also the year of his début at the Metropolitan, New York, as Belcore in *L'elisir d'amore*. He has sung in Chicago and San Francisco, and in the 1990s sang principal baritone roles in most of the leading European houses. With the La Scala company in Japan and with La Fenice on tour in Warsaw he extended his reputation as a successor in Verdi roles to Piero Cappuccilli, whom he somewhat resembles in tone and style. Comparisons have also been made with Renato Bruson, from whom he took over the role of Simon Boccanegra at Genoa in 1992, when he was commended for the carrying power of a warm and flexible voice. In 1996 signs of tiredness were observed in his upper register, although the noble quality of his voice and the assurance of his stage presence continued to command admiration. Recordings include performances of *La traviata* and *Don Carlos* under Riccardo Muti and taken 'live' from La Scala: without any striking individuality of timbre or expression, he produces ample, well-rounded tone and is scrupulously attentive to details of the score.

J.B. STEANE

Coninck, Servaas de. *See* KONINK, SERVAAS DE.

Coniuncta (Lat.: 'something joined on'). In HEXACHORD theory, a mutation of the basic hexachord which involves chromatic notes, F♯, C♯, E♭, A♭ etc., or the chromatic

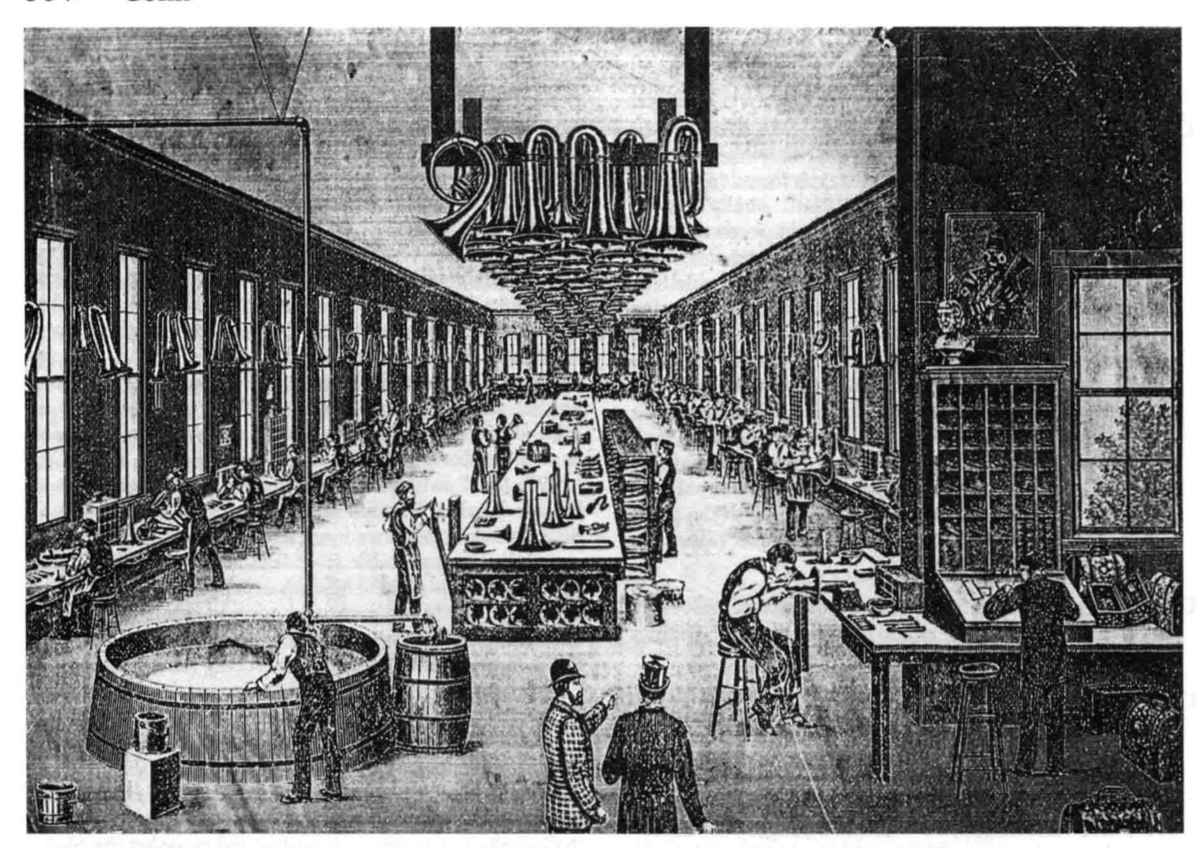
notes themselves. *See* SOLMIZATION, §I, 4, and MUSICA FICTA, §§1–2.

PETER WRIGHT

Coniunctura (Lat.). A notational formation that may be regarded as a type of ligature, but that may itself include a ligature. Derived from plainchant, it is found in sources of 13th- and 14th-century polyphony and usually consists of a single note or ligature followed by between two and seven or more diamond-shaped notes (*currentes*) in a descending progression. The *currentes* resemble the contemporary semibreve in shape, but although the value of each is less than a breve it is not necessarily the temporal equivalent of a semi-breve. The value of each note of a *coniunctura ternaria* (i.e. a single note followed by two *currentes*) is normally identical to that of a conventional three-note ligature. In *coniuncturae* with more than two *currentes*, however, the values of the *currentes* are less rigidly defined; commonly the final note is a long and the penultimate note a breve, with the notes preceding the final note having the combined value of a long. *See also* LIGATURE (i).

Conjunct. A term applied to a melodic line that moves by step (i.e. in intervals of a 2nd) rather than in disjunct motion (by leap).

Conlon, James (Joseph) (*b* New York, 18 March 1950). American conductor. He studied at the Juilliard School, New York, and made his début conducting *Boris Godunov* at the 1971 Spoleto Festival in Italy. After receiving the conducting award of the American National Orchestral Association, he was the youngest conductor engaged for the New York PO's subscription series (1974). He conducted the first performance of Barber's revised version of *Antony and Cleopatra* at Juilliard in 1975 and made his Metropolitan début in 1976 with *Die Zauberflöte*. His British opera début was in *Macbeth* with Scottish Opera in the same year, followed by *Don Carlos* at Covent Garden in 1979, the year he succeeded Levine as music director of the Cincinnati May Festival. He has also worked at the Paris Opéra and the Maggio Musicale, Florence, and was music director of the Rotterdam PO, 1983–91. Conlon's opera engagements in the USA have included a three-year Verdi cycle at Chicago Lyric Opera, 1988–90. He recorded *La bohème* for Luigi Comencini's 1988 film, and his other recordings include an admired version of Weber's *Oberon* and works by Dvořák, Musorgsky, Stravinsky and Poulenc. He became chief conductor at the Cologne Opera in 1989, having made his début there the previous year in Harry Kupfer's production of *Lady Macbeth of the Mtsensk District*, and in 1996 was appointed music director of the Opéra National de Paris. In 1997 he conducted *Pelléas et Mélisande* at the Palais Garnier, Paris, and in 1998 *Tristan* at the Opéra Bastille. Conlon's operatic performances have been much praised for their discipline, fire and theatrical flair.



NOËL GOODWIN

Conn. American firm of instrument manufacturers. It was originally located in Elkhart, Indiana, and still bears the name of its founder, Charles Gerard Conn (*b* Phelps, NY, 29 Jan 1844; *d* Los Angeles, 5 Jan 1931). Conn's first musical product was a rubber-rimmed cornet mouthpiece invented in 1874, with American and international patents following (1875–7). In January 1876 Eugene Victor Baptiste Dupont (*b* Paris, ?May 1832; *d* Washington DC, 26 July 1881), a brass instrument maker, inventor and former employee of Henry Distin in London, was invited to join Conn in Elkhart, and they began production of their Four-in-One cornet (with crooks for E♭, C, B♭ and A) under the name of Conn & Dupont. By March 1879 the partnership had dissolved, leaving Conn as sole owner of the factory at the corner of Elkhart Avenue and East Jackson Street (see illustration). In 1887, after buying the facilities of Isaac Fiske on the latter's retirement, Conn opened a subsidiary plant in Worcester, Massachusetts. The company's product line, now centred on the 'Wonder' cornet, was expanded with the import of French clarinets and flutes (1885), development of the first American-made saxophone (1888) and introduction of Conn's own line of clarinets, flutes and piccolos (1888–92). As he phased out the Worcester operation (production ceased in 1898), Conn established a store in New York City (1897–1902) where a large variety of merchandise was sold under the 'Wonder' label, including Conn's own line of woodwind, brass and percussion instruments, violins, mandolins and portable reed organs. He also distributed both American-made and imported guitars, banjos and zithers. Many of the leading bands and soloists of the day endorsed Conn's instruments, including John Philip Sousa, for whom the first commercially successful bell-up ('rain-catcher') sousaphone was designed in 1898. The factory was destroyed by fire in 1910 and Conn built a new plant on East Beardsley Street. In 1915 he retired, selling the company to the flour miller Carl Dimond Greenleaf (*b* Wauseon, OH, 27 July 1876; *d* Elkhart, 10 July 1959), who renamed the firm C.G. Conn Ltd.

Greenleaf expanded, upgraded and retooled the plant, increasing the assembly-line work force to 550 by 1917 and turning out about 2500 instruments per month using a new hydraulic expansion process. During the 1920s C.G. Conn Ltd. produced a complete line of saxophones and introduced the first drawn-and-rolled tone holes (*c*1919; after a patent of 1914 by W.S. Haynes). Several new saxophone models, including the mezzo-soprano in F and the 'Conn-O-Sax', a hybrid of saxophone, english horn and heckelphone, were introduced in the late 1920s in a futile attempt to recapture a declining market.

From the 1920s the holdings of C.G. Conn Ltd. included the Elkhart Band Instrument Company (1923–7), the Leedy Company (percussion; 1927–55), 49·9% of the stock of H. & A. Selmer (USA) (1923–7), and two subsidiaries, the Continental Music Company and the Pan American Band Instrument Company. Although the stock market crash of 1929 seriously weakened the musical instrument industry in the USA, C.G. Conn Ltd. purchased several companies in 1929–30, including Ludwig & Ludwig (percussion), Carl Fischer and Soprani (accordions). The firm later acquired the Haddorff and Straube piano companies (1940–50 and 1941–2 respectively).

The Conn company's Experimental Laboratory, established in 1928, was unique in the industry. Led by C.D. Greenleaf's son, Leland (Lee) Burleigh Greenleaf (*b* Wauseon, OH, 12 Aug 1904; *d* Leland, MI, 29 March 1978), this department developed the first successful short action valves (1934) and the first device for the visual measurement of sound (the 'Stroboconn'; 1936, *see* TUNING-FORK). It also made significant innovations in the design of the brass instrument bell; the 'Vocabell' (1932) has no rim, theoretically optimising the tone of

Conn company engraving department, Elkhart, IN, 1897

the instrument, and the one piece, seamless 'Coprion' bell (1934) was the first to be electrolytically formed.

During World War II, C.G. Conn Ltd. retooled the Elkhart plant to manufacture products for the government. No musical instruments were produced for civilian use in 1942–6. The resulting loss of sales, as well as a delayed reconversion of the plant in 1946, caused a serious decline in Conn's status as the leading band instrument manufacturer in the USA. However, the Division of Research, Development and Design, directed by Earle Kent (*b* Adrian, TX, 22 May 1910; *d* Elkhart, 12 Jan 1994), flourished after the war with innovations such as the 'Connsonata' electronic organ (1946; later known as the Conn organ), the 'Connstellation' line of brasses (mid-1950s) and the first fibreglass sousaphone (1960). During the 1950s and 60s Conn liquidated its subsidiary companies, including the Leedy and Ludwig Drum Division (1949–55) and the New Berlin [New Berlin, New York] Instrument Company (1954–61), which produced Conn's clarinets, oboes and bassoons.

Under Lee Greenleaf's leadership (1958–69), Conn acquired the Artley Company (flutes; 1959), the Janssen Piano Company (1964) and the Scherl & Roth Company (stringed instruments; 1964). In 1969 C.G. Conn Ltd. was sold to the Crowell-Collier MacMillan Company. During the subsequent decade the corporate headquarters moved from Elkhart to Oak Brook, Illinois; the Conn Organ Division to Carol Stream, Illinois; reed instrument manufacture to Nogales, Arizona; and the Conn Guitar Division and student-instrument brass production to Japan. Daniel Henkin (*b* Kansas City, MO, 1930), a former advertising manager at Conn, purchased the company in 1980. To further diversify the huge conglomerate, the organ division was sold to Kimball in 1980 under the name Conn Keyboards, and Henkin acquired the W.T. Armstrong Company (1981) and King Musical Instruments (1985). In 1985 Henkin sold Conn to the Swedish conglomerate, Skäne Gripen. A new parent corporation, United Musical Instruments (UMI), was formed the same year. UMI subsequently closed the Conn Brasswind Co. facility in Abilene, Texas (1986), moving some brass instrument production to the old King plant in Eastlake, Ohio. All operations were moved out of Mexico (1987) and the production of Artley flutes and piccolos returned to Elkhart, while that of clarinets, saxophones and small brass instruments moved to Nogales, Arizona.

More than 500 instruments and a Conn company archive are preserved at the Shrine to Music Museum, University of South Dakota, Vermillion, South Dakota.

MARGARET DOWNIE BANKS

Connell, Elizabeth (*b* Port Elizabeth, 22 Oct 1946). Irish soprano of South African birth. She studied at the London Opera Centre, making her début in 1972 as a mezzo-soprano at Wexford as Varvara (*Kát'a Kabanová*). With Australian Opera (1973–4) she sang Venus, Kostelnička and Amneris. Engaged by the ENO (1975–80), she sang Eboli, Azucena, Mariya Bolkonskaya (*War and Peace*), Herodias, Waltraute (which she recorded under Goodall), Kabanicha, Eglantine (*Euryanthe*), Rossini's Isabella, Bartók's Judith, Sieglinde, Santuzza, Donna Elvira and Marina. She made her Covent Garden début in 1976 as Viclinda (*I Lombardi*). After Ortrud and Brangäne at Bayreuth (1980–81), she cancelled all engagements, reappearing in 1983 as a soprano. Following performances of Fiordiligi at La Scala, she sang Electra (*Idomeneo*) in Salzburg and Norma in Geneva. She made her Metropolitan début as Vitellia (1985), returned to Covent Garden as Leonora in *Trovatore* and Leonore in *Fidelio*, and sang Reiza (*Oberon*) at Edinburgh. Connell's soprano repertory includes Donna Anna, Cherubini's *Medée*, Senta, Elsa, Elizabeth, Ariadne and Chrysothemis. Since her first Lady Macbeth in Sydney in 1977, she has made a speciality of the part throughout Europe and in the USA; her other Verdi roles include Elisabeth de Valois, Amelia (*Ballo in maschera*), Odabella and Abigaille. She sang Brünnhilde (*Die Walküre*) at Santiago in 1995 and Isolde for the ENO in 1996. A highly dramatic singer, she has a powerful, flexible voice equally suitable for Verdi and Wagner.

ELIZABETH FORBES

Connold, James (*d* ?Norwich, ?1708). English composer. He is listed as precentor of Norwich Cathedral in 1673 and among the minor canons until his name drops out soon after 1690. He may be identified with the John Connould who was admitted sizar at Trinity College, Cambridge, in 1663, graduating in 1667–8 and holding plural benefices in the Norwich diocese between 1680 and 1708. Partbooks at Norwich Cathedral contain two services, in G minor and F. Other manuscripts of Norwich provenance (*GB-Ckc* 9–17) include eight verse anthems and several chants. The anthems, which show evidence of Connold's technical competence, are missing from the organbook accompanying the parts, thus precluding satisfactory reconstruction.

IAN SPINK

Connolly, Justin (Riveagh) (*b* London, 11 Aug 1933). English composer. He was educated at Westminster School and was at the Middle Temple before entering the Royal College of Music in 1958. There he studied composition (with Fricker) and conducting (with Boult), winning prizes for both activities; simultaneously he had frequent informal contact with Gerhard. The music he wrote during this period was fluently composed in a Schoenbergian 12-note style, but was all subsequently withdrawn. In 1963 he went to Yale University on a two-year Harkness Fellowship as a student of Mel Powell, subsequently teaching there for a year; during this period he found his individual voice and consolidated his technical mastery. His earliest acknowledged works proceed largely by the scintillating play of small motifs within complex textures. They employ a virtuoso combination of space-time notation and grace-notes as well as traditional metre. The series of *Triads* (1964–74) exemplify this style, and also provide an example of his penchant for groupings of highly diverse instruments, a tendency which is carried through into the concertante textures of his works for larger forces. By the time of *Anima* (1974) and *Diaphony* (1977), both commissioned for the Proms, he had expanded his expressive range to encompass an increased directness and simplicity as well as the fragmentary motivic writing typical of earlier works.

Ill health led to a period from 1978 to 1988 during which Connolly produced only revisions of earlier works. His next new work, *Spelt from Sybil's Leaves*, came in 1989 in response to a BBC commission, and is scored for a typically unusual combination. The vocal lines display sensitive and expressive word-setting (a characteristic of all his vocal music), but also a more sustained melodic impetus hinted at in his work of the late 1970s. During the 1990s Connolly completed a steady stream of works, both substantial and occasional, culminating in *Scardanelli Dreams* (1997–8), a formally and rhythmically complex work in which five fragments of Hölderlin are sung in parallel with ten solo piano movements of various sizes. The resulting work has unusual poetic power, providing ample proof of Connolly's sustained ability to steer a course between technical brilliance and expressive import.

He is an experienced and respected broadcaster and teacher: in addition to holding posts in London colleges (RCM 1966–88, RAM 1989–96), he was visiting lecturer in composition at the University of California, Santa Barbara (1979–80), and at the University of Melbourne (1982).

NICOLAS HODGES

Conon [Quennon, Quenes] **de Béthune** (*b c*1160; *d* 17 Dec 1219 or 1220). French trouvère. He was the fifth son of Robert V ('le Roux'), seigneur of Béthune, and Alix de Saint-Pol; his birthplace was presumably Béthune. As a young man he is known to have spent time at the French court. His name may be traced in documents from 1180. The chansons *Ahi, amours, con dure departie* and *Bien me deüsse targier*, apparently written in 1188, indicate that he prepared for the Third Crusade (1188–92). In *Bien me deüsse targier* he named Huon d'Oisi as his teacher; Huon, who died at the siege of Acre in 1191, reproached Conon in one of his own songs (R.1030) for having left the crusade prematurely. Two chansons by Blondel de Nesle are dedicated to Conon. *Chançon legiere a entendre* is dedicated to Noblet (Guillaume V de Garlande), a friend of Gace Brulé. It is likely that Conon also knew the Chastelain de Couci, another trouvère who participated in the Third Crusade. Conon took part in the Fourth Crusade (1202–4) and was at the siege of Constantinople. He was present at the coronation of the Latin emperor, Baldwin IX of Flanders, and remained to participate in the political and military affairs of the empire. In 1217 he became seneschal, and in 1219 *bail* (regent).

Conon clearly preferred isometric, decasyllabic verses, although heptasyllables are not infrequent; there is also one hexasyllabic poem. *Bele douce dame chiere*, *Mout me semont amors* and *Tant ai amé c'or me convient häir* each follow the structure of a poem by Bertran de Born; these poems are without music, although melodies may survive in conjunction with Conon's poetry. In turn, two of Conon's songs, *Ahi, amours* and *Mout me semont amors*, provided models for other trouvères.

The main sources for the music to Conon's poetry are *F-Pn* fr.844 and 12615. In these manuscripts seven out of eight poems are set to melodies with finals on G. None of the original settings of his poems is ornate or extended in range. The reading of *L'autrier avint en cel autre pä is* in *F-Pn* fr.844 is noteworthy; it remains within the ambitus of a 4th, displaying the rather primitive form *AA'AA'AAA'A*. In other sources the piece begins with the same musical material, but through various changes displays three other repetition patterns. Repetition within the cauda is frequently present, phrases also often being paired: *CDCD*, *CBCB* or *CDC'E*. *Ahi, amours*, the most famous of Conon's works, presents complex problems with regard to transformation of material. In *F-Pn* fr.846, *Bele douce dame chiere* is notated in the 1st mode throughout, whereas portions of *Ahi, amours* are in the 3rd mode. Occasional hints of modal organization may be found in other melodies.

THEODORE KARP

Conradi, August (*b* Berlin, 27 June 1821; *d* Berlin, 26 May 1873). German composer and conductor. He was originally destined by his father for the study of theology, but was enrolled at the Akademie der Künste in Berlin, where his main teacher was K.F. Rungenhagen, the director of the Berlin Sing-Akademie. When Conradi was 22 he was appointed organist at the Invalidenhaus in Berlin; his first symphony was composed about that time. He held various conducting appointments including Stettin (1849), Berlin (1850), Düsseldorf (1852), Cologne (1853) and (from 1856) Berlin once again at such theatres as Kroll's, the Wallner-Theater, and the Victoria-Theater. It was at this time that Conradi reached his definitive position in the musical life of Berlin, writing light operas and farces which enjoyed great popularity, including the evergreen *Berlin wie es weint und lacht* and *Herzliebchen mein unterm Rebendach*. Conradi's compositions include eight operas, five symphonies, overtures, string quartets, dance music for piano and orchestra, farces, potpourris and numerous lieder. Liszt admired Conradi and made a well-known piano transcription of his *Zigeuner Polka* (1847).

Liszt and Conradi probably first met in the early 1840s. They were together in Weimar in January and February 1844, when Conradi worked as Liszt's copyist, and from 1848 to 1849 Conradi spent 18 months at Weimar at Liszt's instigation. Conradi prepared copies of the first versions of Liszt's orchestral works, made suggestions on scoring and helped Liszt draw up a 'Programme general' of all the repertory he had played during his virtuoso years (MS, *c*1850, in *D-WRgs*). When Conradi left Weimar to take up his appointment at Stettin, Liszt continued to use him as a copyist. In September 1855 we find Liszt writing that he intended to send the score of his Psalm xiii to Berlin so that Conradi could make a fair copy for the first performance there.

The extent of Conradi's help with Liszt's early orchestral sketches has been well-documented by Raabe, who

demonstrated that, whatever the position with regards to the first drafts, the final versions were always Liszt's own.

ALAN WALKER

Conradi, (Johann) Gottfried (*b* Tönsberg, nr Christiania, 17 April 1820; *d* Christiania, 20 Sept 1896). Norwegian conductor and composer. He studied medicine at first, but from 1843 founded several choirs in Christiania, and in 1853–4 was director of music at the Norske Teater. In 1855–6 he studied music in Germany, and from 1857 to 1859 conducted the Christiania subscription concerts; subsequently he made his living as a choral conductor and music teacher. He also composed male-voice choruses, cantatas, songs and piano works, and edited the songbooks *30 sange til brug i skoler og mindre sangforeninger* (1875) and *Tostemmige sange til skolebrug* (1876). His essay on the history of Norwegian music, *Kortfattet historisk oversigt over musikens udvikling og nuvaerende standpunkt i Norge*, was published in Christiania in 1878; it contains a brief autobiography.

H.B. Kragemo: 'Conradi, Gottfried', *Sohlmans musiklexikon*, ed. H. Åstrand (Stockholm, 2/1975–9)

Conradi, Johann Georg (*d* Oettingen, 22 May 1699). German composer. He was a major figure in the Hamburg opera in the 1690s and he introduced the French operatic style there.

1. LIFE. He was the son of the organist Caspar Conrad, who settled at Oettingen, a small court town to the south of Ansbach, no later than 1644. He was probably taught music by his father, and later he joined the court chapel choir. In 1671 he became director of music to the court of Oettingen-Oettingen, a post he retained until 1683, when he was appointed Kapellmeister to the court at Ansbach. Here, under the enthusiastic patronage of Margrave Johann Friedrich, Conradi supervised a rich musical establishment, for which, according to archival records, he composed at least 85 sacred works, all of which are lost. During this period many of Lully's operas appear to have been performed at the court, which would explain the strong French stylistic characteristics of Conradi's later operas. The death of the margrave in March 1686 led to the disbandment of the court orchestra, and Conradi was forced to seek a new position. Only at the end of March 1687 did he become Kapellmeister at Römhild, the residence of Duke Heinrich of Saxe-Gotha. Here he built up a notable orchestra, although further details of his career during this period are unclear. No later than the middle of 1690 he left for Hamburg, where almost immediately he became musical director of the opera. In less than four years his operas for the Hamburg theatre established his reputation throughout Germany. In 1698 he returned to Oettingen as Kapellmeister. After his death his son succeeded him in this post.

2. WORKS. Conradi's music falls into three categories: sacred music for the various small Protestant courts where he worked, occasional pieces for ceremonies and festivities at the same courts, and the Hamburg operas. His church music is nearly all lost. There remain a few sacred arias, strophic in form and most of them settings of hymn texts; only in one, however, is a chorale melody incorporated into the vocal line. The arias are accompanied by small instrumental ensembles. Other compositions are either sacred concertos or cantatas, all scored for soloists, chorus and orchestra. They are good examples of late-17th-century Protestant church music, with typical structural contrasts between vocal polyphony, declamatory homophonic choral passages, solo recitatives and arias, and instrumental passages functioning both as connecting ritornellos and as concerted interjections within the vocal writing. None of the ceremonial and festive music is extant, although a few titles can be determined through surviving librettos.

One must assume, in spite of the lack of sources, that Conradi wrote operas before he went to Hamburg; otherwise he would hardly have been appointed immediately to the position of composer and musical director at the most important opera house in Germany at that time. The titles of his Hamburg works are recorded by Mattheson in *Der musicalische Patriot* (Hamburg, 1728/*R*). He listed nine works, all to librettos by Postel; the music for eight of these is lost, except for one aria transcribed for cithrinchen (a lute-like instrument popular in Hamburg in the late 17th century: see Wolff). However, the score of his first Hamburg success, *Die schöne und getreue Ariadne* (1691), is extant and permits a critical evaluation of his contribution to the history of opera in Hamburg (see Buelow); this manuscript is the earliest surviving score composed for the Hamburg opera.

The music of *Ariadne* is a highly expressive and cosmopolitan mixture of Venetian, German and French styles, French influences being dominant in everything but the recitatives. The score conclusively proves that it was Conradi rather than his successor in Hamburg, J.S. Kusser, who introduced French operatic influences in Hamburg. The opening page of the overture (facsimile in Buelow) is French in every detail of its pompous ceremonial style and in its characteristic dotted rhythms. Among other prominent French features are the numerous French dances and a distinct penchant for chaconne basses, including the favourite Lullian device of ending the opera with a complex sung and danced scene, labelled 'Passacaille', constructed over a simple ground bass. Most of the arias are in a form of da capo structure, although a strict da capo is rare. When the opening section of an aria returns it is always written out, and frequently the return of the music appears in the orchestra alone as a ritornello. The orchestra has a consistently active role; although since the score seldom specifies instrumentation one must assume that the four instrumental parts were played by a string ensemble with the possible addition of oboes and bassoons, which are indicated at a few places. Almost half the 38 arias in the three acts have orchestral accompaniment, but the orchestra functions even more actively than this implies, for it is integrated into the large solo ensembles as well as into a number of recitatives and ariosos. The music of the opera is decidedly lyrical: more than two-thirds is non-recitative in character. But the recitatives, the earliest extant examples written for Hamburg, are of particular musical and historical importance. Conradi used in them a highly dramatic, emotion-laden style, the music carefully observing the rhetorical

emphases of Postel's excellent poetry. Such an obvious musical device as the dramatic placing and duration of certain notes generates a good deal of intensity, but more subtle effects are the results of Conradi's considerable flair for striking dissonance and the insertion of expressive arioso passages. As late as 1722 Keiser revised the score extensively for a revival in Hamburg.

WORKS

OPERAS

All but first item in three acts and performed in Hamburg, with libretto by C.H. Postel; scores lost unless otherwise stated

Templum Martis, oder Auffzug, Ansbach, 1683, lib. lost
Der fromme und friedfertige König der Römer Numa Pompilius, 1691
Die schöne und getreue Ariadne, 1691, *US-Wc*; 3 arias transcr. cithrinchen in Wolff, ii, 57ff, from a now lost MS
Diogenes Cynicus, 1691; also attrib. J.P. Förtsch
Der tapffere Kayser Carolus Magnus und dessen erste Gemahlin Hermingardis, 1692
Der Verstöhrung Jerusalem erster Theil, oder Die Eroberung des Tempels, 1692; 1 aria transcr. cithrinchen in Wolff, ii, 57ff, from a now lost MS
Der Verstöhrung Jerusalem ander Theil, oder Die Eroberung der Burg Zion, 1692
Der grosse König der africanischen Wenden Gensericus als Rom- und Karthagens Überwinder, 1693; also attrib. J.S. Kusser
Der königliche Printz aus Pohlen Sigismundus, oder Das menschliche Leben wie ein Traum, 1693
Der wunderbar-vergnüte Pygmalion, 1694

OTHER STAGE WORKS

Höchst-Erfreulicher Bewillkommens-Gruss, 1679; Die von dem gütigen Himmels-Schein aufgegangene Öttingische Freuden-Sonne, 1680; Die Gefangene und Wieder-Erlösete Amazonische Fürsten-Braut … in einem Schauspiel fürgestellet; Höchst-Erfreute und glückwünschende Frühlings Zeit … in einer Früh Musique vorgestellet, 4 May 1699: all known only from lib. in *D-HR* and first perf. Oettingen

SACRED MUSIC

extant works only; for full list see Jung (1972)

Ach wie lange soll ich doch von Dir, aria, 1v, 2 vn, 2 va, vle, bc (org), *D-Bsb*

GEORGE J. BUELOW

Conradi [Counradi], **Johann Melchior** (*b* Oettingen, bap. 17 Feb 1675; *d* Heroldingen, nr Oettingen, 13 March 1756). German composer, son of JOHANN GEORG CONRADI; the careers and compositions of father and son have frequently been confused. The former sang in the court chapel choir while the latter served as Kapellmeister at Römhild in 1687. Nothing further has been discovered about his career, except that, after his father died in 1699, he succeeded him as Kapellmeister at Oettingen, remaining there until the court orchestra was disbanded in 1732. Most of his music was composed for performances at the court of Prince Albrecht Ernst II of Oettingen-Oettingen and of Duke Ludwig Rudolf of Brunswick-Wolfenbüttel. (*EitnerQ*)

WORKS

performed in Oettingen

Serenades: Als nechst die Ewigkeit, S, insts, 1715; Rüstet euch, Ihr Himmels Zeugen, 2 S, B, insts, 1715; Beglückter Tag, erwünschte Stunden, 3vv, insts, 1715: *D-W*
Cants.: Es lachet jetzt die Zeit, S, insts, 1713; Höchst beglückter Tag der Freude, S, B, chorus, insts, 1729; Nur Seegen solle sehn, S, B, chorus, insts, 1729; Angenehmste Silberflammen, S, B, chorus, 1730: *W*
Lost serenades: Glückwünschendes Schäffer-Gedicht, 1701; Wunsch- und Freuden-Gedicht, 1701; Serenada, 1701; Glückwünschende Freude-Bezeugnung, 1703: libs *HR*

GEORGE J. BUELOW

Conradus de Pistoria [Coradus de Pistorio] (*fl* early 15th century). Italian composer. He was an Augustinian friar ('frater ordinis heremitarum') and probably the Curradus Ser Gualandi de Bracilionis de Pistorio who became a singer at S Reparata in Florence in December 1410. Before that date Conradus may, like Matteo da Perugia and Bartholomeus de Bononia, have belonged to the French-orientated court of Pope Alexander V and his successor John XXIII. Soon after his election, in Pisa in 1409, Alexander V resided at Pistoia, and subsequently at Bologna, where the older layer of the manuscript *I-MOe* α.M.5.24 originated: this is the sole source for Conradus's two surviving works (both ed. in CMM, liii/1–3, 1970–72 and PMFC, xx, 1982). The three-voice ballade with Latin text *Veri almi pastoris musicale collegium* is evidence of the author's association with the chapel of a schismatic pope. Another three-voice ballade, *Se doulz espour ne me donne confort*, has an incomplete secular text. The style, form and notation of both works correspond with the ideals of the Ars Subtilior, and offer evidence of the extensive influence of French music in Italy at this time.

URSULA GÜNTHER

Conrad von Zabern [Conradus de Zabernia] (*d* before 1481). German music theorist. He is presumably to be identified with Conrardus Zabern, a priest of the diocese of Speyer who received the baccalaureate and licentiate degrees at the University of Heidelberg in 1428 and 1430 respectively. He first gained a reputation as a theologian and preacher, esteemed as much for his rhetorical skill as for his personal piety. Later in life he travelled the Rhineland, visiting churches and monasteries to offer instruction in music theory and the proper execution of chant. His principal music treatise, the *Novellus musicae artis tractatus* (*c*1460–70), treats all the traditional themes of medieval music theory: intervals, staff notation, solmization, hexachords, mutation by means of the *claves*, the modes, and the pedagogical use of the monochord.

Conrad relied most frequently on Guido and Johannes Cotto as his authorities. His teaching on the value of the monochord found fuller expression in a later treatise, the *Opusculum de monochordo* (Mainz, *c*1462–74), that also describes in detail the construction of the instrument. Principles governing the proper employment of the voice were explored in *De modo bene cantandi choralem cantum* (Mainz, 1474), a treatise later translated into early New High German (*Lere von Koergesanck*, *c*1480).

In his writings Conrad revealed himself as an engaging teacher passionately committed to the improvement of the church's choral song. His treatises draw on wide practical experience, and he declared himself prepared to travel anywhere to deliver his instruction in person. Central to Conrad's pedagogical method is the keyed monochord, an instrument that he recommended both for self-instruction in accurate singing and as a mode of correcting singers who might be unwilling to accept a teacher's admonitions. *De modo bene cantandi* maintains that the true art of liturgical song must give sufficient attention to refinements of vocal production and to choral discipline. Conrad proposed six essentials of choral singing: chants should be sung *concorditer*(with perfect ensemble), *mensuraliter* (with equal rhythmic values and consistent tempo), *mediocriter* (avoiding extremes of vocal register), *differentialiter*(with adjustment of tempo according to the liturgical rank of the day), *devotionaliter*(without embellishment) and *satis urbaniter* (without committing *rusticitates*, a series of faults including nasal singing, aspiration before the individual notes of a melisma, distortion of vowels, incorrect intervals, raucous singing and unbecoming deportment in choir).

Consecutive fifths, consecutive octaves [parallel fifths, parallel octaves]. In part-writing, the simultaneous duplication of the melodic line of one part by another at the interval of a perfect 5th (ex.1*a*) or an octave (ex.1*b*), or any equivalent compound interval.

Ex.1 Consecutive intervals

In the earliest stages of polyphony, from the 11th century to the 13th, only the unison, the 5th and the octave were regarded as true consonances to be used at cadences and other strong points of articulation. Consecutive 5ths were common in organum and in conductus-style pieces such as the anonymous three-part motet whose incipit is quoted in ex.2 (GMB, no.18). The first theorist to prohibit them was Johannes de Grocheo (*Optima introductio in contrapunctum*, *c*1300; *CoussemakerS*, iii, 12), who forbade consecutive perfect consonances of the same size between two parts of a composition. Nevertheless, consecutive 5ths were used frequently in 14th-century three-part writing, and after 1400 can occasionally be found between two parts of a piece whose contrapuntal design is built on a third part (i.e. the tenor), for instance in the three-part cadence on the scale degrees 1–8–12 instead of the normal 1–5–8 (ex.3). From the high Renaissance on, theorists generally forbade the use of consecutive 5ths and octaves in strict counterpoint, and their occurrence in music up to the late 19th century was incidental.

Ex.2 13th-century Goliard song (Bamberg Codex, f.14*v*)

Ex.3 Ciconia: *Et in terra pax* (*c*1400)

The argument most often advanced against the use of consecutive octaves is that it eliminates one of the parts of a contrapuntal texture in an inartistic way, that is by doubling another. In the case of consecutive 5ths this argument does not apply, since a different set of notes is present in each part. Cherubini's argument against consecutive 5ths was that one would not know on which part to base the tonality of a two-part passage in consecutive 5ths (*Cours de contrepoint et fugue*, 1835–6); this view was repeated 100 years later by Schenker, whose made-up examples of consecutive 5ths in *Der freie Satz* (ex.4) present an amusing case against their use. It is now thought that consecutive 5ths were avoided on

Ex.4 Schenker: *Der freie Satz*, figs.51—2

'aesthetic' grounds, namely that the bareness of the interval of a 5th is accentuated when it leads immediately to another 5th; this argument can account for the objection to simple pairs of consecutive 5ths better than the theory of doubtful tonality advanced by Cherubini and Schenker, and it can also explain further the objection to consecutive octaves.

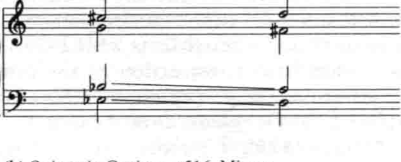
Ex.5 Haydn: Quartet in C op.9 no.1, Adagio

When consecutive 5ths and octaves do occur in tonal music, a non-harmonic note or an ornament is usually present. In ex.5 an octave is approached from an augmented octave; the grace note *b♮″* in the first violin part is for expressive effect and not part of the contrapuntal design. In ex.6 consecutive 5ths are made by the

Ex.6 Mozart: Violin Sonata in A K526, Presto

auxiliary note *d♯″* on the downbeat. Consecutive 5ths are often caused by appoggiaturas or accented passing notes in one part (exx.7–8). A special type of consecutive 5ths,

Ex.7 Schumann: Romance in B♭ minor op.28 no.1



Ex.8 Mozart: Sextet 'Sola, sola in buio loco' from *Don Giovanni* violin and bass parts only

called 'Mozart' 5ths (Ger. *Mozartquinten*), occurs when the German 6th chord resolves directly to the dominant (ex.9); examples in Mozart, however, are rare, as he normally modified the part-writing in such harmonic progressions so as to avoid consecutives. A number of instances of consecutives in Classical and Romantic music

Ex.9 'Mozart' 5ths and their avoidance

(b) Quintet in G minor K516, Minuet

have been known to be 'corrected' by over-zealous editors: for example, in the first movement of Beethoven's 'Harp' Quartet (ex.10), the consecutive 19ths between *e♮″–d″* in

Ex.10 Beethoven: Quartet in E♭ op.74, first movt

the first violin and *A♮–G* in the cello led to the erroneous alteration of the cello's *G* to *F* in some editions.

In the late 19th century and the 20th, consecutive 5ths were used for exotic, folklike or archaic effect or as a means of 'doubling' a part at an interval other than an octave, for instance in Act III of Puccini's *La bohème*.

WILLIAM DRABKIN

Conseil [Du Conseil], **Jean** [Consilium, Johannes; Consilio, Gian de] (*b* Paris, 1498 or 1501; *d* Rome, 1534). French composer, active in Italy. A papal bull of 1521 places his birth date at 1498, but a bull of 1515 states he was then in his 15th year. In 1509 he became a choirboy at the Ste Chapelle in Paris, and in 1513 he was sent by Louis XII along with two other boys, Hilaire Penet and Pierre de Monchiaron, to serve Pope Leo X under the tutelage of Carpentras. His service seems to have been directly to Leo and to his nephew, Cardinal Giulio de' Medici (later Pope

Clement VII). He received benefices from both his patrons and in 1528 was awarded a canonry at Cambrai. He also acted as the Cambrai chapter's procurator in Rome. Conseil probably did not join the Cappella Sistina until after Clement's accession to the throne, as the chapel rolls of 1526 rank him very low in seniority. In 1526–7 he was sent to France to recruit singers for the pope's private chapel, of which he was the *maestro di cappella*. In 1528 he was again commissioned to travel to France and the Low Countries to recruit singers in an effort to restore the Cappella Sistina after the Sack of Rome. This trip included stops in Cambrai, Sens, where the Archbishop promised to send three choirboys to Rome, and Paris, where he recruited six adult singers. He was again in the north in 1530–31, visiting Cambrai and Paris. Conseil seems to have died in November 1534 as he is not listed in the pay records for the last two months of that year. The papal singers participated in a memorial mass for him on 11 January 1535.

Both Adrianus Petit Coclico and François Rabelais (in his prologue to Book 4 of *Pantagruel*) counted Conseil among the outstanding musicians of his day. His works circulated widely in northern Italy, France and Germany. All his chansons and many of his motets were printed by Attaingnant. This was probably the result of contact with the printer and Parisian musical circles during Conseil's visits from 1528 and after. Fétis mentioned a *Livre de danseries en six parties* of 1543, attributed to Conseil and published by Attaingnant, but this may be a confusion with an instrumental arrangement of some of his works, perhaps from 1553. Only three of his works were copied into Cappella Sistina manuscripts: two motets and the setting of the *Nunc dimittis* with the antiphon *Lumen ad revelationem* for the feast of the Purification.

24 of the motets attributed to Conseil can be authenticated as his. The only motet attributed to him without conflicting attribution that can be discounted is *Dextera Domini fecit*, which is the work of an incompetent. His sacred music is typical of Roman music of the 1520s and 30s: he had a predilection for closely spaced, full triadic sonorities, creating a lush sound. Individual voice parts cover ranges controlled by modal pentachord-tetrachord structures in alternating plagal and authentic octaves. The lines tend to be long and graceful. His textures are generally imitative with the use of fully chordal, syllabic passages for contrast. Cadences are clearly articulated, and text setting is clear and unambiguous. The full, rich sonorities of his chansons distinguish these pieces from those of his French-based contemporaries.

Consequent. *See* ANTECEDENT AND CONSEQUENT.

Conservatories. Schools designed for special instruction in music, often also in one or more of the other arts. The term originated in Italy as *conservatorio*; it was adopted by the French as *conservatoire* and by some German cities as *Konservatorium*. 'Conservatory', commonly used in the USA, has prevailed since the mid-20th century.

I. The role of the conservatory. II. Up to 1790. III. 1790–1945. IV. Since 1945.

I. The role of the conservatory

The idea of a school where music is one of the principal if not the only subject of study dates back to medieval church choir schools. By 1600 these schools usually taught reading and writing, and sometimes rhetoric and literature as well. The concept of the conservatory, however, differs from this model in several respects. First, although in some early conservatories students were expected to take part in church ceremonial, that was never their sole occupation. Secondly, conservatories trained them for the

music profession in general, rather than simply for church music. Thirdly, conservatories have usually been answerable to lay people, whether in the narrow sense of having lay governors or more broadly by being partly controlled by state or municipal authorities.

Before the advent of conservatories, musicians were educated by family members and through apprenticeships or guilds, as well as in church schools. A large percentage of musicians were trained by their parents and were bound to provide for their maintenance in old age unless given legal 'emancipation' from such support. Apprenticeship – for which contracts were written right up to the first decades of the 20th century – began as early as the age of eight, whether or not the child was being tutored by a parent. Lasting anywhere from three to 12 years, this agreement between the teacher and the child's family involved either payment during that period or a percentage of the apprentice's income in his early career. The teacher served as mentor, indeed as an agent for the young musician. Similar practices occurred for girls and young women, though contractual apprenticeship was less common than with males.

The establishment of opera companies in courts and cities in the 17th century, and the burgeoning of public concerts in the 18th century, increased the demand for musicians beyond what family training and apprenticeship could meet. The early Italian conservatories were orphanages from which opera companies could draw promising singers. For families of limited resources, training a young man as a castrato was often a good financial strategy. These schools produced the host of musicians who spread all over Europe and made Italian opera the dominant idiom internationally. Another impetus towards the founding of conservatories was the rise of new ideas about how musicians should best be trained. Competition among musical centres stimulated leaders in the musical community to build schools to improve musicianship in their regions. Conservatories also served as a source of musicians for performances in homes and private salons, a growing area of musical activity.

The widespread closing of monasteries and church music schools beginning in the late 1700s gave rise to a golden age of conservatory founding. As sacred and secular institutions diverged, the state and private patrons and societies took over many of the church's functions in musical education. In Paris, London, Leipzig and other cities musicians were trained to take part in the musical life of bourgeois society. Yet religious music retained a place in the conservatory curriculum, and the movement for church music reform gave fresh impetus to the creation of specialist schools for church musicians.

Conservatories responded to the growing professionalisation of musical life during the later part of the 19th century by drawing a sharper distinction between the training of professional and amateur musicians. Increasingly their resources were directed towards meeting the demand for highly skilled orchestral musicians, instrumental soloists and opera singers. Yet there was also a need for teachers to serve the expanding middle class, especially in piano and voice training. Many conservatories made special provisions for teaching 'dilettantes' or maintained preparatory divisions alongside their central course of study.

Throughout the 19th and 20th centuries, conservatories arose and developed in the context of general educational reforms that resulted in an increasingly diverse student body, the elimination or reduction of fees and greatly expanded curricular offerings. The large number of women who studied in early conservatories – usually as many as men, if not more – reflected the expansion of formal education generally. While the great majority of teachers were men, a few women achieved prominence, such as Clara Schumann in Frankfurt and the violinist Nobu Koda in the Tokyo Conservatory at its start in the 1880s. Both staff and student bodies became steadily more international in their make-up, especially after World War II.

The notion of conservatories as 'conservators' of national or regional styles of performance and composition has gradually been eroded in the face of the internationalization of musical life and the trend towards standardization of musical pedagogy. If the 18th century may be said to have been dominated by the Italian conservatory and the 19th century by the French and German models, the 20th century was characterized by a more eclectic approach. This reflects the spread of the conservatory movement to Russia and eastern Europe, Spain, Portugal, the Low Countries, Scandinavia, the USA, Britain's overseas dominions, Latin America and Asia. This article focusses on the central lines of that development; the histories of individual conservatories are covered in greater detail in the respective city and country articles.

II. Up to 1790

1. Italy. 2. Other countries.

1. ITALY. The origins of conservatories must be sought in communal rather than purely ecclesiastical institutions, and the most probable source of the concept lies in the humanist view of music's social and educational role, which affected the curricula of schools and other institutions from the late 15th century. This view, following Plato, insists that music should be taught alongside the other subjects of the Trivium and Quadrivium and was expressed by the humanist Alberti (1404–72): 'if I had children of my own, I would have them learn not only languages and history but singing and instrumental music, together with a full course of geography and mathematics'. It should be noted that music is here considered as a practical rather than a purely theoretical study; in Protestant grammar schools, this became formalized when the timetable advocated by Melanchthon in 1528 included an hour each day devoted to music, a practice widely followed north of the Alps. In Roman Catholic schools it was not so rigidly prescribed, but nevertheless music was often included in the curriculum.

Music became the predominant activity in certain charitable organizations in Venice and Naples during the late 16th century and the first half of the 17th. These were orphanages charged with looking after indigent children, and in their earliest years they had no specific educational role. The Venetian institutions dating from the 14th century were originally hospitals, founded to succour the sick and helpless; they were endowed by private individuals, with funds administered by trustees. In Naples such institutions were founded by confraternities whose role was in one case to 'bury the dead' and 'distribute alms' and in another to look after 'abandoned male children'. By about 1600 their teaching functions were firmly established, and schoolteachers were employed on a

permanent basis. These usually included a musician who taught singing and provided music in the institution's chapel. In the earliest years of the 17th century these musicians were of no great distinction, but in the 1630s members of the *cappella* of S Marco were in charge of music at some of the Venetian hospitals, and in Naples several competent composers were given similar offices.

It was the Neapolitan conservatories that first discovered that music could be a profitable activity. In Germany the music teachers and their charges had augmented their stipends by singing at weddings and similar functions, and also by giving street entertainments. The pupils at the Conservatorio dei Poveri di Gesù Cristo in about 1600 were similarly encouraged 'to search for alms for their own upkeep and to go out [into Naples] singing litanies and *laudi spirituali*'. Later they had more formal engagements at official city celebrations, were also hired by various churches on festival days and in 1680 took part in over 100 recorded 'concerti' and processions. In Venice this was less common, but during this same period the governors of the Ospedale della Pietà noticed that the quality of the music attracted a greater public to its chapel on saints' days, and that collections on the occasion and later donations and bequests grew accordingly. This was especially true during Lent: music at churches was reduced in scale, thus allowing the conservatories to take the opportunity of giving oratorios and other elaborate musical performances. By 1700 guidebooks to Venice were virtually advertising the days when such music was to be heard in the conservatories' chapels, increasing the audience still further. In response to this financial incentive, the conservatories in both Naples and Venice appointed specialist teachers. The Neapolitan Conservatorio di S Onofrio had a violin teacher as well as a *maestro di cappella* in the mid-17th century, while the Conservatorio dei Poveri di Gesù Cristo had teachers of strings (*magister lyrae*) and brass (*magister buccinae*) as well as two general musicians as early as 1633. In 1675 the same establishment hired a castrato, beginning a tradition of employing and teaching eunuchs, some of whom were of great distinction. Such developments took place somewhat later in Venice, Vivaldi, who was appointed about 1704, being the first violin teacher of note.

In spite of the financial advantages brought about by these means, the charities found considerable difficulty in meeting their needs, especially since they still had general responsibilities as infirmaries and orphanages. Against their original purpose, they therefore began admitting *convittori* or fee-paying pupils. The Neapolitan Conservatorio di S Maria di Loreto charged for both tuition and board as early as 1667 and had to raise its limit of 100 pupils to meet the demand. Since these pupils eventually became members of the choir or orchestra, thus earning money for the conservatory, they sometimes petitioned for and obtained reductions in their fees. There is some evidence that in times when admission as an orphan was difficult, poor children were entered as fee payers in the hope that they would almost immediately obtain this remission. Nonetheless, there remained two distinct classes, especially in the 18th century when the fame of the conservatories inspired foreign nobility to send their promising young musicians. To cope with the teaching demands, the conservatories organized themselves more formally. The *maestro di cappella* was appointed for his fame as a composer and administrator rather than as a teacher, although he may have taught theoretical subjects. He was supported by a nucleus of staff, including teachers of strings, wind, brass and singing, some of these also distinguished men. They taught the most advanced pupils, members of the choir or orchestra, who in turn taught the more junior ones, for which they gained various privileges.

During the first half of the 18th century the Venetian and Neapolitan conservatories had an enormous influence throughout Europe. The *maestri* included Gasparini, Galuppi, Porpora, Locatelli, Bernasconi, Donatoni and Leo who often travelled abroad to produce operas. Many of the famous opera singers were taught in the conservatories, the castratos coming mainly from Naples; such women as Faustina Bordoni were taught in Venice, where the Pietà, as one of the few girls' schools, was especially well known for its singers. In Venice it was common for an orchestra to be formed from the 80 best pupils of the four conservatories to perform on state visits by foreign princes; this again added to the chances of gaining foreign pupils. Thus the domination of Italian musicians in Europe was to a large degree due to their efficiency.

The decline of the conservatories came in the later 18th century. In Naples it was due to mismanagement and even fraud by financial officials, to student unrest resulting from the opposition between fee pupils and orphans and to lack of royal support. In Venice the decreasing prosperity in the final years of the republic was the principal cause. Burney's report on the conditions at the conservatories in 1770 reveals an unhappy state of affairs: substantial overcrowding, pupils all practising in the same room at S Maria di Loreto and sometimes indifferent musical performances in Venice. Even so, Cimarosa, Zingarelli and Sacchini were among their composers, while some of the best church musicians in Venice taught at the Pietà and the Incurabili.

2. OTHER COUNTRIES. In Germany a private singing academy had been founded in Leipzig in 1771, and in England two proposals to set up a music school had been mooted, one by John Potter (1762), the other by Burney after his return from Italy (1774). In his *Sketch of a Plan for a Public Music School*, Burney postulated a foundation based on the Foundling Hospital (the English equivalent of the *ospedali*) in the Italian manner, with two classes, one for girls 'chiefly in Singing' and the other for boys 'who have talents for Composition and for performing on different instruments'. The basic course was to last seven years, the pupils to leave not later than 21 years of age. Funds were to be raised by letting out the boys 'singly or in Bands, for Musical Performance in Churches, for Oratorios, and Public and Private Concerts; as well as to attend Persons of Rank into the Country, at a settled and stated price'. This was clearly based on the Neapolitan model, and the teaching was to be organized similarly, with two *maestri* and four assistants, and with a preference for native rather than foreign talent. Nothing came of this scheme immediately, and several others followed it before England achieved its first conservatory.

In France the Roman Catholic Church was the main institution of musical education before the political and social upheaval of 1789. About 500 *maîtrises*, choir schools associated with leading cathedrals and religious colleges, were estimated to have existed before the Revolution. The weaknesses of the *maîtrises* were numerous: their intake was limited to male students and the educational programme varied widely in content and

quality, centring on the performance of plainchant, although it occasionally included rudimentary counterpoint lessons and instruction on instruments used in religious services, such as the serpent, bassoon, cello and organ.

The demand for well-trained opera singers of both sexes was an important impetus for the reconsideration of institutionalized musical education in France in the years before the Revolution. The Ecole Royale de Musique et de Déclamation, directed by Gossec, was established in 1784 by royal decree. It had a faculty of 16 professors, but the enrolment never increased beyond 30 students, who were thus virtually private pupils. The school was not greatly successful and was attacked for extravagance and general incompetence, but it does represent the first attempt to found a national academy supported entirely from public funds.

III. 1790–1945

1. Introduction. 2. French-speaking countries. 3. Germany and central Europe: (i) 1790–1843 (ii) 1843–1918 (iii) 1918–1945. 4. Russia and eastern Europe. 5. English-speaking countries.

1. Introduction. The founding of conservatories between 1793 and 1850 grew out of the shift of political and cultural authority from church and monarchy to the state and private associations. Not only did funds decline for church music schools, but the growth of cities and the rise of parliamentary government brought about new kinds of leadership that reshaped musical life profoundly. The Paris Conservatoire quickly emerged as the model for such institutions, owing to the central role it achieved in opera and instrumental music and its unusually strong government funding. Other conservatories were established and maintained chiefly by private means, both aristocratic and bourgeois; extensive state support was not common until the 20th century. As few schools offered a large number of scholarships, their students included many who did not intend to pursue professional careers in music. Indeed, during this period the term 'conservatory' usually meant a music school for amateurs and future professionals alike, and as such it reflected the dramatic expansion of the musical world generally. Students were often enrolled in their early teens; the Paris Conservatoire admitted them from the age of eight.

Throughout the 19th century formal and informal musical training existed side by side. Pupils often studied privately with teachers outside their conservatories or took only part of the curriculum offered by a school. Some conservatories did little more than match teachers with students, and it was not uncommon for young musicians – singers in particular – to achieve prominence with little formal training of any kind. Most leading soloists did not have extensive education until conservatories received significant state funding and were able to admit many students free of charge. Only after 1945 did it become virtually essential for professional musicians to obtain a formal musical education.

Likewise, the assumption that central conservatories train the highest-level singers and instrumentalists has come about only since the middle decades of the 20th century. The Paris Conservatoire was the main exception to this rule, since from the early 1800s on it educated most of the best orchestral players in the city. A refocussing of conservatories towards the training of high-level musicians began in the late 19th century in such cities as Leipzig, Cologne, Moscow and St Petersburg and became firmly established after World War II with the proliferation of state-funded educational programmes at all levels. Training in the early and mid-teens shifted to special schools and informal teaching, transforming conservatories into strictly tertiary-level institutions. In the process universities came to play increasingly important roles in musical education. The establishment of music schools within universities was part of a wider trend towards upgrading the status and quality of professional musical training (*see* Universities, §III, 4).

Conservatories differed greatly in the relative emphasis they placed on instrumental, vocal and keyboard music. The Paris Conservatoire was at first concerned chiefly with instrumental music but by the 1830s became focussed on opera. The conservatory founded in Vienna by the Gesellschaft der Musikfreunde aimed above all to train singers for performances of oratorios, while the Prague Conservatory emphasized the training of orchestral players. Most 19th-century conservatories provided tuition in harmony, counterpoint, sight-reading and ear-training, but until the end of the century little in composition and almost none in the history of music. Some institutions, mainly in Germany and the USA, also created positions for the teaching of music theory. Concerts presented by conservatories became central to musical life in Paris, London, Brussels and numerous other cities.

The piano moved to the centre of the conservatory curriculum during the second half of the 19th century, even as the range of instruments taught expanded to keep pace with the development of the modern symphony orchestra. The rise of the solo recital as a new type of concert, most commonly for piano, paralleled the growing prominence of conservatories and renowned teachers such as Anton Rubinstein in St Petersburg, Liszt in Geneva and Weimar and Clara Schumann in Frankfurt. The movement towards a 'piano in every home' within the middle classes led some conservatories to devote themselves chiefly to training piano teachers and amateurs. British conservatories placed particular emphasis on the testing and licensing of teachers; in Germany and France the development of uniform methods of pedagogy was a major concern.

During the late 19th and early 20th centuries reformers called for improving the quality of teaching at conservatories. Some schools responded by focussing their efforts on producing outstanding soloists and orchestral and chamber musicians, others by cultivating higher standards of overall musicianship. Composition became a central part of the curriculum, and most conservatories chose their directors from among the leading composers of the time. Curricula became at once more varied and specialized to meet the demands of the marketplace; new programmes were established in such disciplines as contemporary music, chamber music, early music, music therapy and musical technology. New schools with innovative goals rivalled traditional institutions: in London the Royal College of Music competed with the Royal Academy of Music, and in Paris the Schola Cantorum challenged the Conservatoire. Conservatories designed to serve the needs of specialist constituencies, such as organists and students of early music, broadened the range of opportunities available to young musicians.

2. French-speaking countries. With the Napoleonic invasion of Italy in 1796, political conditions changed so radically that most Italian conservatories closed, and although some were reopened a few years later, none regained its former stability or fame. The closing of religious houses disrupted charitable foundations still further and helped to force a reorganization of music schools. In Paris the Ecole Royale de Musique et de Déclamation was reorganized as a more general music school concentrating on singing and theatrical performances. In 1792 Bernard Sarrette, a captain in the National Guard, founded the Ecole de Musique de la Garde Nationale to supply wind players for the grandiose revolutionary *fêtes* – rituals designed for the mass education of the populace – and other civic ceremonies, as well as for the expanding armies of the republic. In 1793 it was renamed the Institut National de Chant et Déclamation.

As criticism of the aims, methods and administration of the two schools heightened, their programmes were re-examined, and on 3 August 1795 the Conservatoire National supérieur de Musique et de danse was established as a result of deliberations at the Convention Nationale. The new school, which was to be free to all qualified students, can be seen as a product of the general educational reforms initiated during the revolutionary period. The Paris Conservatoire was to be a practical training school, much like the recently established Conservatoire des Arts et Métiers, an intellectual centre for the education of all French citizens, akin to the new Institut des Sciences et des Arts, and an institution that 'conserved' the music of the French nation, in the manner of the Biliothèque Nationale. Provision was made for training instrumentalists and singers, for offering courses in theory, composition and music history and for creating a repository of instruments, scores and music books. The Conservatoire was the first truly modern institution of its kind, organized on a national basis, free from charitable aims and with an entirely secular, indeed anticlerical, background. As such it soon emerged as the model for all subsequent conservatories in the West.

Among the Conservatoire's innovations was the creation and dissemination of uniform methods of pedagogy (first mandated in 1796). Both curriculum and examinations were prescribed in some detail. Students were admitted between the ages of eight and 13; they were chosen on a geographical basis, six from each département, with equal numbers of boys and girls. They were to progress through three basic stages, each examined by inspectors, with intermediate examinations carried out by professors twice a year to test progress within each stage. The first of these stages was devoted principally to solfège, the second broadening out into various branches of singing and the playing of instruments, the third demanding theoretical knowledge, history of music and accompaniment of singers, as well as skill as performers, with suggestions of both a principal and a secondary study. The timetable was constructed to ensure regular lessons on a ten-day basis, and pupils had to practise at fixed hours. Method and harmony texts were circulated by the Conservatoire's own publishing house, which existed until 1826, and later by private firms.

The Paris Conservatoire was part of an ambitious scheme devised by the revolutionary authorities to install music schools of various sizes throughout France and, subsequently, the conquered states of Europe. Many plans were submitted for extending the Conservatoire's reach beyond the capital, but not until 1826 did existing schools in Lille and Toulouse become officially connected to the Conservatoire as *succursales*. Leading conservatories on the Paris model were established in Brussels (1813) and Liège (1826). The former grew out of a state-sponsored school of vocal training headed by Jean-Baptiste Roucourt, whose goal was to send promising students to the Paris Conservatoire. Under the directorship of Fétis (1833–71), the Brussels Conservatoire Royal de Musique became central to the musical life of Belgium. As the century progressed the Parisian model was adopted throughout Europe, particularly in Italy and the German-speaking lands, as well as in Russia, England and the USA.

The expansion of the Conservatoire's sphere of influence was accompanied by a broadening of its curriculum and improvement of its facilities. By 1811 a new building was erected with a concert hall. Under Cherubini's directorship (1822–42), the piano came to hold a privileged place both as a performance medium and as a pedagogical tool in singing and harmony classes. As orchestral instruments changed and orchestras increased in size, new disciplines were added, such as harp, double bass, trumpet, valve horn and trombone. The Société des Concerts, founded in 1828, became one of the leading performing ensembles in Paris and was the basis for the Orchestre de Paris. In 1864 an independent museum of musical instruments was opened.

Although the Conservatoire dominated musical life in France until the end of the 19th century, its position was challenged by a succession of smaller, mainly anti-establishment conservatories. The school founded by Choron in 1817 focussed on the study and performance of early vocal music; it closed soon after government funding was withdrawn in 1830 and was resuscitated by Niedermeyer, who shared Choron's concern for religious music and the decline of the *maîtrises*. The Ecole Niedermeyer became a general music academy in 1895. A year earlier d'Indy, Bordes and Guilmant had founded the Schola Cantorum with a curriculum similarly orientated towards early sacred music. The Schola was recognized as an Ecole Supérieure de Musique and became a serious rival to the Conservatoire until after d'Indy's death in 1931. Other prominent Paris conservatories were the Ecole Normale de Musique, started in 1919 under the direction of Cortot, and the Conservatoire Américain, where Nadia Boulanger taught a generation of English and American composers. However, the high degree of centralization in French musical life ensured that the Conservatoire was never eclipsed: by 1930 it was the centre of a national system of music schools that included 23 *succursales*, 21 'national' schools and 20 municipal schools.

3. Germany and central Europe.

(i) 1790–1843. In the latter part of the 18th century rationalism and the Enlightenment led to the decline of church music and of the study of music in the Lateinschulen (Latin grammar schools). In many areas the provision of civic financial support for sacred music soon ceased entirely. This, together with the closure of many monasteries and above all the abolition of ecclesiastical principalities and many secular territories in the wake of secularization and mediatization in 1803 and 1806, had far-reaching consequences for musical education. In many

cases the chapels of the princely courts and noble houses had trained their own musicians, and once they were dissolved yet another basis for professional education was lost. Finally, while the old practice of training musicians in guilds or Stadtpfeifereien had not entirely died out, it had outlived its usefulness in the face of the demands made by the music of the Viennese Classicists. The shortage of qualified young singers and orchestral musicians was increasingly obvious. H.C. Koch, in his *Musikalisches Lexikon* (1802), described the objective of the Paris Conservatoire and emphatically endorsed the French state commitment to musical education. In 1808 a group of Bohemian counts called for the founding of 'a society to promote the art of music in Bohemia'. The society was set up in Prague in 1810, each member making a minimum annual contribution of 100 gulden. It in turn founded the Prague Conservatory in 1811 and appointed Dionys Weber as director. The conservatory was clearly conceived as an orchestral school. The various disciplines (for all the instruments of the orchestra) were designed with that purpose in mind, as were the duration of training (six years, divided into two 'classes' of three years each) and the manner in which new students were to be admitted every three years: they were selected and their numbers supplemented to ensure that a balanced orchestral ensemble was always available. Foreign pupils were charged 60 gulden a year; teaching was free to Bohemian students, but they were required to perform at the society's academies or in private houses. To some extent, therefore, the conservatory provided the Bohemian nobility with a substitute for their private chapels. As students were accepted between the ages of ten and 13, they also received a general education. From 1815 the conservatory had a singing department and from 1826 an opera department; there was no piano department until 1888. The conservatory's main purpose was to train not virtuosos or composers but able orchestral musicians.

Similar initiatives in other cities led to the founding of schools for singers, instrumentalists, church musicians and (later) composers. They were supported by musical associations or the new promotional societies created by the music-loving middle classes or, as in Prague, the nobility. Only occasionally, when conservatories were affiliated to universities or academies, did the state follow the French example and provide support, as it did in Bavaria with the Akademisches Musikinstitut, founded by Joseph Fröhlich in Würzburg in 1804 and deriving from the collegium musicum of the university, and in Prussia with the Akademisches Institut für Kirchenmusik, set up at the instigation of Zelter in Breslau (1815), Berlin (1822) and Königsberg (1824). The Berlin institute trained teachers as well as church musicians, and a Meisterschule for composition was added in 1833; later Busoni, Schoenberg, Strauss and Pfitzner, among others, taught there.

The flourishing musical life of the middle classes fostered the growth of conservatories in the early 19th century. In 1817 the five-year-old Gesellschaft der Musikfreunde in Vienna opened a singing school, directed by Salieri, to satisfy the demand for performances of large-scale oratorios. Instrumental classes were introduced after 1819, beginning with the violin, then the cello and finally the other instruments of the orchestra. Conservatories were soon founded in other cities: Graz (1817), Innsbruck (1819), Linz (1823) and Klagenfurt (1828), and later Pest (1840) and Brno (1862). All were supported by local music societies and sometimes by such church music associations as that of the episcopal city of Passau (1812). In Salzburg the Mozarteum, founded in 1841, developed from the Dommusikverein.

Piano teaching played a subordinate part in most early conservatories, and this accounts not only for the proliferation of private piano schools – some of them of considerable importance, for instance Joseph Proksch's in Prague (1830) – but also for the widespread utilization after the 1820s of piano teaching systems such as that of Logier. As a rule music theory was an auxiliary discipline, consisting of instruction in basso continuo and the elements of harmony, usually described as 'composition'. The study of composition became the main purpose of a teaching institution only in Friedrich Schneider's Musikschule in Dessau (1829) and the Berlin Meisterschule mentioned above. The same aim was pursued by the Mozart-Stiftung set up in 1838 in Frankfurt to promote the work of young composers by granting scholarships.

The oldest conservatory in the Netherlands was founded in 1826 by King Willem I in The Hague. In Rotterdam the initiative for the founding of a conservatory in 1844 came from the Maatschappij tot Bevordering der Toonkunst, one of the promotional societies also set up in Amsterdam and other cities. The first Swiss conservatory was founded in Geneva in 1835 and attracted many students in its first year because of the piano courses given by Liszt.

(ii) 1843–1918. The conservatories founded around the middle of the 19th century differed in many respects from the earlier Musikschulen. First, leading (or at least well-known) composers, music theorists and performers were more committed to founding, directing or teaching in them. Secondly, they were less dependent on promotional societies and were supported instead (for instance in Leipzig and Strasbourg, and later in Frankfurt) by the interest on their endowment capital, by civic subsidies or more rarely by state subsidies. Thirdly, their educational aims were more ambitious, extending beyond teaching the craft of music-making to greater intellectual depth of understanding, as described in Mendelssohn's letter of 8 April 1848 to P. von Falkenhain (*Festschrift ... des Königlichen Konservatoriums der Musik zu Leipzig*, 44–5).

Mendelssohn's primary concern in founding the Leipzig Conservatory in 1843 was no longer to train young musicians for orchestras, opera houses or choruses. Rather, it was to provide 'higher education in music, both theoretical and practical: in all branches of music regarded as a science and an art' (§1 of the 1843 prospectus) and in concrete terms to train composers and virtuoso performers. Accordingly, students were no longer accepted as children, but at the age of about 14 to 17; Theodor Kirchner, the first student registered, was 19. With Mendelssohn, Schumann, Hauptmann and David, and later Gade, Moscheles and Franz Brendel, Leipzig offered a teaching staff of extraordinary eminence which attracted an international student body: of about 6000 students of its first 50 years, only 3300 were from Germany, 1800 coming from other parts of Europe and 1000 from the rest of the world. Leipzig had no orchestra school until 1881, but rehearsals and concerts were given by the Gewandhaus Orchestra, which was closely connected with the conservatory on both an artistic and

administrative level. In the years that followed, conservatories were founded in many German and central European cities, including Cologne (1845), Munich (1846), Berlin (1850, 1855, 1869), Strasbourg (1855), Dresden (1856), Stuttgart (1857), Berne (1858), Lausanne (1861), Basle (1866), Weimar (1872), Hamburg (1873), Budapest (1875), Zürich (1876), Frankfurt (1878, 1883), Brno (1882) and Karlsruhe (1884). The large number of students who flocked to these and other conservatories soon led, in many cases, to problems of space and finance. Only a few had such generous state funding as the conservatories in Munich, Würzburg and Karlsruhe. If the cities granted any subsidies at all, they were usually small, and as a result many conservatories opened their doors to amateurs in order to increase income. Stuttgart had a department for dilettantes from the first; in Karlsruhe there were preparatory, intermediate and senior classes. In 1884 Frankfurt added a seminar in which female students taught children from eight to 12 under the supervision of experienced male teachers; two years later this became the Vorschule where qualified women graduates served as 'auxiliary teachers'.

The usual method of teaching at the conservatories, with students grouped in classes, came to present a number of difficulties. A class had two one-hour lessons a week, and the director determined the number of students per class. With three pupils each would get 20 minutes of teaching time; with more students each would get correspondingly less time. In practice it was possible for a single pupil to be allotted the whole hour while the others simply listened. Hauptmann disapproved of this method of teaching composition, because it divided 'the lesson into as many parts as there are students' (letter to Franz Hauser of 8 April 1847; ed. Schöne, C1871, ii, 53; also 72 and 97). In instrumental teaching, he admittted, mere listening could still be useful, but he claimed that individual students received too little teaching in all the conservatories, and the less proficient held back the abler students without learning anything themselves. Some 50 years later Riemann was even more sharply critical of the 'exclusive training for practical performance' in most conservatories and the lack of discipline and intellectual depth. Students ought, he said, to be provided with a minimum of general education, historical knowledge and aesthetic standards (C1895, p.24).

The number of free places for students decreased considerably over the decades, and fees varied widely. In Karlsruhe in 1884 they were 100 marks a year for the preparatory class, 200 for the intermediate class and 300 for the senior class; in Frankfurt they were 300 marks for all students. Smaller institutions charged according to the main subject studied: in Würzburg fees ranged from 40 to 100 marks and in Sondershausen from 150 to 200 marks.

Most conservatories were marked by a sense of tradition and generally regarded new developments with suspicion. The early sense of the word 'conservatory', as a place for the maintenance of orphaned children, was reinterpreted as signifying that the artistic and educational programme was of a 'conservative' nature. Music from Bach to Beethoven was regarded as 'the model for all time' and the tried and tested basis for musical education. More modern trends could not be banned from the piano classes and operatic training, but 'our students should form their taste and build a secure foundation for their opinions above all on the works of Bach, Handel, Haydn, Mozart and Beethoven' (B. Scholz, annual report of the Hoch Conservatory, Frankfurt, 1883–4, pp.8ff).

(iii) 1918–45. The development of musical institutions in German-speaking countries is reflected in their changing nomenclature. Until the early 19th century most were called Musikschulen. The name 'Konservatorium' or 'Conservatorium' gained ground after 1843 and was transferred to many Musikschulen in the later 19th century. During the 20th century, however, 'Konservatorium' gradually became devalued in Germany and Austria and was increasingly used for institutions devoted to musical education for non-professionals. This tendency was fostered in the 1920s by the Prussian Ministry of Culture under its music adviser, Leo Kestenberg. In connection with the reform of musical education at upper schools, which demanded state examination of their music teachers, Kestenberg urged that leading conservatories should become Staatliche Hochschulen. This trend continued under the Third Reich, when the conservatories in Frankfurt (1937) and Leipzig (1941) were designated Hochschulen, and corresponding changes occurred after 1945 in both East and West Germany. To educational planners, conservatories seemed relics of a bygone age which could either rise to the university status of Hochschulen or be downgraded to Musikschulen (schools of music). Musical training for professionals was to be clearly separated from musical education for amateurs.

The term 'Konservatorium' was generally avoided for institutions established after World War I. For instance, the Westfälische Hochschule für Musik, founded in Münster in 1919, became in 1925 the Akademie für Bewegung, Sprache und Musik. In 1927 it moved to Essen as the Folkwang-Schule für Musik, Tanz und Sprachen (directed by Rudolf Schulz-Dornburg and Kurt Jooss), one of the pioneering Hochschulen of modern music and dance. In some cases not only was the term 'Konservatorium' avoided, but a new approach to teaching was sought, as at the Schola Cantorum Basiliensis, an early music academy founded in 1933.

In 1919 the newly created Czechoslovakian state founded publicly supported conservatories in Prague, Bratislava and Brno. When Czech became the only language used for teaching at the formerly bilingual Prague Conservatory, a Deutsche Akademie für Musik und Darstellende Künste was founded in Prague in 1920 under Zemlinsky; it was largely supported by a promotional society. The Vienna Conservatory, state-subsidized after 1872, was renamed the Akademie für Musik und Darstellende Kunst in 1909, became a Staatsakademie in 1920 and a Reichshochschule (like the Salzburg Mozarteum) in 1939, and reverted to a Staatsakademie in 1945.

4. Russia and eastern Europe. Professional musical education came late to Russia. In the 18th century foreign music teachers started music classes for the children of the aristocracy or for the training of professional instrumentalists from the serf classes, and at the beginning of the 19th century there were also music classes at the universities of Moscow and Kharkiv. The St Petersburg Conservatory officially opened its doors on 8/20 September 1862; its parent organization, the Russian Musical Society (RMS), had sponsored classes in music from spring 1860. The driving force behind both society and conservatory was Anton Rubinstein, who held as his goal the establishment of musical life in Russia on a thoroughly professional footing, with musicians eligible to earn the

same privileges and legal status available to the country's other artists. Soon after the RMS classes began Rubinstein submitted a proposal for a government-sponsored music school to the Ministry of Education, only to have it quickly rejected on grounds of such a school's uselessness. Rubinstein then sought the patronage of the Grand Duchess Yelena Pavlovna, Tsar Aleksandr II's aunt by marriage and a devotee of the arts, who earlier had helped Rubinstein establish the RMS. Slightly more than six months after he submitted to her a *Report on the Necessity of Opening a Music School in St Petersburg*, the government granted a charter for Russia's first conservatory, which was to be attached to the RMS under Yelena Pavlovna's protection and subsidized through the Ministry of the Imperial Court.

The St Petersburg Conservatory offered instruction in singing, performance on the piano and all orchestral instruments, composition and music history and aesthetics. The academic programme filled six years. Classes in *solfeggio*, piano, music history and literature, and aesthetics were required of all students, along with participation in the school's choir; as the first students progressed through their programmes of study, new classes in harmony, counterpoint, fugue, form, composition, orchestration and score reading were added to the curriculum. Courses in the Russian language and in Russian history, geography and literature were also offered, as was remedial instruction for those judged deficient in religion, history, geography, mathematics and languages (Russian, German and Italian). The curriculum was complete by 1865, and in December of that year 12 students, who had begun with classes taken under the auspices of the RMS, took their final examinations. Seven of these (including Tchaikovsky) met all requirements for graduation and thus were granted the title 'free artist', a privileged legal status which exempted its holder from military service and poll tax. Rubinstein served as director of both the conservatory and the RMS until 1867, establishing and maintaining the highest professional and artistic standards throughout his tenure.

Meanwhile Rubinstein's brother Nikolay, with Anton's encouragement, had established a branch of the RMS in Moscow in 1860. This branch offered music classes from its inception and in December 1865 received permission to open a second conservatory with Nikolay Rubinstein as director. The Moscow Conservatory formally opened its doors on 1/13 September 1866, with the young Tchaikovsky serving as professor of composition and head of the theory department. (This circumstance alone is an indication that one of Anton's goals – to provide Russia with fully professional native musicians and teachers of music – was beginning to be realized.) In like manner to St Petersburg and Moscow, five other cities of the Russian Empire gained conservatories before the Bolshevik Revolution. In Kiev, for example, RMS concerts began in 1863 and music classes in 1868; a music institute followed in 1883 and a conservatory in 1913. Conservatories were also established in Saratov (1912), Odessa (1913), Kharkiv (1917) and Tbilisi (1918). All but the last were built on well-established institutions; in essence they were promoted in status from music schools or colleges (*uchilishche*) to conservatories. The goal of 'music education for everyone' was assisted by the foundation of the Free School of Music in 1862 by Balakirev and Lomakin and by the People's Conservatory in Moscow after the 1905 Revolution.

In 1866, after a student's unsuccessful attempt to assassinate Aleksandr II, the government's educational policies took a sharp turn towards the right. Although the conservatories were not subject to the Ministry of Education, Yelena Pavlovna wanted them to conform to the new direction and sought to transform them, in effect, into trade schools for instrumentalists. Anton Rubinstein's successor at St Petersburg, Nikolay Zaremba, directly resisted his patroness and was forced to retire in 1871 over the issue. The school's new head, Mikhail Azanchevsky, took another tack, formally agreeing with the grand duchess but doing little to bring about the changes she wanted. During the same summer in which he promised to eliminate academic classes and concentrate on training performers, he brought new vigour to theory and composition by hiring the 27-year-old Nikolay Rimsky-Korsakov as professor of composition and orchestration. Azanchevsky's manoeuvre also effectively countered the hostility of The Five, who from the beginning had 'challenged the conservatory's ability to train creative artists' (Ridenour, D1981), and it gave the conservatory a composer who, after making up the deficiencies in his own education through an extraordinary programme of self-instruction, was to become one of Russian music's most influential pedagogues. Many of his pupils, including Arensky, Glazunov, Lyadov and Steinberg (Shostakovich's teacher), became professors in the nation's conservatories, often basing their own teaching on Rimsky-Korsakov's textbooks and methods.

After the Bolshevik Revolution the new Soviet government nationalized the conservatories and designated them State Institutions of Higher Learning (decree of 12 July 1918). Graduate departments were established in 1925, and the education of professional musicologists and theorists, initially entrusted to the State Institute for Music Research in Moscow (founded in 1921), was given over to the conservatories. At the same time, curricular reform defined three large branches of study – composition and musicology (including theory), performance and education – with most specialities requiring five years. A new theory/composition curriculum, reflecting an awareness of modern music and thought, was proposed by Vladimir Shcherbachyov. The older professors – including Glazunov, rector of the Leningrad Conservatory until 1928 – leapt to the defence of the old curriculum. But both curricula, together with their adherents, were soon overwhelmed by the Russian Association of Proletarian Musicians (RAPM), who had little interest in extended professional training or art music, preferring instead simple mass songs and marches for use as propaganda. The Party permitted the RAPM to dominate musical education from 1929 to 1932; during their brief period of ascendency academic standards declined precipitously. The chaos of the RAPM years ended in April 1932 with the dissolution of all proletarian arts organizations and a return, in the words of Stalin's commissar of education, to 'musical education that will lead to the acquisition of musical technique and the assimilation of musical skill' (Haas, D1989).

With Andrey Zhadanov's formulation in 1934 of the principles of Socialist realism, demanding that art reflect 'reality in its revolutionary development', the ferment of the 1920s ended. By 1945 conservatories existed in Riga

(1919), Tallinn (1919), Baku (1920), Yerevan (1923), Minsk (1924), Sverdlovsk (1934), Tashkent (1934), L′viv (1939), Alma-Ata (1944), Vilnius (1945) and Kazan′ (1945), with curriculum and organization generally paralleling those of Leningrad and Moscow. Although the Leningrad and Moscow conservatories were relocated away from the front in 1941 – the former to Tashkent, the latter to Saratov – both had returned home by 1944. After World War II the schools were sharply criticized during the cultural purges led with Stalin's blessing by Zhadanov, but the institutional structures established during the 1920s remained viable until 1991.

The conservatory movement spread throughout eastern Europe in the 19th and early 20th centuries. In Warsaw in 1816 Chopin's teacher Józef Elsner founded a school of singing and declamation modelled on the Paris Conservatoire; the Warsaw Conservatory was closed down after the failure of the 1830 Revolution, but reopened in 1861, and other conservatories were established in Lemberg (now L′viv) and Kraków. In Sofia a private school for music was opened in 1904; this came under state control in 1908 and became the Bulgarian State Music Academy in 1922. In Romania conservatories attached to the country's first universities were founded in Bucharest (1864) and Iaşi (1860). The establishment of the Yugoslav state in 1918 led to the creation of conservatories in Zagreb and Ljubljana (both of which had had secular music schools for over a century) and later in Belgrade.

See §III, 3 above for other parts of the Austro-Hungarian empire.

5. English-speaking countries. The British conservatories of the 19th and early 20th centuries served, first and foremost, the growing demand for instruction in piano and singing. They provided a training-ground for the growing population of teachers and amateurs and developed systems for testing and licensing them. While some high-level performers did attend these schools, before 1930 most such singers and instrumentalists were trained informally or by apprenticeship. Leading wind players came more commonly out of the Military School of Music at Kneller Hall, founded in 1857; many of its graduates found employment in leading orchestras. The main contribution of the London conservatories – the Royal Academy of Music (1822), the Royal College of Music (1882), the Guildhall School of Music (1880) and Trinity College of Music (1872) – lay in providing the world of amateur music and music teaching with coherent professional standards.

The conservatories of this period were funded almost entirely from student fees for courses and licences. A government grant of £500 per year to each school, begun in 1865, was not increased until after World War II, and the only substantial private endowment was that of Lady Barber to the Birmingham School of Music in 1932. That many students came from well-off homes and did not continue in the musical profession suggests the central role that music played in the life of the time.

The RAM and RCM grew out of quite different traditions and institutional goals, but ended up working closely together in the testing and licensing of students and teachers. The RAM was founded by the same aristocratic gentlemen who governed the Concert of Ancient Music and the Royal Society of Musicians; it was designed to train singers and instrumentalists for the King's Theatre and for teaching in elite families. The failure to obtain substantial state or private funding led the committee of management in 1868 to reorientate the academy towards serving the needs of teachers and the public.

The original purpose behind the RCM was to develop a leading conservatory comparable to those of Paris and Berlin, but lack of scholarship funds limited achievement of that goal. The effort to model the college on continental institutions was reflected in the programmes of the pupils' concerts, which focussed on the German/Austrian canon (whereas the academy emphasized recent music, especially by British composers). These differences were less marked by 1914, however, as compositions by both male and female students were more frequently performed. The Society of Women Musicians was active in both schools.

The curricula of conservatories during this period were less comprehensive than became the norm later in the 20th century. A certificate was awarded after one year, and in cases of special merit a student was made an associate. Piano and singing were the focus of attention; it was unusual for more than one person to teach any of the wind instruments. Courses were usually required in elements of music, harmony and counterpoint, as well as composition, a recent addition to conservatory teaching. Lectures on music history and programmes in ensemble playing were optional before World War I but became part of the regular curricula in the 1920s, as also happened with courses in conducting.

The testing and licensing of teachers grew to major proportions by the turn of the 20th century. Almost all conservatories conducted tests for teachers that led to the award of a licentiate. In 1889 the RAM and RCM set up the Associated Board of the Royal Schools of Music, initially to license teachers nationally and in the British colonies, appointing honorary local representatives to administer the tests. In 1911–12, 7453 local centres participated in examining 21,135 candidates. The testing was rigorous; only a third normally passed these examinations. Trinity College, which developed the largest licensing programme, led the effort to include music teachers in a parliamentary bill mandating the registration of all teachers in 1912.

Conservatories serving new constituencies, especially choral and sacred music, grew up in the late 19th and early 20th centuries. Trinity College trained teachers for district associations of choral societies around the country. The Royal College of Organists (1864) offered professional training for church musicians. The Guildhall School of Music brought formal musical education to the City of London. The Tonic Sol-fa college (1869) and the Matthay School of Music (1920) trained teachers in their special methods of instruction. Ties between conservatories and universities were initiated in 1902 with the founding of a Chair of Music jointly administered by Trinity College and the University of London.

Elsewhere in Britain conservatories began as music classes within cultural institutes in the 1840s and 50s, as comprehensive music schools at the turn of the century and as schools within universities in the 1930s. The Birmingham School of Music (1859) grew in prominence under the leadership of Granville Bantock, its first full-time salaried principal (1900–34). The Manchester College of Music (1893), founded by Charles Hallé and directed by Adolph Brodsky from 1895 to 1929, attracted unusually well-known faculty members such as Egon Petri

and Wilhelm Backhaus. The Royal Scottish Academy of Music and Drama began within the Glasgow Athenaeum (1847) and was originally the Athenaeum School of Music (1890).

During the 1930s, as the market for private music lessons waned, conservatories began to train more high-level performers; John Barbirolli and Myra Hess studied at the RAM and subsequently joined its staff, as did Leopold Stokowski at the RCM. After World War II such training became the chief goal, especially when government programmes made possible higher education for students in the arts as a whole.

The USA had no cultural capital comparable to London, and the earliest American conservatories were among a widespread group of music schools founded in the mid-19th-century, notably Baltimore's Peabody Conservatory (1857), the Oberlin College Conservatory in Ohio (1865) and the Cincinnati Conservatory (1867). The largest conservatory in the country, Boston's New England Conservatory (1867), represented a highly entrepreneurial effort to train teachers for the expanding market of amateur musicians. By 1885, 4570 students, mostly women, were taught by 100 staff. Students were housed in a large hotel on Franklin Square, thanks to funds donated by the Jordan family, the city's leading retail merchants.

During the 1890s an attempt was made to build a National Conservatory of Music with federal government funds. Begun in New York, the school was intended to move to Washington, DC, but failed after an auspicious three years under the leadership of Dvořák. In the late 19th century several American private universities – Harvard and Yale most prominently – established curricula in music not dissimilar to those of conservatories; Harvard in fact granted degrees for the New England Conservatory until 1929. Important music schools were begun at state universities in Michigan in 1880, in Indiana in 1893 and in Illinois in 1895. However, private patronage continued to be the principal source of support for conservatories; indeed, the three major schools founded in the 1920s had the largest endowments of any such institutions in the world. All three provided scholarships for most if not all of their students.

In 1921 the camera tycoon George Eastman donated $12 million to re-establish an existing conservatory within the privately incorporated University of Rochester, New York. Although originally intended to provide a liberal education for musicians, the Eastman School of Music became a leading centre for the training of performers. In Philadelphia the Curtis Institute was established in 1924 with a $12·5 million gift from the publisher Cyrus H.K. Curtis and his daughter Mary Louise Curtis Bok. She served as president until her death in 1970, and from the start the faculty included prominent singers and instrumentalists. Also in 1924 the Juilliard Graduate School was founded in New York with a bequest of $12 million from the textile magnate and banker Augustus D. Juilliard. Conceived as a graduate institute to train only the most talented young musicians to perform in public, the school nonetheless needed an undergraduate programme, and in 1926 it acquired the Institute of Musical Art (established in 1905) to form the Juilliard School of Music.

IV. Since 1945

Whereas conservatories established in the latter part of the 19th century were generally planned on European lines, the second half of the 20th century saw the emergence of several alternative models varying in size, purpose, formal status, relationships, curriculum and specialities. Some conservatories are independent institutions, others form part of universities. Some are funded by the state, others by different means. Some are devoted solely to music; in others music is studied alongside one or more of the other art forms. Some are located within, or funtion as, arts centres. Some conservatories have thousands of students, others only a few hundred. Each model has its strengths: the ultimate test is the quality of the experience the institution is able to provide for its students.

While the training of soloists with the potential to establish solo careers was once regarded as almost the sole purpose of the conservatory, since World War II stronger emphasis has been placed on the provision of education and training appropriate for a wider range of professional activities. Some conservatories have expanded their remit by offering advanced courses that focus explicitly on the needs of orchestral and chamber music players; of those wishing to specialize as church musicians; and of those aiming for careers in jazz and commercial music, and in fields such as music therapy and arts management. In some countries, such as Finland, the continuing professional development of musicians forms a key element of the role of a national conservatory. In many countries the initial training of music teachers is seen as closely linked with the training of performers and composers, and so is integral to the work of leading schools of music. In England and Wales, changes in the arrangements for teacher training in the last quarter of the 20th century tended to weaken the links between the conservatory and the training of music teachers for the state system.

As in the late 19th century, the conservatory curriculum has broadened considerably since 1934. The expansion that has taken place in Britain and elsewhere reflects shifts in educational philosophy, recognition of the changing needs of and opportunities for professionally trained musicians, and clearer identification by individual insitutions of their roles and responsibilities within their respective societies, as well as developments in school curricula. Although many North American music schools have long espoused a model of liberal education, encouraging most students to undertake some studies outside music, for many students in British conservatories enrolled on performance diploma courses, individual lessons and participation in ensemble activities were until the 1960s complemented mainly by harmony and ear-training, and limited study of history and music appreciation. Since then, British conservatories have strengthened the historical, analytical and critical elements of the curriculum, providing courses that aim to encourage a broader approach to the development of musicianship.

Curriculum design has been influenced by recognition of the range of professional careers and the need for specialization: while most conservatories prescribe a core curriculum, more and more options have become available in the latter years of undergraduate study, as well as at the postgraduate level. Students are encouraged to develop versatility as well as specialist skills: composition, arrangement and work produced in electronic and recording studios are increasingly part of their experience. Contemporary music now plays a more prominent part in the

curriculum. Some conservatories also provide opportunities for intensive study of early music, liturgical music, non-classical music and musics of other cultures. Growing professional interest in historically informed performance has encouraged greater emphasis on issues of performing practice. In some leading European and American music schools musicology can be chosen as a main area of study. Teaching often explores links between music and other art forms – dance, drama, film and the visual arts. Conservatories have begun to give greater attention to the 'professional integration' of students by enabling them to develop skills of self-presentation and self-management and to gain professional experience. Some conservatories employ specialist staff to support this and to encourage community-based performance opportunities for individuals and ensembles.

In addition to the instrumental studies customarily available, more widespread opportunities now exist for the study of period instruments and instruments other than those in the standard 19th-century orchestra, such as accordion, saxophone and guitar, as well as those of the brass band. While most conservatories teach only Western instruments, some leading Asian music schools also include instruction in traditional eastern instruments. In British conservatories most instrumental teaching takes place in individual lessons, with occasional class sessions; in conservatories elsewhere in Europe and in some other parts of the world, classes generally meet several times a week, and individual students are taught in the presence of their peers.

Until the 1980s most students attending British conservatories, on successfully completing their studies, received diplomas, some of which were of graduate-equivalent status. By the end of the decade most of these institutions had replaced diplomas with bachelors' degrees, reflecting the trend in higher education towards the degree as the standard professional award. At the postgraduate level masters' degrees in performance as well as composition have become increasingly common. Similar developments have taken place in parts of Europe: in France and Belgium the *premier prix* was in the 1990s replaced by awards gained after pursuing more wide-ranging courses of study. In the USA the development of the Doctor of Musical Arts introduced a distinctive award at the doctoral level for performers and composers which focusses on practical work, normally supported by research into relevant literature and repertory.

A distinctive feature of the postwar period has been the burgeoning of specialist institutions for tertiary-level study. In 1949 Wales acquired its own conservatory with the embellisment in Cardiff of the Welsh College of Music and Drama. In Tel-Aviv the Rubin Academy of Music (now part of Tel-Aviv University) was founded in 1945, followed two years later by the Jerusalem Rubin Academy of Music and Dance. In 1950 new institutions were established in Beijing (Central Conservatory of Music), East Berlin (Deutsche Hochschule für Musik) and Hamburg. In a number of major public universities in the USA the creation of schools of music offering specifically professional programmes dates from the postwar period. In Germany individual states established their own Hochschulen; in Australia state conservatories were created in Queensland (1957), Tasmania (1965) and Canberra (1965). Some new conservatories arose from the linking of existing institutions, such as the National University of Fine Arts and Music (Tōkyō Geijutsu Daigaku) in Tokyo (founded in 1949), the Norwegian State Academy of Music in Oslo (1973) and the Royal Northern College of Music in Manchester (founded in 1973 by merging the former Northern School of Music and the Royal Manchester College of Music). Other notable schools established since 1970 include the Rotterdam School of Music (1971), the Hong Kong Academy of the Performing Arts (1984), the School of Music of the Korean National Institute of the Arts (1992) and the Hochschule für Musik in Rostock (1994).

The legal status of some long-established conservatories has changed as part of the revision of national systems of music education and training. In this process some leading European institutions, previously privately or locally run, became state-funded and state-controlled. These, along with others already recognized as state institutions, generally gained university status. This pattern can be observed throughout Europe; the Academy of Music and Dramatic Arts in Prague was re-established on this basis in 1946, as were the Budapest Academy and the Royal Danish Academy of Music in 1948. In Austria university status was granted to the Hochschulen in Graz, Salzburg and Vienna in 1970. The Sibelius Academy in Helsinki, established in 1882, was essentially a private institution until 1980, when it came under state control. In certain countries, such as France and Finland, the postwar period has seen the establishment of what is essentially a two-tier system: a network of regional conservatories linked in various ways to a smaller number of national institutions. In France and Spain the inclusion of the term 'superior' in the name of the institution indicates its national standing.

In many countries conservatories functioned from their inception as the local or regional focus for instrumental teaching, admitting students of all ages irrespective of level. One effect of the definition of role and formalization of status which took place in some European countries in the postwar period was that work at the elementary (primary) and secondary levels, and adult education, were transferred to other institutions. In other countries, including Britain, Japan, the USA and Australia, leading music schools have maintained junior or preparatory departments. Some function as specialist schools offering intensive music tuition to enhance the normal school curriculum; others cater for part-time pupils of talent.

Formal links between conservatories and universities increased throughout the 20th century. Although most conservatories were conceived as independent, autonomous institutions, some were planned from the outset as existing within universities: the model of the Melba Conservatorium, founded in Melbourne in 1895 as a 'University Conservatorium', was emulated in 1898 by the creation of the Elder Conservatorum of the University of Adelaide. Since the late 1980s each of the other Australian conservatories has become formally affiliated to a university. Examples of both types of arrangement exist in North America. Some prominent American music schools are formally part of large universities, such as Illinois, Indiana, Michigan, Northwestern and Southern California; the Eastman School of Music is a school of the University of Rochester. While some leading American music schools such as the Curtis Institute and the Juilliard School remain independent, the latter strengthening its informal links with neighbouring institutions, the Peabody

Conservatory in Baltimore became an affiliated division of the Johns Hopkins University in 1977.

National policies for higher education in Britain during the last quarter of the 20th century brought conservatories and universities closer together. With the notable exceptions of the Royal College of Music in London and the Royal Scottish Academy of Music and Drama in Glasgow, which have authority to award their own degrees, most British conservatories are associated with universities for degree-awarding puroposes. Degrees of the Royal Northern College of Music are validated by the University of Manchester, those of the Welsh College of Music and Drama by the University of Wales, those of Trinity College of Music by the Universities of Westminster and Sussex, those of Leeds College of Music by the University of Leeds and the Open University, music degrees of the Gulidhall School of Music & Drama by City University and the University of Kent at Canterbury, while the Royal Academy of Music is a college of the University of London. In 1989 the former Birmingham School of Music, now a faculty of the University of Central England in Birmingham, adopted the name Birmingham Conservatoire. The London College of Music and Media has become part of Thames Valley University. Many music schools belong to regional, national and European networks, and have institutional agreements which support the exchange of students and staff. Collaboration between institutions has become increasingly common since World War II.

In Europe as in North America some conservatories have strengthened their links with other university-level insitutions in order to offer students wider educational opportunities. While these developments have brought benefits, there can also be dangers: there is need for the conservatory to guard against loss of distinctiveness, and to retain its ability to admit those for whom the conservatory provides the most appropriate environment. The traditional staffing pattern of the conservatory, with its close ties to the music profession, is a particular strength.

The internationalization of musical life since 1945 has affected conservatories and been affected by them. This is evident both in the teaching staff and the student body. Although leading conservatories in the late 19th century attracted students from abroad, numbers remained relatively small. In the postwar period study overseas has become more common, particularly at the postgraduate level. Since the 1970s many foreign nationals have been admitted to conservatories in Europe and the USA, some remaining to perform and teach. National styles of performance and composition, as well as musical life internationally, increasingly reflect the impact of these changing social patterns.

Console. Now generally applied to the desk from which an organ is played, comprising manual and pedal keyboards and stop knobs. It may also have swell pedal(s) and registration changing aids. The word is almost certainly French, introduced into England in the second half of the 19th century (C.A. Edwards: *Organs and Organ Building*, London, 1882), replacing earlier terms (Burney's 'keys' or 'box of keys', Hopkins's 'claviers' etc.) and being applied at first only to detached and reversed keyboards (J.W. Hinton: *Organ Construction*, London, 1900, 3/1910/*R*). Examples of detached consoles of the 18th century include a chamber organ (*c*1750) now at the Bachhaus, Eisenach, and the Green organ used at the 1784 Handel Commemoration in Westminster Abbey. Quadrant-shaped keyboards (not unlike console tables) were made by Cavaillé-Coll after the model of E.F. Walcker (1840), and illustrated by theorists from about 1880 onwards (Töpfer, Audsley). The scope for detached consoles increased with the advent of tubular pneumatic action (Willis, St Paul's Cathedral, London, 1872) and electro-pneumatic action (Bryceson, Theatre Royal, Drury Lane, 1868). The 20th-century facility of fully electric detached and moveable consoles was initiated by Hope-Jones at St John's, Birkenhead (1893). Despite similarities in the work of many individual organ builders (Gottfried Silbermann, Gaetano Callido, Aristide Cavaillé-Coll) and the efforts of various national organists' associations, attempts to establish uniformity in console design have been unsuccessful.

PETER WILLIAMS, CHRISTOPHER KENT

Consoli, Marc-Antonio (*b* Catania, 19 May 1941). American composer of Italian birth. He emigrated to the USA in 1956, and studied with Rieti at the New York College of Music, with Krenek at the Peabody Conservatory, with Schuller and Crumb at the Berkshire Music Center and with Alexander Goehr at Yale University (DMA 1977). He also studied with Donatoni at the Accademia Musicale Chigiana (Siena) and at the Warsaw Conservatory on a Fulbright Scholarship (1972–4). Honours he has received include two Guggenheim Fellowships (1971, 1978), an award from the American Academy of Arts and Letters (1975) and residencies at the MacDowell and Yaddo colonies. In 1976 Consoli founded the contemporary music ensemble Musica Oggi, directing it until 1981; in 1984 he took over Rinaldo Music Press, a company devoted to the publication of new music. He has served on the music faculties of the universities of Bridgeport (1972), Western Ontario (1975) and Massachusetts, Amherst (1986), and was appointed lecturer at New York University in 1990. His music has been performed by leading ensembles throughout Europe and the USA and has been featured in international music festivals in Belgium, Finland, the Netherlands, Austria and France.

Consoli's music is dramatic and brilliantly coloured. A typical example, the virtuoso concerto for orchestra *Odefonia*, uses contrasting sonorities, rather than themes, to delineate an almost Classical structure. During the mid-1970s he began to explore his Italian heritage, incoporating folk-inspired melodies, religious imagery and exotic tone colours in music that is more lyrical and personal in style. *Canti trinacriani* (1975) and *Vuci siculani* (1979) are representative works from this period, the former a setting of Sicilian poems in which fragments of folk melodies are layered in different tonalities, the latter a theatrical work combining folk elements, liturgical

texts and the evocative sounds of the flute-like *fiscalettu*. Works from the 1980s such as *Afterimages*, while forceful and dynamic, retain this newer lyrical voice but no longer rely as heavily on folk materials. His later style is most clearly reflected in the symphonic cycle *Le quattro stagione* (begun in 1985), a series of large-scale works combining the emotional language of his heritage with a mastery of formal compositional elements.

WORKS
(*selective list*)

Dramatic and orch: Profiles, 1973; Music for Chambers, 1974; Odefonia, 1976; Naked Masks (3 Frescoes from a Dream) (ballet), 1980; The Last Unicorn (ballet), 1981; Afterimages, 1982; Vc Conc., 1988; Arie Mutate, 1990; Musicali III 'Autunno', 1992–4 [from Le quattro stagione]; Musicali I 'Primavera', 1997– [from Le quattro stagione]

Choral: The Light Cant. (W. Whitman, R. Frost, E. Dickinson, E. Pound, Consoli and others), S/Mez, 2-pt children's chorus, nar, orch, 1986; Greek Lyrics (trans. S. Quasimodo), S, SATB, pf, str ens/str soli, 1988; Musicali II 'Estate', female chorus, orch, 1985–6 [from Le quattro stagione]; Musicali IV 'Inverno', SATB, orch, 1990–92 [from Le quattro stagione]; other works for SATB

Solo vocal (with ens): Equinox I (W. Suiha, trans. G. Bownas and A. Thwaite), S, fl, vc, 4 perc, cel, pf, 1967; Equinox II (M. Shuoshi, trans. Bownas and Thwaite), S, fl, cl, vn, vc, 5 perc, gui, cel, pf, 1968; Isonic (Consoli), S, fl, 2 perc, 2 pf, 1970; Canti trinacriani, Bar, fl + pic, hp, str, perc, tape, 1975; 3 canzoni (Consoli), S/Mez, fl, vc, 1976; Vuci siculani (Consoli), Mez, fl/s rec, cl, gui, str qt, 1979; Fantasia Celeste (Dante), S, fl, cl, vn, vc, perc, pf, 1983; 6 Ancient Greek Lyrics (trans. Quasimodo), S/Mez, fl, vc, pf, 1984

Solo vocal (with pf): 2 Accounts of Childhood (Consoli), S/Mez, pf, 1964; Apodoses (D. Randall), Bar, pf, 1966; Eyes of the Peacock (M. Peacock), S, pf, 1987; 5 canti (Quasimodo), Bar, pf, 1995

Chbr and solo inst: Pezzo, pf, 1969; Interactions I, fl, ob, cl, bn, tpt, trbn, timp, 1970; Interactions, 1971: II, fl, hp, III, vn, vc, pf, IV 'The Aftermath', hn, tpt, trbn, db, perc; Interactions V 'The Consequence', fl, str qt, 1972; Ellipsonics, 1–4 insts, opt. slides, lights, mimes/dancers, 1974 [graphic score]; Music for Chambers, 3 groups (hn, tpt, trbn, db, perc), (fl, str), (cl, hp), 1974; Sciuri novi, fl, 1974; Sciuri novi II, (db, tape)/2 db, 1975; Memorie Pie, pf, 1976; 3 fiori musicali, fl, gui, 1978; Orpheus's Meditation, gui, 1981; Saxolodie, a sax, pf, 1981; Str Qt, 1983; Reflections, cl, a sax, trbn, db, perc, 1986; Str Qt II, 1990; Games for 2, fl/cl, bn, 1994; Games for 3, fl/cl, bn, hn, 1994; Di.ver.ti.mento (Games for 4), cl/fl, a sax/cl, hn, trbn, 1995; Varie azione, vn, pf, 1995; Pensieri sospesi, fl, cl, pf, str trio, 1997–8; Varie azione II, cl, pf, 1998; Varie azione III, vn, hn, pf, 1999

Consonance. Acoustically, the sympathetic vibration of sound waves of different frequencies related as the ratios of small whole numbers (*see* INTERVAL); psychologically, a harmonious sounding together of two or more notes, that is with an 'absence of roughness', 'relief of tonal tension' or the like. DISSONANCE is then the antonym to consonance with corresponding criteria of 'roughness' or 'tonal tension', and the consonance–dissonance dimension admits of degrees of relative consonance based on either criterion. The 'roughness' criterion, however, implies a psychoacoustic judgment, whereas the notion of 'relief of tonal tension' depends upon a familiarity with the 'language' of Western tonal harmony. There is a further psychological use of the term to denote aesthetic preferences, the criterion generally used being 'pleasantness' or 'unpleasantness'.

1. History. 2. Psychoacoustic factors.

1. HISTORY. The association of consonance with simple ratios goes back at least to the Pythagoreans of the 5th century BCE, who used the term 'symphonies' for intervals produced by string lengths in the ratios formed from numbers between 1 and 4. These comprised the octave (2:1), the 5th (3:2), the octave-plus-5th (3:1), the 4th (4:3) and the double octave (4:1). Plato (*Timaeus*, 35*b*–36*b*) constructed the world-soul by harmonizing various ingredients by means of these consonances, and he believed that the planets produced them as they moved in their silent orbits. Aristoxenus dissociated the auditory phenomenon of consonance from numbers and recognized as consonant any interval (besides those named above) produced by adding one or more octaves to a Pythagorean consonance. Though critical of Aristoxenus's purely sensory approach, Ptolemy retained these compounds in his new classification (*Harmonics*, i, 7), which embraced homophonic intervals (the octave and its duplicates), symphonic (the 5th and 4th and their combinations with the homophonic), emmelic (intervals smaller than the 4th that are used in melody) and ekmelic (intervals not admitted into melody). Boethius, following the Pythagorean Nicomachus, returned to the set produced by the ratios using numbers 1 to 4 (*De institutione musica*, i, 7), but he also reported (v, 9) Ptolemy's opinion that the octave-plus-4th was a consonance.

Theorists of the early Middle Ages were content to remain faithful to the Boethian tradition, since it did not seriously conflict with the practice of organum. Johannes de Garlandia in the 13th century, however, saw that practising musicians recognized different distinctions. He proposed threefold classifications of consonances and dissonances (*De mensurabili musica*, *CoussemakerS*, i, 104*b*; ed. E. Reimer, 1972, chap.9, p.67). Consonances were perfect (unison and octave), imperfect (major and minor 3rds) or intermediate (*mediae*; 4th and 5th). Dissonances were imperfect (major 6th, minor 7th), intermediate (major 2nd, minor 6th) or perfect (minor 2nd, tritone and major 7th). He was followed by, among others, Anonymus 4 (*CoussemakerS*, i, 358*b*), who noted that in the west of England 3rds were thought to be the best consonances. The minor 6th was admitted among the consonances in the anonymous 14th-century *Ars contrapunctus secundum Phillippum de Vitriaco* (*CoussemakerS*, iii, 27), and both the minor and major 6ths in the anonymous *Ars discantus secundum Johannem de Muris* (*CoussemakerS*, iii, 60, 70), while the 4ths were rejected by them.

Walter Odington (*Summa de speculatione musicae*; CSM, xiv, 75, early 14th century) first associated, albeit tentatively, major and minor 3rds with superparticular ratios (5:4 and 6:5) rather than with those of the Pythagorean tuning (81:64 and 32:27), but Ramis de Pareia (*Musica practica*, 1482) was the first theorist to divide the monochord in such a way as to produce these tunings for the imperfect consonances. Gaffurius (*De harmonia*, 1518, i, 3) still regarded the imperfect consonances as irrational, because he recognized only the Pythagorean tuning. Zarlino (*Le istitutioni harmoniche*, 1558, i, 14), by extending the Pythagorean inner sanctum to the number 6 (*senario*), was able to admit the ratios 5:4, 6:5 and 5:3 but had to rationalize the minor 6th, 8:5, as a composite interval made up of a perfect 4th and a minor 3rd.

Giovanni Battista Benedetti (*Diversarum speculationum mathematicarum et physicorum liber*, 1585) proposed that the concordance of intervals depended on the coincidence of periods of vibration; for example in a

12th every three vibrations of the shorter string meet one of the longer string. He showed that an index of consonance could be derived by multiplying the terms of the ratios, putting the major 6th (5:3, or 15) ahead of the major and minor 3rds (5:4, or 20, and 6:5, or 30). Vincenzo Galilei (*Discorso intorno all'opere di Messer Gioseffo Zarlino*, 1589, pp.92–3) opposed any numerical limits and denied that there was a natural order of sonorous numbers, insisting that all intervals were equally natural and that theoretically there was an infinity of consonances. Descartes took a similarly empirical position in three letters to Mersenne (18 December 1629, January 1630, 13 January 1631), positing two criteria for distinguishing consonances, simplicity of ratio and pleasingness, the 4th being simpler while the 3rds are more pleasing. This separation of the subjective and objective qualities of intervals has characterized modern thought since that time.

2. PSYCHOACOUSTIC FACTORS. 'Sensory consonance' refers to the immediate perceptual impression of a sound as being pleasant or unpleasant; it may be judged for sounds presented in isolation (without a musical context) and by people without musical training. 'Musical consonance' is related to judgments of the pleasantness or unpleasantness of sounds presented in a musical context; it depends strongly on musical experience and training, as well as on sensory consonance. These two aspects of consonance are difficult to separate, and in many situations judgments of consonance depend on an interaction of sensory processes and musical experience.

Historically, some theorists have argued that the basis of perceived consonance is physiological or sensory (Helmholtz, 1863), while others have attributed it to the learning of relatively arbitrary cultural patterns (Lundin, 1947). However, one should not regard these theories as mutually exclusive. The relative importance of sensory factors and learning in a particular musical culture will depend on the types of sound being presented, on the instructions given and on the musical experience of the listeners. Psychoacoustic studies have usually emphasized sensory consonance, and tried to explain it in terms of the physical nature of the sounds and the way the sounds are analysed in the peripheral auditory system.

An interval that plays an important role in all scale systems is the octave, in which the frequency of the higher note is double that of the lower one. Consequently, two complete cycles of the higher note occur for each cycle of the lower note. Sensory theories of consonance are based on this fact, and on the fact that other common musical intervals – at least in Western, Indian, Chinese and Arab-Persian music (see Burns and Ward, 1982) – correspond to relatively simple ratios of frequencies (e.g. perfect 5th, 3:2; perfect 4th, 4:3; major 3rd, 5:4). Generally, when pairs of tones are played together, intervals giving simple ratios are heard as consonant, while intervals with complex ratios (such as minor 2nd, 16:15) are heard as dissonant. As a rough rule of thumb, ratios involving integers greater than 6 are heard as dissonant, while intervals involving ratios less than 6 are heard as consonant.

Sensory theories offer two (not mutually exclusive) explanations for this preference for simple ratios. The first is connected with the fact that when two sinusoids (pure tones) with similar frequencies are presented together, the total sound fluctuates in amplitude, an effect called 'beats'. The beats occur as the tones move alternately in phase (the peaks in the two tones coinciding) and out of phase (the peaks in one coinciding with the dips in the other). Beats occur at a rate equal to the difference in frequency between two sinusoidal tones, and in the case of complex tones they also occur between the harmonics (overtones). When two complex tones have fundamental frequencies in a simple ratio, such as 2:1, the harmonics of the upper tone always coincide in frequency with harmonics of the lower tone. Hence, no beats are audible. The more the fundamental frequencies depart from a simple ratio, the greater will be the tendency for beats between the harmonics. Intervals may be preferred that minimize audible beats between harmonics of the two notes (Helmholtz, 1863); this point is expanded later.

The second explanation is connected with the fact that action potentials (nerve impulses, 'firings' or 'spikes') in the auditory nerve tend to be synchronized to a particular phase of the stimulating wave in the cochlea or inner ear (*see* HEARING AND PSYCHOACOUSTICS); for example, the impulses may occur close to the peaks of the wave. As a result, the time intervals between successive nerve impulses are close to integer multiples of the period of the stimulus (the time taken for one complete cycle). Thus, if the stimulus is a sinusoidal tone with a frequency of 500 Hz, then the intervals between successive nerve impulses cluster around values of 2 milliseconds, 4 milliseconds, 6 milliseconds and so on. Pairs of tones presented together may sound consonant when the intervals between nerve impulses share common values for the two tones (Meyer, 1898; Boomsliter and Creel, 1961).

Beats may be perceived differently depending on their rate (Plomp and Levelt, 1965). If two sinusoids are presented simultaneously, and their frequency separation is very small, then the beats are heard as slow fluctuations in loudness, but the sound is still consonant. If the two tones are moved apart in frequency, then the beats become faster and the percept is of rapid loudness fluctuations which are somewhat unpleasant. For still greater frequency separations, the loudness of the sound becomes steady, but the sound has a rough, unpleasant quality. Finally, when the frequency separation is sufficient, two separate tones are heard, and the overall sound appears to be consonant. At this point the tones are resolved or separated in the cochlea, so they no longer interact. Plomp and Levelt found that consonance judgments for pairs of sinusoids are related to the critical bandwidth of the ear, which is itself closely related to the bandwidth of the auditory filters. The tones do not sound dissonant at all if they are separated by more than one critical bandwidth. Maximal dissonance occurs when the tones are separated by about one quarter of the critical bandwidth, which corresponds to a frequency separation of about 3–4% (somewhat less than one semitone).

Plomp and Levelt and others (Kameoka and Kuriyagawa, 1969) have proposed methods for calculating the consonance of complex tones from the consonances of the simple-tone combinations that they contain. Generally, the calculation requires summation of the dissonance of all combinations of neighbouring harmonics (or partials in the case of non-harmonic complex tones, such as those produced by gongs or bells). The consonance is then inversely related to the total dissonance calculated in this way. The results of the calculations correspond reasonably

well with subjective judgments. According to this theory, two simultaneous harmonic complex tones having fundamentals with simple ratios sound consonant because the lower harmonics of the two tones are either widely separated in frequency or coincide. The lower harmonics are usually the more important in determining the overall impression of consonance, because, for most musical instruments, they are more intense than the higher harmonics. If the frequency ratio is less simple (if the ratio cannot be expressed by integers less than about 6), then there will be a number of harmonics from the two tones that differ only a little in frequency, and these will give rise to beats and to dissonance.

Explanations based on beats cannot explain all aspects of the perception of consonance. For example, beats do not occur between successive notes, yet a certain amount of dissonance can be experienced for such notes. Also, beats do not occur when the two notes of an interval are presented one to each ear, yet some dissonance may be experienced. Both of these effects might be the result of learning. A given dissonant interval will have become familiar under conditions where the tones are presented simultaneously to the same ear. Hence that interval is automatically associated with a sensation of dissonance, and this sensation may persist when the tones are presented sequentially or to opposite ears.

The second sensory explanation of the preference for simple ratios – attributing consonance to the coincidence of neural firing over a period of time – was put forward by Meyer (1898), and has since been supported by Boomsliter and Creel (1961), among others. Boomsliter and Creel emphasized that there is no sensation of pitch when the sounds are very short. Generally, periodic sounds containing fewer than about ten cycles appear click-like rather than tone-like, and the tonality progressively increases as the duration increases (Doughty and Garner, 1948; Moore, 1973). Boomsliter and Creel's 'long pattern hypothesis of harmony and hearing' arose from this fact. They argued that both pitch and the consonance between notes require the synchronization of neural firing to individual cycles of the sounds, and that the synchronization needs to persist for a certain time for it to be analysed. Similar arguments have been advanced more recently to explain the perception of pitches based on the temporal synchrony of neural firing to the stimulus waveform (Plack and Carlyon, 1995; Moore and Sek, 1996).

An explanation in terms of the synchrony of neural impulses to individual cycles of the sounds is supported by the observation that both our sense of musical pitch and our ability to make octave matches largely disappear above 5 kHz (Ward, 1954; Attneave and Olson, 1971), the frequency at which neural synchrony no longer appears to operate (Palmer and Russell, 1986). Furthermore, the highest note (fundamental) for instruments in the orchestra lies just below 5 kHz. One could argue from this that the disappearance of musical pitch at high frequencies is a result of a lack of exposure to tones at these frequencies. However, notes produced by musical instruments do contain harmonics above 5 kHz, so that if the learning of associations between harmonics were the only factor involved, there would be no reason for the change at 5 kHz.

It is of interest that the equal-temperament scale in general use today does not consist of notes in exact simple ratios. This might appear to undermine sensory theories based on either beats or neural synchrony. However, the deviations from a simple ratio scale are small. For example, the interval of a perfect 5th corresponds to a frequency ratio of 3:2; on the equal-temperament scale the ratio is 2.9966:2. This deviation may produce a small increase in beating between the upper harmonics of complex tones, but the effect is not very noticeable.

A different explanation of the preference for simple ratios between the frequencies of musical tones is that humans learn about octave relationships and other musical intervals by exposure to harmonic complex sounds (usually speech sounds) from the earliest moments in life. For example, the first two harmonics in a periodic sound have a frequency ratio 2:1, the 2nd and 3rd have a ratio 3:2, the 3rd and 4th 4:3, and so on. Thus by exposure to these sounds we learn to associate harmonics with particular frequency ratios. Terhardt (1974) suggested that such a learning process could account for the perception of the pitch of complex sounds, and especially the perception of the pitch of tones with 'missing fundamentals' (*see* HEARING AND PSYCHOACOUSTICS). Judgments of similarity and of consonance or dissonance may depend upon a similar learning process (Terhardt, 1974); we learn which musical intervals 'belong' together by learning the intervals between the lower harmonics in complex tones. Terhardt referred to this as 'harmony' and distinguished it from sensory consonance.

While simple ratios may be preferable for simultaneously presented tones, it is not clear whether this is the case for tones presented successively. A number of experiments investigating preferred notes in performances on stringed instruments of various kinds have shown that there is no simple answer. Some workers have found preferences for simple ratios, while others have found that the preferred scale corresponds fairly closely to equal temperament, except that notes higher than the tonic or keynote tend to be sharpened relative to that note. Musicians were asked to play familiar tunes on a monochord, a one-stringed instrument with continuously variable tuning; while subjects consistently chose the same tuning for a given note within a given tune, they chose different tunings, for what is ostensibly the same note, in different melodies and in different parts of the same melody (Boomsliter and Creel, 1963). However, the chosen patterns formed a structure of small whole-number ratios to the tonic and to additional reference notes linked by small whole-number ratios to the tonic. Thus within small groups of notes simple ratios are preferred, although the 'reference' point may vary as the melody proceeds. Others have concluded, in contrast, that 'there is no evidence . . . that suggests that the performers tend to play intervals corresponding to exact small-integer ratios, . . . for either melodic or harmonic situations' (Burns and Ward, 1982, p.259).

There have been few cross-cultural studies of the perception of consonance. Consequently this makes it difficult to assess the relative importance of learning and of innate sensory/perceptual processes; moreover, few cultures remain that are accessible to experimenters but unaffected by Western music. One cross-cultural study found no meaningful differences in preferences for musical intervals between American and Japanese students (Butler and Dalston, 1968). However, aesthetic preferences seem to be distinguishable from psychoacoustic judgments.

Consistent results across listeners for judgments of 'roughness', have been reported (Taylor, 1965); however, the judgments became very inconsistent when the criterion was changed to 'pleasantness'. A factor-analytic study of the determinants of consonance judgments yielded two psychoacoustic factors, 'pitch' and 'fusion', and one aesthetic or 'evaluative' one (van de Geer, Levelt and Plomp, 1962).

Some studies have shown that preferences for musical intervals change with age, at least among schoolchildren. One found that British children under nine years of age did not show distinct preferences for tones with simple frequency ratios (as compared to complex ratios), whereas children over 12 did (Valentine, 1913). Such changes may reflect the development of sensory and perceptual skills, or they may reflect increasing familiarity with the 'grammar' of the local musical idiom and a development of concepts like the resolution of tension in music. How much the perception of consonance and dissonance is due to basic sensory and perceptual factors and how much to learnt ones remains unresolved.

CLAUDE V. PALISCA (1), BRIAN C. J. MOORE (2)

Consoni, Carlo Donato. *See* COSSONI, CARLO DONATO.

Consoni, Don **Giovanni Battista** (*b* Bologna, 1706; *d* Bologna, after 1765). Italian composer and organist. A priest, he was the son of Girolamo Consoni, organist and composer, and elder brother of Giuseppe Antonio Consoni. He began studies with G.B. Martini in 1735 and was admitted in 1758 with his brother to the Accademia Filarmonica of Bologna. According to Fétis, he had a considerable reputation as an organist. His extant works, all in the Bologna Conservatory library, include 25 fugues with sacred texts for three or four voices and continuo, 27 psalms, four mass movements, three *Magnificat* settings, two hymns, a litany and antiphons. This library also has the counterpoint exercises from his study with Martini and his test pieces for the Accademia. (*FétisB*; *EitnerQ*; *SchmidlD*)

MILTON SUTTER

Consoni, Don **Giuseppe Antonio** (*b* Bologna, *c*1710; *d* Bologna, 7 March 1765). Italian composer. A priest, he was the son of Girolamo Consoni, an organist and composer, and younger brother of Giovanni Battista Consoni. He became a pupil of G.B. Martini in 1740 and was admitted in 1758 with his elder brother to the Accademia Filarmonica of Bologna; he was elected *principe* early in 1765 but died soon afterwards. His extant works, all in the Bologna Conservatory library, include 23 fugues with sacred texts for three or four voices and continuo, eight psalms, two hymns, a mass for unison chorus and continuo and five mass movements. This library also has the counterpoint exercises from his study with Martini and his test pieces for the Accademia. (*EitnerQ*; *SchmidlD*)

MILTON SUTTER

Consonium. A term mentioned by Francesco da Barberino as the text for a *caribus*, a *nota* or a *stampita*; *see* LAI, §1(vii).

Consort. A small instrumental ensemble for playing music composed before about 1700. The meaning is frequently extended to cover ensembles of voices with or without instrumental accompaniment, and the word is also applied to the music itself. During the early period of its use (from about 1575 to about 1700) the term also had a variety of meanings which often differ from those usually understood today.

1. Relationship with the Italian *concerto* and the French *conert*. 2. Mixed consorts. 3. 'Broken music'. 4. Instrumentation.

1. Relationship with the Italian 'concerto' and the French 'concert'. The musical term 'consort' appears to have originated as a false representation of the existing Italian 'concerto', which in the early 16th century denoted simply an ensemble of voices or instruments. It is not known how the English term acquired its early implication of a mixed group of instruments, but by the early 17th century this specialized use was less common than the general one as defined in John Bullokar's *English Expositor* (London, 1616/*R*): 'A company: or a company of Musitions together'. The French 'concert' seems to have had a similar meaning in the early 17th century, for example in the section of Mersenne's *Harmonie universelle* (1636–7) dealing with 'Violes dans les Concerts'. In Cotgrave's *Dictionarie of the French and English Tongues* (London, 1611/*R*) 'concert de musique' is equated with 'a consort of musicke'.

The Italian term, however, was itself changing its meaning at the end of the 16th century. Boyden explained how 'concerto' came to be applied alongside its older sense in an etymologically more accurate way. This was to describe new styles which involved solo-like parts and 'competing' choirs and groups of instruments. An example is Monteverdi's heading 'Concerto' in his *Settimo libro di madrigali* (1619), a usage echoed in Walter Porter's *Madrigales and Ayres* (1632), modelled on Monteverdi's publication, whose title-page refers to 'Toccatos, Sinfonias and Rittornellos ... After the manner of Consort Musique'. 'Concerto' was also used in Italy from the late 16th century in the sense of a musical entertainment in which a number of performers took part. It was presumably such an event that Fynes Moryson had in mind when he wrote in his unpublished *Itinerary* (*c*1619) concerning Italy: 'And in all Churches upon all Sondayes and festifall dayes they have consortes of excelent musicke, both lowde and still Instruments and voyces'.

Both 'concerto' and 'concert' were used increasingly in the 17th century as titles for collections of instrumental ensemble music. In England the title 'Consort' was similarly used by the 1650s, for example in William Lawes's *Royal Consort* and Locke's *Consort of Four Parts*. It was rarely used for individual pieces, although in the plural it was treated as a collective expression by many authors, including Christopher Simpson in his *Compendium of Practical Musick* (1667):

> You need not seek Outlandish Authors, especially for Instrumental Musick; no Nation (on my opinion) being equal to the English in that way; as well for their excellent, as their various and numerous Consorts, of 3, 4, 5, and 6 Parts, made properly for Instruments; of all which ... Fancies are the Chief.

2. Mixed consorts. The majority of 16th-century music that would now be called 'consort music' was seldom referred to at the time as such. Indeed, the earliest recorded example of the English word 'consort' in a musical sense is in George Gascoigne's description of a spectacle presented to Queen Elizabeth at Kenilworth in July 1575 (*The Princelye Pleasures*, London, 1576, lost; repr. in *The Whole Woorks*, London, 1587): 'From thence her Majestie passing yet further on the brydge, Protheus appeared, sitting on a Dolphyns backe ... With in the which Dolphyn a Consort of Musicke was secretely placed, the which sounded, and Protheus clearing his voyce, sang'. Another account of the same event by Robert Laneham describes this ensemble as 'compoounded of six severall instruments' (*A Letter*, London, ?1575/*R*). There is evidence to suggest that during the late 16th century the word 'consort' was applied primarily to groups of diverse instruments coming from different families, although more general uses of the word may also be found.

The classic grouping together of unlike instruments in England at the time consisted of the six instruments which, according to an anonymous chronicler (*The Honourable Entertainement ... at Elvetham*, London, 1591), entertained the queen at the Earl of Hertford's Hampshire estate of Elvetham: 'After this speech, the Fairy Quene and her maides daunced about the garland, singing a song of sixe partes, with the musicke of an exquisite consort, wherein was the Lute, Bandora, Base-Violl, Citterne, Treble-violl, and Flute'. It was for this combination that Morley's *Consort Lessons* (1599, 2/1611) and Rosseter's *Lessons for Consort* (1609) were written. The use of the word 'consort' in these titles seems to be significant, since it occurs every time this instrumental grouping is involved. William Leighton's *Teares or Lamentacions* (1614), for example, includes a section of four-part songs accompanied by the same group of six instruments. The list of contents in this publication clearly distinguishes between the accompanied 'consort songs' and the unaccompanied '4 Parts for Voyces' and 'Songs of 5. Parts for Voyces'. This appears to be the only known contemporary example of the term 'consort song'. Praetorius wrote enthusiastically of the 'Englisch Consort' in the third volume of his *Syntagma musicum* (Wolfenbüttel, 1618, 2/1619/*R*), and showed that it could be made up of a great variety of different instruments, not just those specified above. His descriptions testify to the fame of such ensembles on the Continent in the early 17th century. This is supported by other literary and archival references, and by Dutch and German pictures showing characteristically English combinations of instruments being played together (see illustration).

A mixed ensemble is now often referred to as a 'broken consort', but this expression is of doubtful authenticity; there are no recorded examples of its use in Elizabethan times, and it is questionable whether it was ever used specifically to denote a consort of unlike instruments. The Lord Chancellor's records for 1660 show that there was in King Charles II's 'private Musick' a group known as 'the Broken Consort' which may well have given its name to Matthew Locke's two sets of compositions called *The Broken Consort* in a manuscript bearing the general title *Compositions for Broken, and whole Consorts*. The meaning of 'broken consort' here is not entirely clear. Other references in the 17th century are extremely rare, but seem to signify disorder rather than a mixed group of instruments. 'Whole consort' is also seldom encountered and tends to denote completeness rather than homogeneity. Comparison may be made with the expression 'full consort' found from time to time in Elizabethan literature, for example in a passage from Sidney's *Lady of May* which tells of Espilus singing to the accompaniment of his fellow shepherds' recorders, and Therion's foresters playing their cornetts; later 'the shepheards and forresters made a full consort of their cornets and recorders'. The same sense was probably meant when the five recorders in the custody of the Norwich waits in 1584–5 were described as 'beeying a Whoall noyse'.

3. 'Broken music'. Some confusion has arisen between the expression 'broken consort' and a quite different one,

English consort of lute, bandora, violin, flute and bass viol: detail from 'Fête champêtre', engraving by Nicolaes de Bruyn after a lost painting (c1601) by David Vinckboons

'broken music', which occurs several times in Elizabethan and Jacobean literature. The latter term appears to be closely associated with music for mixed consort, as may be seen in Thomas Churchyard's description of an entertainment before Queen Elizabeth at Norwich in 1578 (*A Discourse of the Queenes Majesties Entertainment*, London, ?1579). The device featured a cave in which was 'A noble noyse of Musicke of al kind of instruments, severally to be sounded and played upon; and at one time they should be sounded all togither, that mighte serve for a consorte of broken Musicke'. Nearly 50 years later in *Sylva sylvarum* (1627) Francis Bacon equated 'broken music' with 'consort music' in a discussion about the blending together of different instruments:

In that Musicke, which we call Broken musicke, or Consort Musicke; Some Consorts of Instruments are sweeter than others; (a Thing not sufficiently yet observed:) As the Irish Harpe and Base Viall agree well; the Recorder and Stringed Musick agree well: Organs and the Voice agree well; etc. But the Virginalls and the Lute; Or the Welch-Harpe, and Irish-Harpe; Or the Voice and Pipes alone, agree not so well.

Other examples testify to the usefulness of 'broken music' for such functions as courtly masks and the accompaniment of eating. Perhaps the best known instances of the term occur in Shakespeare's plays (*Henry V*, *As you Like it*, *Troilus and Cressida*), but unfortunately they can throw little light on its meaning, being used merely for the value of 'broken' as currency for making puns.

It is usually assumed in the light of Bacon's discussion of 'broken music' that 'broken' refers to the breaking up of 'whole' sets of instruments into mixtures of instruments from different families, but this need not be the case. The term is not mentioned in mixed consort publications or manuscripts, or in detailed descriptions of mixed consorts such as those quoted above. Bacon was not defining the term and there may be other reasons why the music of such consorts came to be known as 'broken music'. By far the most common Elizabethan connotation of 'broken' or 'break' in a musical context is that of division, the 'breaking' of long notes into smaller ones. Morley consistently used the word in this sense in his *Plaine and Easie Introduction to Practicall Musicke* (1597/*R*), for example: 'When they did sing upon their plainsongs, he who sung the ground ... sometimes would breake some notes in division, which they did for the more formall comming to their closes'. There are numerous other examples and later in the 17th century the word retained the same meaning. Christopher Simpson, for example, defined 'division' in *The Division-Viol* (2/1665/*R*) as 'the Breaking, either of the Bass, or of any higher Part'. An echo of this use is perhaps to be found in the term 'broken chord', although the *Oxford English Dictionary* records no examples before 1879. Possibly 'broken music' implies, in the early stages of its use at any rate, music making a special feature of division. Rapid virtuoso passage-work is found in almost every example of the repertory for mixed consort. By the turn of the century 'broken music' in this sense may have become so closely connected with 'consort music' that the two were regarded as synonymous even if there was no rapid division.

4. INSTRUMENTATION. The sources of English mixed consort music are unusual in that they specify with some precision which instruments are involved. Sources of other types of ensemble music normally give no such information, although they sometimes offer a broad choice of instruments. A rigid choice of performing medium is alien to 17th-century and earlier music, but complete flexibility, uninformed by historical and practical considerations, may equally lead to performances far removed from the spirit in which the music was written. The function of the music, rather than the music itself, tended to govern its instrumentation, an important factor being the nature of the occasion on which the music was played. At the English Jesuit college at Saint Omer in France, for example, the music of viols was associated in the early 17th century with the training of young musicians; mixed consort music was effective for the reception of guests and persons of distinction, while the music of wind instruments such as the 'hautbois' and the 'recorders' was suitable for the reception of people of high rank. In the theatre, where consort music was often played, instrumentation would often be determined by

the symbolic associations of particular instruments. Strings, whether viols or violins, represented harmony, unity or agreement; oboes had magical associations and were often called for in connection with evil portents; the soft sound of flutes or recorders, sometimes referred to as 'still music', tended to symbolize death.

The social position of the players was also an important consideration in determining instrumentation. The instrumental resources of musical amateurs were different from those of professionals, and this is perhaps reflected in the title-pages of publications like Holborne's *Pavans, Galliards, Almains, and other short Aeirs ... for Viols, Violins, or other Musicall Winde Instruments* (1599). Professional musicians would probably use mainly violins and wind instruments according to the occasion, amateurs would use viols. During the 17th century the role of amateur instrumentalists became much more important than hitherto in the performance of consort music, and Henry Peacham in *The Compleat Gentleman* (London, 1622) makes clear the suitability of the viol for this purpose: 'I desire no more in you then to sing your part sure, and at the first sight, withall, to play the same upon your Violl, or the exercise of the Lute, privately to your selfe'. Consequently, the vast majority of Jacobean consort compositions for domestic consumption tend to adopt a style idiomatic to the viols, although particular instruments are not normally specified. For an illustration of a consort of viols *see* MASQUE, fig.1.

WARWICK EDWARDS

Consort anthem. A late 16th- and early 17th-century anthem scored for instrumental ensemble and voices. The term has recently been introduced to distinguish anthems that appear in secular sources with a 'consort' accompaniment (as in the Myriell Partbooks, *GB-Lbl* Add.29372–7) from those in choir partbooks written for organ and voices. No hard and fast distinctions can be made, though, between the liturgical verse anthem for organ and voices and the consort anthem, for many of the extant consort anthems (including most of those by Gibbons) are also to be found in organ versions. The consort anthem sources do not define the nature of the accompanying instruments, but some published collections intended primarily for domestic use, including consort anthems, bear the legend 'apt for voices or viols'. The engagement of cornett and sackbut players in the Chapel Royal and some choral foundations in the earlier 17th century may suggest church performance with wind instruments on occasion. *See* ANTHEM, §I, 3, and CONSORT SONG.

PETER LE HURAY/JOHN HARPER

Consort of Musicke. British ensemble. Founded in 1969 by the lutenists Anthony Rooley and James Tyler, it specializes in the performance of Renaissance and Baroque vocal music. The ensemble's membership has included a varied cast of singers and instrumentalists, with Rooley as sole director since 1972. Since its inception the core of the ensemble has consisted of Rooley, Emma Kirkby and David Thomas. The Consort of Musicke's repertory is exceptionally wide-ranging, and its extensive discography includes such landmarks as complete surveys of the madrigals of Monteverdi, the vocal works of Dowland, the stage music of Purcell and the Cordiforme Chansonnier. In recent years the ensemble has established its own record label, Musica Oscura, with the aim of intensifying its investigation of lesser-known figures from the Italian and English madrigal and Restoration repertories.

FABRICE FITCH

Consort song. A term coined by Thurston Dart to denote a characteristic English song form of the late 16th and early 17th centuries for solo voice or voices and an obbligato accompaniment for instruments, by implication, a consort of viols. Although confined in contemporary use to a number of songs for four voices in the lutenist tradition accompanied by a standard mixed consort of six instruments (in William Leighton's *Teares or Lamentations*, 1614), the term has generally been accepted because it captures the intergration of the genre's ensemble characteristic and its aesthetic values, and provides a useful parallel to the (equally modern) expression 'lute song'. With the addition of a vocal chorus the form expanded, and its major offshoot was the verse anthem, which may usefully be distinguished from the consort song by its ecclesiastical function, its reduced accompaniment and its frequent use of prose texts (*see* ANTHEM, §I, 3). It should be noted, however, that many verse anthems were originally 'consort anthems' designed for domestic or occasional use and later suited for church by substituting an organ for the viol accompaniment. The musical importance of the consort song rests largely on its adoption and development by Byrd, who regarded it as the standard means of setting vernacular poetry. Historically, it represents the chief manifestation of a sturdy native musical tradition which withstood the onslaught of the italianate madrigal and the English lute ayre, and by a fascinating process of assimilation and expansion emerged triumphant after these forms had enjoyed their brilliant but short-lived ascendancy.

Consort songs first appear in the retrospective manuscript collections of the 1580s, but many of them must date from an earlier time, perhaps as early as 1550. The origins of the form remain obscure. Attempts to link it to the Tenorlied are at best tentative owing to the lack of documentary evidence and to the great differences in style. The instrumentally accompanied solo songs of

France, particularly the *chanson rustique* settings of Antoine de Févin and his contemporaries, may have had some bearing, though probably an indirect one. Indeed, it seems likely that the origins of the consort song owe less to foreign models than to the effect of practical considerations on the flexible performing possibilities of the early Tudor song tradition. The two most important of these practical considerations are the growing popularity of the consort of viols after 1540 when an Italian consort made its appearance at the English court, and the preference after Henry VIII's reign for court entertainments performed exclusively by boys.

The other song form current in England during the infancy of the consort song was the four-part chanson-like partsong that appears, for instance, in the Mulliner Book (*GB-Lbl* Add.30513). Both share an emphasis on the highest voice and a new kind of phrase structure that sets them apart from earlier Tudor songs. It is possible that the consort song first arose from solo performances of these partsongs. A few early four-part consort songs survive, but five-part texture seems to have been standard almost from the inception of the form. When Henry Disle published Richard Edwards's collection of courtly verse in 1576 under the title *The Paradyse of Daynty Devices*, it was probably consort settings he had heard that led him to advertise the contents as 'aptly made to be set to any song in 5 partes, or song to instrument(s)'. This verse anthology provides the texts for what appear to be among the very earliest consort songs, most of them simple strophic settings, with one syllable to a note, and no repetitions other than the customary one involving the final line or couplet of each stanza. Sometimes they are enlivened by antiphonal effects between voice and viols, as in the anonymous setting of Hunnis's *In terrors trapp'd*. A further development, found in Robert Parsons's *Enforced by love and fear* and Strogers's *Mistrust not truth*, is the half-canonic dialogue that develops between treble and solo voice when the former takes the highest position in the ensemble, a technique that Byrd continued to exploit.

Another kind of consort song in the early repertory (which is almost all to be found in MB, xxii, 1967) is the lament, or 'death song' as Peter Warlock appropriately called it. Many examples appear to have come from the Senecan plays performed by choirboy companies at court and elsewhere, especially in the earlier part of Elizabeth I's reign. These songs are not only lugubrious but also highly stylized; indeed, they are simply a musical extension of the set speeches in which the plays abound, usually beginning with an appeal to the divine powers, and ending with reiterated statements about the character's impending demise in a manner that Shakespeare ridiculed in the Pyramus and Thisbe episode of *A Midsummer Night's Dream*. The songs are through-composed, but instead of building them on imitation between voice and instruments, composers generally sought a flexible, self-generating accompaniment, based largely on stock figures passed from one instrument to another and a harmonic style heavily spiced with false relations. This pleasantly decorative but rather discursive idiom is most successful in Richard Farrant's laments, and in the fine anonymous settings of *O Death, rock me asleep* and *Ah, silly poor Joas*.

Byrd's adoption of the consort song, probably in the 1570s after his arrival at court, immediately enhanced its musical stature. On first sight it seems puzzling that the same composer who delighted in the most high-flown rhetorical gestures in some of his motets should at the same time have largely rejected the madrigal in favour of a form that traditionally gave little occasion for musical illustration of the words. Characteristic of all Byrd's consort songs are a strophic setting; the separation of the poetic lines in the music; the syllabic setting of the words, with a melisma on the penultimate syllable of a line in the more serious songs; and the lack of repetition, other than that of the final couplet or the occasional vocative or imperative phrase, such as 'O Lord' or 'Come down'. The vocal melody is sturdy rather than ingratiating, and it matches the solemn iambics of the poetry with a measured alternation of semibreves and minims, or minims and crotchets. There is rarely any predetermined metrical scheme (*Constant Penelope*, a setting of hexameters, is an exception), but instead continual variation on a few patterns mostly involving syncopation as a means of avoiding the obvious. The only satisfactory conclusion to be drawn from Byrd's preference for this sober kind of song is that he pursued it out of a sense of literary propriety: poems to Byrd, as to his contemporary the literary theorist George Puttenham, were not simply rhymed passages of prose but expressive forms shaped by number and proportion, and it is form that takes precedence over content and imagery in Byrd's settings.

While this remains true throughout his career, Byrd nevertheless found increasingly more interesting ways of making the music 'framed to the life of the words' (to quote the title-page of his last song collection, the *Psalms, Songs, and Sonnets* of 1611). The early psalms, those surviving only in manuscript, are little advanced over the work of his predecessors, though some of them make use of a vocal chorus and are therefore among the earliest experiments leading to the verse anthem. Those in the *Psalmes, Sonets and Songs* of 1588, however, are much more rigorous in their use of imitation as a structural principle. It is as though Byrd was chiefly concerned at this stage to raise the musical level of the consort song by means of contrapuntal skill. And it is incidentally the thorough-going imitative technique that made it possible for him in publishing to add words to the instrumental parts and therefore appeal to a wider market. Even the lighter sonnets and pastorals admit some imitation, though here the emphasis is on providing the less serious verse with an appropriate musical counterpart, making use of more obvious musical devices such as rhyming cadences to match rhyming lines. The *Songs of Sundrie Natures* of 1589 contains a smaller proportion of consort songs, but it includes two carols with vocal burden and a fully-fledged consort anthem, *Christ rising*, that became one of Byrd's most popular works in church circles. In the songs written after this time the accompaniment became increasingly flexible, recapturing some of the spirit of the old death songs (which Byrd occasionally parodied outright) but using its new-found freedom to support and elaborate on the text in ways that Byrd's predecessors had simply never considered. This development can be followed in the few printed consort songs of the last period, but it is even more clear in a series of songs, some of them commissioned for family celebrations, found in the manuscripts emanating from the household of a Norfolk gentleman named Edward Paston. Many of these songs are anonymous in their sources, but

bibliographical and stylistic evidence strongly supports their attribution to Byrd.

The style of these magnificent late songs had little or no effect on Byrd's successors, but his example in cultivating the consort song ensured its survival during the period when the Italian madrigal dominated English musical taste. Indeed, several madrigal collections, like Byrd's first two songbooks, contain consort songs disguised by the addition of words to the instrumental parts, and the influence of the style may be discerned in the work of even the most thorough-going madrigalists, as Kerman's study shows. Byrd's example may also have helped to crystallize composers' conception of the consort song as an appropriate manner of setting occasional, serious, spiritual or (most especially) elegiac verse. Yet it continued also to find its place in the theatre for lighter music, as well as in those curious mixtures of quodlibet and comedy known as STREET CRIES. In about 1600, the date when the phrase 'fit for voices or viols' first appeared on the title-page of a madrigal print, there seems to have been renewed interest in consort music, and this in turn led to a growing concern for what might be called the 'verse' idiom. Beginning about the time of Michael East's influential *Third Book* (1610) there is a tendency for consort songs and anthems to turn up in many published collections, including those of Byrd himself (1611), Thomas Ravenscroft (1609, 1611 and 1614), Sir William Leighton (1614), John Amner (1615), Thomas Vautor (1619) and Martin Peerson (1620 and 1630), not to mention the further prints of the prolific East (1618 and 1624). And the 'secular' manuscript sources of the pre-Commonwealth period, as Monson shows, give an even stronger impression of the ascendancy of the consort song and anthem, and the decline of the madrigal.

The growth in popularity of the lute ayre after the appearance of Dowland's *First Book* in 1597 may perhaps be connected with this process (*see* AIR, §2). The four-part 'ayres' could, and must often, have been performed as solos with viol rather than lute accompaniment in the manner implied by Thomas Myriell's copies (in *B-Br* II 4109). Greer has even gone so far as to assert that the serious contrapuntal 'ayre' was an offshoot of the consort song and that some ayres originated as real consort songs. His views pass over the distinction between the four- and five-part textures observed by those contemporary anthologists who made consort arrangements of lutenist songs (e.g. in *GB-Lbl* Add.17786–91 and 37402–6); but a close connection undoubtedly existed between the two forms, and some mutual influence.

The distinguishing features of the Jacobean consort song result from composers' attempts to make some sort of synthesis between the native and the imported forms and styles. Thus the stage songs and other light numbers from the Ravenscroft collections and the Oxford manuscripts (*Lbl* Add.17786–91, 17797 etc.), and the brief pieces of Peerson's first collection, capture the simpler and more ingratiating manner of the lute ayres. On the other hand, the more serious consort songs and anthems of East, John Ward, Ravenscroft and William Simmes (whose *Rise, O my soul* seems indispensable to every anthologist of the period), and those of Peerson's later collection, generally attempt to impose expressive elements from the madrigal upon the traditionally contrapuntal style of the indigenous form. Thus pictorial word-setting, expressive harmony and even contrasts of scoring find their place in these works, which nevertheless keep some of the native idiom's solemnity. The most distinguished upholder of the older tradition is of course Gibbons, whose consort anthems rank next to the songs of Byrd in the repertory. Gibbons was conservative in many respects but he was alive to new possibilities in the handling of the words, and he imparted a quality of his own to the idiom, as can be seen, for instance, in the remarkable welcome song, *Do not repine, fair sun*, composed for the Scottish Progress of 1617, as well as in the better-known sacred pieces.

It needed another set of influences from France and Italy to produce the extended musical forms of the Restoration period, the verse anthem and occasional ode, and it would be dangerous to make excessive claims for the effect of the earlier consort song upon them. Yet the consort anthems of Gibbons and his contemporaries were still being performed in Restoration times and beyond, and there can be little doubt that they played their part in shaping the more grandiose genres of this later age.

PHILIP BRETT

Con spirito. *See* SPIRITOSO.

Constance. *See* KONSTANZ.

Constans [Costinus] **Breuwe** [Breeu, Brawe] [Constans de Languebroek, Constans de Trecht] (*d* 1481). Franco-Flemish singer and composer. He was chaplain in the Burgundian court chapel from December 1442 to 1479, and he also held a prebend 'pro nobili' at Cambrai Cathedral from 5 November 1451 to 17 November 1452 (*F-CA* 1046, f.143*v*–144). In the 1460s he was listed as a member of the confraternity of St Jacques-sur-Coudenberghe at Brussels as 'her Constans de senghere' (see Pinchart). His nephew, Johannes Bouvart 'de Tricht' or 'de Mastricht', was in the Burgundian chapel from 1453 to 1476. (Languebroek, then, may have been north of Maastricht where a Langbroekbeek still exists, although Marix, 1939, suggested it was Langeboeken near Ghent.)

From November 1456 to December 1457 Hayne van Ghizeghem, a young boy and a protégé of the future Charles the Bold, was lodged at the home of Constans. The account books for subsequent years are lost, but Hayne may well have remained there and received his initial musical training from Constans. The two three-part textless pieces in *I-TRmf* 90 (ed. in Marix, 1937) ascribed to 'Constans' are probably secular songs, but it is difficult to see in them details that might be interpreted as influencing known works by Hayne. There is a reference to Constans in Crétin's *Déploration sur le trepas de Jean Ockeghem* (1497) and in a Spanish treatise of the time (*E-E* C III 23).

DAVID FALLOWS

Constant, Franz (*b* Montignies-le-Tilleul, Hainaut, 17 Nov 1910; *d* Le Tignet, France, 13 March 1996). Belgian composer. He started his musical studies at the Charleroi Academy of Music and continued at the Brussels Conservatory, where he obtained a virtuosity prize for piano. He studied composition with Jean Absil and Francis de Bourguignon. In Paris he received advice from Henri Tomasi. Until his retirement in 1976 he was a piano teacher at the academies of Schaerbeek and Uccle, director of the Auderghem Academy of Music and since 1947 taught solfège and later harmony at the Brussels Conservatory. As a pianist he performed numerous works by Belgian contemporaries, and he gave recitals and concerts first as a soloist, and later as part of a piano duo with Jane Pallemaerts. Slowly his career as a pianist gave way to composition. As a composer he was prolific in spite of starting late in life. He was open to all the aesthetic tendencies which influenced the language of modern music, but was in particular an admirer of Bartók and Stravinsky. He developed a contrapuntal style which shows great interest in form, melody and colour.

WORKS
(*selective list*)

Orch: Rhapsodie, op.14, vn, orch, 1962; Tpt Conc., op.12, 1965; Fantasia, op.41, a sax, orch, 1969; Vn Conc. no.1, op.48, 1971; Rhapsodie, op.54, 1973; Visions, op.66, 1974; Concertino, op.69, cl, orch, 1975; Concertino, op.73, vn, str, 1975; Pf Concertino, op.78, 1976; Rhapsodie d'été, wind band, op.88, 1977; Ballade du sud, op.98, 2 pf, orch, 1979; Mouvement rhapsodique, op.93, db, orch, 1980; Préambule, op.100, 1980; Musique, op.102, sax qt, str, 1981; 4 movimenti sinfonici, op.101, 1983; Eventail, op.107, str, 1983; Conc., op.121, wind band, 1987; Vn Conc. no.2, op.147, 1994

DIANA VON VOLBORTH-DANYS

Constant, Marius (*b* Bucharest, 7 Feb 1925). French composer and conductor of Romanian birth. He graduated in piano, harmony and composition from the Bucharest Conservatory in 1943, and was awarded the Enescu prize in 1945. In 1946 he won a French government scholarship which enabled him to move to Paris. There he entered the Conservatoire as a student of Aubin and Messiaen, winning *premiers prix* in composition and analysis (1949). He also studied privately with Boulanger and Honegger, and enrolled in Jean Fournet's conducting class at the Ecole Normale de Musique. In 1952 he joined Schaeffer's Groupe de Recherche de Musique Concrète, and in 1954 co-founded France-Musique which he directed under the auspices of Radio France from 1954 to 1966. He founded the Ars Nova ensemble in 1963 as French radio's official new music ensemble, and began an international career as a conductor of contemporary music. Intended to counteract the relatively narrow aesthetic outlook of the Domaine musicale, Ars Nova performed a broader spectrum of new music, including works by non-serial composers. (Constant himself vigorously eschewed the serial movement of the 1950s and 60s.) His awards include the Koussevitzky Prize (1962), the Marzotto Prize (1968) and the Grand Prix National de la Musique (1969). He was professor of orchestration at the Paris Conservatoire from 1974 to 1988.

The first of several works to include electronic tape, *Le joueur de flûte* (1952), based on the tale of the Pied Piper of Hamelin, won Constant both the Italia Prize (1952) and the Grand Prix du Disque (1956). Choreographed in 1957, it marks the beginning of Constant's long association with ballet. In 1958 he became musical director of Roland Petit's Ballets de Paris and later served as musical director of dance at the Opéra (1973–8). He has composed nine ballets for Petit, including several for companies outside Paris, such as *Paradis perdu* (1966) for London's Royal Ballet, *Septentrion* (1975) for the Ballet de Marseille and *L'ange bleu* (1985), a cabaret pastiche, for the Deutsche Oper, Berlin. He collaborated with Marcel Marceau on a mimed version of *Candide* for the Hamburg Staatsoper (1970).

Despite Constant's early success as a ballet composer, it was his orchestral work *24 préludes*, first performed under Bernstein in 1959, that brought him to widespread

prominence. His continued exploration of unconventional timbral combinations reflects not only his electro-acoustic experimentation but also his stylistic affiliation to the colourism of Ravel and Debussy (as in *Turner*, 1961). His timbral experiments have led him either to focus on particular homogenous groups – as in the aptly titled *Winds* (1968) and *Strings* (1972) – or to explore timbral interplay, as in *Moulins à prières* for two harpsichords and electronic tape (1969). Other works involving unusual instrumental combinations include *Faciebat anno 1973* (1973), a concerto for 24 violins and orchestra, the horn concerto *Choruses and Interludes* (1987), which incorporates a jazz quartet into the orchestral ensemble, a barrel organ concerto (1988), and a concerto for six pianos and orchestra, the *Symphonie concertante* (1994). Both *Winds*, Chants du Maldoror (1962) and *Traits-cadavre exquis* (1969) involve aleatory techniques, the latter allowing free choice of both instrumentation (from two to 20 players) and duration (from two to 20 minutes), while he has also experimented with the spatial division of instrumental forces, as in *Texas Twilight* (1986) and *Pierres-Jewels* (1984).

Of his five operas, *Le souper* (1969) is without orchestra and two are commentaries on existing scores. In *La tragédie de Carmen* (1981) and *Impressions de Pelléas* (1992), both collaborations with Peter Brook, the original Bizet and Debussy scores are substantially reworked and reorchestrated. Recent orchestrations of Berlioz, Satie and Ravel, as well as Constant's music (1992) for Abel Gance's film *Napoléon*, which incorporates Honegger's original score, suggest an increasing fascination with the historical and musical legacy of his adopted French culture. Admitted to the Légion d'Honneur in 1990, Constant was elected to the Institut de France in 1993 to replace Messiaen, and was made a Grand Officier de l'Ordre du Merite in 1995.

WORKS

STAGE

Op and music theatre: Le souper (op, after J. Tardieu), Bar, SATB, 1969; Le jeu de Sainte Agnès (chbr op, after 14th-century Provençal manuscript), 4 S, 3 B, ens 1974; La tragédie de Carmen (op, after G. Bizet) S, Mez, T, Bar, large ens, 1981, collab. P. Brook and J.-C. Carrière; Impressions de Pélléas (chbr op, after C. Debussy and M. Maeterlinck), S, Mez, 2 Bar, B, child's v, 2 pf, perc, 1992, collab. Brook; Teresa (music theatre, 4 tableaux, text P. Bourgeade after Marquis de Sade), Mez, Ct, 2 Bar, B, ens, 1995

Ballet: Le joueur de flûte (ballet, choreog. J. Charrat), orch, tape, 1952; Haut-voltage (ballet, choreog. M. Béjart), orch, tape, 1958, collab. P. Henry; Cyrano de Bergerac (ballet, 2, choreog. R. Petit), orch, 1959; Rain (ballet, choreog. Petit), ens, 1960; Le violon (ballet, choreog. Petit), orch, 1962; Ponant 19 (ballet, choreog. Petit), 19 insts, 1964; Eloge de la folie (ballet, 9 tableaux, choreog. Petit), large ens, 1966; Paradis perdu (ballet, choreog. Petit), large ens, 1966; Candide (mimodrame, after Voltaire, choreog. M. Marceau), hpd, orch, 1970; Septentrion (ballet, choreog. Petit), tape, 1975; Nana (ballet, after E. Zola, choreog. Petit), orch, 1976; L'ange bleu (ballet, 2, after H. Mann, choreog. Petit), C (cabaret v), large ens, 1985

Film scores: Napoléon (dir. A. Gance, after A. Honegger), 1992

OTHER WORKS

Vocal: 5 chants et une vocalise 'Par le feu', S, orch, 1968; 3 poèmes élastiques, SATB, org, 1987; Des droits de l'homme (orat), 5–6 nar, S, SATB, tape, orch, 1989; Chants de retour (orat), Mez, Bar, child's v, SATB, 3 perc, 8 vc, 2 pf, org, 1995

Orch: 24 préludes pour orch, 1959; Turner (3 essais pour orch), 1961; Chants de Maldoror, nar, orch, 1962; Chaconne et march militaire, 1968; Candide, hpd, orch, 1970; Strings, elec gui, str, 1969, arr. hpd, str, 1972; Faciebat anno 1973, 24 vn, orch, 1973; Nana-symphonie, 1976–80; Conc. 'Gli elementi', 2 hn, trbn, str, 1977; Concertante, a sax, orch, 1978; Symphonie pour instruments à vent, 1978; Harpalycée, hp, 1980 (str orch/str qnt), 1980, arr. solo hp, 1980; 103 regards dans l'eau, vn, orch, 1981, arr. vn, ens, 1984; Perpetuo, 1986; Texas Twilight, 4 tpt, str, 1986; Choruses and Interludes, hn, orch, 1987; Conc. pour orgue de barbarie, barrel org, orch, 1988; Cyrano de Bergerac (sym. suite from the ballet), 1988; Konzertstück, ob, orch, 1990; Hämeenlinna [An Imaginary Landscape], str orch (on stage), brass, perc (off stage), 1991; Brevissima sym. 1992; Sym. concertante, 6 pf, orch, 1994

Chbr and solo inst: Trio, ob, cl, bn, 1946; 3 complexes, db, pf, 1951; 3 mouvements, cornet/tpt, pf, 1953; Musique de concert, a sax, ens, 1955; 3 portraits, vc, pf, 1958; Winds, ens, 1968; Moulins à prières, 2 hpd/hpd, tape, 1969, arr. barrel org, 1988; Traits-cadavre exquis, ens (aleatory work, 2–20 players), 1969; Equal, 5 perc, ens, 1970; 14 Stations, perc, ens, 1970; 9 Mars 1971, pic, glock, 1971; Pour flûte et un instrument, fl, any melody inst, 1971; Piano personnage, pf, large ens, 1973; Silètes, hpd, 1973; For Clarinet, cl, 1975; Psyché, 2 pf, 2 perc, 1975; Stress, 2 pf, db, drum kit, brass qnt, perc, 1977; 9 pieces, fl, pf, 1978; Alleluias, tpt, org, 1980; Harpalycée, hp, 1980; D'une élégie slave, gui, 1981; Précis de décomposition, cl, bn, hn, str qt, db, tape, 1982; Recitativo, va, 1983; Pierres-Jewels, 3 vc, 1984; L'inauguration de la maison, wind band, brass band, 1985; Blues-Variations, gui/elec gui, 1990; Die Trennung, str qt, 1990; Phantasma, vn, pf, 1990; L'ange bleu: 4 scènes de cabaret, accdn, 1991; Matines, org, 1992

ORCHESTRATIONS

E. Satie: Messe des pauvres, 13 insts, 1970; C. Debussy: Pelléas et Mélisande-symphonie, orch, 1983; H. Berlioz: L'île inconnue, S/T, small orch, 1984; Les mariés de la Tour Eiffel (from music by G. CAROLINE RAE

Constantin, Louis (*b* Vexin district, nr Paris, *c*1585; *d* Paris, bur. 25 Oct 1657). French violinist and composer. He became one of the 24 violinists in the chamber of Louis XIII on 21 February 1619; in 1655 he passed on this position to his nephew, Antoine Desnoyers. In addition he was one of the governors of the chapel of St Julien-des-Ménétriers from 1620 and from 12 December 1624 *Roy des joueurs d'instruments*, an office which conferred on him the right to levy throughout France the taxes that had to be paid before anyone could enter the profession of instrumentalist; his successor was Guillaume Dumanoir. He was considered one of the great virtuosos of his time and was singled out for praise by Mersenne in his *Harmonie universelle* (Paris, 1636–7). Most of his works, gathered together in the Philidor collection (*F-Pn*), have disappeared: only *La pacifique* (1636), for six instruments, survives there. Six dances by him are in contemporary anthologies (RISM 1646[11] and 1649[7]). One courante for guitar (1649) also survives (*F-Psg*).

CATHERINE MASSIP

Constantine VII Porphyrogennetus [Kōnstantinos Porphyrogennētos] (*b* 905; *d* 959). Byzantine emperor and poet-composer. He was co-emperor from 908 until 945, and thereafter reigned solely until his death. According to Byzantine music manuscripts he was the composer of the 11 *exaposteilaria anastasima* of Sunday ORTHROS and three other *stichēra*. He was also responsible for compiling a *Book of Ceremonies* (which includes some older material); concerned with Byzantine imperial ceremonial, this work provides valuable evidence about performing practice, the organization of the choir and the use of organs at the Byzantine court.

CHRISTIAN TROELSGÅRD

Constantinescu, Paul (*b* Ploieşti, 30 June/30 July 1909; *d* Bucharest, 20 Dec 1963). Romanian composer. He studied at the Bucharest Conservatory (1928–33) with Nicolescu (theory), Castaldi (harmony), Jora (composition) and Cuclin (aesthetics), and then in Vienna (1934–5) with Franz Schmidt, Oscar Kahasta and Joseph Marx. After teaching harmony, counterpoint and composition at the Bucharest Academy of Religious Music (1937–41), he was appointed professor at the School of Military Music, Bucharest (1941–4), and professor of harmony at the Conservatory (1941–63). He was the first Romanian teacher to introduce a study of the harmony of folk music and of Byzantine chant into his courses, having done original research in both fields (working on the latter with the Byzantine scholar Ion Petrescu). The church music tradition also provided a source for his compositional activity, and in particular for his choral works, such as *Patimile şi Invierea Domnului* ('The Passion and Resurrection of Our Lord') and the *Liturghia în stil psaltic*. His music draws on a wide range of other materials, and covers a similar diversity of approach, form and genre; yet Constantinescu managed to establish an individual style, one that served as the foundation for a national school. If Enescu brought a phase of Romanian music to consummate maturity, Constantinescu pointed the way for a new generation. He was awarded the Enescu Prize for composition (1932, 1938), the State Prize (1952) and in 1963 was elected to the Romanian Academy.

Although his language is direct and clear, Constantinescu's music shows a high degree of technical mastery, and many works had to be revised before he was fully satisfied with them. He was particularly fond of variation procedures, using them, with the aid of his harmonic skill, to integrate folksong fragments into his work. Effects of humour or irony are sometimes obtained by the reverse of this method, namely the presentation of an urban folktune in a deliberately disjointed and caricatural form. A brilliant orchestrator, he sometimes mimicked folk instruments or achieved comic effects through a playful use of wind instruments, although rich, warm sounds are more typical. Constantinescu also used the rhythm and the *parlando rubato* declamation of peasant music, and his ballets and orchestral pieces are influenced by folkdance.

WORKS

(*selective list*)

Stage: O noapte furtunoasă [A Stormy Night] (op, I.L. Caragiale), 1934, rev. 1950; Nuntă în Carpaţi [Wedding in the Carpathians] (ballet, F. Capsali and M. Dumitrescu), 1938; Pană Lesnea Rusalim (op, V. Eftimiu), 1955

Film scores: O noapte de pomină [An Unforgettable Night], 1940; O noapte furtunoasă [A Stormy Night], 1942; Drăguş, 1944; Răsună valea [Resounding Valley], 1949; O scrisoare pierdută [A Lost Letter], 1952; Moara cu noroc [The Mill of Luck and Plenty], 1956

Orchestral: Din cătănie [Service Years], 1933; Burlescă, pf, orch, 1937; Sinfonietta, 1937; Sym., 1944, rev. 1955; Olteneasca, 1949; Ciobănaşul [The Shepherd], 1949; Joc din Oaş [Oaş Dance], 1950; Balada haiducească [Outlaw Ballad], vc, orch, 1950; Brîul [Girdle Dance], 1951; Pf Conc., 1952; Huţulca, 1952; Mărănghile, 1953; Sîrba, 1954; Conc., str, 1955; Rapsodie oltenească, 1956; Vn Conc., 1957; Hp Conc., 1960; Simfonia ploieşteană, 1963; Triple Conc., 1964

VIOREL COSMA

Constantinidis, Yannis (*b* Smyrna, 21 Aug 1903; *d* Athens, 17 Jan 1984). Greek composer. He was trained first in Smyrna, and then in Germany, where he studied in Dresden with Mraczek (harmony, 1922) and in Berlin with Juon (harmony, counterpoint and fugue, 1923–6), Weill (orchestration, 1923–6), Rössler (piano) and Ehrenberg (conducting). He was also introduced to 12-note composition by Rufer. In 1931 he settled in Athens, where he turned to writing popular music under the pseudonym Costas Yannidis, which he adopted in order to distinguish himself from Grigoris Constantinidis, a well-known operetta composer of the time. After 30 years of success in the field, he abandoned popular music in 1962: besides

writing and revising a relatively limited number of concert works, he concentrated on his work as a producer of classical music programmes at the Armed Forces Radio (which in 1974 became the second programme of Hellenic Radio and Television).

Constantinidis ranks with Riadis as one of the greatest figures of the National School. His concert music presents a felicitous blend of Eastern and Western elements: Greek folksongs used in their original form (he never invented pseudo-folk melodies) became the cornerstone of all of his art-music compositions, with the exception of the Piano Sonatina (1927), the Tagore songs (1924–80) and the *Six Studies in Greek Rhythms* (1956–8). Rather than subjecting folk melodies to development, he repeats them in subtly transformed contexts, exploring their various harmonic implications or ornamentally varying them. He thus attains a style unmistakably personal and remotely associable with Ravelian impressionism. His contributions (as Yannidis) to operetta and popular song are instantly memorable, with an unmistakably personal charm and depth of feeling. His settings of well-known Greek revue writers, such as Alékos Sakellarios and Christos Yannakopoulos, enjoy a popularity second only to those of Hadjidakis.

WORKS

STAGE

under pseudonym Costas Yannidis, unless otherwise stated

dates are of first performance in Athens

Over 50 stage works; 35 recorded titles, incl. *Yeppe o vounissios* [Yeppe the Mountaineer] (inci, H. Ibsen), 1940; 19 revues, 1932–50, incl. *Anthropoi, anthropoi* [Ye men, ye men] (A. Sakellarios and others), 1948; 7 operettas and musical comedies, 1931–45, incl. I koumbara mas [Our maid of honor] Coperetta, 3, D. Yannoukakis), 1931; o kathodihiyitis tis Mariannas [Marianna's political instructor] (musical satire, D. Evanghelidis), 1945

SONGS

5 tragoudhia tis prosmonis [5 Songs of Expectation] (R. Tagore, trans. Constantinidis), Mez, pf, 1924–80; 5 Love Songs (trad.), Mez, pf, 1930–31; 20 Songs of the Greek People (trad.), Mez, pf, 1937–47; Miroloi (trad.), Mez, pf, 1950

under pseudonym Costas Yannidis

Dos mou dhyo filia ki as einai pséftika [Kiss me twice, even if you don't mean it] (Yannidis), 1934 [from revue Alepou]; Tha xanartheis [You will come back to me] (Sakellarios), 1934; Ti na sou kani to krasi [Wine is no use to me] (Yannoukakis), 1934 [from revue Alepou]; Afiste me na pio [Let me Drink] (Yannidis), 1935; Se lypamae [I am sorry for you] (Kioussis), 1936; Tharto mia nychta me fengari [On a moonlit night I will come] (M. Rigopoulos), 1937; O Yannos k' i Pagona [Yannos and Pagona] (trad.), 1938; Sygnomi sou zito [Forgive me, I beg you] (Sakellarios), 1938

Les ke itan htes [As if it were yesterday] (Sakellarios), 1939; Poso lypamai [How I regret] (Spyropoulos, Papadoukas), 1939; Liga louloudhia [Some Flowers] (Spyropoulos, Papadoukas), 1940; Poté de tha sto po [I'll Never Tell You] (Yannoukakis, Evanghelidis), 1940 [from revue Athina tou 1940]; Etsi in' i zoi [That's Life] (Evanghelidis), 1943 [title song from musical play]; Kalo sou taxidi [Farewell to You] (Savvidis), 1947; Pame san all ote [Let us go, as we once did] (Sakellarios-Yannakopoulos), 1950; Kalo sou taxidi [Farewell] (E. Savvidis), waltz; Htes to vrady oneiréftika [Last night I dreamt] (Yannoukakis); 6 Popular Songs, 1961

OTHER WORKS

Choral: 8 Dodecanesian Songs, 1972; 8 Songs from Asia Minor, 1972

Inst: Sonatina, pf, 1927; Apo ta Dodekanissa, pf, 1943–6; Suite on Dodecanesian Folktunes, vn, pf, 1947; 2 Dodecanesian suites, orch, 1948, 1949; 3 Greek Dances, orch, 1950; Kykladhitikos horos [Dance from the Cyclades], orch, ?1950; 44 Children's Songs (Greek Miniatures), pf, 1950–51; Mik rasiatiki Rapsodina [Asia Minor Rhapsody], orch, 1950–65; 3 Sonatinas, pf, 1952; 8 Dances from Greek Islands, pf, 1954, arr. 2 pf, 1971; 6 Studies in Greek Rhythms, pf, 1956–8; 10 Greek Melodies, wind qnt, 1972

Film scores (under pseudonym Costas Yannidis): I prosfygopoula [The Refugee Girl] (dir. T. Misrahi), 1938; Marina (dir. A. Sakellarios), 1947; Madame Sousou (dir. T. Mouzenidis), 1948; Oi yermanoi xanardhondae [The Germans are Back] (dir. Sakellarios), 1948; Teleftéa apostoli [The Last Mission] (dir. N. Tsiforos), 1949; O methystakas [The Drunkard] (dir. Y. Tzavéllas), 1950; To koritsi tis yitonias [The Girl Next Door] (dir. A. Lambrinos), 1954

Principal publishers: Melody (Athens), Rongwen

Con strepito (It.). *See* STREPITOSO.

Contact microphone. *See* PICKUP.

Contant, Alexis (*b* Montreal, 12 Nov 1858; *d* Montreal, 28 Nov 1918). Canadian composer and organist. He studied organ and piano with S. Fowles and performed in public at 13. Later he accompanied several artists in recital including the violinist Jehin-Prume, who advised him to go to Europe to study. He was essentially self-taught, although he studied briefly under Calixa Lavallée (in Boston) and consulted Guillaume Couture, with whom he differed over matters of style. He was the first important Canadian composer who did not study music in Europe, relying instead on his own study of Bach, Weber, Wagner, Saint-Saëns, Massenet, Franck and especially Gounod. Some of his songs reveal the unmistakable influence of the French songwriters. A very popular teacher, he taught in many schools and colleges as well as giving private lessons at his studio to such notable musicians as Claude Chapagne, Rodolphe Mathieu and Wilfrid Pelletier. He wrote several masses for choir and orchestra, and (exceptionally for turn-of-the-century Canada) most of his almost 100 works were performed during his lifetime, although very few were published. His *Caïn*, the first Canadian oratorio, was given its première performance on 12 November 1905, with a chorus of 250, five soloists and 50 instrumentalists, a remarkable number of performers for Montreal at that time. *Caïn* is in three sections, *La haine*, *Le sang* and *La promesse*, with an overture. According to Gour, 'The work elaborates striking polyphonic contrasts in the manner of Verdi or Berlioz. It contains fugues, canons, grand ensembles in which the orchestra has the most important part and which are complemented by the choral sections'. In 1909 Contant composed a second oratorio, *Les deux âmes*, which he described as a symphonic poem. After reading the manuscript, Damrosch wrote: 'The score shows great powers and skilful work. It should have a hearing'. In *Les deux âmes* the orchestral patterns have become more complex, there is more continuity in the working out of the themes and the work as a whole shows greater maturity than *Caïn*. That same year Contant wrote a symphonic poem, *L'aurore*, in which the influences of Wagner, Gounod and Franck are replaced by more original ideas. Jean Yves Contant wrote: 'In it there are

dissonances and a musical style not unlike that of Sibelius and Strauss'. Alexis Contant was also an initiator and pioneer in chamber music, and his piano trio (1907) is the most frequently revived of his works. In 1914 he began an opera based on Louis Frechette's play *Véronica*, but completed only the overture.

WORKS

Vocal: Mass no.1, d, chorus, orch, 1884; Mass, B♭, chorus, org, orch, ?1896; Mass no.2, chorus, org, orch, 1897; Tantum ergo, chorus, orch, 1897; L'angelus, chorus, orch, 1898; Mass no.3, chor, org, orch, 1902; Caïn (orat), 1905; Le Canada (cant.), 1906; Vision de Jeanne d'Arc, 1v, orch, 1906; Musique, Bar, vc, pf, Paris, 1907; Les deux âmes (orat), 1909; Messe breve, 3vv, org, 1910; several songs

Orch: Fantaisie sur des airs canadiens, 1900; L'aurore, sym. poem, 1909; Véronica (op), 1914, ov. only; several fanfares and marches

Chbr: Méditation, vc/vn, pf/orch, 1897; Fantaisie on Home, Sweet Home and God Save the King, vc, pf, 1903; La Charmeuse, vc/vn, pf, 1903; Tarantelle, vc, pf, 1903; Trio, vn, vc, pf, 1907; 6 mélodies, Montreal, 1908; several pf works

ANDRÉE DESAUTELS

Contarini, Marco (*b* ?Piazzola sul Brenta, nr Padua, 20 Feb 1632; *d* Padua, ?17 ?May 1689). Italian patron of the arts. He came of a wealthy and noble Venetian family and built two theatres on his estate, Piazzola sul Brenta. There he commissioned and produced a series of operas and other entertainments during the 1670s and 80s, engaging several of Venice's leading composers, notably Carlo Pallavicino and Domenico Freschi. His collection of over 1000 manuscript scores of the period 1639–85 (now in *I-Vnm*) is a major surviving musical source of 17th-century Venetian opera. His large collection of musical instruments included a viola da gamba by Gasparo da Salò, chitarroni by Matteo Sellas and Cristoforo Cocho, and a wide variety of wind instruments. It was later acquired by P.A.L. Correr, and much of it is now in the instrument museums of Brussels and of the Paris Conservatoire.

Conti, Carlo (*b* Arpino, Frosinone, 14 Oct 1796; *d* Arpino, 10 July 1868). Italian composer. He studied in Naples, with Zingarelli (composition) at the Real Collegio di Musica di S Sebastiano and with J.S. Mayr (orchestration). From 1819 to 1821 he taught at S Sebastiano. His earliest compositions were performed while he was a student; among them the *opera semiseria Le truppe in Franconia* (1819) was especially praised by Rossini. Conti quickly made a name for himself as an opera composer, winning fame above all for *L'Olimpia* (1826). At his father's request he gave up composing operas and returned to Arpino in 1831. In 1840 he became an honorary member, and in 1851 president, of the Royal Academy of Arts in Naples and from 1846 to 1858 was professor of counterpoint and composition, and in 1862 assistant director, at the Conservatorio di S Pietro a Majella. He was elected an associate member of the Institut de France.

Conti's works are remarkable for their refined orchestration and technical command. He faithfully adhered to Rossini's operatic style in his theatrical works; Rossini declared him 'the most remarkable contrapuntal composer in Italy of his day'. Florimo attributed to Conti the farce *I Metastasiani*, for which no dates are known, and, on the basis of a letter by the composer, the opera *Sansone*, first performed at the S Carlo.

FRANCESCO BUSSI

Conti, Francesco Bartolomeo (*b* Florence, 20 Jan 1681/2; *d* Vienna, July 1732). Italian theorbist and composer. Letters addressed to Ferdinando de' Medici between 1699 and 1701 suggest that even before the turn of the century Conti was held in high regard for his performances as a theorbist in Florence, Ferrara and Milan. News of his virtuoso playing spread beyond Italy and by 1701 the Habsburg court in Vienna had offered him an appointment as associate theorbist with the same stipend paid to the principal theorbist, Orazio Clementi. Conti served in this capacity from 1701 to 1708, except for the period from October 1706 until July 1707, when his name is absent from the records. On the death of Clementi in August 1708 he was promoted to principal theorbist, a position which he held until illness forced him to retire in 1726. The court had difficulty selecting his successor; Joachim Sarao from Naples was appointed in January 1727.

Conti was also a highly skilled mandolin player and composed one of the earliest sonatas for this instrument. However, Viennese accounts of his career as a performer on either instrument are peculiarly lacking. The extent of his activities as a soloist are hinted at in reports in the *Daily Courant*, London, which confirm that 'Signior Francesco' participated in a benefit concert there in May 1703, entertained Queen Anne at the court in March 1707, and presented a programme of theorbo and mandolin music for the general public in April 1707. He was elected a member of the Accademia Filarmonica, Bologna, in 1708 and near the end of his career earned the title of 'first theorbist of the world' for his part in the performance of J.J. Fux's *Costanza e fortezza* in Prague in 1723.

By using the mandolin and theorbo as obbligato instruments in several of his operas, cantatas and oratorios, Conti created additional opportunities for virtuoso performances. The 1719 performance of *Galatea vendicata* is the only occasion on which he paired the two instruments in the same musical number; this occurred five days before his son Ignazio received a court appointment, suggesting that the unique scoring was intended for performance by father and son.

Long before the Habsburgs officially recognized Conti as a composer, he had distinguished himself at court with several successful performances of his music, including the opera *Clotilde*, presumably written for Carnival 1706, although neither a score nor any contemporary accounts of the production are known to have survived. Vestiges of the original score exist in the pasticcio version, *Clotilda*, which had at least seven performances in 1709 at the Queen's Theatre, London. They also appear in Handel's pasticcio *Ormisda*, first performed in London on 4 April 1730. The oratorio *Il Gioseffo*, with a text designed to honour Emperor Joseph I, whose coronation occurred in March 1706, was another such work. After a lapse of four years, Conti presented the court with an oratorio (1710) and an opera (1711) before being asked to fill a vacancy created by the promotion of J.J. Fux to vice-Kapellmeister. His appointment in 1713 as court composer entitled him to receive two stipends, one as composer and one as theorbist, the combined total of which made him one of the highest paid musicians in Vienna. His financial status was further enhanced by his second and third marriages, both to court prima donnas.

Conti married three times. After the death of his first wife, Theresia (Kugler), in April 1711, he married the wealthy prima donna, Maria Landini, a widow with three children. Not only had she inherited her husband's estate, but she was the highest paid musician in Vienna at that time. She sang the leading role in each of Conti's operas from 1714 to 1721. After her death in 1722, the position of prima donna remained vacant until 1724, when the court appointed Maria Anna Lorenzani. She sang the leading role in three of Conti's operas, and became his third wife in April 1725. Conti became ill in 1726 and by 1729 had left Vienna for Italy. Presumably he went back to Florence, where he owned a house and other property. By 1732 he had returned to Vienna and presented two new works at the court before his death in July of that year.

The importance of Conti as a composer of secular dramatic music for the court can be judged from the events at which his music was performed. For example, the opera staged during the carnival season was considered the major musical production of the year. It was a full-length work (in three or five acts) and received multiple performances. Between 1714 and 1725 Conti wrote all but one of the carnival operas. (Caldara, who served the court during this same period, had to wait until 1726 to be given the honour, and then only because Conti was ill; when Conti resumed his duties in 1732, Caldara again had to step aside.) Conti also wrote dramatic works to honour birthdays and name days of the imperial family and again he held a monopoly on some of these events: almost every year between 1713 and 1726 he wrote the music to celebrate either the birthday or name day of the Empress Elizabeth Christina.

Conti collaborated with several librettists, notably Stampiglia, Pariati, Zeno and Metastasio. Many of Pariati's librettos offered Conti possibilities for bringing comedy to the stage; of all their collaborations, *Don Chisciotte in Sierra Morena* (1719), a tragicomedy, is perhaps the best known. A satire on *opera seria* and its heroic arias, its popularity generated multiple performances outside Vienna (principally in Hamburg and Brunswick) between 1720 and 1737.

Conti's penchant for comedy and parody and his skill in writing *buffo* bass arias found expression in his numerous intermezzos. As early as 1714 he brought to the imperial stage 'Dorimena, Tuberone', a set of intermezzos performed with the pasticcio opera *L'Atenaide* by M.A. Ziani, Negri and Caldara. 'Dorimena, Turberone' may well have been the first intermezzos ever staged in Vienna independent of their host opera, and when they were repeated in Hamburg in 1719 they may have instituted the staging of independent intermezzos there as well. Pariati and Conti collaborated on at least four other sets of intermezzos between 1715 and 1718, and these and their tragicomedy operas (which included some memorable comic scenes) were in great demand outside Vienna, notably in Dresden, Hamburg, Breslau and Brunswick. In order to make them accessible to German-speaking audiences, Keiser, Telemann, Mattheson and others translated, revised and even pirated the original scores. Through these stagings, Conti's music had the potential to influence an important group of composers.

Conti's flair for the dramatic also found expression in his sacred music. His ten oratorios are stylistically akin to sacred operas, with emphasis on the soloist rather than the chorus. His varied handling of the chorus can best be seen in the shorter secular dramatic works, such as *Galatea*, where it functions as prologue, epilogue, commentator and participant. These opera choruses, however, do not employ the majestic fugal writing found in the oratorio choruses. Conti composed several settings of the mass in concertato style with full orchestra, chorus and soloists and may have been the first to compose a so-called 'Credo' mass, where the word 'credo' is repeated over and over against the setting of the liturgical text. Although Conti was celebrated in his lifetime as a composer for the theatre, it was as a composer for the church that his name was perpetuated for more than 150 years through repeated use of his *Missa Sancti Pauli* at the Schottenkirche, Vienna. Conti's offertory *Languet anima mia* is extant in a set of 11 parts and a score, both of which are partly autograph in the hand of J.S. Bach. The score dates from 1716 when Bach was in Weimar, but he did not perform the music until he was in Cöthen, where oboes were added to the scoring. Bach again performed the music in Leipzig with the continuo part transposed to accommodate the lower pitch of the organ there.

Although Conti paid particular attention to composing interesting arias for the bass and baritone roles in his operas and oratorios, the majority of his vocal chamber works are for soprano solo. Many of his cantatas require only a basso continuo accompaniment, but a significant number have orchestral accompaniment, including various obbligato instruments. His *L'Istro*, written for the 1719 wedding celebrations of Maria Josepha, daughter of Emperor Joseph I, and Crown Prince Frederick Augustus of Saxony, is on a grand scale, with the overture and two of the arias scored for trumpets, oboes, timpani and strings.

Conti's musical style balances a zest for experimentation with a keen sense of clarity of design articulated by thematic and tonal principles. Nowhere is this more apparent than in his overtures and arias. In the overtures he developed concepts that evolved into fully recognizable sonata forms in both the first and third movements of the customary fast-slow-fast pattern. In the arias his handling of the ritornello principle in da capo structures moves his music towards the threshold of the Classical style. The aria accompaniments are exceptionally diverse in texture and scoring. His preference for bassoon and lower strings (baryton, viola da gamba, cello) as obbligato instruments extends even to the viola, which comes to the fore as a proponent of melodic material in *Meleagro* and as a supporter of the harmonic foundation in *Teseo*.

Issipile, Conti's last opera for Vienna and his only confirmed collaboration with Metastasio, signals a change in compositional style: arias are fewer in number but greater in length, emphasis shifts from male to female voices (no bass role is included); the amount of accompanied recitative increases substantially, scoring is limited to strings, reinforced by woodwinds, and the overture and opera share thematic material. *Issipile* offers clear evidence that Conti's popularity as a composer did not depend solely on his trademark of comic episodes and *buffo* bass arias.

WORKS

DRAMATIC

first performed in Vienna, at court, unless otherwise stated; MSS in A-Wn, unless otherwise stated (see Williams, 1999)

dm – *dramma per musica*

Clotilde (G. Neri), ?carn. 1706, lost; pasticcio version as Clotilda (3, J. Heidegger), with A. Scarlatti and A.M .Bononcini (London, 1709), *US-Wc*; overture from *Clotilda* with Handel's pasticcio *Ormisda* (London, 1730)

Il trionfo dell'amicizia e dell'amore (dramma pastorale, 3, F. Ballerini), carn. 1711, lost; revived, carn. 1723; rev. as Il trionfo dell'amore e della costanza, with addns by R. Keiser, Hamburg, Jan 1718, *D-SWl*; lib, *US-Wc*

L'ammalato immaginario (int, 3), ?carn. 23 Feb 1713; rev, as Intermezzi musicali, Perugia, carn. 1727, music lost; lib, *US-Wc*

Circe fatta saggia (serenata, 1), 28 Aug 1713

Alba Cornelia (dm, 3, S. Stampiglia), carn. 1714; rev. version (P. Pariati), Breslau, carn. 1726

I Satiri in Arcadia (favola pastorale, 3, P. Pariati), 28 Aug 1714

Dorimena, Tuberone (int, 2, Pariati) and Licenza (Pariati), perf. with M.A. Ziani, A. Negri, A. Caldara: L'Atenaide (dm, 3, A. Zeno), 19 Nov 1714

Dorimena, Tuberone (int, 2, Pariati), ?rev. version, perf. with J.J. Fux, F. Gasparini, A. Caldara: Teodosio ed Eudossa (dm, 3), Brunswick, 1716, lost; ?rev. version, perf. with F. Gasparini, A. Vivaldi, G. Orlandi: Die Über Hass und Liebe siegende Beständigkeit oder Tigranes (D. Gazal), Hamburg, 1719, lost

Il Ciro (dm, 3, Pariati), carn. 1715; with Bagatella, Mamalucca, Pattatocco (int, 2, Pariati)

Teseo in Creta (dm, 3, Pariati), 28 Aug 1715; with Galantina, Pampalugo (int, 2, Pariati)

Il finto Policare (tragicommedia, 3, Pariati), carn. 1716

Sesostri, rè di Egitto (dm, 3, Pariati), carn. 1717; with Grilletta, Pimpinone (int, 3, Pariati); rev. version, Brunswick, 1720

Vespetta e Milo [Act 3] (int, 3, Stampiglia and Ballerini) [Acts 1 and 2 by A. Scarlatti], perf. with A. Lotti: Giove in Argo, Dresden, 1717, lost, lib *Wc*

Astarto (dm, 3, A. Zeno and Pariati), carn. 1718; with Farfalletta, Lirone, Terremoto (int, 3, Pariati); rev. version, Brunswick 1722

Amore in Tessaglia (componimeno da camera, 1, Pariati), 28 Aug 1718

Don Chisciotte in Sierra Morena (tragicommedia, 5, Zeno and Pariati), carn. 1719 (facs. in IOB, lxix, 1982; ov. in Williams, 1983); rev. as Don Quixotte in dem Mohren-Gebürge, with addns by Mattheson, Hamburg, 5 Oct 1722, *D-MGs*

Cloris und Thyrsis (schäferspiel, 3, trans. Gazal), Hamburg, 26 April 1719, *MGs*

Galatea vendicata (festa teatrale, 1, Pariati), 19 Nov 1719; rev. version, 1 Oct 1724

Alessandro in Sidone (tragicommedia, 5, Zeno and Pariati), carn. 1721, ov. in Williams (1983); rev. version (3), Brunswick, Aug 1726

La via del saggio (componimento da camera, 1, Pariati), 1 Oct 1721

Archelao, re di Cappadocia (tragicommedia, 5, Pariati), carn. 1722

Pallade trionfante (festa teatrale, 1), 19 Nov 1722; ov. in Williams (1983)

Creso (tragicommedia, 5, Pariati), carn. 1723

Il trionfo della fama (serenata, 1, F. Fozio), Prague, 4 Nov 1723; ov. in Williams (1983)

Penelope (tragicommedia, 3, Pariati), carn. 1724

Meleagro (festa teatrale, 1, Pariati), 19 Nov 1724

Griselda (dm, 3, Zeno), carn. 1725; with Eringhetta, Donchilone (int, 3)

Il contrasto della bellezza e del tempo (componimento da camera, 1, G.C. Pasquini), 15 Oct 1725

Isicratea (festa teatrale, 1, Pasquini), 19 Nov 1726

Issipile (dm, 3, P. Metastasio), carn. 1723, ov. in Williams (1983); rev. as Sieg der Kindlichen Liebe (Wendt), Hamburg, 20 Feb 1737, *MGs*

Arias: principal sources *A-Wgm*, *Wn*, *D-Dl*, *MEIr*

ORATORIOS

MSS in A-Wn and first performed in Vienna, unless otherwise stated

Il Gioseffo, 1706, pt 1, strings of pt 2 and lib extant

Il martirio di S Lorenzo (D. Filippeschi), 1710, *A-Wgm*; revived 23 March 1724

La colpa originale (Pariati), 1718; revived 1725

Dio sul Sinai (G. Giardini), 1719

Mosè preservato, 1720

Naaman (Zeno), 1721
Il David persequitato da Saul (A. di Avanzo), 1723
David (Zeno), 30 March 1724
L'osservanza della divina legge nel martirio de' Maccabei (A. Lucchini), 1732; revived 13 March 1736
Gioseffo, che interpreta i sogni (G. Neri), 23 Feb 1736
Il martiro della madre de' Maccabei (AM. Lucchini), Brno, San Michel' Arcangelo de' Padri Predicatore, 1736, lost
Sant'Elena al Calvario (A.M. Lucchini), Brno, Chiesa Parchiale S. Giacomo, 1736, lost
Contributor to pasticcio oratorios: I trionfi di Giosuè (G.P. Berzini), Florence, Compagnia di S Marco, 1703, lost, lib, *I-Fn*, and as Giosuè in Gabaon, Florence, Compagnia di San Sebastiano, ?1710, lost; L'onestà combattuta di Sara ossia Sara in Egitto (D. Cavanese), Florence, Compagnia di S Marco, 1708, lost, lib, *D-Hs*

CANTATAS

L'Istro (Zeno), S, 2 ob, str, tpt, timp, bc, Aug 1719, *D-Dl*
Cantata allegorica (Pariati), S, str, bc, 1720, *A-Wn*
Nasce con flausti auspici, S, str, bc, 1726, *D-MEIr*
Volate o lucciolette, S, str, bc, 1726, *MEIr*
Cantata a due, voci, Clizia e Psiche, S, A, ob, vn, va, bc; Clori nemica ed Irene, 2S, ob, vn, va, bc; Con più luci, S, chalumeau, vn, lute, bc; Fra questi colli, 2S, ob, vn, bc; Fugga l'ombra tenebrosa (C. Savallia), S, vn, ob, bc; Gira per queste (S. Stampiglia), S, ob, vn, bc; La beltà che il core (C. Stella), S, chalumeau, vn, lute, bc; Lidia, e Tirsi, 2S, ob, vn, bc; Lontananza dell'amato (Savallia), S, chalumeau, fl, ob, vn, lute, bc; O nasca, ò muora, S, fl, vn, bc; Porta la face l'arco (Stampiglia), S, ob, vn, bc; Ride il prato e fra l'erbe, S, vn, lute, fl, bc; Vaghi angelletti che d'amor, S, chalumeau, vn, lute, bc: all *Wn*; Fra queste umbrose piante, S, vn, ob, fl, chalumeau, bass chalumeau, bc, *D-DS*; Innamoramento, S, bc, *GB-CM*; Lidia già mi vedesti, S, ob, vn, violetta, bn, tiorba, cembalo, *D-Bsb*; Mia bella Clori, S, bc, *US-NH*; Per tacer il mio tormento, S, A, bc, *S-Uu*; Il Rosignolo, S, bc, *GB-Lbl*
Many other cants., mostly only with bc; principal sources *A-Wgm*, *Wn*, *D-Bsb*, *MEIr*, *Müu*, *SHs*

OTHER SACRED

Alma Redemptoris mater, T, str, org, *A-Wn*
Hymni sacri per tutto l'anno, 4vv, org, *D-Dl*
Mass, with int and grad, 4vv, orch, *I-Fc*
Missa assump. BVM, 4vv, orch, org, *D-Bsb*
Missa con Trombe, 4vv, orch, org, *Dl*
Missa Sancti Pauli, S, A, T, B, 4vv, str, viola da gamba, bn, org, *A-Ws*; as Missa mirabilium Dei, *D-Dl*
Missa SS Petri et Pauli, S, A, T, B, 4vv, str, trbn, tpt, timp, bn, vc, org, *A-Ws*
Motetto de SS Angelis, S, A, T, B, 4vv, str, tpt, timp, vc, org, *H*
Motetto per ogni festivita, 4vv, str, tpt, timp, vc, org, *LA*
Offs: Languet anima mea, S, vn, vc, org; *H*, rev., with addl ob, by J.S. Bach, *D-Bsb*, ed. in Stuttgarter Bach-Ausgaben, ser. C, suppl. (1980); Aria de venerabili, B, vn, va, vc, org, *A-H*
Pie Jesu, T, str, org, *D-Dl*
Te Deum, 4vv, str, *HE*; Te Deum, 10vv, orch, *Wgm*
Sacred works attributed to Conti in *I-Mcap* are by Francesco Conti of Novara (*d* 1730) or another Francesco Conti (*d* Vigevano, 1822)

INSTRUMENTAL

Allegro Fuga, f, str, *D-Bsb*
Consort of Musick, London, 1707, lost
Fugue, f, 2 vn, va, bc, *Bsb*
Sinfonia, 2 vn, bc, *A-H*
Sinfonia, 2 vn, va obbl, bc, *H*
Sinfonia à 4, 2 vn, va, bc, *A-Wn* [ov. to Pallade trionfante]
Sinfonia in A, 2 vn, va, 2 ob, bn, bc, *D-Dl*; in Williams (1983)
Sonata al mandolino solo e basso, *CZ-CSSR*
Sonata, 2 vn, va, bc, *A-H*

HERMINE W. WILLIAMS

Conti, Giacomo [Jacques] (*b* Milan, 24 May 1754; *d* Vienna, 24 Jan 1805). Italian violinist and composer. He is known to have played in a concert in Zürich in 1786, after which he may have moved to Vienna (his op.1 was published there by Artaria in 1788). In 1790, according to Gerber, he was in the service of the Russian court in St Petersburg; either at the same time or subsequently he was a member of Prince Potyomkin's retinue but in 1791, at Potyomkin's death, he left Russia. From 1793 he led the orchestra of the Italian opera in Vienna and was severely criticized, since the decline of the opera was blamed on him. From 1797 he was also a member of the Hofkapelle. He is described by Karl van Beethoven in 1802 as *Geigenmeister* (presumably violin teacher) to Count Moritz von Fries, to whom Conti dedicated his three violin duos op.9 (1797). Conti's compositions for violin make considerable technical demands but are little more than agreeable entertainment pieces.

THEOPHIL ANTONICEK

Conti, Gioacchino ['Egizziello', 'Gizziello'] (*b* Arpino, 28 Feb 1714; *d* Rome, 25 Oct 1761). Italian soprano castrato, probably the son of Nicola Conti. His nicknames

derived from Domenico Gizzi, who taught him singing. His début at Rome in Vinci's *Artaserse* (1730) was a spectacular success. He sang at Naples in operas by Vinci (1732–3), and in Vienna (1734), Genoa, Venice (1735, two operas, including Leo's *La clemenza di Tito*) and other Italian cities. In 1736 he was engaged by Handel for London and made his Covent Garden début in a revival of *Ariodante* on 5 May; a week later he created the role of Meleager in *Atalanta*. The press reported that he 'met with an uncommon Reception'; the poet Gray admired him 'excessively' in every respect except the shape of his mouth, which 'when open, made an exact square'. According to Jennens, Handel considered him 'a rising genius'. The next season, Conti appeared in Handel's new operas *Arminio* (as Sigismond), *Giustino* (Anastasius) and *Berenice* (Alessandro) and in several revivals. He also sang in Handel's oratorio *Esther* (with several new arias) and probably in *Il trionfo del tempo*, and was to have taken part in a revival of *Deborah* which was cancelled.

Conti sang in Rome in 1738, 1741–3 and later, at Padua in 1739 in Lampugnani's *Didone abbandonata*, and in 1742 in Florence, where he made a great impression but was taken seriously ill. He may have gone to Lisbon in 1743. He sang at the S Carlo, Naples, in 1746 in Duni's *Catone in Utica* and Jommelli's *Eumene*. In 1747 the theatre engaged both Conti and his rival Caffarelli; the rivalry caused much excitement. He was often heard at Venice, in operas by Jommelli, Hasse and Pescetti (1746–7, 1749–50), and appeared at Lucca (1749) and Padua (1751, in Galuppi's *Artaserse*). From 1752 to 1755 he was employed by the Lisbon court theatre and sang in many operas, most of them by Perez; he is said to have narrowly escaped with his life from the Lisbon earthquake (1755), and 'was impressed with such a religious turn by the tremendous calamity, that he retreated to a monastery, where he ended his days' (Burney), but not before he had imparted much sage and practical counsel to Guadagni. His retirement may, however, have been due to ill-health.

Gioacchino Conti: mezzotint by Alexander van Aken after Charles Lucy, 1736

Conti was one of the greatest of 18th-century singers. He was an exceptionally high soprano with a compass of at least two octaves (*c′* to *c‴*) and the only castrato for whom Handel wrote a top C. The four parts Handel composed for him indicate brilliance, flexibility and unusual powers of pathetic and graceful expression. In character Conti was the antithesis of Caffarelli, being as gentle as the latter was overbearing.

WINTON DEAN

Conti, Ignazio Maria (*b* ?Florence, 16 July ?1699; *d* Vienna, 28 March 1759). Italian theorbist and composer, son of FRANCESCO BARTOLOMEO CONTI. From 24 November 1719 until his death Ignazio served the Habsburg court as a theorbist, holding the title *Hofscholar*, an apprentice position that carried a very small stipend. Five days prior to receiving the title, he may have performed in his father's *festa teatrale Galatea vendicata*. The final aria has solo parts for mandolin and theorbo, perhaps designed to be played by father and son respectively and thereby providing a unique way for Francesco to introduce Ignazio to the court. Apparently Ignazio's musical talents did not equal those of his father, for he never received a major court appointment.

Ignazio began to compose for the imperial court soon after illness caused his father to curtail his duties in 1726. Beginning in 1727 with *Dialogo tra l'Aurora ed il Sole*, a serenata dedicated to Maria Theresia, he composed operas, oratorios, cantatas, *a cappella* masses and other sacred works. Eight of his major dramatic compositions were settings of librettos by G.C. Pasquini, a tutor of the Habsburg archduchesses from 1726 until his appointment as court poet in 1733. Although Conti's music was written primarily for performance in Vienna, inventories of manuscripts and theatre productions for other cities and courts show that performances of his music were not confined to the imperial city. The quality of his works must have impressed J.J. Fux for in 1739 he tried, without success, to secure for him the position of court composer. Discouraged, Conti stopped composing, and spent the next 20 years fulfilling his duties as *Hofscholar*. Had it not been for the illustrious careers of his father and stepmothers, he may never have had an opportunity to compose for the Habsburgs, and it is unlikely that any notice would have been paid to his music centuries after his death. It is ironic, then, that one of the few occasions in his life when he attracted public notice was for a scandalous event and not for his musicianship: in 1730 he insulted and assaulted a Sicilian cleric, Steffano Bertoni, for which he was convicted by an ecclesiastical tribunal and confined to Spielberg prison from June 1730 until the end of January 1731.

Some confusion over the attribution of works to either Francesco or Ignazio has arisen from the use of the diminutive form of the family name, Contini. It is not the case that this form was reserved only for Ignazio (as suggested in *EitnerQ*); 'Contini' was used from time to time to refer to both father and son by copyists and

archivists. Extant materials also show that both father and son signed their name Contini.

WORKS

SECULAR DRAMATIC

MSS in A-Wn unless otherwise stated; only works with librettos by Pasquini are known to have been performed in Vienna

Dialogo tra l'Aurora ed il Sole (serenata, G.C. Pasquini), 15 Oct 1727
Pieria (festa teatrale, Pasquini), 1728
Clelia (festa teatrale, Pasquini), 19 Nov 1733
Pastorale (festa da camera, Pasquini), 1734
La liberalità di Numa Pompilio (servizio da camera, Pasquini), 1 Oct 1735
La fortuna annichilata della prudenza (festa da camera, Pasquini), 15 Oct 1735
Dafne in Alloro (serenata)
Cants., S, str, *B-Bc*, *D-MEIr*

ORATORIOS

all MSS in A-Wn; all performed at the court chapel, Vienna

La destruzione d'Hai (Bosellini), 1728
Mosè nell'Egitto (L. de Villati), 1729
Ezechia (A.M. Luchini), 1733
La Debbora (F. Manzoni), 1734
Il figliuolo prodigo (Pasquini), 1735
Il giusto afflitto nella persona di Giobbe (Pasquini), 1736
La colpa originale (P. Pariati), 1739

OTHER SACRED

[2] Messe, 4vv, Vienna, 1727, 1734, *A-Wn*
[4] Messe, supra 'Sperabo in te', 'Adjuva me', 'Exaudi me', 'Judica me': *D-Bsb*
Quattro messe a capella, *I-Fc*
4 masses, 4–6vv, *D-Mbs*
Offs: In mandatis tuis, 3vv, orch; Meditabor in mandatis tuis, 5vv, bc: *Bsb*

HERMINE W. WILLIAMS

Conti, Lorenzo (*b* ?Florence, *c*1680; *d* ?Florence, *c*1740). Italian priest and church musician. He is not related to other musicians of the same name. He was *cappellano di onore* to Cardinal Francesco Maria de' Medici from at least 1708 and a chaplain at the church of S Lorenzo in Florence. From 1710 to 1736 he directed most of the oratorio performances, usually several each year, at the company of S Marco and for its subsidiary, the Ospizio del Melani. His oratorios were also frequently heard at the Compagnia di S Jacopo del Nicchio of which he was a member. At his death he left all his masses, psalms and motets to the convent of S Marco, his oratorios with orchestral accompaniment to the Oratorians of S Firenze, his oratorios 'without violins' to the nuns of S Domenico, and his celebration cantatas to Bartolomeo Felici, presumably his pupil. None of Conti's music has been located.

WORKS

Orats, all perf. Florence, only pubd libs extant: Mosè bambino (P.A. Ginori), 1703; the same as Mosè, 1704, and Faraone re d'Egitta, 1705; S Clotilde (G.B. Taron), 1705: Il convito di Baldassare (Ginori), 1705; Lot (Ginori), 1705; Il ratto di Dina (Ginori), 1707; Repudio della Regina Vasti (Ginori), 1707; L'Umiltà trionfante in S Odoardo re d'Inghilterra, 1707; at least one aria in Sara in Egitto (D. Canavese), 1708; S Maria Maddalena de pazzi, 1710; Il mondo abbattuto nel trionfo della religione (G.P. Berzini), 1710; Sisara (Ginori), 1710; Natività di nostro Signor Gesù Cristo (Ginori), 1711; La fuga di S Teresa (E. Manfredi), 1718; Nabucco (Ginori), 1724; La povertà fortunata (Ginori), 1725; Esaltazione di Esther (Ginori), 1734; Ritorna di Noemi alla patria (Ginori), 1736

Numerous sacred works, occasional cants., lost

JOHN WALTER HILL

Conti, Nicola [Niccolò] (*fl* Naples, 1733–54). Italian organist and composer. He studied, according to Villarosa (*Memorie dei compositori*, 1840), with Durante and was later *maestro di musica* of 'many Neapolitan churches'. On 14 December 1733 he was admitted to the Neapolitan royal chapel as an organist. In 1737, on the death of the *maestro di cappella* Francesco Mancini, he asked for promotion but this was not granted. Although he wrote several operas, he composed mainly sacred music; his works were still sufficiently admired at the end of the century for a quintet to be incorporated into the pasticcio *L'ape musicale, ossia Il poeta impresario* (L. da Ponte; Trieste, 1792) and for Reichardt to praise the serious fervour expressed in his arias. It is uncertain whether he was the singer Nicolò Conti who sang in Brescia in 1747 and at the Teatro S Samuele in Venice in 1749; he may have been the father of the soprano Gioacchino Conti, who sang the role of Apollo in *La Dafne*.

His opera scores are lost, but his serious style may be studied in the oratorios. These works are impressive, particularly in their harmonic treatment and in their tonal control. Arias are in full da capo form and show Conti's predilection for concertato effects with contrasts in scoring, contrapuntal texture, dynamics, melodic style and key. He used much accompanied recitative and unexpected modal alterations were a favourite device. Expressive markings of tempos and dynamics are uncommonly thorough for the time. He was less skilful in his handling of declamation than of harmony; melismas often appear on emotionally neutral words, indicating the stereotyping of the practice. *Attalo re di Bitinia*, performed in Naples in spring 1751 and sometimes ascribed to Nicola, was by Giuseppe Conti.

WORKS

OPERAS

performed in Naples, unless otherwise stated

L'Ippolita (ob, G.A. Federico), Fiorentini, spr. 1733
Cajo Marzio Coriolano (os, P. Pariati), S Bartolomeo, carn. 1734, rev. of J.A. Hasse, Carlotta e Pantaleone (int)
La Dafne (componimento drammatico), Palazzo Carafe, 1747 [for the wedding of Gennaro Maria Carafa, Prince of Roccella, and Teresa Carafa]
Berenice (os, B. Vitturi), Rome, Capranica, 3 Dec 1743
L'Olindo [most of Acts 1 and 2] (ob, A. Palomba), Fiorentini, spr. 1753; rest, incl. sinfonia, by M. Capranica
Arias in *D-Dl*, *F-Pn*, *GB-Lbl*, *Lkc*, *I-Gl*, *Mc*; Duet, *Mc*

OTHER VOCAL

In lode del glorioso patriarca San Francesco di Paola (L.C. Fularco), Naples, Casa Rinaldi, 1732
La Passione di Gesù Cristo (orat), 1739, *I-Nf*
Isacco (orat), 1741, *Nc*, *Nf*
La Passione di Gesù Cristo Signore Nostro (orat, P. Metastasio), Florence, Oratorio di S Filippo Neri, 1743
La morte di Abel (orat, Metastasio), Naples, Oratorio di Napoli, 1748
L'Endimione (cant., Metastasio), Naples, 26 July 1752
Partenope consolata (cant., D. Volpe), Naples, Palazzo Reale, March 1754
Per la festività del SS Natale (Metastasio), Naples, 1755
Rut nel campo di Booz (N. Recco), Naples, S Maria Regina Coeli Monastery, 1759

JAMES L. JACKMAN/PAOLOGIOVANNI MAIONE

Contilli, Gino (*b* Rome, 18 April 1907; *d* Genoa, 4 April 1978). Italian composer. He studied first with Dobici at the Conservatorio di S Cecilia in Rome, receiving the diploma in composition in 1933, and then with Respighi and Pizzetti. From 1942 to 1966 he taught composition at the Corelli Institute, Messina and from 1944 he was also its director; in 1966 he became director of the Paganini Conservatory in Genoa. For a period he contributed music criticism to the Rassegna Nazionale. Until 1943 Contilli wrote works strongly marked by neo-classicism, as was usual at the time in Italy. Subsequently he was one of the first Italian composers, with Dallapiccola, Malipiero and Togni, to adopt a dodecaphonic technique. However, he avoided the most extreme sides of Viennese Expressionism and did not strictly follow serial organization. On the contrary he interpolated tonal harmonic suggestions into his richly contrapuntal textures. True to Italian tradition, the expressive, lyrical quality of his vocal writing gave to his music breadth and continuity; this held even in his last works, which add novel timbres and a Berg-like expressivity.

Continental fingering. The FINGERING of keyboard music with figures 1 to 5 for each hand, 1 standing for the thumb, a system in general use throughout the world today. The term was used in Britain in the 19th century in contrast to so-called ENGLISH FINGERING (not, however, exclusively English), which provided for four fingers (marked 1 to 4) and a thumb (marked +). □

Contini, Domenico Filippo (*fl* 1669–87). Italian librettist. He was an abbot, and from 1676 to 1685 was patronized by the Colonna, Barberini and Orsini families. His most successful work was Alessandro Scarlatti's early opera *Gli equivoci nel sembiante*, which is known to have received 14 productions between 1679 and 1716. Like Contini's four other librettos, it is a pastoral comedy with four rustic characters. The men are portrayed by tenors (not castratos) in Scarlatti's music. It shuns both machines and choruses, and has only one setting ('the woods'), making it eminently suitable for a chamber production. Although its plot is conventional, in that an intricate web of intrigue arises from misunderstandings, its text is free from exaggerated similes and other 'Baroque' devices.

Contini's *La donna ancora è fedele*, produced in five cities between 1676 and 1698, is set within two pastoral villas near Frascati. Its three men are portrayed by two tenors and a bass in Pasquini's score. Contini's only librettos which may have received their premières outside Rome are those for P.F. Corsi's *In amor vince chi fugge* (1669, Ancona) and Bernardo Pasquini's oratorio *Il martirio dei Santi Vito, Modesto e Crescenzia* (1687, Modena).

LOWELL LINDGREN

Contino, Giovanni (*b* Brescia, *c*1513; *d* Mantua, March 1574). Italian composer and priest. According to Guerrini he attended the choir school attached to Brescia Cathedral where he was probably taught by Battista Lancini and, more importantly, G.M. Lanfranco (whose *Scintille di musica* was published in Brescia in 1533). As a young man, probably in 1539–40, Contino entered the household of Bishop (later Cardinal) Cristoforo Madruzzo, thanks to the influence of Nicolò Secco. In 1551, as a result of the death of his father, Contino returned to Brescia where he had been offered a five-year contract as *maestro di cappella* at the cathedral; this was renewed for a further five years when it expired in October or November 1556. In 1561 Contino moved to the Gonzaga court in Mantua where he served for a short period as *maestro di cappella* at the Basilica di S Barbara. In 1565 he once again returned to his former post in Brescia, from which he was removed two years later due to his negligence in instructing the choristers. Nevertheless, he remained in Brescia with a benefice at the church of S Ambrogio and continued to be paid by the cathedral until the end of 1568 when, according to a document bearing his signature, he was 55. His successor as *maestro* in Brescia was not appointed until 1569. In 1573 Contino returned to Mantua as a dean of S Barbara, and he remained there until his death in the following year.

Contino's earliest published work (in 1549[31]) comes from his period in Madruzzo's employment, and is the only one of his madrigals in the *note nere* style. Thereafter, his madrigal writing settled into an unremarkable mid-century manner. Imitation, often rhythmic rather than melodic, is deployed at the beginning of most major

phrases, and the use of text-expressive figures and chromatic inflection is restrained. Contino's only surviving book of madrigals is dedicated to Barbara Calini, a member of a prominent Brescian family, one of a number with which he had professional and personal contacts (some of which date from his years in the service of Madruzzo). One piece, *Poi che'n voi sola* is addressed to Calini, and the book opens with a setting of a text by Bartolomeo Arnigo, one of the founders of the Brescian Accademia degli Occulti. According to the book's dedication, Contino also dedicated another book to Calini: one of the two lost books of four-voice madrigals. 12 unica in the Aschaffenburg organ book (Aschaffenburg, Stadt- und Stiftsarchiv MS 4783, *c*1584) were almost certainly intabulated from one or both of these missing volumes.

Notwithstanding the false impression given by the loss of these two books as well as a second volume of five-voice madrigals, the major part of Contino's output was for the church. From 1545, when the first session of the Council of Trent opened, Contino's role as *maestro di cappella* to Madruzzo took on a more public and ceremonial aspect. The dedication to the Cardinal of Contino's 1561 book of masses makes it clear that its contents were written while Contino was in Madruzzo's service. Although the repertory performed by Madruzzo's cappella (strengthened or even replaced by six papal singers sent from Rome) is not known, it is likely that at least some of these masses were composed for performance during the Council. Three of the masses are cantus-firmus compositions based on plainsongs, a somewhat old-fashioned procedure by this date; another two are parody works on motets by Josquin and Willaert. Equally official in character, and also from the same period, are a number of motets, scattered throughout the three volumes of *Modulationum*, composed for politico-religious occasions in Trent. *Texebat viridem Cloris*, for example, was written to celebrate either Madruzzo's nomination to the cardinalate in 1542 or the arrival of the red hat in Trent in 1545. Similarly, *Pange Thalia modos* was composed for the visit to Trent of Robert de Croy, Bishop of Cambrai, in 1546, while the text of *Austriae stirpis* refers to the marriage of Francesco Gonzaga, Duke of Mantua, to Katharina von Hapsburg, and was probably written to mark the bride's entry into Trent on the way to Mantua. Other pieces in these books, such as *Sanctorum martyrum*, written in honour of Faustina and Jovita, patron saints of Brescia, are clearly from his time in that city. In general, Contino's motets are written in a discrete imitative style; as in the masses, cantus-firmus techniques are common and, as in the madrigals, response to textual imagery is both restrained and rare.

The *Missae cum quinque vocibus*, dedicated to Antonio Londonio, a high-ranking official in Milan with an interest in music, and published in the same city, are nonetheless fruits of Contino's Brescian years. Three of these masses are paraphrase compositions based on the polyphonic sections of alternatim masses which he had previously written for S Barbara. These, which remained unpublished at the time, are in turn elaborations of chants from the basilica's own rite as preserved in its manuscript Kyriale (*I-MAad*). The collections of hymns, introits and Lamentations, all three of which were also, like the masses and motets, published in 1560–61, seem to be Brescian works; the hymns and Lamentations are dedicated to the canons of the Cathedral and were evidently composed for use there, while the introits are dedicated to Domenico Bollani who was elected bishop of the city in March 1559.

IAIN FENLON

Continuo [basso continuo] (It.). Continuo playing in varying ensembles was an art practised by players of chordal instruments throughout Europe for roughly two centuries after about 1600. The instruments used included keyboard (organ, harpsichord), plucked string (chitarrone/theorbo, lute, guitar, harp) and bowed string (*lirone*, bass viol, violoncello). The continuo was fundamental to music in the 17th and 18th centuries to such an extent that its characteristic manner of notation, the FIGURED BASS (It. *basso numerato*; Fr. *basse chiffrée*; Ger. *bezifferter Bass*), also became the basis for teaching composition and analysis and has remained in use for theoretical purposes

throughout the 19th and 20th centuries (*see also* GENERALBASS and THOROUGHBASS).

1. Definition. 2. Origins. 3. Development. 4. Instruments. 5. Playing techniques: (i) Keyboard instruments (ii) Plucked–string instruments (iii) Bowed–string instruments.

1. DEFINITION. A basso continuo (through bass or thoroughbass; Fr. *basse continue*; Ger. *Generalbass*) is an instrumental bass line which runs throughout a piece, over which the player improvises ('realizes') a chordal accompaniment. The bass may be figured, with accidentals and numerals ('figures') placed over or under it to indicate the harmonies required. Continuo realization is essentially an improvised art, and much remains undocumented and ambiguous; most figured-bass methods were published to teach the elements of harmony rather than the art of accompaniment. Performance issues include not only where and when the various instruments played, but also the manner of realization: types of arpeggiation and imitation; the placing of cadences; the doubling of the upper part(s); the addition of dissonances; and the ornamentation or simplification of the written bass. The practice of continuo playing was originally closely associated with the growth of recitative (and hence opera and oratorio) and with certain kinds of solo music both vocal (monodies) and instrumental (early violin sonatas, etc.). No player may treat a continuo bass line as an opportunity for unbounded extemporization. The fact that the part is not fully written out, as an obbligato part would be, indicates its secondary nature: the function of the continuo is to accompany. While following this general principle, styles of accompaniment differed widely at different times and places. (*See also* IMPROVISATION, §II.)

'Basso continuo' was one of several terms used by Italian composers from about 1600 onwards, either as a label or as a reference term for the organ part of an ensemble work. That it became the term most used may be due to the fact that it was coined by one of the first major exponents of the practice, Lodovico Viadana, whose *Cento concerti ecclesiastici ... con il basso continuo* (Venice, 1602) became widely known: Viadana was later credited with the 'invention' of continuo (or figured bass) playing. 'Continuo' ('continuous') itself may in turn reflect its character in Viadana's *Concerti* – not an organ bass part culled from the vocal bass (as were others of the period) but an independent part running through the whole composition, without the rests characteristic of a vocal line.

2. ORIGINS. The origins and early history of the basso continuo may conveniently be divided into two separate though related categories, depending on whether the music performed with this technique was sacred or secular. As the organ part in concerted church music, the basso continuo took the form of an 'abbreviated full score': the organist played the lowest-sounding note at any given point, together with its harmony. This practice began long before the earliest figured basses appeared in print in 1600. The first unfigured bass parts for the organ to be printed were apparently those in Placido Falconio's *Introitus et Alleluia per omnes festivitates* (Venice, 1575), but there are others in manuscript that may be older. Manuscript sources of the late 16th century often provided some kind of organ part and whether this was a bass (Croce, *Motetti*, 1594), a partial score (Victoria, *Missae*, 1600: three- or four-part chords), a full score (Valente, *Versi*, 1580) or a complete *intavolatura* with divisions was not necessarily significant; nor in most cases, one imagines, did the composer supply it. Unfigured basses seem to have been used most often in polychoral music, presumably because of the inconvenience of accompanying works in a large number of parts from score, but also because such large-scale, vertically conceived works tend to be more straightforward contrapuntally and harmonically. The bass line might be extracted from several vocal basses, as it is in Striggio's 40-part motet *Ecce beatum lucem* (surviving parts 1587, first performance probably Florence 1561), and include whatever vocal or instrumental part happened to be lowest (*see* BASSO SEGUENTE). Some secular part-music was likewise provided with an accompaniment for harpsichord, lute, etc., playing exactly what the voices sang, perhaps with an added part to fill out the texture and harmony (Felice Anerio, *Canzonette*, 1586). Very likely the popularity of organ basses about 1600 was due to publishers rather than composers. As such it may reflect practical needs: to help organists in smaller churches to hold their choirs to pitch; to replace instruments originally specified by the composer for performance in his own cathedral, court chapel, etc; occasionally, perhaps, to replace the choir completely; or (perhaps most significant) to replace one or more singers in an ensemble. It could well be that Viadana (1602) intended the organist to add imitative parts to his vocal *Concerti* in the way that other voices in a choral work would have done (ex.1).

Imitative 'points' were recommended by many theorists, and Praetorius, who was acquainted with the work of all the important early Italian writers, quoted a preface by B. Strozzi in which figured basses were praised since they actually enabled organists to 'perform Palestrina's motets ... in such a way that it seemed to listeners as if the pieces were written in full tablature'. Palestrina himself evidently authorized an organ bass for his six-part motet *Dum complerentur* in 1585, and by at least 1600 in Madrid and 1608 in Venice, works of Victoria and Palestrina were being published with organ basses, for example Palestrina's *Motettorum quinque vocibus ... addita parte infima pro pulsatoris organi comoditate*. Viadana justified his bass part on the grounds that it was less troublesome to write out than a full *intavolatura*; Agazzari (and hence Praetorius) added two further reasons: that it suited the new recitative style (or possibly its notation) and that organists would be spared large collections of transcriptions. Whether composers desired performers to play background chords or worked-out contrapuntal lines of a quasi-vocal nature, they employed various means of showing the harmonies (Banchieri, 1609/*R*). Some composers printed a single bass line, some a double (one for each choir – Croce, *Motetti*, 1594 [*partitura*]). Often they added a few sharps and flats above the bass (Banchieri, *Concerti ecclesiastici*, 1595); less often, but increasingly from about 1610, they inserted figures as well. Some composers gave organists not only their bass line but also one voice above (soprano, Banchieri, 1595); and most included bar-lines (*spartite*) in their parts, a help to the ensemble (as Banchieri noted in his *Cartella musicale*, 3/1614). Although the volumes of music written at the turn of the century were in a less contrapuntally organized style than that of Palestrina, it is clear that, for sacred music, continuo playing has roots not only in the organ basses of the late 16th century but in the more general

Ex.1 from C. Gallico: 'L'arte dei "Cento concerti ecclesiastici" di Lodovico Viadana', *Quaderni della Rassegna musicale*, iii (1965), 55–86

practice of organ accompaniment in elaborate polyphonic music, particularly in Italy north of Rome. Moreover, even when the continuo as a publisher's or composer's notational device was well established, theorists often advised organists to write out their own worked-out parts (Viadana, 1602) even for relatively simple hymns (Kittel's edition of Schütz's *Gesänge*, 1657).

Between 1600 and 1640 many Italian and German composers prefaced their works with hints on how to play the figured, semi-figured or unfigured basses they provided, the Germans being largely influenced by the Frankfurt editions of Viadana's *Concerti* (1609–13). The most pretentious German musicians, or at any rate the most pretentious court chapels, were the most Italianate. Composers in England, France (sacred and secular monodies only from about 1640), Spain, Austria and elsewhere also imitated the Italians. Not all German musicians adopted the technique enthusiastically. As late as 1648 Schütz evidently gave a continuo part for his *Geistliche Chormusik* only at the request of its publisher; and Praetorius, despite his copious references to theorists and his own wide experience, did little more for continuo playing than disseminate existing information on Italian practices.

Though earlier continuo parts were neither published nor described in print at the time, the practice of playing continuo may well be older for secular music than for sacred – particularly in the performance of Italian secular song. Castiglione wrote in 1528 that he liked best 'singing to a lute and reciting' (*per recitare*); Antonfrancesco Doni's *Dialogo* of 1544 refers to poems recited to music played by *lira* or *viuola*. In neither case is it clear to what the authors, who were amateur musicians, referred, although there was certainly no question of a figured or unfigured bass part. But both writers were associated with Florence where secular entertainments (on such occasions as weddings) brought together rich vocal and instrumental forces, organized around groups of keyboard or plucked instruments. Even at the end of the 15th century it seems that the instruments were organized in what would later be called continuo groups on one hand and obbligato groups on the other. One Medici wedding (1565) had a tableau for Amor and Psyche in which the music 'was played by a consort of four harpsichords of large compass, two lutes, two violins, two trombones, two tenor recorders, one transverse flute and a *cornetto muto*'. Choosing colours from such potential was one of the composer's duties, as is clear from Monteverdi's letters, in which he wrote of using a chitarrone and harp for pastoral figures (1615) and the unsuitability of citterns, harps and harpsichords for sea-music (1616), etc. From at least 1597, the published accompaniments to such works as Peri's operas, Caccini's songs and Cavalieri's sacred dramas were simply bass lines, but figured more systematically than those for contemporary sacred music. As such they allowed one or more instruments to play the chords according to their individual technique and, no doubt, according to the rubato of the singer. A written-out accompaniment would therefore not have been traditional for groupings of instruments long known in secular entertainments, nor suitable for the several instruments reading the part (*lira doppia*, harpsichord and chitarrone in Cavalieri's *Rappresentatione*, 1600), and was too rigid in metre or rhythm for performance with a solo singer. The expressiveness of the vocal line was, after all, foremost in operatic monody and recitative.

Exactly how continuo players realized their basses in such secular music is not known. Extant written-out accompaniments are simple, leaving the voice free in its bravura passages (ex.2). But theorists such as Agazzari (1607), who divided instruments of accompaniment into chordal ones ('instruments of foundation') and ornamenting ones ('instruments of ornamentation': see §4 below), suggested many kinds of decoration for the 'ornamental' continuo instruments, and contemporary sources of English consort music, written out in full for all instruments, may suggest some of the 'mille belles variétés et une vitesse de main incroyable' heard from Italian lute players by André Maugars. By definition Hume's lyra viol parts (ex.3) are not basso continuo parts, but nor were many contributions made by continuo instruments in early opera. Hume wrote out the parts, but good players could have improvised them. According to Agazzari, lute, theorbo and harp players seem to have suited their style to circumstances. If they were accompanying only a few voices they provided simpler supporting chords than if they were in a larger ensemble, improvising above an

[2 chitarroni also accompanied the voice]

organ or harpsichord. In slow-moving music the 'ornamental' instruments, and even those playing the basic harmonies, could be more adventurous. Schütz suggested that the organist or string player should add passage-work when the singer holds or repeats a note (*Historia der Auferstehung*, 1623), and Agazzari (*Del sonare sopra 'l basso*, 1607, 2/1608) distinguished between those playing with 'invention and variety, now with gentle strokes and repercussions, now with generous passage-work' and those with 'facility of hand but little learning' who play endless and unmusical runs. Exactly how he conceived the one as different from the other can now only be conjectured.

3. Development. In some counterpoint treatises from the 16th century intervals were designated with numbers; it was thus only a short step to use these numbers to indicate chords above a bass. Most of the signs or figures that appear above early basses are sharps or flats; digits were added sparingly, mostly 6s and 4s to clarify particularly ambiguous passages. Both Cavalieri and Monteverdi (*Orfeo*, published in 1609) were careful to specify such progressions as 3–4–4–3, though their scores are mostly without figures. But it is doubtful if any basses of the whole figured bass era were figured completely from the theoretical point of view, save in a few treatises. In 17th-century Italy few composers figured them even adequately, and there are many ambiguities, especially in music by major figures like Monteverdi. The examples of continuo songs arranged for voices and strings by the composers themselves, for instance Cavalli or Purcell, reveal how distant in some cases their intentions were from what they implied by their figuring. But on the whole players could assume that in most music, particularly sacred music within a narrow harmonic spectrum by Carissimi, Schütz, Charpentier and their lesser contemporaries, certain bass notes would imply certain harmonic progressions: for example, C♯ rising to D would require a 6-3 chord. Many theory books until well into the 18th century deal mainly with the standard situations which players learnt as formulae (*see* Regola dell'ottava). Thus both the sacred and the secular compositions of good composers offer the player of today two distinct kinds of problem. First, that certain situations (notably cadences) demand progressions so standard that the composer did not trouble to specify them; second, that the composer has sometimes required the soloist to 'contradict' the implied harmonies, giving rise to a harmonically ambiguous situation. Monteverdi's *Vespro della Beata Vergine* and *Orfeo* bristle with examples of these problems, which are not always solved in modern editions. On the one hand, assumed cadences (especially the 4–3 progression) may be missed, and on the other the continuo instruments may be given harmonies reconciling the bass to the vocal line instead of vying with it.

Early continuo parts differ in some particulars from later practice. When accidentals are the only 'figures' above the bass line, for example, they are often used to indicate ♭6 and ♯6 as well as ♭3 and ♯3, and here ambiguities may arise, for some of the early typefaces (especially Venetian) did not always distinguish clearly enough between ♭ and 6. Moreover, some secular scores supply compound figures above 9 (10 being an octave and a 3rd, 11 an octave and a 4th, etc.), a practice that may reflect the special requirements of lutes and chitarroni. Such compound figures indicate the actual pitch of

Ex.3 T. Hume: *The Passion of Music: Sir Christopher Hatton's Choice* (1607)

Ex.4(a) J. Peri: *Euridice* (1600)

(b) E. Cavalieri: *Rappresentatione di Anima e di Corpo* (1600)

the note required, not merely its harmonic position. Peri used figures up to 11 (*Euridice*, 1600), Cavalieri up to 18 (*Rappresentatione*, 1600), and Caccini up to 14 (*Nuove musiche*, 1601/2/*R*). In 1626 J. Staden wrote that 'figures 9 to 14 are rare, as they should be', and it was not a practice that became widespread, despite its useful precision (ex.4).

The facility with which a player might learn to recognize the harmonies required in a given situation without 'understanding' the reasons for them seems to have led many composers and theorists to warn against figured bass playing. In fact, however, this ability is not easy to acquire, and the theorists' objections should not be taken too literally; they must often have been motivated by a kind of guild-master's suspicion of new techniques. Thus Banchieri (1609/*R*) distinguished between figured bass players and those who had mastered score-reading and improvisation, but (except in the simplest, slowest choral music) the former is unlikely to have shown no elements of the latter. As Niedt (1700–21) implied in his fables of ignorant village musicians, German organists continued to be brought up on tablature and its realized harmonies, and this system was easier than one with unrealized harmonies. Roger North wrote of the comparison between figured basses and written-out parts:

> the old masters would not allow the liberty of playing from a thro-base figured, as harpsichords of late have universally practised, but they formed the organ part express; because the holding out the sound required exact concord, else the consort would suffer; or perhaps the organists had not then the skill as since, for now they desire only figures.

He went on to recommend that an organist should play from score, not for the better understanding of the harmonic theory of a piece but rather so that he could then extemporize more practically, 'embellishing his play' and putting 'somewhat more airey' into his realization. On the other hand, earlier sources like the Batten Organbook (*GB-Ob*, *c*1630), containing English anthems in short score, give unfigured bass lines which are found realized in other sources with an invention not easily reconcilable with standard continuo principles.

Basically, early continuo style implied simple harmonies, at least in sacred music. Fergusio (*Motetti*, 1612) considered that not all chords need be played by the organist, but only those necessary to help the singer, while Werckmeister (1698) implied that figures often served merely as a kind of warning – that a bass figuring requiring both a 4th and 5th warns the player that what the voice is singing cannot be accompanied by a common chord.

It can be assumed that by about 1675 most Italian organists were accompanying from bass lines, albeit sparsely figured ones. The continuo came early into Germany through close links between some German courts and Italy. It was an essential ingredient of the new concertato style which was taken up with enthusiasm by a number of Lutheran courts such as Dresden and in the principal churches of larger urban centres such as Danzig. Spain had close political links with Italy, and although there are no Spanish discussions of the continuo before the late 17th century, the practice of supporting polyphony with a *basso seguente* on the organ had been adopted by the early years of the century. At the same time, large accompanying groups of guitars, harps, lutes and theorbos were employed in secular festivities, as in equivalent Italian events, and Spanish players could build on a tradition of accompanied song reaching back to Mudarra's songs with vihuela (1546).

England and France, with their own strong native traditions, proved less immediately receptive. The earliest publication with continuo by an English composer is a collection of two- and three-voice motets by Peter Philips (*Gemmulae sacrae*, 1613). But this was published in Antwerp, in the area of the Spanish Netherlands where other, similar publications appeared around this time. The earliest example of an English 'thorough basse' is probably that for Tallis's 40-part motet *Spem in alium*, which seems to have been written in response to Striggio's, possibly in 1571. But accompaniment on the organ from unfigured or figured basses remained unusual for some decades into the 17th century, although a few printed collections of domestic sacred music have continuo parts for organ (Martin Peerson's *Mottects*, 1630 and William Child's *First Set of Psalmes*, 1639). Organ parts for consort music were initially (in the 1620s and 30s) either an unfigured bass, or a bass and cantus part; otherwise they were more or less fully written out almost up to the time of the Restoration, and only in the 1660s did thoroughbass parts become common. English lute songs, on the other hand, began to move from fully written-out tablature accompaniments to thoroughbass after the publication in London of the Italian theorbist Angelo Notari's *Prime musiche nuove* (1613), though the basses of English songs up to around 1670 were rarely figured.

The French were yet slower to take up the practice, in spite of the artistically successful visit by Caccini and his family to the French court in 1604–5. Some adumbrations of continuo practice may been seen in airs of the court musicians Pierre Guédron (*Troisième livre*, 1617), where the lute is used to support a dramatic dialogue, and Antoine Boësset, whose *VII Livre* (1630) includes a five-part air with a 'basse continue pour les instruments'. But these are rare moments, and the *air de cour* of the first half of the century typically had a fully written-out lute part in tablature. Only with the sudden popularity of the theorbo for accompanying the voice in the 1660s did the *basse continue* become normal for airs and dialogues.

The concertato manner was quicker to influence composers of sacred music for the royal chapel such as Thomas Gobert, an admirer of Monteverdi, whose *Antiennes récitatives* (lost) were perhaps the first French use of the continuo. French musicians had ample opportunity to admire the latest Italian fashions in the 1640s when Cardinal Mazarin was importing great numbers of Italian singers and instrumentalists for his operatic enterprises. But the first Parisian publication with continuo was by the Dutch diplomat and connoisseur Constantijn Huygens (*Pathodia sacra et profana*, 1647), and it was not until Henry Du Mont's *Cantica sacra* (1652) that one was provided by a professional composer resident in Paris.

A great variety and richness of continuo instrumentation prevailed throughout the 17th century. Nonetheless, certain repertories tended to have standard groupings, such as harpsichord and cello for Italian cantatas from the 1690s, and organ and theorbo or archlute – a combination recommended much earlier by Monteverdi (letter, 1611) – for Corelli's sonatas and Kuhnau's cantatas. An English visitor to the Venetian opera in 1714 commented on the 'lutes, theorbos and harpsichords which accompany the voices with marvellous exactness'. This not only describes a specific instrumental combination but confirms the fact that the opera composer was still throwing the weight of the accompaniment on to the continuo group. In ensembles with many instruments (operas, concerted church music) the keyboard player had light improvisatory duties, and the harmonies became sparse, to judge by Rousseau's reports of the Italian opera in Paris (1753). But the sources suggest that practices in chamber music were different, as might be expected, particularly in solo sonatas and cantatas. While continuo players were adding a few thin chords to *opera buffa*, they were concocting rich, complex and extravagant harpsichord or organ parts in their performances of Italian solo cantatas.

The rise of the obbligato sonata – one for solo instrument in which the harpsichordist's right hand has a solo line as important as the soloist's – is a particularly interesting development. The best examples are among the earliest, those of J.S. Bach for violin, bass viol or flute, but the idea was widespread by about 1750 in all centres of *galant* music. Most such sonatas contain stretches of unfigured bass; only in other spheres, like organ trio sonatas, did composers (even Bach) consistently rely on three obbligato melodic parts. Conversely, even the most *galant* sonatas in this tradition (for example those by Georg Benda, *Sammlung vermischter Clavier- und Gesangstücke*, 1780–87) give to the harpsichord right hand complete themes, answering the soloist in the dominant, in fact behaving in traditional fugal style. The written-out accompaniment in the Largo of Bach's Flute Sonata in B minor (BWV1030, ex.5) appears to lead without a break to the complete, unfigured accompaniments of Classical piano and violin sonatas, for example those by Mozart; but they belong to different traditions. Bach sometimes wrote a kind of worked-out continuo part – note, for example, how the right hand plays something more lively as the soloist rests, a technique advocated by countless theorists – whereas Mozart composed pieces rather like piano sonatas with obbligato violin (*see* ACCOMPANIED KEYBOARD MUSIC).

Two developments in the early decades of the 18th century brought in trends which were ultimately to

undermine the figured bass as a practical system. The first, in reaction to the ever increasing sophistication of harmony which was leading to ever more complicated figurings, was Rameau's formulation of the fundamental bass (1722), an attempt to reduce the growing complexities of chord formation to a logical system. This ushered in decades of argument in which this theoretical concept was held in opposition to the figured bass as a means of understanding composition (*see* GENERALBASS). The second was the new light and graceful style introduced after 1710 by Neapolitan opera composers such as Leo, Porpora and Vinci. Clear textures and harmony based on the primary triads joined with the symmetrical phrase groupings of dance music to form a *galant* style that was cultivated initially in vocal music, but rapidly infected the instrumental genres of sonata and concerto. From the 1730s the presence of a chordal continuo in ensemble music became less a matter of course, as had long been the case in ensemble dance music. Some works dispensed with keyboard accompaniment altogether (Mattheson, *Das neu-eröffnete Orchestre*, Hamburg, 1713), and others neglected to give the keyboard a figured bass part (certain French string chamber music, *c*1735). If a figured bass part were provided, some composers directed the keyboardist to play TASTO SOLO for long stretches (e.g. Handel's organ part for *Alexander's Feast*, 1736), or else theorists offered that advice in their treatises (Avison, 1752). Several later German theorists (Daube, 1756; Petri, 1767) objected to the provision of a basso continuo in trios and quartets, and, indeed, by 1750 the participation of a keyboard continuo was exceptional in smaller chamber groups; it played no part in Haydn's string quartets, and we should not assume that figured bass parts in string quartets of about 1770 by Vanhal and others necessarily imply keyboard accompaniment. On

the other hand, bass lines with figures, or such directions as *col basso* in the opening ritornellos of Mozart's piano concertos, appear from contemporary accounts to direct the soloist-director to accompany the ensemble with chords based on the bass line of the keyboard part, perhaps simply to hold the ensemble together.

While it is possible that a *col basso* direction in a score is simply an indication to the copyist to include the bass line in the piano part, the balance of evidence suggests that Mozart and his pupils played continuo accompaniments in the tuttis when performing with full orchestra. The symphonies, on the other hand, demonstrate the disappearance of the continuo as orchestration became more sophisticated. The earlier ones have the traditional composite part for all the bass instruments, including harpsichord or organ *colla parte*. Later ones separate this into its elements (bassoons with separate obbligato parts, cellos and basses *divisi* at least part of the time in most movements), so moving on from the old idea of the common *basso continuo* and making keyboard accompaniment dispensable. Beethoven provided a figured bass part for the tuttis of all his piano concertos (with the exception of the middle movement of no.4). Not only did he expect it played, but he treated it more fully than did either Haydn or Mozart. Playing in tuttis was a form of direction practised also by Hummel, and probably by Mendelssohn and Chopin as well, but by the mid-1830s both soloists and leader were relinquishing control to the baton conductor.

In the larger chamber or concert halls in Europe during two centuries there was of course no consistent practice regarding the direction of the music. Sometimes the continuo player functioned as director; sometimes there was a more specialized conductor, who did nothing else. In many cases the first violinist directed irrespective of whether or not he was a virtuoso soloist (C.P.E. Bach referred to this practice); in such cases the continuo player filled in the harmonies. In other music, both sacred and secular, a *maestro di cappella* led the group and would not have degraded himself by playing a keyboard instrument. Haydn at Eszterháza (from 1766) probably directed from the violin (otherwise the 'Farewell' symphony would have to end with a keyboard solo), but composers at London concerts about 1790–1800 directed from the piano, playing from the bass throughout, as Haydn is reported to have done in his London symphonies.

The places where direction from the keyboard and the chordal continuo lasted longest were the theatre and the church. Mozart speaks of directing operas from the keyboard ('Dirigiren beim Clavier'), and Rossini and his contemporaries 'presided at the pianoforte', on which they presumably accompanied the recitatives. Although *recitativo semplice* ceased to play a part in serious opera after the 1820s, it continued in use in revivals of *opere buffe* through the 1850s and 60s (Donizetti's *Il campanello*, 1835, is the last of his operas to use it). The figured-bass treatises published in Vienna by Albrechtsberger and others point to the continued practical use of the continuo in church music. Bruckner's early masses still call for organ continuo, and the figured organ part for his Requiem (1849) reflects the traditional concept of the continuo group set against obbligato string and wind parts. For works such as oratorios to be performed in the concert hall there was a tendency to write out organ parts, including those for revivals of 18th-century choral works (as Mendelssohn did for Handel's *Solomon*, *Israel in Egypt* and *Joshua*, and Brahms did for *Saul*). It is not clear when this began, but in most countries it was established by 1820 or perhaps earlier; as soon, that is, as a composer could assume that the organist would use a published organ reduction (for example in English oratorios from about 1750). For works performed in church (motets, etc.) the continuo tended to be realized by the organist.

4. Instruments. From the beginning of the continuo period, the organ was specified or understood as the instrument for church music, many parts from 1600 to 1800 being labelled 'basso per l'organo' or simply 'organo'. In some countries, organs were forbidden during Lent (or at least during Holy Week); hence the payments for harpsichord in S Marco, Venice, for Palm Sunday Passions (1656, etc.), and title-pages of such works as Francesco Milleville's *Pompe funebri ... delli matutini la sera nella settimana santa ... co'l basso continuo per lò clavicembalo, tiorba ò simil'instromento* (Venice, 1624). Many 17th- and 18th-century organs in Italy were provided with a harpsichord manual for use in Holy Week. In German court chapels, some organs had a set or more of harpsichord strings, and the organist may have used these for accompanying recitative. Certainly in the extra-liturgical oratorios, Passion stories, etc., the evangelist might be accompanied by 'a large or small organ, or also a harpsichord, lute or pandora, according to his choice' (Schütz, *Historia der Auferstehung*, 1623) or according to what was available. Some larger German churches (like the Thomaskirche, Leipzig, *c*1680–1780) kept a harpsichord, probably in the organ gallery at the west end. Pictorial evidence suggests that lutes sometimes played with the organ in church, at least on larger occasions (as in John Weldon's *Divine Harmony*, 1716) and perhaps often in the more aristocratic churches (in the English Chapel Royal after the Restoration two theorbos were sometimes used as part of an accompanying group with the organ). Evidence suggests that from at least the 1550s many larger Spanish churches had one or even two harps for use during services. The harp never lost its popularity in Spain during these two centuries, and skill in accompaniment was at least as highly prized as solo playing. In church music there are generally separate parts for harp and organ, the harp(s) playing in all items, the organ only in tuttis. Harpists were evidently expected to play florid, prepared accompaniments since they were all permanent members of the establishment, well paid and with plenty of time for preparation.

Exactly how the organ was played changed from period to period and area to area. The lesser *organo pleno* of the highly standardized single-manual Italian organ, being specially suitable for continuo purposes, must have contributed to the popularity of continuo. Stops were drawn discreetly; both Viadana (1602) and Gasparini (1708) recommended that full choral passages be accompanied by large chords, played by hands and feet, rather than by the drawing of extra stops. Registrations implied in contemporary organ tutors (Costanzo Antegnati, *L'arte organica*, Venice, 1608; Banchieri) vary, as they do in Monteverdi's *Vespro della Beata Vergine*, from Principale (Open Diapason alone) to 8.4.2 Principals and so to *organo pleno* (full Diapason chorus, no reeds, but 16′ in bigger churches). German theorists seem always to have allowed greater variety, as did their instruments

themselves. Praetorius (2/1619) advised the organist to prepare two manuals, one louder than the other, and to play the bright registrations in a more lively manner than the quiet. Recitative should ideally be accompanied by a quiet Gedackt or 8′ Stopped Diapason (Schütz, *Historia der Auferstehung*, 1623) and pedals can be colourfully registered (for example 8′ Posaune, 8′ Oktave and 5$^{1}/_{3}$′ Quinte) when several instruments are accompanying concerted music (Samber, 1704–7). German theorists also began to be more specific about pedals, Samber advising 16′ ranks in tutti passages, and later writers such as Mattheson (1731), C.P.E. Bach (1753–62) and Adlung (2/1783) assuming that the pedal played the bass part unless it was too difficult for the feet, in which case it was played on a manual with a 16′ stop. It is characteristic of the period when continuo traditions began to decay that some later writers (Schröter, 1772) should suggest that the organ could take over obbligato solo lines in the style of contemporary flute sonatas, while others advocated thick combinations of 8′ and 4′ stops (Bédos de Celles, *L'art du facteur d'orgues*, 1766–78).

Organs were sometimes to be heard playing continuo in places other than churches, notably in 17th-century Italy, where the organ was used in the continuo of instrumental chamber music much more than the harpsichord or other instruments. Positive organs based on 8′ or 4′ principals, regals, table organs and claviorgans (a combination of table organ and harpsichord) were much more common than one might expect, and the specification of organ continuo by no means necessarily implies *da chiesa* use. The organ was also favoured in English and German consorts, in the oratorios of the mid- and late 18th century (London, Paris, Vienna) and – more exceptionally – in the sumptuous opera productions of the 17th century (*see* ORGAN, §V). Little *organi di legno* (small single-manual organs of a rank or two of closed and open pipes) are specified by such composers as Monteverdi (*Orfeo*, 1607) and such theorists as Barcotto (*c*1640), while Mace (1676) continued to think the organ the most suitable instrument for consort music, except when the piece is 'airy, jocund, lively and spruce' in which case he thought harpsichord better. Many German sources give the impression of the organ (full-sized or positive) as being unrivalled for keyboard continuo playing, and its style certainly influenced the realization of figured basses in the piano tutors of the late 18th century – rather as if idiomatic harpsichord continuo had been completely bypassed by many German performers between 1600 and 1800.

In his discussion of the rich array of instruments of accompaniment in early 17th-century Italy Agazzari (1607) explained that his instrumental categories depended on whether or not an instrument was capable of playing the bass. Foundation instruments such as organ and harpsichord were capable of playing the bass line and also chords above, accompanying as it were 'on the bass'. Some ornamentation instruments, such as the violin and the spinet, were too high in pitch to play the bass line (the early 17th-century *spinetta* was at 4′ or quint pitch); some, such as the *lirone*, cittern and guitar, were incapable of playing 'perfect harmony' because their re-entrant tuning put many triads into 6-4 position. These accompanied 'over the bass'. Some instruments, such as the lute, theorbo and harp could take either role. Melodic bass line instruments were used to make good deficiencies: a trombone (played quietly) could supply the bass for a 4′ *organetto*, and Praetorius (1618) recommended a bassoon for this purpose.

The chitarrone, which first appeared at the Florentine *intermedi* of 1589, was the prime instrument for accompanying monodic song, its quasi-antique name alluding to the kithara, the instrument of Apollo. Other instruments mentioned in publications include the harpsichord, lute, guitar (from the 1620s) and double harp. On the whole, a single instrument was considered sufficient, and melodic bass instruments such as the bass viol or violone were not used in this repertory. Around 1600 the term *tiorba* began to be used for the chitarrone (Cavalieri); the earlier term fell out of use by the 1640s. Melodic bass instruments were more usual in stage works (Monteverdi's *Combattimento* (1624) uses a *contrabasso da gamba* along with the harpsichord throughout) and became particularly important with the development of the cello from the 1680s. The rise of the latter encouraged elaborate obbligato bass lines in opera and cantata arias in which the new generation of virtuosos such as Francesco Alborea ('Franciscello') could shine. But the combination of harpsichord and cello was not common in Italy before the last decade of the 17th century.

The archlute, a normal-sized lute with extra bass courses, was more agile than the larger theorbo, though with a less sonorous bass. Both were used not only for chordal accompaniment, but also as purely bass line instruments. The combination of two violins with chitarrone/theorbo was favoured for dance music and chamber sonatas, where the plucked string was preferred to other bass instruments such as the bassoon as giving 'spirit' to the violins (Francesco Turini, *Madrigali, libro III*, 1629). Much ensemble dance music in the 17th century did not involve any chordal continuo. After about 1635 these extended lutes became principally bass line instruments in Italy. The theorbo continued to be used in conjunction with the organ in the graver style of church music. But the archlute, like the cello, came to the fore in the 1680s with the introduction of silver-wound strings which increased the strength of its bass notes without impairing its agility. The best known manifestations of this new and brilliant use are Corelli's church sonatas op.1 and op.3 (Rome, 1681, 1689) where the archlute is an alternative to the violone (in this case a cello with the part demanding considerable agility in the upper range). Multiple plucked string instruments were used in the continuo of large concerto orchestras at the end of the century, with several harpsichords, theorbos and harps in the tutti, but just one harpsichord or theorbo in the concertino group (print of Bernardo Pasquini's *Applausus musicale*, in C. Schoor, *Festa celebrata in Roma*, 1687; Georg Muffat, *Ausserlesene Instrumental-Music*, 1701).

Of other bass line instruments, the bass viol fell from favour in Italy before 1650, although some members of the family such as the six-string contrabass with *A′* or *G′* of the lowest string (playing sometimes at 8′, sometimes at 16′ pitch) were among the instruments that went under the general heading of violone. This term on its own usually meant an instrument at 8′ pitch in Italy, with the 16′ four-string *contrabasso* tuned in 4ths appearing in larger orchestral groupings in the later part of the century. A continuo group of two harpsichords, sometimes with theorbo, or harpsichord supported by cello and double bass (documented in numerous theatre illustrations

and plans), crystallized for opera after 1700. Many sonata title-pages until well into the 18th century specified harpsichord or violone/cello as alternatives rather than in combination, in which case the cello may have played a partially chordal continuo. It is not clear precisely how this worked in practice since the evidence for chordal continuo on the cello dates from the later 18th century. Given the very full and dissonant Italian style of harpsichord accompaniment, the difference in sound between these alternatives would have been very marked.

In the early 17th century a dulcian was used as the bass of a wind or brass group. Because of its agility it developed a virtuoso solo repertory, making it a possible alternative to the theorbo as a bass line instrument (Cavalli, *Musiche sacre*, 1656). Late in the century the refined French bassoon was exported all over Europe, used for solos or as the bass of a trio with two oboes. It became a standard component of the bass line with the cello and double bass in the early Classical orchestra (Haydn, letter, 1768). The trombone is rarely mentioned in publications after about 1650; after the decline of its natural consort partner, the cornett, it was used in Rome and in some German centres as the bass of a trumpet ensemble.

Much of German practice closely mirrored that of Italy. Early in the 17th century Praetorius made the main Italian writings on the new monodic and concertato styles available in German, and many German composers were trained in Italy. Not only the Catholic south, which naturally looked to Italy, but many of the Lutheran courts of the centre and north, notably the Dresden of Schütz, looked to Venetian models, and after mid-century to Carissimi's Rome. Fewer courts (notably Hanover and its dependencies, and Schwerin) looked to France, though there was a general tendency to look to that country for dance music. The German wish to absorb and combine the best features of both styles is summed up in the careers, music and writings of Froberger and Georg Muffat.

In north German church music the harpsichord was sometimes used with the organ as an additional part in tuttis (as continuo parts in the Düben collection (*S-Uu*) imply), and even occasionally alone. More common as a second accompanying instrument was the lute or theorbo, usually with the organ rather than alone, and playing throughout, not just with the ripieno. The largest centres naturally had the most elaborate instrumentations. In the Dresden of Heinichen and Zelenka (*c*1710–30) the (Catholic) court chapel employed a continuo group of two or more cellos, bassoons, violoni and theorbos, though the theorbos fell out of use in the 1730s after the arrival of Hasse. The harpsichord was used only in works in the modern style in Holy Week (Lamentations, oratorios, passions) when the organ was silent. Less extravagantly funded centres used more modest resources: Bach in Leipzig regularly used one or two cellos and occasionally a violone to reinforce the continuo line, while his eldest son, Wilhelm Friedemann, in Halle used organ alone for most of the continuo line in his church cantatas. The evidences for the use of the harpsichord in Bach's church music can be argued in various ways, but he would not have been going against traditional German practice in using it occasionally either in conjunction with or separately from the organ. He himself directed the funeral music for the Queen and Electress Christiane Eberhardine from the harpsichord (1727).

The violone at 16′ pitch was used at times: Praetorius called for it in *Polyhymnia* (1619); one was bought by the Marienkirche, Lübeck, in 1672; and it was particularly recommended by M.H. Fuhrmann (*Musicalischer-Trichter*, 1706) to give weight to ensembles in large buildings. As in Italy, the bassoon appeared from the early stages, for example in Schütz's *Psalmen Davids* (1619). Later it was used in *stile antico* choral fugues to double the vocal bass when oboes doubled the upper voices. In the 18th century it was used for the continuo in many movements without other reeds being present, and also occasionally in *recitativo semplice*. Fuhrmann regretted the disappearance of the old 16′ *bombardone* (bass shawm) and its replacement by the bassoon at 8′ pitch. The earliest instance of a double bassoon being specified in a work is Georg Österreich's *Actus funebris* (1702), reinforcing the possibility that the *bassono grosso* for which Bach provided a part in the *St John Passion* was at 16′ pitch.

In England strong native traditions of lute and viol playing influenced the continuo. The theorbo, introduced in the second decade of the 17th century, remained an important accompanying instrument until well into the 18th. It was mentioned until about 1730, but after 1700 it was overshadowed by the more fashionable archlute. As in France, the lute fell out of use towards the end of the 17th century, its place as a popular accompanying instrument being taken by the guitar. A specifically English instrument for song accompaniment was the bass viol. A number of Elizabethan and Jacobean prints include accompaniments for bass viol alone, some elaborately chordal and in tablature, some just a bass line (Robert Jones, *Second Booke of Songs and Ayres*, 1601). The airs of Corkine's *Second Book* (1612) look like continuo songs with melody and bass line, but some were to be sung to the viol alone. Later prints often give lute or viol as alternatives: John Playford's *Select Musicall Ayres* (1652), for example, are 'to sing to the Theorbo, Lute, or Basse Violl'. Those less skilled could simply play the bass line, but Playford's *Musick's Recreation on the Lyra Viol* (1652) and Simpson's *The Division-Violist* (1659) show that chordal and even contrapuntal techniques were widely used, perhaps by skilled players even in accompaniment. The harpsichord was rarely mentioned for song accompaniment before the Restoration. Its use for accompaniment was probably introduced by foreign musicians brought to England by the later Stuarts: Pepys heard G.B. Draghi sing to the harpsichord in 1667, but this was not common before 1680. Chamber organs were standard in consort music, and no doubt accompanied in other contexts although not usually specified. Parts began to be expressed as continuo lines, rather than being written out, from the 1650s.

Keyboard instruments hardly figured in early 17th-century court masques, in which chordal accompaniments were played, as in the French *ballet de cour*, by large numbers of lutes. Theatrical works after the Restoration continued to be influenced by French practice, by then that of Lully, with a chordal continuo group accompanying the voices; dances and symphonies were played by the string group alone, without continuo. After 1700 fashion swung decisively in favour of Italian opera, with its standard complement of one or two harpsichords to accompany the *recitativo semplice*, and a continuous bowed bass of cello and probably double bass. A fairly typical example would have been the group of cello, two harpsichords and archlute that P.-J. Fougereux heard

accompanying the recitative in a Handel production of 1728. Handel also used the harp (*Esther, Saul, Alexander Balus*), and it became very fashionable for song accompaniment in both England and France in the later 18th century. A harpsichord continued to appear in London orchestral lists up to 1791, after which the pianoforte took its place.

The practice of the continuo did not become common in France until after 1650 and at first was associated with church music (Du Mont, *Cantica sacra*, 1652), which was more open to Italian influence than secular vocal music. The main instrument was naturally the organ, but works of M.-A. Charpentier, for example, occasionally also called for harpsichord or theorbo. The theorbo, which must have been known in France from early in the century through visiting Italian musicians and French musicians returning from England, came suddenly into fashion around 1660, apparently thanks to the lutenist and viol player Nicolas Hotman. Its first recorded use by Lully is in the *Ballet d'Alcidiane* (1658). Bénigne de Bacilly, in the standard vocal tutor of the era (1668), wrote that neither harpsichord nor bass viol had the theorbo's grace in accompanying the voice. He also noted that at that time the harp had fallen out of use in France: Lully used it exclusively for *entrées* of Spanish character, in conjunction with guitars (*Les muses*, 1666). The vogue for Italian sonatas and cantatas that began in the 1690s brought with it the standard combination of keyboard and string bass (Brossard, 1703; François Couperin, *Leçons de tenébres*, 1713–17), with either the cello or bass viol preferred depending on how much one adhered to the Italian faction. Some cantata arias (for example by Clérambault) are completely Italianate in form and style, but require the seven-string bass viol on the virtuoso bass line, an example of the union of French and Italian elements sought by composers of the generation of Couperin. After about 1720 the Italian influence predominated, including the typical Italian combination of violin and cello (as an alternative to the harpsichord) favoured by French violinists such as J.-B. Anet and J.P. Guignon.

French ensemble dance music written for violin-family instruments in the early 17th century seems not to have involved any chordal instruments, judging by the many surviving contracts for groups of musicians. But lavish court entertainments, on the other hand, frequently used massed instruments of all sorts, particularly lutes. In his stage works Lully divided the orchestra into two components, each with a clear function: the *petit choeur* accompanied the vocal airs and ensembles, linking them into a seamless sequence; the *grand choeur* played the overture, symphonies and dances. The *grand choeur* (in five parts, notionally played by 24 violin-family instruments, sometimes doubled by woodwind, though listings and accounts vary) had no chordal continuo and the bass line was unfigured. There is no exact description of the *petit choeur* of Lully's time, but a list for the Académie Royale de Musique in 1704 gives two solo violins, harpsichord, two theorbos, two bass viols and three bass violins; another for 1712–13 adds two transverse flutes and has one less each of bass viol and bass violin. A double bass was added, probably to the *grand choeur* only, around 1700 and was used initially for representations of storms and subterranean rumblings, as popularised by the storm in Marais' *Alcione* (1706). Theorbos had disappeared by 1733, and the bass violin by 1750. The remaining chordal instrument, the harpsichord, was gradually less used during Rameau's career and by the time of Gluck's Paris operas in the mid-1770s was no longer listed in the orchestra.

5. Playing techniques.

(i) Keyboard instruments. Precisely what the gravicembalo players contributed to the solo and ensemble pieces of the 1589 Florentine *intermedi* will never be known; nor is it at all certain how much composers or copyists expected contemporary church organists to add for the performance of an English anthem or a Spanish motet. Such organists did not in principle contribute an indispensable part to the harmony or texture of the piece. But the first set of rules for continuo players (Viadana's *Concerti*, 1602) accompanied a volume of music in which the continuo part was indeed indispensable for the completion of the work. The famous set of twelve rules is therefore particularly instructive. A short paraphrase of their conjectured meaning is:

(1) Concertos of this type are to be sung tastefully, discreetly, elegantly;

(2) the organ part must be played simply, especially the left hand; the right may add appropriate decoration ('passaggio') but not so much as to confuse or cover the singer;

(3) the organist should first look through the piece to be sung;

(4) the leading note should not be doubled at a cadence except in unison with the singer;

(5) when a concerto begins fugally, the subject and its answer should be doubled on the organ;

(6) no fully written-out score is provided since most players will find an organ bass easier; you may however write out your own score which, to tell the truth, is better;

(7) when accompanying the chorus, increase the number of parts played by manual and pedal, not the number of drawn organ stops;

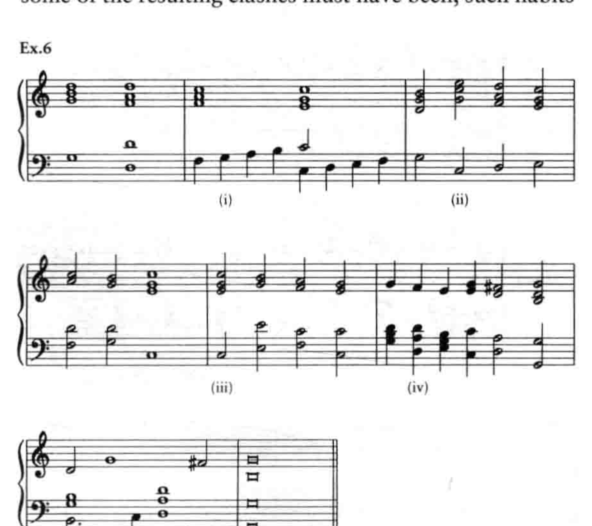
(8) accidentals are placed carefully and the organist must observe them [this probably refers to the placing of sharps and flats in the staff, a 3rd or 6th above the bass, to imply the precise note affected; but Viadana's printer was not sufficiently accurate];

(9) the organ part need not avoid consecutive 5ths and octaves, though the voices should;

(10) the effect of these pieces will never be good without organ or keyboard ('manacordo') since the harmony will not make sense;

(11) falsettists make a better effect in these concertos than [boy] trebles;

(12) the organist should accompany in an appropriate tessitura, neither high if there are the usual four parts, nor low if the vocal part is high.



Such rules do not inform the organist what to play, and the choice remains wide, from simple block chords to thinner, more contrapuntal textures (see ex.1). Generally speaking, however, the style of the realization depends on the function of the continuo instrument. Did it play alone? Was the music sacred or secular? Did it fill in the harmony or add colour? In some motets for few voices by Viadana and his contemporaries in Italy and elsewhere (such as Praetorius) the organ supplies the lines that might be expected to belong to other voices; in lute songs and monodies, the lute or chitarrone gives a harmonic background (ex.2); in instrumental or vocal consorts, the bowed or plucked string instruments supplying Agazzari's so-called ornamentation did so in ways suggested by the nature and technique of the instrument concerned (ex.3); in ensembles of several choirs, contrast of technique and timbre between continuo instruments is required; and so on. When Roger North, speaking of broken consorts in the middle of the 17th century, wrote:

But I must allow that the attendance of instruments of the *arpeggio* kind, which rattle plentifully, as harpsichords, archlutes and above all the pandora, give a fullness as well as elegance to the sound and thereby attract an attention. It is to my knowledge within the memory of man, that in the celebrated consorts divers of the pandoras were used...

the function of the extra continuo instruments in such an ensemble is clear, and hence what they play is implied. A harpsichord adding an ornamental part to a consort should play differently from one alone accompanying a voice, whatever the style or period of music concerned.

Theorists necessarily concentrated on correct harmony, and their examples are only too frequently explications of harmony rather than idiomatic realizations for a particular instrument. But straightforward harmonizations are often found to suit a particular style (like Schütz's recitative), or a particular instrument (such as a small organ or fortepiano), or a particular function (for example the piano directing the tutti of a Mozart concerto). Thus when Agazzari realized a bass line in a simple chordal manner, organists should appreciate that it suits very well church music of the period, with or without other accompaniment, especially in Italy and Germany (ex.6). Such interpretation naturally served as an obvious model for theorists writing either predominantly for organ (Praetorius, Werckmeister, etc.) or more theoretically, for no particular instrument (Locke, Blow, etc.). Four parts, especially with a gap between the hands, could also serve to accompany a violin solo, for example in the violin sonatas of the 1620s or the later fully-fledged concertos (ex.7). Even if the copyist did not intend this as a literal accompaniment, it would suit the organ with an 8′ Principale registration. On an Italian harpsichord, it would be better to put the right hand down an octave. A more inventive organ style is hinted at by certain Italian authors such as Penna (1672) who liked the organist to 'accompany the dissonances with their consonances' (to play suspensions and resolutions together). Severe though some of the resulting clashes must have been, such habits

Ex.6

Agazzari's notes:
(i) Passing-notes below held chords.
(ii) Contrary motion.
(iii) When the bass line leaps, keep the right hand smooth by playing adjacent chords.
(iv) Not passing-notes: harmonize each with a chord above.

Ex.7 Vivaldi: Concerto for Violin and Organ, RV 541/P 311

were also suggested by Roger North when he talked of 'mixing' the chords, playing 'together continually such sounds as a descanter would scarce allow of'. The effects were reserved for fuller ensembles and are in practice often justified by the very simplicity of the harmony in so much vocal music of the 17th century.

Where music-making was still under the influence of Italian arias and cantatas (e.g. English publications *c*1790) or retained old styles and forms (Protestant and Catholic Germany), continuo can be assumed to have been played in the old manner, though somewhat simplified. Such simplification might have taken the form of elementary harmonies, following the voice discreetly in arias. Only occasionally did a treatise suggest an idiomatic organ style, less extravagant than the harpsichord's (e.g. Penna, 1672); the first to deal with the subtleties of harpsichord accompaniment was probably Saint-Lambert's *Nouveau traité* of 1707, a book soon followed by similar ones by Gasparini (1708), Heinichen (1711) and their imitators.

Judging from the practice of Georg Muffat (*c*1699), organ accompaniment in the South German/Italian tradition in the later 17th century encompassed a variety of textures: three parts (two in the right hand); four parts (two in each hand); and a variable full texture of four and more parts (two or more parts in each hand). These probably relate to Agazzari's instruction to thin or fill out the texture according to the number of voices being accompanied. By 1730 four-part harmonies (with three parts in the right hand) were given as the realizations of figured-bass lines in all theory books except, occasionally, one written by an Italian: Manfredini's (1775) gave five. A large collection of realized continuo parts from the circle of C.P.E. Bach (*D-Bsb* Mus.ms.theor.348) uses this four-part texture for works from Corelli's *Sonate a tre* op.1 (1681) to trios by J.G. Graun (*c*1760), including the *St John Passion* of J.S. Bach and overtures of Handel. This is a student work, but may be seen in the light of Daube's (1756) description of three playing styles: 1) simple, with closely connected right hand chords and all chord factors present; 2) natural, which adjusts this strict manner to be more melodious and like a composition; and 3) complex ('die künstliche oder zusammengesetzte'), similar to the elaborated ('manierlich') accompaniment given by Heinichen (1728), or the concertante patterns of Mattheson's *Exemplarische Organisten-Probe* (1719).

Daube noted that J.S. Bach excelled at the third style. The simple style was the common teaching method of the 18th century, from which one could branch out into idiomatic organ or harpsichord accompaniment. In practice good professional harpsichordists probably played, as Quantz (1752) recommended, a nuanced accompaniment with texture varied to enhance the musical effect of the moment. This is probably what Daube had in mind for his natural style, a style which according to Löhlein (1765) was only for those with experience of composition and the sensitivity to do it properly. Löhlein also tells us that by his time the complex manner had gone out of fashion.

Four-part texture has remained the most usual in the academic teaching of harmony, and most sources explain the rudiments of harmony rather than the subtleties of harpsichord accompaniment. Nevertheless, four-part harmonies were useful in several respects: they suited the new piano better than did the older harpsichord arpeggios; they matched the traditional four-part layout of sacred vocal music; and they suited the nature of the *galant* styles in which an elaborate melody required simple chords below.

From a study of the small treatises by Penna, A. Scarlatti, Pasquini, Gasparini, Geminiani, Pasquali, Antoniotto, Manfredini and several anonymous authors, it is possible to build up a picture of the mature Italian harpsichord continuo style. In the large orchestra described by Agazzari and Praetorius the harpsichord and spinet divided the foundation and ornamental functions, both subsequently taken by the harpsichord. If it were alone accompanying ('maintaining the harmony', in Roger North's phrase), the harpsichord would need to be played in a restrained manner, except perhaps when the voice or solo instruments were silent. North distinguished between the two functions of the harpsichord when he wrote:

> For an accompanying part which is to maintain the harmony, to trill, and upon the low notes whereon it most leans, unless it be upon a little *ritornello* or solo, is senseless and destructive to the musick. But that is the fault of our English masters who, accompanying a voice, will clatter trills at the bottom to make one wild...

By 1711 and 1728 Heinichen and those he influenced in north and central Germany (Mattheson, Kellner, Daube) were issuing extended models or written-out examples for harpsichord players to show where and how ornaments could be added to the realized harmonies, how to improvise melodies and imitations and how to 'break' chords. According to Geminiani (1756–7), the art of accompanying on the harpsichord 'chiefly consists in rendering the Sounds of the Harpsichord lasting, for frequent interruptions of the Sound are inconsistent with true melody'. Such approaches contrast strangely with, for instance, contemporary French chamber music, in which the harpsichord was often given an almost effetely discreet part to play. The influences behind the advice of Geminiani and Heinichen were the Italian theorists and players of about 1700, musicians used to little Italian harpsichords with two 8′ registers requiring rich harmonies and constant repercussion, ornamentation and the like if they were to sustain their sound usefully for a singer. A good example of the Italian approach is to be seen in the frequent explanations of harpsichord acciaccaturas, familiar from the solo sonatas of Domenico Scarlatti but once equally familiar in harpsichord continuo playing. According to the anonymous *Regole piu necessarie et universali per accompagniare il basso continuo* (MS, 1720, *I-Rli*, Mus P15), the simplest progressions could be treated with these little crushed notes (ex.8), as

Ex.8

could whole arias (ex.9). Gasparini and others wrote of such acciaccaturas as if they were best suited to recitatives, as they surely are; but it is clear from many sources that they were more generally a part of the 'mature Italian style'. For example, Geminiani (*A Treatise of Good Taste*, 1749) wrote of the player that:

> In accompanying grave Movements, he should make use of Acciaccaturas, for these rightly placed, have a wonderful Effect. No performer ... should flatter himself that he is able to accompany well till he is Master of this delicate and admirable secret which has been in use above a hundred years.

This attribute that would disqualify it in the most up-to-date circles of Paris and Berlin. But as important are the suggestions from French theorists that in many contexts chords were realized very richly; that they were fancifully arpeggiated with little crushed notes slipped in, and that the bass was sometimes doubled in order to take advantage of the new rich sonorities from low notes added shortly before to French harpsichords (ex.10).

The Italians and those they influenced obviously knew two distinct styles of continuo playing on the harpsichord: one very rich, the other simple. The one was filled with acciaccaturas and obviously led some players to distort the composer's original bass line, as in Antoniotto's version of a passage from one of Corelli's violin sonatas (op.5 no.1; ex.11). One can understand Le Cerf's complaint in 1704 that 'usually all that is heard in Italian

Ex.9

Ex.10 from J. H. d'Anglebert (1689); realized according to his ornament table

Ex.11

music is a continuo accompaniment varied without respite, the manner of decorating the chords often taking the form of arpeggios and figurations'. The second was that employed in the quick *recitativo semplice* of the new light operas – short, simple chords below a parlando vocal line, much admired by Rousseau in the middle of the century. Rousseau reported hearing only the bass played in such music, without chords, but Rameau (1760) recommended quick arpeggios. Rousseau's distinction between the French and Italian styles raises the question of the accompaniment of recitative. Certain areas of this difficult subject will always remain obscure – for instance, how keyboard players accompanied recitative in the operas of Monteverdi, Lully and Rossini. The music by such composers as Schütz and Handel is less open to conjecture, since in both cases the performing tradition to which it belongs is better understood. In practice, however, the finer points of style in recitative playing amount to knowing how richly to play and whether to spread and repeat the chords, how quickly to play them, and when to leave the voice unsupported. The recitatives in Monteverdi's *Orfeo* include some of the most confident and well-developed progressions in 17th-century harmony; their very inventiveness and beauty demand simple chords from the organ and harpsichord. It is also clear from the vocal style that there should be a distinction between the sections accompanied by organ and those by harpsichord. A suggested realization requiring both approaches is given as ex.12.

Lully's harmony is on the whole much simpler than Monteverdi's, and this may imply a greater freedom for the player. However, French sources are so scanty that all we know is that by 1660 the French had learnt how to

Ex.12

adapt the rich, broken-chord, low-tessitura harmonies of Baroque lute music to the harpsichord; this style of *basse continue* was demonstrated by D'Anglebert (1689). At the other end of the scale, evidence for accompanying Rossini's recitative is also scanty but probably because chords were played so plainly and quickly as to require no special explanation. When Gasparini wrote (1708) of recitative that 'the more its dissonances can be played full and doubled, the better will be the effect', he was referring neither to the old aristocratic operas nor to the new *opera buffa*, but to the standard cantata and *opera seria* style. Yet as late writers (C.P.E. Bach, Pasquali, Löhlein, Kollmann, Türk) saw, the changing mood of recitative was one of its chief features, and the player had to help to distinguish between a text 'common, tender or passionate' and one full of anger or abrupt surprise (Pasquali, 1757; ex.13).

Some of the problems facing the conscientious continuo player are highlighted by the work of J.S. Bach, himself a fine performer and one open to a vast range of influences. The written evidence concerning Bach's own playing is contradictory and must be understood as representing him in different roles. Contemporaries spoke of his invention. Mizler von Kolof (*Musikalische Bibliothek*, i/4–6, 1738) wrote that:

> Anyone who wants to have the right idea about what refinement in continuo-playing and very good accompaniment mean need only trouble himself to hear our Kapellmeister Bach here who plays every continuo to a solo in such a way that it might be thought an obbligato piece with the right-hand part composed previously.

J.F. Daube (1756) reported that:

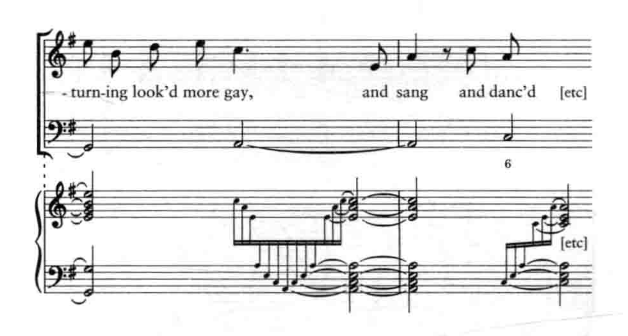
> A lifeless piece was inspirited by his very skilful accompaniment. He could bring in imitations with his right or left hand so cleverly, or introduce a counter-subject so unexpectedly, that listeners could not believe that it had not been very carefully pre-composed. He did not nevertheless neglect his duty of supporting the harmony ...

In a letter to Forkel (*c*1774) C.P.E. Bach wrote:

> Above a thinly figured continuo part set in front of him, and knowing that the composer would not object, [he converted trios] into complete quartets, astonishing the composer ...

These concern performances of chamber music, apparently instrumental. J.C. Kittel (*Der angehende praktische Organist*, 1801–8) commented on his style in church music:

> One always had to be prepared to see Bach's hands and fingers suddenly mingle with the hands and fingers of the keyboard-player and ... fill out the accompaniment with masses of harmony ...



– a description, surely, of a rehearsal rather than a public performance. The obbligato harpsichord part for one aria from *Amore traditore* (BWV203) exemplifies the remarks of these commentators. It is a very rich and extravagant accompaniment written in a manner theoretically possible to improvise but in fact more complex than the obviously Italianate figurations in (for example) Handel's cantata *Ah! Che pur troppo è vero*; it goes well beyond the later techniques of the composers of obbligato works.

But both the written evidence and the keyboard accompaniments in the works for flute (BWV1030–32), violin (BWV1014–19) and voice (BWV203) compare strangely with the evidence of Bach the figured bass pedagogue – the teacher who dictated plain directions in the *Clavierbüchlein* for Anna Magdalena Bach (1725), borrowed the grammarian rules from Niedt's *Musicalische Handleitung* (1700–17; copied *c*1738), taught his pupils strict four-part thoroughbass (according to Forkel)

Ex.13 N. Pasquali: from *Thorough-bass made Easy* (1757)

and, it seems, had one of his pupils (H.N. Gerber) realize the harmonies of a violin sonata by Albinoni in the plainest texture of four-part chords. Another of his pupils, Kirnberger, harmonized the bass from the trio from the *Musical Offering* in the same simple way (*c*1781).

Such distinctions between Bach the skilful performer and Bach the careful teacher must reflect the case of many a composer from Viadana to Albrechtsberger; they must also reflect to some extent the difference expected of a player realizing a continuo accompaniment in theatre or chamber music and the organist playing harmonies in church. But even in Bach's chamber music there are not many opportunities for extravagant style. The kinds of composition that C.P.E. Bach reported him as 'improving'

were perhaps the meagre *galanteries* of the 1740s, or at least second-rate music that not only admitted of an extra new part but very likely required it for interest. In his own violin sonatas, for example, Bach left the player very little scope for any extemporization – a few simple chords here and there, contrasting with the worked-out obbligato lines.

The secular cantatas call for a more extravagant style in the recitatives, as well as a harpsichord on which to play them. Players would do well to distinguish in this way between the sacred and secular versions of those cantatas known in both forms. Such works as the flute sonatas with figured bass (BWV1033–5; 1033 is of dubious authenticity) are as Italianate in form as they are in detail (for example the Corellian influence in the first movement of BWV1035), and a harpsichord realization should perhaps reflect this in the richness of its parts, the generally low positions of the hands, the arpeggios, acciaccaturas, etc. Other movements in the chamber works, like the fourth of BWV1033, are more French, hinting at the thin textures that were to become popular, requiring the pretty treble tone of a good French harpsichord (ex.14). In these pieces the harpsichordist alternates between obbligato solos for right hand and simple three- or four-part chords for the stretches of figured bass; and these two functions were to become common in the sonatas of the Berlin school. Often the figures need not be realized but are there, as in Corelli, only to show the implied harmony.

There are several problems in accompanying Bach's church music, and the solutions appear to be controversial, or at least may apply only to one or another period in his output. The possible role of the harpsichord has already been mentioned. If the organ, with a cello for recitatives and a double bass for choruses, is the usual instrument for the continuo in the cantatas and passions, what did it play? The extant harmonization of part of an aria from Cantata no.3, in the hand of C.F. Penzel, who studied at the Thomasschule (1749–56), follows the familiar pattern of three-part chords for the right hand on every main beat. But even here, if the aria is conceived as a lively, rather tortured piece, too many chords are supplied: the harmonization seems merely to demonstrate progressions for young players. Nevertheless, the mass of theoretical evidence suggests that four-part chords are correct in such continuo parts; moreover they should be played legato, with notes common to two consecutive chords held over, the whole forming a quiet support on, for example, an 8′ Diapason stop. In a Bach aria with obbligato instrument, the organist can add little in the way of interesting imitations; in one without an obbligato instrument, the bass line usually contains the theme, in which case the organist's right hand should not detract from the melody being played by a more melodic instrument (that is, the cello). If the introductory bars are a bass line against which the theme of the aria fits contrapuntally (as often happens in Handel), it is tempting to bring in the aria theme against it; but composers rarely gave such opportunities to the harpsichordist. In any case, the whole tradition of arias without obbligato instruments, whether Italian and secular or German and sacred, was against counter-melodies from the organ once the voice had begun.

Ex.14 (Attrib. J. S. Bach)

A further problem concerns the figuring, for if an organist takes the trouble to realize all the figures of the bass of a Bach aria a doubling of the voice or obbligato instrument will result. Much evidence from both early and late figured bass theorists suggests that doubling the voice was not frowned upon, but in the case of Bach's continuo parts it is not clear why they are so copiously figured. The composer himself rarely figured or wrote out the part, and it may be that the organist or one of Bach's pupils figured them for reference from the composer's full score. Perhaps the figures helped the organist to play the harmonies complete, or to know what to leave out, or were useful only in rehearsal. Or perhaps they were added merely to indicate what the upper parts were playing. Doubling the voice part is sometimes effective for a few passages in an aria, although many singers dislike it; but it is seldom necessary to help singers in recitative by touching their next note, though this was advised by such theorists as D.G. Türk.

A third problem in performing Bach's church music concerns German recitative accompanied by organ. Türk, a typical organist brought up in the central German tradition, writing in 1787, thought it a special requirement of organists that they play the chords in recitative short, however they were notated; and some theorists writing about the harpsichord said the same (ex.15). This leaves the singer quite free and allows the words to be heard distinctly. Evidence suggests that the practice became increasingly common during the 18th century; some authors recommended that players lift their hands if the sound of the organ became irksome during a long note (Heinichen, 1711; Mattheson, 1731) and some issued firm directives that the organist should usually play chords short (C.P.E. Bach, 1762; Petri, 1767). Nevertheless it is not clear where in J.S. Bach's work recitatives are to be played in this fashion, nor whether the bass line itself should also be cut short. Petri, Schröter, G.P. Telemann and C.P.E. Bach suggested that the bass should be held by the keyboard (perhaps also by the cello) but Türk and others did not. Like Handel in his secular Italian cantatas,

Ex.15 A.F.C. Kollman: *A Second Practical Guide to Thorough-bass* (1807)

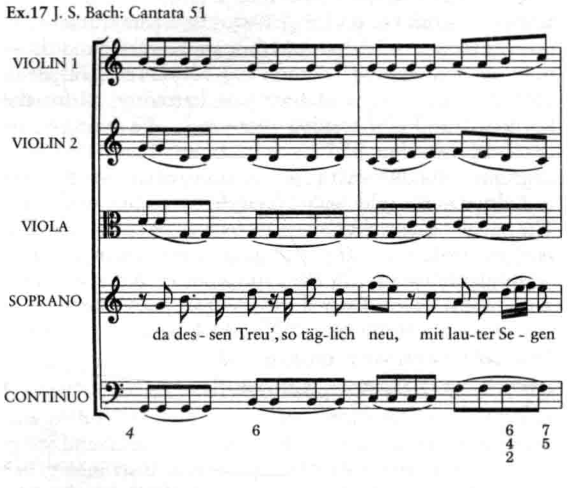
J.S. Bach frequently varied recitatives within a work by writing long held notes at some points, short notes (with rests) at others; surely, therefore, the composer did not expect chords in all recitatives to be shortened uniformly. The practice may have become established in the 1730s, judging by the detached bass notes written in the parts for the revival of the *St Matthew Passion* in about 1736; or perhaps the notation merely confirms what had long been customary in practice. In the recitative of Peri, Monteverdi or Schütz, sustained organ tone brings out the contrast between simple triadic harmonies and the quicker, more lyrical line of the soloist; but late Protestant cantatas demand different treatment, as does late *opera buffa* recitative. Despite their differences, church cantatas and *opere buffe* require short chords in recitative for the same reason: the texts of both need maximum clarity, whether biblical or mannered *buffa* patter. For this reason even Schütz in his last oratorios considered there need be no accompaniment at all for his quasi-plainsong recitatives. Close attention to style could well lead the conscientious player today to think there may have been a distinction intended between recitatives dealing with meditative, pious texts (Bach's chorale cantatas, the cycles of 1723–5, etc.) and those directly quoting biblical narrative (the Passions, the *Christmas Oratorio* and *Ascension Oratorio*, etc.): in the former, perhaps, the chords were held, in the latter played short.

A fourth problem in Bach's sacred music concerns the manner in which perfect cadences at the ends of phrases or sections are intended to be performed. Most players find it as difficult to follow the singer as to find the correct chords; but players should never delay the bass line while under the stress of sight-reading, pursuing a fast singer, inventing suitable figurations below an obbligato instrument, etc. In the recitatives of chamber cantatas, players should let the singer finish the vocal cadence before playing the instrumental one (G.P. Telemann, 1733–4). But Heinichen (1728) wrote that, in the opera house, the harpsichordist's delayed cadence may hold up the action; and he is supported by Telemann, who specified differences between recitative in chamber cantata and in opera (ex.16). In bar 4 of ex.16 there is no sign to delay the cadence, and harmonically no delay is needed even though use of the conventional vocal appoggiatura results in a temporary clash. But in bar 9, as in many passages in J.S. Bach's church cantata recitative, not delaying the cadence results in a harmonic clash with the final vocal phrase. That this did not trouble composers, however, is quite clear from arioso recitatives where the accompaniment is

Ex.16 Telemann: *Singe-, Spiel- und Generalbass-spielen auf der Orgel* (1733)

Telemann's notes:
(a) Do not restrike bass when a discord.
(b) Restrike bass for resolution.
(c) In cantatas, wait and play the cadence after the singer; in operas do not wait.

written out (ex.17) and further examples are found in other genres, such as Handel's operas and oratorios. The tonic–dominant clash at such cadences is often inaudible in quick operatic recitative, with a non-sustaining harpsichord in a large theatre; but not in slower church recitative accompanied by organ. However, such clashes agree closely with the Italian-English 'mingled harmonies' of the late 17th century and could well lead one to suppose that the problem is again chronological – the later the recitative, in theatre, chamber or church (in that order), the more likely it is that the composer expected the final perfect cadence to be delayed until the voice had finished. Bach's Leipzig cantatas occur at a period in which practices seem to have been changing in an important respect for continuo players. The practice of telescoping cadences began to be abandoned by Neapolitan opera composers in the 1720s, and by 1755 it had practically ceased. Not even in a single genre by one composer, therefore, can a blanket solution be applied.



(ii) Plucked-string instruments. Much of the instruction given in writings and tutors is concerned with the elements of harmony and applies generally to continuo playing. Agazzari (1607) tells us that a knowledge of counterpoint in such matters as dissonance treatment and where to put major or minor 3rds or 6ths has to be taken for granted. Bianciardi's *Breve regola* (1607) for playing from an unfigured bass was designed for 'every kind of instrument'. Most of Delair's tutor for accompaniment on the harpsichord and theorbo (1690) concerns the basics of notation and figuring common to both instruments.

The novelty of early 17th-century Italian monody and its basis in a lively interaction of music and literature produced detailed information about the style and technique of accompaniment of that period. As well as verbal prescriptions, there are also many accompaniments for monodic song with a part for chitarrone/theorbo realized in tablature. According to Agazzari (1606, 1607), the lute, harp, theorbo and harpsichord when playing as foundation instruments should concentrate on supporting the voice with full and sonorous harmony; they should play loudly or softly according to the number and quality of the voices, the place and the work; and they should not spoil the singer's *passaggi* or expression of emotion by restriking the strings too often. When playing as instruments of ornamentation they can exploit their individual character. To the lute belongs a ravishing inventiveness and variety, with soft and loud, slow and fast effects, and imitations in different registers, all embellished with *groppi*, *trilli* and *accenti*. In the consort the theorbist should play full, gentle chords, restriking them and running lightly over the diapason courses – which are the particular glory of this instrument, and when the singer pauses put in little right-hand ornaments (*trilli*, *accenti muti*).

No doubt the experience and subtlety required for good monody accompaniment explains why there are so many tablature realizations for lute or chitarrone in manuscript. They are of variable quality; most useful as guides are the printed realizations by Flamminio Corradi (1616), J.H. Kapsberger (*Libro I di villanelle*, 1610, *Libro III di villanelle*, 1619) and Bellerofonte Castaldi (1622). From these some general conclusions may be drawn: the accompaniment was in the tenor range, below the voice, though it often doubled the vocal part; the bass line was played completely and the bass note repeated when the chord changed on a tied note (an instruction given by Giulio Caccini); unfigured 4–3 suspensions and passing notes were routinely added at cadences, but the dominant 7th chord was sparingly used, seemingly for special expressive effect (Monteverdi associated it with the pain of love); accompaniments were simple, with an almost total lack of motivic figuration and counterpoint, and wholly subservient to the voice; variety of chording was cultivated, from two to five parts, with sparing use of breaking and repeating chords; there was no particular concern for the contrapuntal rule banning parallel 5ths and octaves (Vincenzo Galilei, *Dialogo della musica antica*, 1581, had particularly attacked this rule as belonging to the convoluted counterpoint which monody aimed to supplant with natural declamation).

A feeling for French theorbo style can be acquired from the solo works of Robert de Visée and others. There are unmeasured preludes in elaborate STYLE BRISÉ, but the dance music is simple in texture, generally melody and bass with subtle accentuation by means of a discreet and variable addition of chords. The most useful tutors are by Delair (1690) and François Campion (1716, 1730). Delair addressed the problem of inversions created by the re-entrant tuning by directing that the bass note always be played first in a chord or put into the lowest octave of the instrument, a practice used in all theorbo repertories. The problem that chord factors do not come out in regular order in a spread can be solved by irregular fingering

Ex.17 J. S. Bach: Cantata 51

patterns. Guitar strum technique was sometimes used in solo music for lute and theorbo (*tirer et rabattre*) and no doubt was also used as appropriate in accompaniment: Visée was a virtuoso of both instruments, and Campion recommended aspiring theorbists to start with the guitar.

In England in the earlier 17th century the change from fully worked tablature accompaniments for lute or theorbo to thoroughbass was gradual, with both systems existing side by side for several decades; thus there are many models for style. For the later part of the century the most important discussion is Mace's chapter on theorbo accompaniment (1676). Mace listed many different handshapes (positions) for chords. He also dealt with ways 'to Amplifie your Play' by breaking chords at cadences; some of his 21 examples are in the French *style brisé* while some are more elaborate. He also gave examples for decorating bass scale passages by breaking the chords (ex.18). These appear in the abstract, without a part to accompany, and they are more elaborate than existing tablature accompaniments. However there are arrangements for harpsichord of vocal pieces by Purcell which use a *style brisé*, arpeggiated texture in the accompaniment.

The guitar became very popular in Italy from the 1620s, particularly for song accompaniment, where it was often paired with the harpsichord. Its primary technique was strumming (BATTUTO; typical guitar dances such as the chaconne and the folia are based on strum patterns), but plucking (PUNTEADO, pizzicato) in imitation of lute technique was added by G.P. Foscarini in his first three

Ex.18

written

played

books (*c*1630). Guitar tutors commonly give scales with handshapes for chords on each degree. The most sophisticated version of this is Nicola Matteis's 'Universal Scale' showing how to construct chords on each degree of the chromatic scale (1682), and the principle culminated in Campion's formulation of the *règle de l'octave* in 1716 (*see* REGOLA DELL'OTTAVA). Matteis's tutor is the most useful since he goes well beyond information for beginners, covering style and interpretation as well as technique and providing copious examples of realization. The guitar again became popular in Italy, France and England early in the 19th century, particularly through the works of Ferdinando Carulli, which included *L'harmonie appliquée à la guitarre* (*c*1825). For further information, *see* GUITAR, §4.

For the harp, Agazzari (1607) gave the best description for the Monteverdi era. As a foundation instrument it played as the lute, theorbo and harpsichord; as an ornamentation instrument the *arpa doppia* (double-strung harp), being as good in its upper as in its lower register (unlike the chitarrone, for example, which is at its best in its lower), used its entire range, with sweet plucked notes, responses between the hands, *trilli* etc., and the player aimed at good counterpoint. This matches closely the style of the *arpa doppia* part of 'Possente spirto' in Monteverdi's *Orfeo*. Some 13 of 220 monodic song publications between 1601 and 1635 mentioned the harp, as opposed to over 100 that mention the chitarrone. A number of 18th-century Spanish tutors dealt with the harp, notably Torres (2/1736) who cited a number of harpsichord examples of spread chords with dissonant additions from Gasparini (1708). Elsewhere, tutors purporting to deal with harp accompaniment, such as those of Honoré Garnier (1767) and P.-J. Meyer (2/1772), dealt only with the basics of four-part harmony, as for the keyboard, and said nothing about style. We must assume that harp continuo had much in common with keyboard continuo, though with some similarities to theorbo technique in flexible voicing and the spreading of chords. The one definitely characteristic technique of the late 18th century was, naturally enough, arpeggiation in song accompaniments (as in the very popular 'Nel cor più mi non sento' from Paisiello's *L'amor contrastato*, also known as *La Molinara*, 1788) which became a cliché of 19th-century drawing-room ballads.

(iii) Bowed-string instruments. The LIRONE originated as a low-pitch version of the *lira da braccio*, and so was essentially a chord-playing instrument. Caccini and Striggio played it without a supporting bass instrument, but according to Praetorius it did not play the top or bottom parts and so needed a discant and bass with it. This is presumably why Agazzari put it with the instruments of ornamentation, even though improvising florid counterpoint was not part of its nature. Its 9 to 14 strings on the fingerboard, with two to four drone strings, and almost flat bridge, together with a cleverly designed re-entrant tuning, meant that it could play four- or five-part chords across the fingerboard. Agazzari (1606) said that, like all viols, it should be played clearly and sonorously, using the whole bow, and that care should be taken that the parts follow the rules of counterpoint.

The 16th-century fashion for the *lira da braccio* was probably the inspiration for chordal accompaniment on the viol. The first printed example, in tablature, is in Ganassi dal Fontego's *Lettione seconda* (1543) where the

instrument plays mainly two-part chords with an occasional three-part one at cadences. It was no doubt the successive waves of Italian viol players employed by the English court who brought the technique to England, where it attained its greatest flowering. Early 17th-century manuscript and printed tablature accompaniments such as those by Tobias Hume (1605) are much more sophisticated than Ganassi's, with variety in chording and some *style brisé* effects, and provide models for the continuo realization of contemporary thoroughbass parts. A problem with the viol is that chords of more than two notes have to be spread (this is probably why the Italians developed the *lirone*), which may impede the rhythm. Simpson (*The Division-Violist*, 1659) and Mace (1676) recommended emphasizing the lowest note; Mace also recommended exploiting the continuing resonance of open strings in the bass to sustain the harmony. Simpson often included extended chordal passages in his divisions, but Mace, in demonstrating how a viol can accompany itself, used a *brisé* texture (as do his theorbo examples), more so than one would normally expect in a continuo accompaniment.

In France there are references to chordal continuo playing in prefaces to solo viol publications (Machy, 1685; Marais, 1689, 1701), but few technical details, even though chordal viol playing reached a very high level there. In two chapters on accompaniment in his *Traité* (1687) Jean Rousseau discussed how to finger chords to make them more resonant. Chords should mostly be played with generous bow strokes, and smoothly connected like an organ, though some movements are 'beaucoup marquez'; ornaments in the solo part should be imitated in the bass if the same motive appears there. In Germany, a collection of arias by Jakob Kremberg (*Musicalische Gemüths-Ergötzung*, 1689) gives melody and figured bass, and also tablature for four fretted instruments including the bass viol. The tablature versions are really for solo performance, intabulating the melody and bass, the latter often transposed up for playability, with fuller chords on main beats. Chordal playing was an important part of a distinguished German viol tradition which lasted into the second half of the 18th century, the best-known continuo example being the written-out accompaniment in the recitative 'Mein Jesus schweigt' in the J.S. Bach's *St Matthew Passion*. It may have been for a German violist in Rome that Handel wrote chordal continuo parts in the cantata *Tra le fiamme* (probably 1707) and the oratorio *La Resurrezione* (1708). In numbers involving the viol he provided a few bars of fully written out three- or four-part chords or arpeggiated texture at the opening and continued the part as a figured bass.

Considering how frequently the cello is prescribed as an alternative to the harpsichord in sonatas, there is surprisingly little contemporary instruction for it. The earliest tutor (Corrette, 1741) gave fingerings for chords and exercises for arpeggiating chords, but said nothing specific about chordal continuo playing. Corrette did, however, refer to the practice of playing division elaborations of the bass line, for which there is much evidence. The fullest 18th-century description was given by J.B. Baumgartner who devoted four chapters of his *Instructions de musique* (1774) to accompaniment, covering recitative, cadences, standard progressions, etc. Chords in recitative were played short ('avec un coup sec'), in from two to four parts, and with the bass frequently put down an octave to allow a four-note chord. Standard progressions were in two parts, the added part being constructed from 3rds, 4ths or 6ths above the bass, with fuller chords at cadences. There is evidence for harmonic additions of this sort in the bass parts of sonatas by Tartini and Boccherini. The practice of chordal accompaniment in recitative was discussed in many 19th-century tutors starting with the *Méthode* compiled by Pierre Baillot and others (1804). It long survived in *opera buffa* and was used (according to Bernard Shaw) for a performance of Federico and Luigi Ricci's *Crispino e la comare* in London as late as 1891.

PETER WILLIAMS, DAVID LEDBETTER

Contius [Cuncius, Cuntius, Kuntze], **Christoph** (*b* Wernigerode, *c*1676; *d* Halle, 8 Nov 1722). German organ builder. He lived and worked in Halberstadt, and after 1716 in Halle. His most significant work was the building of the organ for the Liebfrauenkirche, Halle (1713–16; three manuals, Pedal, 65 stops), which had the distinction of being played by Bach, Johann Kuhnau and Christian Friedrich Rolle. His contemporaries drew attention to its various special stops, such as the 8′ Rackett, the 4′ Blockflöte and the 4′ Nachthorn, as well as the fact that it could be retuned to concert pitch. However, Bach, Kuhnau and Rolle criticized its low wind pressure and the poor alloy of which the pipes were made. Only the front of this organ has been preserved. Other organs by Contius include Tharshengen (1706), Wernigerode (1706; rebuilding), Abbenrode (1708; extant), the Ulrichskirche, Halle (1716; addition of *Brustwerk*), St Georg, Glaucha, near Halle (1718–20; rebuilt in 1755 by his son Heinrich Andreas), and St Paul, Halberstadt (1721). He was described by T.H.G. Trost as a 'renowned' master.

His son Heinrich Andreas (*d* after 1782) was also an organ builder. He was a pupil of Christian Joachim of Halle, and began working independently in about 1740. From 1748 he was an inspector of organs in Halle and he later held an organ builder's privilege in that city. He was recommended as an able organ builder by both J.S. and W.F. Bach. In 1763 he moved to the Baltic, and in 1783 to Riga. In general he built in a solid style, showing no tendency towards experimentation, and his organs are considerably uniform in terms of size. He maintained the classical structural specification, with no Tierces among the mixture stops, and used almost no mutation stops. His organ fronts frequently depict angels playing kettledrums and trumpets. His work includes organs for St Bartholomaeus, Giebichstein, near Halle (1743), Dieskau (1749–50), Merseburg Cathedral (1759; repairs), St Jacobi, Riga (1760), St Petersburg (1761), the Moritzkirche, Halle (1766; rebuilding), and Reval (now Tallinn) (1768–71). His most significant achievement was to introduce the central German organ-building tradition to the Baltic area.

FELIX FRIEDRICH

Contojo d'Arti e d'Industria. *See* KUNST- UND INDUSTRIE-COMPTOIR.

Contra. An abbreviation for CONTRATENOR.

Contra-. (1) A prefix meaning 'against', as in *contrapunctus* and contratenor.

(2) A prefix meaning 'lower octave', probably derived from the early practice of indicating the notes below the great octave (*C* to *B*) by dashes written underneath (C̱, Ḏ, Ḛ etc, i.e. *C′*, *D′*, *E′*): the dashes are in the opposite position to those used for the higher octaves (c̄, d̄, ē, etc.). Hence the contra-octave is the one below the great octave and instruments with that range are described as contrabass instruments, for example, contrabass clarinet (It. *clarinetto contrabasso* or *contra-clarone*), contrabassoon (It. *contrafagotto*), contrabass tuba and so on.

(3) On the organ the prefix 'contra-' signifies 16′ pitch on the manuals and 32′ pitch on the pedals (*see* ORGAN STOP).

Contrabajo (Sp.). *See* DOUBLE BASS.

Contrabass clarinet. A member of the clarinet family (*see* CLARINET, §II, 1) pitched two octaves below the soprano clarinet in B♭ (or one below the B♭ BASS CLARINET) or an octave below the alto clarinet (in E♭). The B♭ variety is sometimes called 'pedal clarinet'.

Contrabasso (i) (It.). A modifier signifying an instrument that plays in the contrabass range, such as the contrabass clarinet (*clarinetto contrabasso* or *contra-clarone*).

Contrabasso (ii). The largest member of the violin family, i.e. the DOUBLE BASS.

Contrabasso (iii). Name given to specially trained Russian bass singers whose range extends downwards to as far as *F′*.

Contrabassoon. *See* DOUBLE BASSOON.

Contradanza (It., Sp.). *See* CONTREDANSE.

Contrafactum (from medieval Lat. *contrafacere*: 'to imitate', 'counterfeit', 'forge'). In vocal music, the substitution of one text for another without substantial change to the music.

1. Before 1450. 2. After 1450.

1. BEFORE 1450. The term is most commonly applied to the practice of composing new poems to older melodies, particularly in the secular monophonic repertory of the 12th and 13th centuries. But it is found equally in the plainchant repertory, where the texts of new feasts, for example, were routinely adapted to older melodies. Many sequence and hymn melodies too were retexted numerous times. Contrafacta are also found in medieval polyphony. A number of 13th-century motets, for example, survive with both Latin and French texts; thus Philip the Chancellor's *Agmina milicie* appears with the texts *Quant froidure* and *L'autr'er cuidai*. The constant re-use of older, particularly sacred, melodies is so fundamental to both the technique and spirit of medieval music that it does not constitute a special usage.

Although the word 'contrafactum' (or 'contrafacere') is not part of the classical language, it was used in the Middle Ages to mean imitation in general, though often with the more negative connotation of counterfeit, its nearest English equivalent. Although the term is not used in medieval music theory, melodies are occasionally identified in rubrics such as 'un lais de Nostre Dame contre le Lai Markiol', which accompanies the Marian contrafactum *Flours ne glais* (R.192) attributed to Gautier de Coincy. But this usage is not consistent and the phrase 'super cantilenam' is equally common. The earliest use of

the term contrafactum in the modern sense is in the 15th-century German Pfulligen manuscript, where it is restricted to the textual adaptation of secular melodies for sacred use.

As the term is used in the modern sense, no precise limits have been observed in the designation of a song or composition as a contrafactum. There is no general agreement as to whether the term should be restricted to sacred adaptations of secular melodies, or the degree of correspondence necessary before a contrafactum becomes a free adaptation, or when conscious adaption becomes coincidental similarity. In the strictest sense, a contrafactum would not only employ the melody, rhymes and metric scheme of the model, but would also be in some sense an adaptation of the meaning of the original poem. Gautier de Coincy's *Amours dont sui espris* (R.1546) is a case of this kind: it not only employs the melody of Blondel de Nesle's *Amours dont sui espris* (R.1545), but also retains the first line of the poem. Here there can be no doubt about the intention of the author of the contrafactum, but this is the exception rather than the rule. More common is the contrafactum which employs an older melody, but whose verbal text leaves room for doubt about the intentions of its author. In such a case it is impossible to know whether a contrafactum is a conscious and deliberate imitation of a known model or simply the casual re-use of a well-known melody or common melodic type. Gennrich called this type the 'regular contrafactum', and from here it is a short step to what he called the 'irregular contrafactum': the newly composed song adopts certain features of an older song, without imitating every detail of its melodic or metrical structure. An extreme example is shown in ex.1, containing the first two lines of two songs in entirely different metres, of which the second (*Douce dame*) is derived indirectly from the first (see Falck, 1967).

The scarcity of authentic melodies for German Minnesang has led scholars to supply melodies from trouvère or troubadour songs when the German poems can be shown to be contrafacta from French or Provençal models. That this method may be appropriate is suggested by Walther von der Vogelweide's *Allerêrst lebe ich mir werde*, for which the surviving melody is closely related to that of Jaufre Rudel's *Lanquan li jorn son lonc en may*. Such methods must be used with care, however, since songs may employ identical rhyme and metrical schemes without necessarily having the same melody. Indeed there are several medieval poems with three different melodies.

A number of melodies enjoyed great popularity in the Middle Ages. Each of the melodies in ex.1, for instance, has a Latin contrafactum, and the first (*Quant li rossignol*) also has one in French. The sequence *Letabundus* inspired countless sacred and secular contrafacta, and the melody of Bernart de Ventadorn's *Quan vei la lauzeta mover* was used for a number of new songs in Latin, German and French. The melody to Blondel's *Amours dont sui espris*, mentioned above, was also used for three Latin conductus, two of them set polyphonically (*Purgator criminum*, *Procurans odium* and *Suspirat spiritus*).

2. After 1450. In the 15th and 16th centuries contrafactum often involved substitution of a sacred text for a secular one; only rarely did the reverse take place. The following examples illustrate varieties of contrafacta in this period. French chansons were sometimes given sacred Latin texts in 15th-century German sources (e.g. Busnoys' *Quant ce vendra* becomes *Gaude mater*). Some English songs of the 15th century were twice transformed, first into French, then Latin (e.g. Walter Frye's *So ys emprentid* appears in continental sources as *Soyez aprantiz* and *Pour une suis* and as *Sancta Maria succurre*). Josquin's chanson *Plusieurs regretz* appears in 16th-century German sources as both *O Virgo genitrix* and *Sana me Domine*. Transformations of secular music into sacred continued throughout the 16th century (e.g. Lassus's *Mon coeur se recommande à vous* becomes the *chanson spirituelle* to the words *Mon coeur se rend à toy, Seigneur*). An opposite example, of a secular text replacing a sacred one, is Senfl's lied *Wohlauf, wohlauf*, which is musically identical with the motet *Ave ancilla Trinitatis* by Senfl's teacher Isaac.

Pieces composed for specific occasions sometimes had their texts altered to fit new circumstances: for example, Festa's *Quis dabit oculis*, lamenting the death of Anne of Brittany (1514), was transformed by Senfl into a funeral piece for the Emperor Maximilian I (*d* 1519) by substitution of a few words. Similarly, texts of motets were changed, sometimes drastically, to make them suitable for different liturgical occasions (examples in manuscript *I-TVd* 29). A more complex example, approaching recomposition, is Isaac's lament for Lorenzo de' Medici on a text by Poliziano, *Quis dabit capiti meo aquam* (1492). Most of the music is identical with portions of Isaac's *Missa 'Salva nos'*, but these passages are ordered differently and incorporate a new section based on an ostinato, refocussing and intensifying the effect of the borrowed music.

Contrafacta are specially common among Italian *laude* from the 15th century to the 17th. Many *laude* borrow their music from frottolas (e.g. Tromboncino's *Eterno mio signor*, derived from his frottola *Quando fia mai*). An important collection of works of this type is Giovanni Razzi's *Libro primo delle laudi spirituali* (Venice, 1563), which contains music taken from carnival songs of Lorenzo de' Medici's time.

The Protestant reformers, eager to provide appropriate music for their devotions, drew on both popular and courtly secular music as well as older sacred music, altering texts as needed. The Genevan Psalter borrows heavily from popular chanson melodies, while many Lutheran chorales derive their music from traditional sacred melodies and secular songs (e.g. Isaac's *Innsbruck* becomes *O Welt ich muss dich lassen*). Sacred texts of Catholic flavour were changed to suit the Lutheran viewpoint: La Rue's *Ave regina caelorum* becomes *Ave apertor caelorum* in Rhau's *Symphoniae iucundae* (Wittenberg, 1538). The Counter-Reformation responded with such examples as a *Te Deum laudamus* transformed into *Te Lutherum damnamus* (Maistre Jhan). The English church occasionally used contrafacta; among the earliest is an anthem derived from Taverner's famous 'In Nomine': *In trouble and adversity*, attributed to Thomas Caustun (1565). Throughout the later 16th century and the early 17th Latin motets were 'English'd' to render them suitable as anthems.

Contrafacta continued to be made in the early 17th century, in spite of the increasing union of words and music characteristic of the *seconda prattica*. Monteverdi, for example, transformed his *Lamento d'Arianna* into *Il pianto della Madonna*, and a number of his madrigals were 'spiritualized' by Aquilino Coppini, who supplied sacred Latin texts carefully matching the affect of the original words and music (1607–8). Later in the 17th century and throughout the 18th contrafactum tended to merge with parody (*see* PARODY (i)), the generic term describing adaptation of pre-existing music to new texts. It is often difficult to separate contrafacta from the manifold degrees of recomposition that occur in such genres as *opéra-comique*, ballad opera, church cantata and oratorio: Bach's and Handel's self-parodies are perhaps the most notable examples.

Contrafacta virtually disappeared in 19th- and 20th-century art music. This can be attributed to the premium placed on originality and the belief in the uniqueness of the individual work of art that has prevailed since the 19th century.

ROBERT FALCK (1), MARTIN PICKER (2)

Contrafagotto (It.). *See* DOUBLE BASSOON.

Contralto (It.; Fr. *alto*; Ger. *Alt*). A voice normally written for within the range *g* to *e''*, which may be extended at either end, particularly in solo writing.

1. The term. 2. Before 1800. 3. 19th century. 4. 20th century.

1. THE TERM. In modern English usage the term denotes the lowest of the three principal female voices, the others being soprano and mezzo-soprano; but when the term was first used it would have denoted a male singer, originally a FALSETTO singer, later a CASTRATO. The

various attempts (e.g. Brossard, 1703; Walther, 1732; *Grove5*) at an etymological understanding of 'contralto' directly through its roots, *contra* ('against') and *alto* ('high') – thus, one part written against another high part – are misconceived. The word originated in the early 16th century as 'contr'alto', a local abbreviation of the late 15th-century CONTRATENOR ALTUS. Throughout the 16th century, however, the form 'contralto' was used only rarely, (*See* ALTO (I)) being the common term. In the 17th century, as castratos became more numerous in Italy, authors sometimes sought to create distinctions. 'Alti naturali' was used to designate falsettists, while Andrea Adami (a castrato soprano) used the word 'contralto' in his *Osservazioni* (1711) to refer to the castratos Stefano Landi (*d* 1639) and Mario Savioni (*d* 1685), members of the papal choir. Burney, however, made no such distinction, and used 'contralto' for both castratos and women. In later English usage, when castratos were no longer on the musical scene, 'contralto' came to refer always to a woman, as distinct from a male alto (a boy alto, or a falsettist).

The term 'contralto' is usually limited to solo singing; in choral music 'alto' is preferred for boys, falsettists or women, or any combination of these.

2. BEFORE 1800. Until the 19th century, the only two terms commonly used for treble voices were 'soprano' and 'contralto'; most roles then identified as for contralto are today sung by mezzo-sopranos. The term 'mezzo-soprano' was established only in the 19th century following the upper extension of the soprano's range, so that many earlier roles written for soprano can also be sung by today's mezzo-sopranos. The identification of roles and singers as either contralto or mezzo-soprano may thus depend on whether contemporary or modern standards are considered, and there remains a great deal of terminological confusion.

In 17th-century opera, the contralto voice was often used for the representation of old women. As early as Monteverdi's *L'incoronazione di Poppea* (1643) the most haunting lyrical music in the score, the lullaby 'Oblivion soave', is assigned not to a soprano but to Poppaea's nurse, the contralto Arnalta (range *a* to *a'*. In Cesti's *Orontea* (1656), the old woman contralto Aristea (range *e* to *g'*) makes advances towards a young man soprano (the situation being made the more ridiculous in that the 'youth' is in fact a woman in disguise). The comic element in the portrayal of a low-voiced, amorous old woman was often increased by assigning the part to a high tenor *en travesti*: the roles of Arnalta and of Alcesta in Cavalli's *Erismena* alternated in performance between alto and tenor (*see* TRAVESTY). The contralto in the operas of Alessandro Scarlatti emerged as the constant companion of the comic bass, and the celebrated Santa Marchesini (not to be confused with Maria Antonia Marchesini, one of Handel's singers) built her career on this type of role; Scarlatti composed several for her, including Dorilla in *Tigrane* (1715) who flirts with the comic bass Orcone and whose comic function is stressed by her silly asides to the audience. These roles are often written in such a restricted range that classification by voice type is difficult: Dorilla's range extends only from *c'* to *d''*; it is listed for mezzo-soprano in the modern edition (1983). A similar role in Scarlatti's *Marco Attilio Regolo* (1719) for the maid Eurilla is listed in the modern edition (1975) for contralto, though closely equivalent in range (*b* to *c''*).

In the 18th century, librettists and composers came better to appreciate the dramatic potential of the deep female voice. In the 1720s Handel created many sympathetic roles for Anastasia Robinson, who at this stage of her career was singing in the range *b♭* to *e''*, including Zenobia (*Radamisto*, 1720) and Cornelia, Pompey's widow (*Giulio Cesare*, 1724). Classification of such roles remains difficult, however. Although Robinson is considered a contralto, her immediate successors in the same range are considered mezzo-sopranos, such as Francesca Bertolli and Maria Caterina Negri (both of whom often sang male roles). The leading male roles in Handel's operas, usually sung by castratos, were written in the same range (*a*–*e''*). Handel's *primo uomo* in the 1720s was the castrato Senesino, 'who was always regarded in England as a contralto' (Burney, *History*, iv, 1789, p.275). Quantz however referred to him as a mezzo-soprano. Neither castratos nor women played a significant role in choral music at this date: in the Anglican service, the alto parts would have been taken by boys or countertenors; in Lutheran cantatas, exclusively by boys.

The contralto voice was virtually unknown in France; the French *bas-dessus* was of mezzo-soprano rather than contralto pitch and quality. The contralto hardly appears in the operas of Gluck and indeed is rare throughout the Classical period; there is no true contralto role, in terms of range and weight, in any Mozart opera. In Italy, the one place where the contralto voice was and had been cultivated assiduously since the first third of the 17th century was in the *ospedali* (orphanages for girls) of Venice that specialized in music training for girls and young women who gave public performances. Goethe wrote of hearing the female musicians of the Mendicanti performing Ferdinando Bertoni's oratorio *Saul furens* in 1774: 'The women presented an oratorio from behind a grille in the church, which was filled with listeners; the music was beautiful, and the voices were magnificent. An alto sang the role of King Saul, the central figure in the libretto. I scarcely realized that such a voice existed'. (Baldauf-Berdes, 1993, p.242).

3. 19TH CENTURY. By the end of the 18th century, Italian composers were again using the low-lying female voice in comic roles. The contralto Josephina Grassini benefited from this trend at the beginning of her career, performing leading roles in comic operas by Paisiello and Salieri among others; she also took on serious dramatic roles. Napoleon, attending a gala performance in 1800 at La Scala in celebration of his victory at Marengo, remarked on 'the beauty of her stage appearance and the sublime accents of her voice'. When she sang the title roles in the London premières of Winter's *Il ratto di Proserpina* and *Zaire*, the *Daily Advertiser* noted that 'the lady's voice is of the counter-alto kind, and much deeper than we have hitherto been accustomed to in a female'.

Rossini continued the traditions of using contralto voices for women's roles in both comic and serious opera. The coloratura contralto roles of Cinderella in *La Cenerentola* (1817) and Rosina in *Il barbiere di Siviglia*

(original version, 1816) were both written for Geltrude Righetti, who had a powerful and rich-toned voice with a compass *f–b″*. For Marietta Marcolini, a 'prima donna contralto', Rossini created roles in five operas, including that of Isabella in *L'italiana in Algeri* (1813).

Of equal importance among female contralto roles in the early 19th century, given the decline of the castrato, were male roles written specifically for coloratura contralto voice, such as the title role in *Sigismondo* (1814) for Marcolini. The term PRIMO MUSICO rather than PRIMA DONNA or PRIMO UOMO for such singers made clear the association with the castrato. Adelaide Malanotte scored a triumph with the aria 'Di tanti palpiti' in the title role of *Tancredi* (1813). Benedetta Rosamunda Pisaroni created the role of Malcolm Graeme in *La donna del lago* (1819) and was an admired Arsace in *Semiramide* (1823). The Italian *musico* tradition ended in the 1840s with the rise of the leading tenor.

In the middle of the century, contraltos were particularly well served by Russian and French composers with both male and female roles. Anna Petrova, a Russian contralto who specialized in travesty roles, created two in Glinka's operas: Vanya in *A Life for the Tsar* (1836) and Ratmir in *Ruslan and Lyudmila* (1842). Marietta Alboni, who had a particularly flexible and powerful voice, studied Rossini's contralto roles with the composer; she sang Arsace at the opening of the Royal Italian Opera at Covent Garden (1847), and Meyerbeer transposed the role of Urbain in *Les Huguenots* from soprano to contralto for her. Meyerbeer also included a magnificent contralto role in *Le prophète*, Fidès, created in Paris in 1849 by Pauline Viardot, a singer greatly admired for her artistry and musicality by many composers, particularly Berlioz, who adapted Gluck's Orpheus for her to sing at the Opéra (1859).

The French tradition continued at the end of the century with Blanche Deschamps, a contralto with a rich and powerful voice who created the title role of Massenet's *Hérodiade* (1881), as well as the Mother in Charpentier's *Louise* (1900). She was the first Delilah at the Opéra; her immense repertory ranged from La Haine in Gluck's *Armide* to Fidès and Carmen. Massenet wrote dramatic roles for her in *Cendrillon* (1899) and *Chérubin* (1905).

The late Italian and German repertory for contralto is less rich. Ulrica (*Un ballo in maschera*), is exceptional among Verdi's operas, and in Wagner Erda in *Das Rheingold* and *Siegfried* is the single major role calling for a true contralto. Ernestine Schumann-Heink was the first Clytemnestra in Strauss's *Elektra* (1909) and was renowned as an interpreter of Wagner in both the mezzo-soprano and contralto range at Bayreuth, Covent Garden and the Metropolitan, where she took her farewell as Erda (*Siegfried*) in 1932 at the age of 70. Her American contemporary Louise Homer also excelled in Wagner roles and created the Witch in Humperdinck's *Königskinder* in 1910; she took her farewell as Azucena in 1929 at the age of 68.

The rich colouring of the contralto voice, particularly in the lower half of its range, has been used to expressive effect by several late Romantic and early 20th-century composers. In Brahms's *Alto Rhapsody* (1869) the solo voice is projected against a sombre background provided by orchestra and male voices. Mahler included an important solo contralto part in his Third Symphony and entrusted the voice with some of his most intense outpourings in *Das Lied von der Erde* (1907–9). The Angel in Elgar's *The Dream of Gerontius* (1900) is another part in which the warmth and fullness of the contralto voice is tellingly used. Among contraltos who have become identified with Elgar's music are Clara Butt, for whom Elgar wrote his *Sea Pictures*, Kathleen Ferrier and in her early days Janet Baker.

4. 20TH CENTURY. Contralto parts in 20th-century opera have tended to be restricted to character roles, such as Berg's: Margret in *Wozzeck* and the Theatrical Dresser/High-School Boy/Groom in *Lulu*. Strauss's in his later operas include the Widow Zimmerlein in *Die schweigsame Frau* and the major role of Clairon in *Capriccio* (more usually sung by a mezzo). Prokofiev, continuing the Russian tradition of writing contralto roles for younger characters, contributed Blanche in *The Gambler* and Princess Clarice in *The Love for Three Oranges*. Leokadja Begbick in *Der Aufstieg und Fall der Stadt Mahagonny* and Kabanicha in *Káťa Kabanová* are very effective contralto roles, also frequently sung by mezzos.

English and French works have offered a somewhat richer set of roles. Although in *Peter Grimes* the only contralto part is that of Auntie, hostess of The Boar, in Britten's next opera, *The Rape of Lucretia*, the title role was written for Ferrier. Tippett wrote a vocally very strong contralto role for Sosostris in *The Midsummer Marriage*, while Poulenc provided a dramatic opportunity for the contralto voice in Madame de Croissy in *Dialogues des Carmélites*, created at La Scala by Gianna Pederzini and in Paris by Denise Scharley. Menotti composed the title role of Madame Flora in *The Medium* for the contralto Claramae Turner, who sang Madame de Croissy in the American première of *Dialogues des Carmélites*.

Despite these strong contralto roles, there has been a notable movement in opera away from contralto towards mezzo-soprano. This may be related to an increasing preference for a light, pure sound, eschewing the chest register; compared to the soprano and mezzo-soprano repertory, little contemporary music has been written for the deep, rich contralto. Even with the revival of the coloratura contralto parts of Rossini, Donizetti and Bellini, by Marilyn Horne and others, such singers are usually described as mezzo-sopranos rather than contraltos: the Metropolitan Opera, for example, does not list contraltos on its register, classifying female singers as soprano or mezzo-soprano (Myers, 1996).

The apparent bias against the term contralto in opera is perhaps based partly on the stereotype of the contralto as an old woman, a stereotype also emphasized in popular music and in the works of Gilbert and Sullivan, where the contralto roles revert to the comic type common in the 17th century (in their relation to travesty-type roles: Stedman, 1970). It may also be based on the fact that many acknowledged contraltos of this century were known primarily as concert and oratorio singers. This applies to Butt and Ferrier; the American contralto Marian Anderson was also best known for her concert performances and for the singing of spirituals. Racial

prejudice kept her from the operatic stage until 1955, when she became the first black singer to perform at the Metropolitan, singing the role of Ulrica. The Canadian Maureen Forrester, although she has sung contralto roles from three centuries, including Handel's Cornelia, Mistress Quickly and Madame Flora, also concentrated on concert performances.

Butt's popular touring and the concerts of other popular contraltos, such as the American Kate Smith (famous for her rendition of 'God bless America' and 'K-K-K-Katy'), have also added, unjustly, to a bias against the contralto voice in serious opera. Nevertheless, in popular singing from folk and religious song to jazz and blues, the contralto voice has been cherished. The versatility of such singers can be indicated by naming only three: Ethel Waters, who moved from vaudeville and musical comedy to evangelical touring; Ella Fitzgerald, whose extraordinary voice reached down to *d* and who competed with jazz instrumentalists in her 'scat-singing' improvisations; and Marlene Dietrich, whose film roles made special use of her sultry and husky singing voice.

Contrappunto (It.). *See* COUNTERPOINT.

Contrappunto rigoroso (It.). *See* STRICT COUNTERPOINT.

Contrapunctus (Lat., from *contra punctum*: 'against note'). A term first used in the 14th century in counterpoint treatises; before this the term 'discantus' had been used. Later, especially in German theoretical writings of the Baroque period, it was applied to a fugal movement or to counterpoint generally; the best-known examples are in J.S. Bach's *Art of Fugue*.

The term was used around 1330 to describe a note-against-note (*punctus contrapunctum*) compositional structure intended as the first step to producing a finished 'discantus' or upper voice. The earliest known treatises on 'counterpoint' are the anonymous *Volentibus introduci* (*c*1320), published by Coussemaker in two different versions, one falsely attributed to Philippe de Vitry (*CoussemakerS*, iii, 23–7) and the other to Johannes de Garlandia (iii, 12–13), and the *Quilibet affectans* (after 1340), published by Coussemaker (iii, 59–60*a*) as the first part of the *Ars contrapuncti secundum Johannem de Muris*. The former begins with a clear definition of counterpoint: 'If you wish to be introduced to the art of counterpoint, that is, note against note . . . ' ('Volentibus introduci in arte contrapunctus, id est notam contra notam . . . '). Another term used to define 'counterpoint', and one that shows its clear relationship to 'discant', is *fundamentum discantus* ('foundation of the discant'). This term appears in the *Cum notum sit* extension (later 14th century) of the *Quilibet affectans*; in the anonymous *Liber musicalium* (probably after 1340; attributed by Coussemaker to Vitry); and in the second treatise, attributable to Goscalch, of the Berkeley Manuscript (*US-BEm* 744, *c*1375; extract ed. in Sachs, 1974).

A typical 14th-century counterpoint treatise such as the *Volentibus introduci* included as a minimum: (1) a listing of permissible consonances, classified as perfect (unison, 4th, 5th, octave and compounds) or imperfect (3rd, 6th and compounds); (2) a description of the proper resolution of imperfect consonances to the nearest perfect consonance, normally by contrary motion; and (3) various rules of part-writing, especially a prohibition against parallel progressions of perfect consonances and a limitation on the number of parallel imperfect consonances.

Treatises on discant often begin with a similar section on the rules of counterpoint but then proceed to other matters that are necessary to transform that note-against-note framework into a finished discant. These include the ornamentation of the upper voice to fill in the structural points of the counterpoint, as well as other matters affecting that voice, such as the notation of rhythm (especially small values that pertain only to the upper voice and are not covered in standard mensuration treatises), proportions and modal considerations.

This separation of polyphonic theory into two topics, provided with separate terminology and discussed in separate treatises, clearly reflects the division of the compositional process into two stages, at least for the novice composer, at whom these treatises are directed. The implication is that one should compose by first laying out a structured framework of consonant progressions and then ornamenting the upper voice into its finished form.

Some counterpoint treatises were expanded into ones on discant, so that the material dealing with counterpoint forms the opening section of the more extended discussion of discant. The anonymous treatise *Ars contrapuncti secundum Johannem de Muris* is such a composite treatise: the first part, the *Quilibet affectans*, which appears separately in some sources, is a standard counterpoint treatise, and the title refers to that section alone. As published by Coussemaker, this treatise includes a later, additional section, the *Cum notum sit*, that expands the earlier work into a complete discant treatise. A revision of *Quilibet affectans* appears at the beginning of the second treatise of the Berkeley Manuscript, attributed to Goscalch; it is followed by different material, again devoted to discant.

In the early 15th century, the term 'contrapunctus' was expanded gradually to take on its modern meaning and, in the process, replaced the term 'discantus'. In his *Contrapunctus* (1412), Prosdocimus de Beldemandis distinguished between counterpoint in a 'strict' sense (*contrapunctus stricte sumptus*), which reflects the traditional note-against-note view, and counterpoint in a 'larger' sense (*contrapunctus large sumptus*), which reflects the expanded sense of the term. That the newer meaning is not entirely accepted is clear from Prosdocimus's definition: 'Counterpoint in a large sense, or taken

commonly, is the employment of several notes against a single note in a cantus [lower voice]. I do not intend to discuss that here, nor is it truly called counterpoint' ('Contrapunctus largo modo, sive communiter sumptus, est plurimarum notarum contra aliquam unicam solam notam in aliquo cantu positio, et de tali non intendo hic determinare, nec talis vere contrapunctus nominatur').

Later 15th-century theorists generally adopted the expanded meaning of the term, but the narrow sense continued to appear, especially in more detailed accounts. Ugolino of Orvieto, in his *Declaratio musice discipline* (1430–35; ed. in CSM, vii, 1959–62), distinguished between a *contrapunctus stricte seu proprie sumptus*, which he defined as 'placing a note against one note' ('uni notae contraponitur nota'), and *contrapunctus large sumptus*, defined as 'placing several [notes] against one note' ('uni notae plures contraponi videntur'). In his *Liber de arte contrapuncti* (1477; *CoussemakerS*, iv, 76–153; Eng. trans., MSD, v, 1961), Tinctoris still distinguished between a *contrapunctus simplex* (the strict, 'simple' sense) and a *contrapunctus diminutus* (the broader, 'diminished' or 'ornamented' sense). By the end of the 15th century, only the broader meaning survived.

OLIVER B. ELLSWORTH

Contrapuntal. Composed according to the rules, or techniques, of COUNTERPOINT. The term is sometimes used indiscriminately as equivalent to 'polyphonic', though it is properly restricted to the technical rather than the artistic aspects of part-writing, or used with reference to specific sections of a composition that is not wholly polyphonic.

Contrary motion (Ger. *Gegenbewegung*). In PART-WRITING, the simultaneous melodic movement of two parts in opposite directions.

Contratenor (Lat.: 'against the tenor'). The name given in the 14th and early 15th centuries to a polyphonic line composed in the same range as the TENOR. The practice of writing a part 'against the tenor' superseded the typical 13th-century process of adding parts above a tenor line. The first theoretical mention of the word 'contratenor' occurs in the treatise *In arte motetorum* (CS, iii, 88; 14th–15th century), and its earliest known appearance in a musical source is in a fragmentary motet manuscript of between 1315 and 1319 from the cloister of S Giorgio Maggiore, Venice (facs. in *Quadrivium*, ix (1968), table 1). The innovatory practice of adding a contratenor to a tenor is interestingly revealed in two motets (*Vos quid admiramini/Gratissima/Gaude gloriosa* and *Impudenter circuivi/Virtutibus laudabilis*) by Philippe de Vitry (1291–1361), which may be performed either with a conventional single-line tenor ('tenor solus') or with the same part ingeniously rewritten in the new manner as two lines, 'tenor' and 'contratenor'.

In late 14th- and early 15th-century works with borrowed tenors (motets, isorhythmic motets and tenor masses) the cantus firmus appears in long note values, while the added contratenor moves with rather more rhythmic flexibility, often assuming the chief responsibility for providing the harmonic foundation (e.g. Dunstaple's *Preco preheminencie*). In a typical three-voice chanson of the period the tenor and contratenor parts are both more active (though usually not as florid as the superius). The tenor, no longer *prius factus*, still shows signs of having been written at least bar by bar in advance of the contratenor in so far as it usually forms perfect intervals with the top voice (e.g. Du Fay's *Belle, veulliés moy retenir*).

The technique of conceiving a tenor part first and then adding another line, or lines, against it persisted after about 1450, when the contratenor split into two parts, the CONTRATENOR ALTUS and the *contratenor bassus*; it is still reflected in Pietro Aaron's instructions 'Del modo del comporre il controbasso, et controalto doppo il tenore et canto' (*Il Thoscanello de la musica*, 1523, bk 2, chap.21). In the generation of Josquin Des Prez, as composers began to stratify more clearly the ranges of voices in polyphony and, in particular, as they became interested in the art of imitative counterpoint, the term 'contratenor' and the compositional approach that went with it became obsolete. For further information see D. Hoffmann-Axthelm: 'Contratenor' (1973), *HMT*.

OWEN JANDER

Contratenor altus (Lat.: 'high [part] against the tenor'). A line in polyphony lying just above the tenor. In the 15th century, as music came to be written in four rather than only three voices, composers approached the addition of the fourth voice by an extension of earlier compositional procedure. The most common arrangement of three voices had been superius (or cantus), tenor and CONTRATENOR; in the new four-voice texture the composer used two contratenor parts, a *contratenor bassus* and a *contratenor altus*. The original method of writing these two voice parts is still evident in Pietro Aaron's *Il Thoscanello de la musica* (1523), where ten rules set out 'the method of composing the controbasso and the controalto, after the tenor and canto' (bk 2, chap.21). In Italy 'contratenorbassus' was abbreviated to 'bassus', 'controbasso' or 'basso'; 'contratenor altus' became 'altus', 'controalto', 'contr'alto', 'contralto' or 'alto'. In France the term became HAUTE-CONTRE. English usage was complicated because even in the late 16th century (by which time the word 'contratenor' had long been obsolete on the Continent) an alto part might also be called a meane, a contra, a counter or a COUNTERTENOR. Morley's *A Plaine and Easie Introduction* (1597), for example, discusses

four-part writing with the designations 'treble', 'counter', 'tenor' and 'bass'.

Whereas in the 15th century the *contratenor bassus* was distinctly the lowest of the four voices in range, the *contratenor altus* still shared the same range as the tenor, roughly *c* to *g′*. In the 16th and 17th centuries, as the *contratenor altus* assumed the verbal forms just cited, the range gradually became higher (sometimes as high as *f* to *c″*), depending on the type of singers employed. Singers who were able to perform in the range between the tenor and the top voice (superius, cantus, soprano) were of five types, and the particular choice varied not only from period to period, but from region to region – even from choir to choir, or, later, from one production of an opera to a later revival. The first type of alto-range singer was the man with an extremely high natural voice. Unusually high tenors of this sort have always been rare, and highly prized. Burney, for example, described one William Turner (1651–1740) as 'a counter-tenor singer, his voice settling to that pitch: a circumstance which so seldom happens *naturally* that if it be cultivated, the singer is sure of employment' (*History*, iii, pp.459f). The second type was the falsettist – a man with an ordinary tenor, baritone or even bass voice, who could readily sing FALSETTO in the alto range. Falsetto singing has been the most common source of alto voices in all-male choirs throughout the history of Western music. Because it was professionally advantageous for tenors to cultivate the uppermost ranges of their voices, they became adept in moving back and forth from falsetto to natural tone with little or no break; as a result it is sometimes impossible to determine whether certain singers were in fact basically falsettists or tenors with naturally high voices. A third type was the boy alto; most boys are sopranos, and boy altos with strong voices tend to be rare. Fourth, there was the CASTRATO with a low range, common only among Italian singers during the 17th and 18th centuries. Finally there was the female CONTRALTO, who arrived late in the history of choral music because of the church's opposition to the participation of women in ecclesiastical rites.

Contredanse (Fr.; Ger. *Contratanz*, *Kontretanz*; It., Sp. *contradanza*). The most popular French dance of the 18th century. Its development was stimulated by the English country dance introduced at the French court in the 1680s, as seen in André Lorin's two manuscripts on the country dance (*c*1686 and 1688) presented to Louis XIV. Its gaiety and the novelty of its democratically progressive pattern appealed to the younger generation, so that French dancing-masters were soon composing dances in the English style. They did not attempt to translate the English name but merely pronounced it in the French manner. English tunes were imported along with the dance form; according to the Swiss Béat de Muralt, 'Les airs sont d'une vivacité qui émeut l'âme'. Feuillet's *Recüeil de contredances* (Paris, 1706/*R*) contains many English dances: *Greensleeves* appears as *Les manches vertes* and *Christ Church Bells* as *Le carillon d'Oxfort*. Dance figures were sometimes altered, or the time pattern of the tune changed, as in ex.1*a*.

Ex.1

(a) *Vienna* from Playford. Feuillet's barring as dotted lines

(b) *La contre-dance* from Pécour: *Recüeil de dances* (1700)

The 17th-century English country dance included dances in circle, square and longways formations. By the end of the century, the longways dance had become the preferred type and was adopted by the French. The ingenuity of English figure dancing was much admired: the figures were executed with any suitable steps familiar to the company or chosen by individual dancers. The choice of steps was therefore affected by fashion: Feuillet and Essex suggested the gavotte, *chassé*, *pas de bourée* and *petit saut*, while country-dance tunes were also set in minuet, courante and gigue rhythms. French taste tended towards regularity, whereas the English favoured variety and individuality. Thus Lorin indicated the steps for each figure of a dance, while Feuillet and English publications gave general advice, leaving the dancers scope to improvise. Another important element of French style was dancing across the bar, either throughout a dance by treating the first half-bar as an anacrusis or as a rhythmic contrast within the dance. This feature shows clearly in *La contre-dance*, a couple-dance by Pécour for theatre or ballroom to an *air* by Lully (ex.1*b*).

The native French dance *Le cotillon* (a square dance for two couples) was subsumed into the contredanse genre, and then returned to England as the cotillion in the early 18th century. The dance-tune appears in *The Beggar's Opera* (1728), where Macheath refers to it as 'the French tune that Mrs Slammekin was so fond of' (ex.2). Stage directions here call for 'A Dance a la ronde in the French Manner'.

Ex.2

(a) *Cotillon* from Feuillet: *4ᵉ recüeil de danses de bal pour l'année 1706*

(b) *Cotillon* from *The Beggar's Opera*, Air XXII

The contredanse (as a *cotillon* for four couples) reached its most highly developed form in the mid-18th century. An elaborate figure was danced nine times, each repetition preceded by a different introduction; this required a tune with two repeated sections: the first, of eight bars, for the introductions; the second, of eight bars or more, for the figure (see illustration). The tunes are in duple rhythm (2/4 or 6/8) and often begin at the half-bar (ex.3). Major

Ex.3 Contredanse rhythms *c*1750—70

(b) *La Grecque*

tonality predominates, though an alternative tune in the tonic minor often provides variety. The monotony of nine repetitions of the figure was sometimes relieved by the introduction of alternative figures in contrasting rhythms; this was called a 'potpourri'.

La Cuisse, in *Le repertoire des bals, ou Théorie pratique des contredanses* (Paris, 1762–5/*R*), explained that the French army's years in Germany had popularized movements with arms interlaced in the German style; consequently many figures at this time included such movements and were described as 'contredanses allemandes'. The name 'anglaise', originally denoting the longways progressive pattern, was now also used when the figure was danced mainly in two lines. The contredanse was soon the most popular dance in French urban society, at the expense of the minuet. Its popularity remained undiminished under Louis XVI and during the Revolution, but the figures became simpler and more stereotyped, until it was replaced by the quadrille. Mozart's contredanse rhythms make themselves felt in his serious music, and he was pleased to find tunes from *Le nozze di Figaro* used in the ballroom. The final movements of his string quintets provide good examples and may be compared with the music he wrote for actual dancing (ex.4). Many lively pieces in major keys and 2/4 or 6/8 metre written at this

time, with the clearcut melody and eight-bar phrases common in the period, tend to sound like contredanses whether or not the intention was conscious.

Early 19th-century dance-tunes show a predilection for 'reel' rhythm, and Beethoven followed this trend in his 12 Contredanses for orchestra (1802). The similarity between them and some surviving European dance-tunes makes

Music and choreography for the contredanse 'La Victorieuse' from La Cuisse's 'Le repertoire des bals, ou Théorie pratique des contredanses' (1762–5)

an interesting comparison (ex.5). The contredanse continued to hold its own until about 1840, when it finally gave

Contreras, Agustín de (bap. Poveda, nr Cuenca, Feb 1678; *d* Córdoba, *c*19 Dec 1754). Spanish composer. In 1689 he became a choirboy at Sigüenza Cathedral, where he studied composition with Pedro Ventura Enciso (*d* 1698). He moved to Madrid in 1695. On 25 June 1706 he succeeded Juan Pacheco Montión (1684–1706) as *maestro de capilla* of Córdoba Cathedral, remaining there until his retirement on 22 December 1751, when he presented his scores to the chapter. According to the Córdoba Cathedral chapter acts he had not had an official post in Madrid, but he must have been in contact with Sebastián Durón, *maestro de capilla* in the royal chapel. When the royal palace music archive was destroyed by fire in 1734, Francisco Courcelle, who was to replenish it, ordered that music by Contreras be brought from Córdoba. Contreras took an active part in the controversy regarding Francisco Valls's music. He was of the generation of Spanish composers who were the first to adapt the Italian style to traditional Spanish music, and should not be confused with the composer Fernando Contreras, whose works are preserved in Andalucian archives (*E-GRcr*, *MA*).

MIGUEL-ÁNGEL MARÍN

Contreras, José (*b* Granada, 1710; *d* Madrid, 1782). Spanish violin maker. His working life was entirely spent in Madrid, where he was established by 1737. Although he never travelled to Italy, it is clear that he was inspired by the violins owned by the Italian musicians who were playing at the royal chapel; this is attested by a letter that he addressed to King Felipe V, in which he applied for the post of permanent repairer and curator of the instruments at the court. His violins are tonally and visually outstanding, being closely modelled after Stradivari in terms of design, pattern, quality of varnish and sound. He was succeeded in Madrid by his son, José Meliton Contreras (1741–91) and grandson, José Pedro Contreras (1765–1827).

RAMON PINTO-COMAS

Contreras, Salvador (*b* Cuerámaro, Guanajuato, 10 Nov 1910; *d* Mexico City, 7 Nov 1982). Mexican composer. He studied at the Mexico City Conservatory with Revueltas (violin), Huízar (theory) and Carlos Chávez (composition and conducting). In 1935 with Ayala, Galindo and Moncayo he formed the Grupo de Jóvenes Compositores, later called the Grupo de los Cuatro, dedicated to propagating new music, particularly their own. On 23 May 1941 his *Piece for String Quartet* (1936) was given its first performance at the 18th Festival for Contemporary Music, in a chamber concert at the Museum of Modern Art, New York. After 13 years in various other local orchestras he joined the National SO as a violinist (1946–55), and he was then (1955–8) conductor of the opera orchestra subsidized by the Instituto Nacional de Bellas Artes. He was appointed professor of violin, harmony teacher and orchestra director at the Mexico City Conservatory in 1958. In 1967 he retired, that same year winning a prize for his 18-minute *Cantata a Juárez*, first performed on 15 July 1967. In 1978 Zen-on Music in Japan issued his *Tres*

movimientos para guitarra (1963), his first published work. His reputation had been made with the locally colouristic pieces of the late 1930s and early 1940s. By 1966 he was using serial techniques – a change of allegiance that took him to the camp of Manuel Enríquez and lost him the public attracted by folk-like tunes and brash rhythms.

ROBERT STEVENSON

Controller (Fr. *contrôleur, dispositif de contrôle*; Ger. *Steuereinrichtung*; It. *dipositivo di controllo*). In electronic instruments, the device that transmits the player's actions, via electrical connections, to relevant parts of the instrument's sound generating and shaping circuitry. Usually the controller is a keyboard (often permitting some level of touch-sensitivity), but some are designed to utilize the techniques of string, wind and percussion players. Other kinds of controllers include ribbon controllers (*see* FINGERBOARD, (2)), joysticks, slide or rotary faders, thumbwheels, or computer control devices such as alphanumeric keyboards, mice, light-pens, and touch-sensitive screens. Some instruments are played without direct physical contact, e.g. the THEREMIN; in other instruments or sound installations the electrical circuitry for any of a variety of parameters is affected by the detection of movement, for example by a video camera or the interruption of a light beam.

In many cases the controller is independent of the console: connection may be made via a cable or by radio transmission. In early electronic instruments the controller operated only within a single instrument (the equivalent of the remote control aspect of every acoustic keyboard instrument); towards the mid-1960s VOLTAGE CONTROL was introduced in the earliest modular synthesizers to vary specific functions of different modules. Around the end of the 1970s some synthesizer manufacturers introduced their own protocols, permitting similar control linkages between different instruments of their own manufacture, and in 1983, with the introduction of MIDI, this was expanded to cover (in principle if not always in practice) all electronic instruments and independent controllers with compatible connection ports.

Because acoustic keyboard instruments invariably involve a similar degree of operation by remote control, their keyboards may also be designated as controllers.

HUGH DAVIES

Con velocità. *See* VELOCE.

Converse, Frederick Shepherd (*b* Newton, MA, 5 Jan 1871; *d* Westwood, MA, 8 June 1940). American composer, teacher and administrator. He was the youngest of seven children born into a New England family. At the age of ten he began to study the piano, and showed an interest in composition almost from the start. After a good education in the public and private schools of Newton, Converse entered Harvard College in 1889, where he studied under Paine. He received the BA with highest honours in music in 1893, and then tried to carry out his father's wish that he pursue a business career. But his nature was unsuited to commercial life, and after a few unhappy months in an office he decided to devote all of his energies to a career in music. He resumed his study of the piano with Baermann and of composition with Chadwick. Recognizing the need for further study, Converse went to Munich in 1896 to the Akademie der Tonkunst; there he came under the influence of Rheinberger, with whom he studied counterpoint, composition, and organ. He graduated in 1898.

On returning to the USA, Converse soon became active in the musical life of Boston. Around 1900 he moved to a large country estate in Westwood where he farmed, participated in vigorous outdoor sports and brought up a large family. At the same time he continued to compose, study and teach. From 1900 to 1902 he was an instructor in harmony at the New England Conservatory; from 1903 to 1907 he taught at Harvard College, first as an instructor, later as an assistant professor. While at Harvard, he composed several major works which gained him a reputation as one of the outstanding composers of the USA. In 1905 he was asked by Percy MacKaye to write the music for his play *Jeanne d'Arc*; this marked the beginning of a long and intimate friendship, and the two collaborated on several major works. Converse resigned from his post at Harvard in 1907 to devote more time to composition.

From 1907 to 1914 Converse was at the height of his career as a composer; he was elected to the National Institute of Arts and Letters in 1908 and also served as vice-president of the Boston Opera Company (1908–14). He oversaw several performances of his operas, including the Metropolitan Opera Company's production of *The Pipe of Desire*. Completed in 1905 and first produced in Boston, this romantic opera was presented at the Metropolitan Opera on 18 March 1910, and was the first American opera to be performed there. However, the majority of the critics attacked the undramatic nature of the libretto and criticized the score for its lack of originality; praise was reserved mostly for Converse's skilful and effective orchestration. His second opera, *The Sacrifice* (1910), was more favourably received when it was first produced in Boston on 3 March 1911. Converse's third and fourth operas – *Beauty and the Beast* (1913) and *The Immigrants* (1914), both written in collaboration with the librettist Percy MacKaye – show great promise, but were never produced due to the advent of World War I and the demise of the Boston Opera Company. It is unfortunate that after Converse had secured an able

librettist in MacKaye, the results of their collaboration could not have been heard.

During World War I, Converse served in the Massachusetts State Guard and was a member of the National Committee on Army and Navy Camp Music. He returned to the New England Conservatory in 1920 to become head of the theory department. In 1931 he was appointed dean of the faculty, a position he held until 1938 when he was forced to retire because of illness.

Converse was a versatile composer who knew his métier. His compositional style was rooted in late 19th-century, richly chromatic harmony. However, beginning around 1905, he began to include harmonic and orchestral devices of Impressionism in his music. He again modified his style in the late 1920s by employing bitonality, quartal harmonies and dissonant chords. Jazz rhythms and harmonies also appear in *American Sketches* (1928) and other works written during the 1920s. Despite the radical departure in style that is apparent in *Flivver Ten Million*, Converse had no desire to be sensational or experimental. However, he believed there was room for everything in music and he did not hesitate to forsake tradition when something new arose, providing it could be assimilated with complete artistic honesty and sincerity.

Although interested in developing a distinctly American musical style, Converse knew it would take time. Musically and programmatically he tried to capture aspects of American life in several of his compositions. For example, historical events provide background material for the plots of *The Masque of St. Louis* and *Puritan Passions*; scenic panoramas are depicted in *California* and *American Sketches*; and the automotive age was given expression in *Flivver Ten Million*. For these and other works Converse employed American folksongs, shanties, spirituals, patriotic airs and Amerindian-like melodies. He was a gifted melodist who used the leitmotif technique in all of his operas, several symphonic poems and other works. His leitmotifs most often represent characters or human emotions, especially love.

Converse was one of the earliest American composers to write successful symphonic poems; *The Mystic Trumpeter* is probably his best work. His music was widely performed during his lifetime. He received the David Bispham Medal from the American Opera Society of Chicago in 1926 and in 1937 was elected to the American Academy of Arts and Letters.

WORKS

OPERAS

The Pipe of Desire (1, G.E. Barton), 1905; Boston, 31 Jan 1906

The Sacrifice (3, Converse and J.A. Macy), 1910; Boston, 3 March 1911

ROBERT J. GAROFALO

Conversi, Girolamo (*b* Correggio; *fl* 1572–5). Italian composer. His first and most popular work was his volume of five-part *Canzoni alla napolitana* (1572), described as 'these first efforts of mine' in the dedication. His volume of six-part madrigals, known only in a reprint of 1584, must have first appeared by 1575, since it is dedicated to Cardinal Granvelle, Viceroy of Naples, who occupied that position only until that year. In the dedication, Conversi describes himself as 'in the service' of the cardinal. All later editions of his works, with the possible exception of the lost book of five-part madrigals, are reprints; it is possible, therefore, that he died around 1575.

In his choice of madrigal texts, Conversi preferred sonnets by earlier, established poets, such as Petrarch, Giovanni Guidiccioni, Castiglione, Bembo and Luca Contile. However, he was quite modern in his settings, for he introduced into his madrigals many aspects of the *canzone alla napolitana*. He favoured sharp contrasts, as in his setting of Petrarch's *Zefiro torna*. His canzoni are modelled on those of Giovanni Ferretti, but unlike Ferretti's they are not based on the texts and tunes of earlier villanellas; instead, Conversi combined in them the more popular tone of the villanella with an artistic refinement more characteristic of the madrigal. They are for the most part in the form of the villanella, AA^1BCC^1, and display great rhythmic ingenuity and harmonic interest. The canzoni achieved great popularity and were often reprinted, sometimes in arrangements or as contrafacta, both in Italy and in anthologies published in northern Europe and England.

WORKS

Il primo libro de canzoni alla napolitana, 5vv (Venice, 1572, enlarged 2/1573); 2 contrafacta in 1588[29],1590[29]; inst arr. in T. Morley, First Book of Consort Lessons (London, 1599), ed. S. Beck (New York, 1959); 2 pieces, ed. in WE, viii (1965); repr. (Trent, 1996)

Il primo libro de madrigali, 6vv (Venice, *c*1572–5 [lost], 2/1584); 1 contrafactum in 1588[29]

Madrigali, 5vv, lost; cited in heirs of F. Giunta: *Catalogus librorum* (Florence, 1604)

Reprints and arrangements: 2, 1583[14]; 2, 1583[15]; 3, 1584[12]; 1, 1585[19]; 2, 1587[14]; 6, 1589[8]; 1, 1590[17]; 1, 1592[22]; 2, 1593[4]; 5, 1600[5a]

W. RICHARD SHINDLE/RUTH I. DEFORD

Convert, P. (*fl c*1460–70). French composer. He is known only from three three-voice songs, all of which are ascribed to him in the Laborde Chansonnier (*US-Wc* M2.1 L25). All three pieces are also copied in the Dijon and Copenhagen chansonniers (*F-Dm* 517; *DK-Kk* Thott 291 8°); it seems likely that he was active in the Loire valley. His most widely copied song, *Se mieulx ne vient*, is related to works by Compère and Agricola, and parts of it were borrowed in masses by Weerbeke and Carpentras. It is possible that Compère's *Se pis ne vient* was written as a response.

The three songs, all *rondeaux cinquains*, are compositionally quite varied. *Ma plus ma mignonne* (ed. in Jeppesen and in Goldberg), in Phrygian mode, appears to be the earliest. The beginning of the tenor is an almost exact quote of Du Fay's *La plus mignonne de mon cuer*. Both *Ma plus ma mignonne* and *Se mieulx ne vient* (ed. in Jeppesen, also ed. in CMM, lviii/1, 1972, and ed. M. Gutiérrez-Denhoff: *Der Wolfenbütteler Chansonnier*, Wiesbaden, 1985) are scored for tenor and contratenor in equal ranges; *Pour changier l'air* (ed. in Jeppesen and in Goldberg) has a lower contratenor, which suggests it might be slightly later. It is the most imitative of the three works; aside from the striking imitation in all three voices with which *Se mieulx ne vient* begins, this latter piece and *Ma plus ma mignonne* are predominantly non-imitative.

JANE ALDEN

Convery, Robert (*b* Wichita, KS, 4 Oct 1954). American composer. He studied at Westminster Choir College, the Curtis Institute of Music and the Juilliard School. His principal composition teachers included Rorem, David Diamond and Persichetti. Among his honours are grants from the Rockefeller Foundation and Opera America and performances of his works by the Philadelphia Orchestra, Glimmerglass Opera and the orchestra of the Teatro Comunale Giuseppe Verdi, Trieste. His compositions have also been featured at the Spoleto Festival USA and the Festival dei Due Mondi.

Convery's output is primarily vocal, including four one-act operas, 17 cantatas, 7 song cycles and more than 150 songs for voice and piano. His compositions, while thoroughly crafted, also display spontaneity and invention; his keen harmonic sense and frequent use of transparent textures inform the clarity of his lyricism and lend an immediacy to the music. *Pyramus and Thisbe* (1982), a comic farce, is Britten-like in its texture with each section based on a single musical cell. Every character is paired with an orchestral instrument that contributes to character development by adopting a distinctive melodic style. *The Blanket* (1986), a model of musical economy lasting only 16 minutes, can best be described as being in a post-Menotti idiom. Later works include *The Passion of Lizzie Borden* (1994), a monologue opera in one act based on a poem by Ruth Whitman.

WORKS

OPERAS

ELLWOOD J. ANNAHEIM

Conyngham, Barry (*b* Sydney, 27 Aug 1944). Australian composer. After initial involvement in music as a jazz pianist, he studied at the University of Sydney (1965–9), where his teachers included Sculthorpe (composition), with Takemitsu on a Churchill Fellowship to Japan (1970) and at the University of Melbourne (DMus 1980). A Harkness Fellowship facilitated further research and study at the University of California, San Diego and Princeton University (1972–4), an Australia Council Fellowship enabled him to spend a year at the University of Aix-Marseille (1974) and a Fulbright Senior Fellowship funded study at the University of Minnesota and Pennsylvania State University (1982). In 1975 he accepted a teaching post at the University of Melbourne and later served as dean of creative arts at the University of Wollongong (1990–94). He was appointed vice-chancellor of Southern Cross University in 1994. His honours include membership in the General Division of the Order of Australia (AM 1997).

Conyngham's first important works were composed in Japan. *Ice Carving* (1970), for solo violin and four string orchestras, was inspired by ice sculptors in the Imperial Palace Gardens; *Water … Footsteps … Time* (1971), for four soloists and two orchestras, was influenced by a Zen aesthetic. Upon his return to Australia, he began to work towards the development of a distinctive Australian music. This is evident not only in the titles of many of his works, but also in the musical details, which conform to patterns and forms of the Australian landscape. One of his first completed projects was the theatre work *Edward John Eyre* (1973) based on Eyre's trek across the Nullarbor Plain in 1841. *Voss* (1972) and *From Voss* (1973), based on Patrick White's novel about a fictitious explorer, followed, as did *Ned* (1978), an opera about Australian bushranger Ned Kelly, and *The Apology of Bony Anderson* (1978), a music-theatre piece telling the story of a convict on Norfolk Island. Particularly notable is the five-movement Double Concerto 'Southern Cross' (1981). Each movement takes a different aspect of Australia as its topic: 'Magnitude' is a meditation on the size of the Australian continent; 'Velocity' contrasts the speed of the stars (semiquavers) with the inertia of the land (slow-moving harmonies); 'Duration' is a series of variations on the Australian song *Waltzing Matilda*; 'Collisions' uses violent chords to depict the strength of natural forces; and 'Distance' features string textures that evoke the buzzing of blowflies.

Throughout the 1980s and 90s Conyngham's works continued to consolidate his interest in Australian themes: *Fly* (1984), an opera, is based on Australian pioneer aviator Lawrence Hargrave; *Vast* (1987), a ballet, explores the nature of Australia's geography; *Bennelong* (1988), a puppet opera, traces the life of the Australian Aboriginal who was taken to Britain and after whom the site of the Sydney Opera House was named; and *Waterways* (1990), a viola concerto, depicts water coalescing into a vast inland lake, or carving through rock channels as it makes its way to the sea. The orchestral work *Decades* (1993) is an autobiographical portrait of Conyngham's response to the 1960s.

MICHAEL BARKL

Cooder, Ry(land Peter) (*b* Los Angeles, 15 March 1947). American guitarist, singer and composer. He began playing the guitar at the age of three. He formed the Rising Sons with the blues revivalist Taj Mahal (1965–6) and for a short time joined Captain Beefheart and the Magic Band (1967). He also worked as a session musician with such groups as the Rolling Stones (*Let it Bleed*, 1969) and Little Feat (*Little Feat*, 1971). His first albums as a leader, *Ry Cooder* (1970) and *Into the Purple Valley* (1971) showed him to be a keen student of several American traditional music forms including blues and early country music. His attempt to redraw the map of American music continued in recordings with the gospel and falsetto singers Bobby King and Terry Evans which appeared on *Bop till You Drop* (1979). On *Chicken Skin*

Music (1976) he looked beyond the mainstream of American music, performing instrumental duets with the Mexican accordionist Flaco Jiminez and the Hawaiian slack-key guitarist Gabby Pahinui; in each case Cooder adjusted his own guitar style to the demands of a different genre. He took the same approach to later work with the *sitār* player V.M. Bhatt (*A Meeting by the River*, 1993), the Malian *kora* player Ali Farka Toure (*Talking Timbuktu*, 1994) and a group of Cuban jazz veterans (*Buena Vista Social Club*, 1997).

Cooder's expert slide-guitar style can be heard to great effect in his best-known film soundtrack, *Paris, Texas* (1985). Other films on which he worked include *Performance* (1967), *The Long Riders* (1980) and *Johnny Handsome* (1989).

DAVE LAING

Coogan, Philip. *See* COGAN, PHILIP.

Cook, Barbara (Nell) (*b* Atlanta, GA, 25 Oct 1927). American singer and actress. After arriving in New York in 1948 she began to sing at clubs and resorts, eventually procuring an engagement at the Blue Angel club in 1950. Her Broadway début in the political satire *Flahooley* (1951) was followed by revivals of *Oklahoma!* in 1953 and *Carousel* in 1954, in which she played supporting roles; she would eventually play the leads in important revivals of *Carousel* (1956), *The King and I* (1961) and *Show Boat* (1966). Meanwhile, in 1954 her starring roles in original musicals began with Hilda Miller in *Plain and Fancy*, Cunegonde in *Candide* (1956), which featured the coloratura parody 'Glitter and be Gay', and Marian in Meredith Willson's *The Music Man* (1957) in which her portrayal of the stern librarian was her greatest popular success on Broadway and earned her a Tony Award.

In the 1960s she appeared in two critically acclaimed musicals with Central European settings: *The Gay Life* (1961, based on Schnitzler's *Anatol*); and *She Loves Me* (1963, based on Miklos Laszlo's *Parfumerie*). After the unsuccessful *Something More!* (1964) and *The Grass Harp* (1971) she reorientated her career towards concert and club appearances and, under the guidance of Wally Harper, her music director since 1974, she began to sing Tin Pan Alley standards and contemporary ballads. Her concert recording at Carnegie Hall (1975) marked her return to national recognition. Since then she has returned to Broadway in a one-woman show, *Barbara Cook: a Concert for the Theatre* (1987), which received a Drama Desk Award, and appeared regularly in New York, London and Australia. She has also participated in acclaimed recordings of *Follies* (1985) and *Carousel* (1987), and given masterclasses in musical theatre at the Juilliard School and the University of Southern California. In 1994 she was inducted into the Broadway Hall of Fame.

During her years as Broadway's leading *ingénue* Cook was an outstanding lyric soprano, renowned for her agility, wide range and interpretative warmth. Her signature roles of Cunegonde and Marian encompass a much higher tessitura than most female roles of the era. Her voice also possesses, however, a dark quality that has become more prominent over the years, even in head voice, and she remains a subtle, sensitive interpreter of American popular song.

HOWARD GOLDSTEIN

Cook, E(dgar) T(homas) (*b* Worcester, 18 March 1880; *d* Chipstead, Surrey, 5 March 1953). English organist. After studying with Ivor Atkins at Worcester Cathedral, he was organist of St Leonard's, Newland, Malvern, from 1898 to 1908, and there he had opportunities for cultivating plainsong, which led to his short book *The Use of Plainsong* (Burnham, Bucks., 1928). He was also assistant organist of Worcester Cathedral, 1904–8. In 1909 he became organist of Southwark Cathedral, a post he occupied until his death. There he established a special choir for the performance of large-scale works and maintained an admirable standard of daily cathedral music in a busy commercial area. In the late 1920s and early 1930s, through his weekly recitals from Southwark Cathedral relayed by the BBC, Cook became known as one of the earliest organists to broadcast. He was distinguished among English players of his day by the considerable amount of French organ music he included in his repertory. Cook composed little, but his Evening Service in G established itself in the standard repertory. He was made a CBE in 1949.

WATKINS SHAW

Cook, John. *See* COOKE, J.

Cook, (Alfred) Melville (*b* Gloucester, 18 June 1912; *d* Cheltenham, 22 May 1993). English organist and conductor. He was a chorister at Gloucester Cathedral, 1923–8, and later studied with Brewer, Sumsion and Bairstow, gaining the FRCO in 1931 and the DMus from Durham University in 1940. He was organist of Leeds Parish Church from 1937 to 1946 (interrupted by war service), founder of the Leeds Guild of Singers and also conductor of the Halifax Choral Society. In 1956 he became cathedral organist at Hereford, where he conducted the choral society and was responsible for the Three Choirs Festivals held in the city. He emigrated to Canada in 1966, serving as organist of All Saints Church, Winnipeg, and conductor of the Winnipeg Philharmonic Choir before moving to Toronto, to the Metropolitan United Church, the following year. In Toronto he organized concerts and recitals as well as a series of oratorio performances with the Metropolitan Festival Choir – during his years in Canada Cook generally championed the cause of English music, and his conducting of Elgar's *The Dream of Gerontius* was particularly admired. He also taught at McMaster University and toured as a recitalist and adjudicator. Cook built up a fine reputation as a recitalist, both in Britain and overseas, and his recordings, notably those at Leeds Parish Church and Hereford Cathedral, testify to his fluent technique and the elegant control of his playing. His compositions are limited to a few works for choir. He retired to England in 1986.

GILES BRYANT

Cook, Thomas Aynsley (*b* London, July 1831 or 1836; *d* Liverpool, 16 Feb 1894). English bass. Originally a boy soprano, trained by Edward Hopkins at the City Temple, London, he developed into a powerful bass and went to

Germany to study with the elder Joseph Staudigl and other teachers for five years. After appearing in several German provincial theatres, he made his English début in Manchester in 1856 as a member of Lucy Escott's National English Opera Company, subsequently touring the USA with Escott. In 1862 he joined the Pyne-Harrison Company, appearing with it during its winter seasons at Covent Garden until 1864, and then with the Royal English Opera Company, also at Covent Garden, until 1866, in works by Balfe, Benedict and Wallace; Devilshoof in Balfe's *The Bohemian Girl* was probably his most famous role. In 1870 and 1871 he appeared at the Gaiety Theatre in a company headed by Charles Santley, singing Van Bett in the first performance in England of *Zar und Zimmermann* as well as roles in *Zampa* and *Fra Diavolo*.

In 1875 he began a connection with the Carl Rosa Company which lasted until his death. He took part in the command performance at Balmoral Castle on 13 November 1893, when Queen Victoria conferred the titles 'Royal' and 'Her Majesty's Servants' on the Carl Rosa Company; on that occasion he sang Beppo in *Fra Diavolo*. According to Herman Klein he had a powerful voice of agreeable quality, his singing and acting being marked by abundant energy and spirit, coupled with a keen sense of humour. His daughter, Annie Cook, was a contralto and also sang with the Carl Rosa Company; she married Eugène Goossens (ii) (1867–1958).

HAROLD ROSENTHAL/R

Cook, Will Marion (*b* Washington DC, 27 Jan 1869; *d* New York, 19 July 1944). American composer and conductor. He revealed musical talent early and at 15 was sent to study the violin at Oberlin College Conservatory, later studying in Germany with Joachim. He returned to the United States in 1889, and in 1890 assumed the directorship of an orchestra supported by his mentor, the famed civic leader Frederick Douglass. Cook's orchestra toured in the Northeast and possibly to Chicago in 1892. Cook promoted Colored American Day (25 August 1893), part of the World's Columbian Exposition of that year, and in all his efforts was determined to bring black American music and musicians to the public eye. After the Exposition he returned to New York and attended the National Conservatory, studying with John White and its director, Dvořák. As a classical performer he met frustration and discrimination, and eventually he turned completely to popular music.

Later in the decade he proposed to collaborate with the poet and novelist Paul Laurence Dunbar, an effort that resulted in the musical-comedy sketch *Clorindy, or The Origin of the Cakewalk*, which included five songs with a script by Dunbar. Although the eventual production at the Casino Theatre roof garden stage in July 1898 eliminated Dunbar's dialogue, *Clorindy* as a song-and-dance medley made history as the first thoroughly black American show to find critical acclaim in the heart of Broadway. Between 1900 and 1908 Cook served as director and composer-in-chief for the Bert Williams and George Walker productions, which opened a golden era for the black musical theatre with *The Sons of Ham* (1900), *In Dahomey* (1902–3), *Abyssinia* (1906) and *Bandanna Land* (1908). In 1904 he composed the music for *The Southerners*, a musical comedy which featured white lead singers and an all-black chorus. In addition, he directed concerts and toured abroad with various companies.

From 1908 to 1918 Cook offered his services as a musical factotum to Harlem and other communities, organizing choral groups, lecturing on black music, and collaborating on more shows that did not make it to Broadway. In 1918 Cook organized the Southern Syncopated Orchestra that toured the USA and England to great acclaim. In 1922 he settled in New York and was active as a conductor, concert promoter, teacher and musical adviser. Over the years he performed with, coached and directed a host of eminent musicians, including Abbie Mitchell (his wife), Sidney Bechet, Eubie Blake, Luckey Roberts, James P. Johnson, Will Vodery, Paul Robeson, Fletcher Henderson, Duke Ellington and Eva Jessye.

Cook's music consistently exploits themes and idioms derived from black American folklore and folk music. His basically neo-romantic style is notable for its sophisticated melodies, bold and expressive harmonies, and vigorous rhythms. His songs for *Clorindy* and *In Dahomey* led the way to the creation of a popular-song type characteristic of black American musical comedies at the turn of the century. This genre rejected the exaggerated and stereotyped imagery of the earlier minstrel show song, but adopted modern elements with respect to vernacular language, rhyme, syncopation and choral refrains that were recognized as distinctive in their day. The rare recordings of his songs, made for Victor, include *Darktown is out tonight* (1902), *Who dat say chicken* (1902), *Bon-Bon Buddy* (1908) and *Swing along* (1912).

WORKS
(*selective list*)

Stage: several musicals, incl. Clorindy, or The Origin of the Cakewalk (P. Dunbar), 1898; Jes' Lak White Fo'ks (Dunbar), 1899; The Cannibal King (Dunbar and J.R. Johnson), 1901; The Southerners (W. Mercer and R. Grant), 1904; The Traitor (A. Creamer), 1913; Darkeydom (H. Troy and L. Walton), 1915; Swing Along, collab. W. Vodery, 1929; inst and choral music for the Williams/Walker musicals (J. Shipp)

Choral: partsongs, incl. Swing along; many songs, incl. Exhortation, Rain Song

THOMAS RIIS

Cooke, Arnold (Atkinson) (*b* Gomersal, Yorks., 4 Nov 1906). English composer. He studied with Dent at Cambridge (1925–8, BA, MusB; MusD 1948) and with Hindemith at the Berlin Hochschule für Musik (1929–32). He spent a year as music director of the Festival Theatre, Cambridge (following Walter Leigh, an earlier Hindemith pupil), and then taught composition at the Manchester College of Music from 1933 to 1938. After war service in the navy he was appointed professor of harmony, counterpoint and composition at the Trinity

College of Music, where he remained from 1947 until his retirement in 1978.

It was with Dent's help and encouragement that Cooke was able to take the step, unusual in the 1930s, of studying abroad, and Hindemith's anti-serial maxim – 'Music, as long as it exists, will take its departure from the major triad and return to it' – was one to which Cooke adhered. His approach is naturally contrapuntal, with a vein of gentle lyricism that frequently comes to the surface. The string quartets on the other hand often show the uncompromising ruggedness of a Bartók.

A pianist and cellist himself, Cooke has written chamber music and vocal music for soloists, for children and for choirs. His woodwind writing is especially grateful and, like Hindemith, he has written successfully for the organ. His song cycles display his affinity with poets from the Elizabethans to D.H. Lawrence, Blake being a particular favourite.

His list of commission sources includes the BBC (Proms and Overseas Service), the Royal Philharmonic Society, the Royal Ballet, and the Bath, Cambridge, Cardiff, Cheltenham and City of London festivals, as well as a number of distinguished singers and instrumentalists. He was a founder-member of the Composers' Guild of Great Britain (1945).

ERIC WETHERELL

Cooke, Benjamin (i) (*b* ?London, ?1695–1705; *d* ?London, after 1742). English music seller and publisher. He was active in London from 1726 to 1743, and published a considerable number of vocal and instrumental works, some of them obviously pirated from other publishers, others under licence as authoritative first editions. His publications were mostly in a heavy bold style, but some were engraved in a lighter style by THOMAS CROSS. After Cooke's death or retirement some of his plates were acquired by JOHN JOHNSON (ii), who reissued copies from them. Cooke's publications include Roseingrave's *XII Solos for a German Flute* (1730), Handel's Sonatas op.2 (*c*1733) and 42 'suites' by Domenico Scarlatti in two volumes (1739). His most interesting publication, however, was that of the five books of sonatas and the 12 concertos of Corelli issued in 1732. Not only do these constitute a collected edition of the composer's works, but all, including the concertos, were published in score expressly for study purposes, an extraordinary form of publication for instrumental music at that time. Cooke's plates were used well into the 19th century for reissues of these works.

WILLIAM C. SMITH/PETER WARD JONES

Cooke, Benjamin (ii) (*b* London, 1734; *d* London, 14 Sept 1793). English organist and composer, son of the music publisher Benjamin Cooke (i). In about his ninth year he became a pupil of Pepusch and when 12 years old became the deputy of John Robinson, organist of Westminster Abbey. He was successively librarian (1749) and, on Pepusch's death, conductor from 1752 until 1789 of the Academy of Ancient Music. He followed Gates as Master of the Choristers of Westminster Abbey in 1757 and succeeded Robinson as organist there in 1762. In 1775 he took the Cambridge degree of MusD, proceeding to the same degree at Oxford in 1782, the year in which, in addition to his work at the Abbey, he became organist of St Martin-in-the-Fields. (He was unsuccessful in his application for the appointment at St Michael Cornhill in 1781.) Cooke played a full part in the London musical organizations of the day, as a member of the Society of Musicians (1760), the Catch Club (various years from 1767), the Madrigal Society (1769), and as an assistant director of the Handel Commemoration of 1784; but an unhappy difference led to his resignation from the Academy of Ancient Music and caused him for a time to refuse membership of the Graduates' Meeting. Among his pupils were William Parsons, Greatorex, Charles and William Knyvett, Bartleman and Reginald Spofforth. Laetitia Hawkins, daughter of Sir John Hawkins, recorded some reminiscences of Cooke (see *The Harmonicon*, 1831, p.208). There is a memorial to him in the cloisters of Westminster Abbey, where he is buried; the inscription testifies that 'His professional knowledge, talents, and skill were profound'.

Though not in the very front rank, Cooke was an admirable glee composer, winning Catch Club prizes on

several occasions, and some of his pieces, such as *How sleep the brave* and *In paper case*, were for long standard favourites. His anthems, which generally were of too occasional a character to enter into the standard repertory, adhered to the style of the 1740s without much character. But his Service in G, written for the Abbey organ when pedals were first added in 1780, and which keeps his name alive, escapes from the aridity of the 18th-century norm for such music by its melodious quality and flowing texture. His setting of Collins's *Ode on the Passions*, though largely untouched by the progressive idiom of its day, minimizes the formality of the aria style and is notable for enterprise in the figuration and above all in the sonority of its instrumental writing, calling for muted strings, obbligato organ and harpsichord, harp, cymbals, triangle, carillon and *tibiae pares* (representing the double flutes of classical Greece). In general, Cooke's vocal music appears consciously to have favoured the 'antient' style. McVeigh refers to the 'madrigalian' nature of *In the merry month of May*, while the influence of Handel, and of polyphonic church music, is elsewhere widely evident. His concertos, also rather conservative for their time, demonstrate a confident and assured command of predominantly italianate techniques and procedures; the Concerto for Organ in D, which is dated 1749, is a considerable youthful accomplishment.

Cooke had a personal collection of manuscript music in 33 volumes (now in *GB-Lcm*). Besides his own compositions, this includes numerous transcripts reflecting his interest in early music – extracts from the Fayrfax Manuscript, Bull, Clemens non Papa, the *Art of Fugue*, Corelli, Domenico Scarlatti and much else. Of outstanding interest is a consecutive group of pieces consisting of Preludium, Adagio, Trio and Fuga in B♭ for organ (MS 814) which, despite its requiring pedals, Cooke endorsed as being by his predecessor John Robinson, but which seems to be wholly by J.S. Bach, providing in transposed form, versions of BWV545*a*, 1029 and 545, the Adagio and recitative-like link between Trio and Fuga being otherwise unknown.

Cooke married Mary Jackson in March 1758. His son Robert Cooke (*b* Westminster, 1768; *d* London, 13 Aug 1814) succeeded him as organist of St Martin-in-the-Fields in 1793 and in 1802 became organist and Master of the Choristers of Westminster Abbey; he composed sacred and secular vocal works, including a Service in C (published in 1806) and three glees that won Catch Club prizes (a collection of eight was published in 1805). He died by drowning himself in the Thames and was buried in the Abbey.

WATKINS SHAW/GERALD GIFFORD

Cooke, Deryck (Victor) (*b* Leicester, 14 Sept 1919; *d* Thornton Heath, 26 Oct 1976). English writer on music. He studied the piano privately, and music with Patrick Hadley and Robin Orr at Selwyn College, Cambridge (1938–40, 1946–7; MA, MusB), and worked for the BBC as a music presentation assistant (1947–56), music producer (1956–7), music presentation writer (1957–9) and music presentation editor (from 1965); in the intervening years (1959–65) he was a freelance writer on music. His main areas of research were 19th-century music, especially that of Wagner, Mahler, Bruckner and Delius, and musical semantics.

In 1960 Cooke made a 'performing version' of Mahler's Tenth Symphony, which was first performed at the Proms on 13 August 1964 and subsequently revised in the light of this and other performances; Cooke was always at pains to emphasize that this text did not represent a putative reconstruction of the symphony as Mahler might have completed it but rather a text that carefully followed precedents established in the sketches and thus allowed Mahler's music to be heard at least in a form not foreign to the composer. His version has won considerable praise;

it has been much performed and recorded, and was published in 1976 with an extended preface.

In his influential *The Language of Music* (1959) Cooke argued that tonal music is literally a language of the emotions, the emotions conveyed being in some imperfectly explained sense those of the composer. The words of the language are melodic phrases, of which Cooke supplies an extensive vocabulary supported by an impressive range of examples; these phrases have meaning not conventionally but through the inherent force of the intervals they comprise. Cooke offers no firm opinion as to whether this force is itself conventional or in some sense natural: his remarks on the present state and future possibilities of expression in atonal music suggest the former view, but the general drift of his argument rather favours the latter. His thesis has been criticized because it confines itself to tonal European music and it is easy to find examples which contradict those given. In an empirical study, Gabriel (1978) found that musically untrained subjects failed to recognize any relationship between tonal pattern and emotional meaning. However, Sloboda (1985) has affirmed the validity of Cooke's approach, arguing that the musically literate acquire the ability to 'read' the emotional language of music.

ROSEMARY WILLIAMSON

Cooke, Henry (*b* ?Lichfield, *c*1615; *d* Hampton Court, 13 July 1672). English singer, choir trainer and composer. Directly after the Restoration, he introduced italianate techniques of composition and singing to the choristers of the Chapel Royal. Although the merit of his own compositions is slight, their influence was considerable; he was, moreover, an indefatigable and gifted teacher with a ready eye for spotting young talent, and his first set of choristers included Humfrey, Blow, Wise, Turner, Robert Smith (i) and Tudway, all of whom were to emerge among the leaders of the flourishing generation of English musicians that followed him.

Cooke may well have been the son of John Cooke, a bass from Lichfield who was 'sworne [e]pisteler' of the Chapel Royal on 16 December 1623 and died on 12 September 1625. All that is known of Henry's early years is that, in Anthony Wood's words, he was 'bred up in the Chapel' of Charles I and that he scratched his signature and the date 1642 on a pane of glass in the Jerusalem Chamber at Westminster Abbey. About this time he joined the royalist forces in the Civil War, becoming first a lieutenant and then a captain, the title by which he was known for the rest of his days. He is next encountered in 1651, when he was listed on the title-page of John Playford's *A Musicall Banquet* among the 'excellent and able Masters' of the voice and viol in London; and in October 1654 he entertained a party that included the diarist John Evelyn by singing to his own accompaniment on the theorbo. On 23 May 1656 he joined Henry Lawes, Locke, Charles Coleman and George Hudson in providing music for Davenant's *The First Dayes Entertainment at Rutland-House, by Declamations and Musick: after the manner of the Ancients*. As this theatrical experiment did not incur any opposition from the Cromwellian authorities, Davenant followed it later in 1656 with *The Siege of Rhodes*, in which Cooke sang Solyman and composed the music for the second and third entries. He was still, however, obliged to look far beyond London for work: Lord Hatton of Kirby Hall, Northamptonshire, whose steward was the idiosyncratic amateur composer George Jeffreys, employed Cooke as visiting music master for his daughters.

The first entry in the Lord Chamberlain's records after the Restoration marks the appointment of Cooke as a bass in the King's Private Music, and later in the year he was appointed a composer for the Private Music and a musician for the lute and virginals. He was made master of the boys in the Private Music as early as 29 June 1660, and it may well have been these boys, about four in number, who formed the nucleus of the Children of the Chapel Royal of whom Cooke had been appointed master by 29 September 1660. He had to build the boys' section of the choir from scratch, but by the end of the decade his unfailing selection and rigorous methods produced a choir that was second to none and ideally equipped to effect the consolidation of the Baroque style in English church music. During the first year of his appointment as Master of the Children, Cooke revived the system of conscription under the royal warrant, and on 4 July 1661 fetched five boys (one of them almost certainly Blow) from Newark and Lincoln. In addition to training the boys for the chapel, Cooke was responsible for their wider musical education, teaching them the organ, harpsichord, lute and violin, and for their feeding, lodging, clothing and laundry. Throughout the decade he had to contend with delays in payments from the Treasury for the maintenance of all aspects of his work at the chapel, despite the exemption of the musical establishment from

the severe retrenchments in royal expenditure that were imposed in March 1667. On 19 January 1668 Cooke kept the Children from the chapel because their clothes were in tatters; the Lords of the Treasury were scandalized at this, and summoned Cooke before them. Two years later the Children's liveries were again worn out, and following a petition by Cooke an order was given 'that the Children be kept as prior to the retrenchments'. Payments nevertheless remained years overdue, and at his death Cooke was owed over £1600.

Cooke not only held leading positions at court, but was also prominent among musicians in the city. In 1662 he was elected an assistant of a guild, the Corporation of Music, and later served as one of its deputy marshals, rising to become marshal in 1670. Meanwhile in 1669 he left Little Sanctuary in Westminster and took up residence 'at the further end of the Old Bowleing Alley at Hampton Court'. It does not appear, however, that he ceased discharging his duties as royal choirmaster, and it was not until 24 June 1672 that he resigned as marshal of the Corporation of Music 'by reasons of sickness'. He made his will on 6 July and died on 13 July. On 17 July he was buried in the east cloister of Westminster Abbey; it may have been for this occasion that the young Purcell composed his Funeral Sentences, for they complement those of Cooke himself to form a complete setting, in compatible keys, of the seven sentences as given in the Book of Common Prayer. Cooke was predeceased by one of his daughters, Mary, but was survived by his wife and a number of other daughters, including Katherine, who married Pelham Humfrey later in 1672.

The earliest mention of Cooke as a composer after the Restoration was made by Pepys who heard an anthem by him in the Chapel Royal, 'which he himself sung', on 12 August 1660. On 17 April 1661 Cooke provided an impressive verse anthem for the installation of the Knights of the Garter at Windsor, in which the choirs of the Chapel Royal and St George's Chapel, Windsor, were joined by 'some instrumental loud music ... two double sackbuts and two double courtals' (Ashmole, 1672). Less than a week later, on 23 April, four or five of the nine items sung at the coronation of Charles II were by Cooke. Pepys made several further references to Cooke's prowess both as a composer and as singer, crediting him with 'the best manner of singing in the world' (*Diary*, 27 July 1661); but later, sickened by 'his bragging that he doth understand tones and sounds as well as any man in the world, and better than Sir W. Davenant or anybody else', described him as 'a vain coxcomb ... though he sings and composes so well' (*Diary*, 13 February 1667).

In addition to the settings of the Nicene Creed and of four of the Funeral Sentences, Cooke is known to have composed two or three full anthems and nearly 30 verse anthems, only 11 of which have survived; nine of these have instrumental preludes and ritornellos. Verses for soloist or ensemble, punctuated with short choruses and simple instrumental movements, form the most prominent features of Cooke's anthems. He employed the comparatively wide harmonic vocabulary with which he would have been familiar from Italian music, but for the most part its expressive potential eluded him and his use of chromaticism, though occasionally telling, is often arbitrary. He showed an understandable preference for treble and bass voices in his verses, and it is here that his most effective writing is usually to be found. The anthem *O give thanks* divides trebles into three parts in verses and choruses almost throughout and testifies to the skill of his own choir. This interest in sonority is evident in many of his anthems, with the division (admittedly brief and unsystematic) of one or more voices occurring in both choruses and ensemble verses: the final chord of *The Lord hear thee*, for instance, divides the basses into five.

Cooke's instrumental movements are artless imitations of forms found in English masque music; those in some of his anthems are clearly intended for strings, but others are more probably for cornetts and sackbuts. The structures are for the most part fragmentary, with very little sustained development of musical ideas, but he pioneered several important techniques that were to become characteristic of the Restoration anthem: the inclusion of self-contained rather than merely preludial instrumental movements; the repetition of the opening symphony at the mid-point of the anthem; the alternation of triple time with the hitherto ubiquitous duple; and the use of a succession of solo or ensemble verses, usually contrasting in texture or vocal scoring, in place of the regular alternation of verse and chorus found in pre-Restoration anthems. He also established the use in England of spatial separation: he first exploited it in his anthems for the coronation of Charles II, at which the full choir, a group of solo voices and violin band were described by an eyewitness as 'answering alternately' from separate galleries, while the autograph score of another of his anthems includes directions that vocal soloists and instrumentalists be placed 'above' and 'below', presumably in the galleried Chapel Royal. Despite these innovative features, however, Cooke's anthems are primarily the contribution of a singer, and it remained to his greater pupils to fill their general outlines with more cogent and imaginative musical ideas. His three court odes follow the patterns and proportions of his verse anthems with strings, and his songs are unpretentious miniatures, making no advance on the style of much minor music of the late Commonwealth period.

Throughout his life Cooke was celebrated as a practitioner of the Italian style of singing. His earliest contact with it would have been as a chorister of the Chapel Royal, where the influence of Walter Porter, one of the Gentlemen and a pupil of Monteverdi, made itself felt both on the repertory and on performing practice. The diarist John Evelyn described Cooke on 28 October 1654 as 'esteem'd the best singer after the *Italian* manner of any in *England*', and in the 1664 edition of *A Brief Introduction to the Skill of Musick* John Playford asserted that the Italian manner of singing 'is now come to the Excellency and Perfection ..., by the Skill and furtherance of that Orpheus of our time *Henry Cook*'. In addition to graces such as the trill and *gruppo*, the style involved rhythmic liberties and elements of improvisation that could meet either with delighted approval or shocked displeasure. On 13 February 1667 Pepys wrote of Cooke's 'strange mastery ... in making of extraordinary surprizing closes, that are mighty pretty', whereas on 14 September 1662 he had heard Cooke 'to overdo his part at singing, which I never did before'. Cooke not only practised this Italian manner himself but also taught his boys Italian songs; he thus provided, both in and out of the Chapel, some of the earliest direct stimuli to young musicians who were later to integrate the Italian style into their works with greater artistry than he himself could command.

WORKS

ANTHEMS

verse, unless otherwise stated

** – autograph*

† – music lost, text printed in J. Clifford: The Divine Services and Anthems (London, 2/1664)

PETER DENNISON/BRUCE WOOD

Cooke [Cook], **J(ohn)** (*b c*1385, *d* ?1442). English church musician and composer. Nine compositions in the OLD HALL MANUSCRIPT are attributed to 'Cooke' and one piece preserved anonymously there may also be assigned to him; a further, unclear attribution may read 'J. Cooke'. The name Cooke was common, and it is possible that this music includes works by more than one composer so named. Most if not all, however, is probably attributable to the John Cooke who, as almost certainly a former chorister of the Chapel Royal, was sent from a very junior clerkship there to study at King's Hall, Cambridge, in 1402/3. He vacated this fellowship in January 1414, but had already been re-admitted to membership of the Chapel Royal as a chaplain (a Gentleman in priest's orders) by the summer of 1413. He was among the personnel who accompanied the entourage of Henry V on the Agincourt expedition of 1415.

By July 1419 he had left the Chapel Royal, and at the same time he vacated the canonry of the collegiate church of Hastings to which he had been collated by Henry V in 1417. Unusually, the letters of appointment for his successor made no record of the reason for the vacancy, indicating that it was the consequence of neither death nor resignation; rather, the serious attempts made to erase two of his pieces from the Old Hall Manuscript (see below) suggest that Cooke had suffered a catastrophic fall from favour.

He would nevertheless have been able to resume his career elsewhere, and it is perfectly possible that he may be identifiable with the John Cooke who was appointed a minor canon of St Paul's Cathedral, London, in March 1426, briefly occupied the office of junior cardinal in 1435 and died in 1442. A John Cooke who in 1455 had been a lay Gentleman of the Chapel Royal for 26 years was a separate individual of a later generation.

Cooke and Leonel Power are the only two composers present in both the original and later layers of the Old Hall Manuscript. Cooke's musical fingerprints are strong, and survive the presumed chronological division between music copied earlier and later, with the attendant move towards greater simplicity. The influence of Power is so evident as to prompt the suggestion that Cooke may have been his pupil or associate (which may point to yet another candidate for the composer's identity, Richard Cooke, who was a chaplain alongside Power in the Clarence Chapel; see A. Wathey: *Music in the Royal and Noble Households in Late Medieval England*, New York, 1989, pp.36, 49). The Gloria (Old Hall no.36), is closely modelled on Power's Gloria–Credo pair nos.21, 77. The Credo, no.82, is also similar in structure to these three works, and although flanked by Power's compositions in the manuscript, can be assigned provisionally to Cooke: the ascription has been cut off with the initial but left an imprint on the conjoint folio of the manuscript. (The first four and a half staves of music have been erased, as have ff.101*v*–102 including the Agnus Dei, a descant setting

apparently ascribed to J. Cooke.) Power's influence is also seen in the introduction of proportional passages (no.92), use of simultaneously conflicting signatures (final section of no.112), fluctuating bar lengths (no.36), augmentation in one part (duets of no.82), commencement of the Credo polyphony at 'Factorem . . .' (no.82), textual telescoping (nos.82, 92), bold contrapuntal writing with advanced chromaticism (no.36), and skilful handling of complex colorations and syncopations (no.92), though his use of syncopation is more advanced than Power's. The remarkable number of sharps marked in the otherwise simple setting of *Stella celi* (no.55) may indicate that it was used didactically. The two Glorias in score (nos.7, 14) open in major prolation with much use of minims, coloration and changes of time signature – they are far removed from simple descant style and make no use of chant. No.7 has the text variant 'propter gloriam tuam magnam', prescribed for double feasts in the Sarum Missal. This piece originally had extensive duet sections, which were subsequently filled out to three parts by the second-layer scribe who was responsible for Cooke's works: his *Ave regina* is the only other first-layer piece in score with duets.

His sole isorhythmic motet, *Alma proles regia/Christi miles/Ab inimicis nostris*, is a rhythmically complex specimen, reducing in the ratio 9:6:4. The tenor is a Rogation litany, and the saints invoked in the upper parts are Mary and George. It has been suggested that this piece would have been suitable at the time of the unsuccessful Rogationtide peace negotiations which preceded the Agincourt campaign, and also at the time of the victorious return of Henry to London. The text of the middle part, *Christi miles*, coincides, together with the motets of Damett and Sturgeon, with chronicle accounts of the Agincourt celebrations.

MARGARET BENT/ROGER BOWERS

Cooke, Matthew (*b* ?1761; *d* London, bur. 7 June 1829, aged 68). English organist and composer. He was trained as a chorister in the Chapel Royal under Nares. In 1777 his voice broke, and shortly afterwards he became organist to the Dowager Countess of Essex and the Ladies Capell. His main London appointments were as organist (from 1788) of St George's, Bloomsbury, and also, briefly, of Curzon Chapel, Mayfair. Cooke appears to have been closely associated with the Linleys, and his *Short Account of the late Mr. Thomas Linley, Junior* (*GB-Lbl* Eg.2492) is a primary source of biographical information about this composer. His own compositions are unimportant; apart from one set of *Six Lessons for the Harpsichord or Piano Forte* (London, *c*1780), they consist almost entirely of short vocal pieces (chiefly songs, glees, hymns and psalm tunes). Cooke was also an inventor, and in 1812 he was awarded the Gold Medal of the [Royal] Society of Arts for an apparatus 'by means of which Blind People can both learn and teach Music'. Nathaniel Cooke (1773–1827), a nephew and pupil, was organist of Brighton Parish Church from 1813 until his death and was one of the 100 'most Eminent Living Musicians' invited to contribute an autobiographical entry to Sainsbury's *Dictionary of Musicians* (1824).

H. DIACK JOHNSTONE

Cooke, Robert. English organist and composer, son of BENJAMIN COOKE (ii).

Cooke [Cook], **Sam(uel)** (*b* Clarksdale, MI, 22 Jan 1931; *d* Los Angeles, 11 Dec 1964). American gospel and soul singer and songwriter. He first sang gospel music professionally as a teenager with the Chicago-based Highway QCs. In 1950 he replaced R.H. Harris as lead singer in one of the most important postwar gospel quartets, the Soul Stirrers. While their base remained Chicago, they recorded for Specialty records in Los Angeles with Cooke singing lead on emotionally charged recordings such as *Were You There*, *Touch the Hem of His Garment*, *Be with Me Jesus* and *Nearer to Thee* (the latter three written by Cooke). At Specialty, the producer Robert 'Bumps' Blackwell suggested that Cooke should also record as a solo secular artist. One single was released under the pseudonym Dale Cook before Cooke was released from his contract with Specialty in 1957. He then wrote and recorded a succession of pop singles including *You Send Me* (Keen, 1957), *Everybody Likes to Cha Cha Cha* (Keen, 1959) and *Wonderful World* (Keen, 1960). Flush with his initial success, Cooke next recorded for the larger RCA company, where he worked with the producers Hugo Peretti and Luigi Creatore. Although he continued to write and record a series of hits including *Chain Gang* (RCA, 1960), *Cupid* (RCA, 1961), *Twistin' the Night Away*, *Bring it on home to me*, *Having a Party* (all RCA, 1962), *Another Saturday Night* (RCA, 1963), *Shake* and *A Change is Gonna Come* (both recorded in 1964 and issued posthumously), Cooke was intent on broadening his audience, recording a number of popular standards and performing at such venues as the Copacabana Club, New York.

Cooke was one of the first black popular musicians to attempt to take control of the business part of his career, starting his own publishing company, Kags Music, in 1958 and his own record labels, Sar and Derby, in 1959 and 1962. His legacy is immense, influencing a number of important soul singers, most notably Otis Redding, Bobby Womack, Johnnie Taylor (1938–2000) and Al Green. His songs have been covered innumerable times by rock and soul artists alike.

ROB BOWMAN

Cooke, Thomas Simpson [Tom] (*b* Dublin, 1782; *d* London, 26 Feb 1848). Irish singer, instrumentalist and composer. He studied under his father, Bartlett Cooke, a famous oboe player at the Smock Alley Theatre, and performed a violin concerto in public at the age of seven. He received instruction in composition from Tommaso Giordani. At 15 he was appointed leader of the orchestra at the Crow Street Theatre, Dublin, a position he held for several years. For this theatre he composed several overtures and songs; at the same time he kept a music shop (1806–12). On one of his benefit nights he announced himself to sing the part of the Seraskier in Storace's *The Siege of Belgrade*, an experiment which proved successful and led to his moving to London; he made his first appearance, in the same role, at the Lyceum on 13 July 1813. On 14 September 1815 he appeared as Don Carlos in *The Duenna* at Drury Lane, where he continued as a principal tenor for nearly 20 years. He composed music for over 50 theatrical productions at Drury Lane during the same period, including an *Oberon* in opposition to Weber's opera in 1826.

In 1821 Cooke was called 'director of the music at Drury Lane Theatre'. From about 1823 he was alternately a singer and the leader of the orchestra. From 1828 to 1830 he was one of the musical managers of Vauxhall Gardens. When Alfred Bunn became lessee of both Covent Garden and Drury Lane, he engaged Cooke as director of the music and conductor. Cooke was a member of the Philharmonic Society, and occasionally led the orchestra or conducted the concerts. For several years he held the post of principal tenor at the chapel of the Bavarian Embassy, a post he relinquished in 1838. In 1846 he succeeded John Loder as leader at the final two years of the Concert of Ancient Music.

As a musician, Cooke was renowned for his versatility: on one of his benefit nights at Drury Lane he performed in succession on the violin, flute, oboe, clarinet, bassoon, horn, cello, double bass and piano. Macfarren reported that 'he was scarcely less noted as a wit than as a musician and thus all the musical jokes of his time were characteristically fathered on him'. As a singing teacher he had a deserved reputation, and several of his pupils achieved distinction, among them Maria Tree, Elizabeth Rainforth, Mrs Austin, Miss Povey, the Misses A. and M. Williams, and Sims Reeves. His treatise on singing was also much esteemed. His theatrical music, composed as it was for 'operas' which were essentially plays interspersed with songs, shows no more dramatic sense than does Bishop's. The most elaborate pieces are strophic arias designed for (written-out) florid variation in the manner of Arne's *The soldier tir'd*, but these increasingly gave way to simpler ballads, sentimental and comic songs; after 1830 his major works were adaptations.

Cooke's eldest son, Henry Angelo Michael (Grattan) Cooke (*b*Dublin, 1809; *d* Harting, Sussex, 12 Sept 1889), was educated at the RAM (1822–8) and for many years was principal oboist in the major London orchestras; from 1849 to 1856 he was also bandmaster of the second regiment of Life Guards. He retired about 1869.

BRUCE CARR

Cook Islands. *See* POLYNESIA, §II, 1.

Coolen [Coelen], **Lambert** (*b* *c*1579–*c*1581; *d* Liège, 30 May 1654). Flemish composer, singer and priest. His name is first recorded in 1599, when he was one of the three *duodeni seniori* in the choir school of the cathedral of St Lambert, Liège. In the same year he received one of the two Toleolo bursaries. At that time he was probably about 18 to 20 years of age, and may have been a pupil of Dominus Henri Jamaer, singing master at the cathedral, and of his deputies Jacques Chabot and Narthodi Bartholdi. On 15 December 1606 he was appointed a singer at the cathedral, receiving a benefice (of the altar of St Aldegonde) from December 1611. In 1615 he seems to have spent a brief period in the collegiate church of St Denis as *monitor chorayliu*m, since on 12 September 1615 he was promoted to canon of the *petite-table* of the cathedral. A little later he became a priest, and was appointed *intonateur* in 1621. His activities within the cathedral choir school gained him the benefice of the imperial chapel of St Remacle in 1627. When Hodemont resigned his posts in 1633, Coolen became temporary succentor. In 1640 he himself asked to resign his posts for reasons of health.

The preservation of 26 of his motets in manuscripts in Liège, one of them copied as late as 1691, is evidence of his success as a composer there. Following Raymundi and Hodemont, Coolen contributed to the implementation of the musical reforms of the Council of Trent in Liège. He adopted the style of Roman composers and rarely succumbed to modern tendencies (such as the use of double choir). A conservative, he enjoyed a good repuation with the ecclesiastical authorities, but he does not appear to have attracted the attention of the prince-bishop Ferdinand de Bavière. (J. Quitin: 'Lambert Coolen, compositeur liégeois, *c*1570–1654', *Bulletin de la Société liégeoise de musicologie*, no.49 (1985), 13–20)

1 motet, 6vv, Livre de choeur II de la cathédrale Saint-Lambert, 1691, *Lc*

PHILIPPE VENDRIX

Coolidge, Elizabeth (Penn) Sprague (*b* Chicago, 30 Oct 1864; *d* Cambridge, MA, 4 Nov 1953). American patron of music. Her maiden name was Sprague and on 12 November 1891 she married Frederic Shurtleff Coolidge at Chicago. The Berkshire festivals of chamber music, held under her patronage at Pittsfield, Massachusetts, were begun in autumn 1918 as the South Mountain Chamber Music Festival. As an outgrowth of the festivals she created the Elizabeth Sprague Coolidge Foundation in 1925 at the Library of Congress by placing in trust a large sum of money, the income of which is paid to the library. The trust was intended, among other things, to enable the Music Division of the library to conduct music festivals, to give concerts, to offer and award a prize or prizes for any original composition or compositions performed in public for the first time at any festival or concert given under the auspices of the library, and to further the purposes of musicology through the music

division of the library. Among the works that have resulted from commissions by the foundation are Copland's *Appalachian Spring*, Stravinsky's *Apollon musagète* and Crumb's *Ancient Voices of Children*.

In 1925 Elizabeth Coolidge presented the library with an auditorium (capacity 511) costing over $90,000 exclusive of the organ, which was also her gift (it was removed in 1954). Her numerous benefactions also included contributions towards the gift of a music building to Yale University (primarily the gift of her mother, Nancy Ann Sprague), an endowment for the first pension fund for the Chicago SO (1916, in memory of her parents), and the establishment of a tuberculosis hospital and a school for crippled children at Pittsfield. In 1932 she instituted the Elizabeth Sprague Coolidge Medal 'for eminent services to chamber music', which was awarded annually to one or more recipients until 1948, when the library ceased making awards. She was an accomplished pianist and an experienced ensemble player. She began to write music in the 1890s, and composition later became for her primarily a spiritual refuge from the deafness which began to afflict her in her thirties.

For her contributions to education Coolidge received an honorary MA from Yale University, Smith College and Mills College, as well as a DLitt from Mt Holyoke College, a DMus from Pomona College and an LLD from the University of California. She brought many European composers and performers to the USA and contributed towards cultural activity in Europe. In recognition of her European activities she received decorations from several foreign governments, as well as the Medal of Citizenship from the city of Frankfurt and the Cobbett Medal from the Worshipful Company of Musicians in London. In 1931 she was admitted by France to the Légion d'Honneur.

The Elizabeth Sprague Coolidge Papers at the Library of Congress contain business and personal correspondence as well as books from her library, photographs and scrapbooks. The Library of Congress also holds the papers of the Elizabeth Sprague Coolidge Foundation, which contain correspondence and autograph scores by many major 20th-century composers, programmes, photographs, and other materials relating to contemporary music and musicians.

The following is a list of composers who have received commissions either from the Elizabeth Sprague Coolidge Foundation (marked by a dagger) or at the instigation of Elizabeth Coolidge herself. Full documentation regarding these commissions is being prepared by the Library of Congress.

†Hugh Aitken, Franco Alfano, Paul Arma, †Milton Babbitt, †Sándor Balassa, George Barati, †Samuel Barber, †Béla Bartók, Ernesto Bartolucci, Arnold Bax, †Gustavo Becerra, Conrad Beck, Herbert Bedford, †Nicolai Berezowsky, †William Bergsma, Balthasar Bettingen, †Thomas Beveridge, †Arthur Bliss, Ernest Bloch, Renzo Bossi, Domenico Brescia, †Frank Bridge, Benjamin Britten, Hans Burian, †Stephen Douglas Burton, Adolph Busch, †Roberto Caamaño, John Alden Carpenter, Francisco Casabona, Alfredo Casella, Mario Castelnuovo Tedesco, †Carlos Chávez, Raymond Chevreuille, †Rebecca Clarke

GUSTAVE REESE/CYRILLA BARR

Cool jazz. From the late 1940s, a jazz style derived largely from BOP, but advocating a moderation of those musical, emotional or ritualistic qualities associated with the parent style. Most of its musicians pursued a soft level of dynamics, for example favouring drum brushes rather than sticks, and many avoided a pronounced use of vibrato. Beyond this the pursuit of moderation was diverse and inconsistent. Possibilities included the meticulously restrained lyricism of Stan Getz's solo on *Early Autumn* with Woody Herman's Second Herd (1948, Cap.); the elimination of cutting sharply differentiated articulation, as heard in the highly chromatic and rather unmelodic unison themes and improvised lines presented by Lennie Tristano's group (1949); an emphasis on mid-range

register and subdued timbres, and a delicate balance between improvisation and composition, as practised by Miles Davis's 'Birth of the Cool' nonet (1949–50); the Baroque- and Classically-influenced chamber jazz of the Modern Jazz Quartet (from 1952), with its concomitant appeal to an audience behaviour associated with the concert hall rather than the nightclub; the heady, transparent and contrapuntal dialogues improvised by Chet Baker and Gerry Mulligan in Mulligan's pianoless quartet (also from 1952). Cool jazz led directly to another substyle of bop, West Coast jazz. The distinction between bop and cool jazz may seem obscure as these styles share many of the same conventions.

BARRY KERNFELD

Coon song. A genre of American comic song, popular from about 1880 to the end of World War I, with words in a dialect purporting to be typical of black Americans' speech. The term 'coon' was used disparagingly of blacks by that date. J.P. Skelly's *The Dandy Coon's Parade* (1880) and *The Coons are on Parade* (1882) may be considered precursors of the coon song; with the addition of ragtime elements in the 1890s the coon song sprang into prominence as a national favourite. It was often performed on the vaudeville stage by white female 'coon shouters'. Coon songs explored every conceivable black characteristic and were written by black as well as white composers. Entertainments were developed from the coon song, and coon songs found their way into legitimate theatrical productions as unrelated interpolations. J.P. Sousa's famous band popularized the genre both in America and abroad with such songs as Lee Johnson's *My Darktown Gal*, including some composed by his assistant director, Arthur Pryor.

SAM DENNISON/R

Cooper, Ėmil (Al'bertovich) (*b* Kherson, 8/20 Dec 1877; *d* New York, 19 Nov 1960). Russian conductor. He studied composition with Fuchs, and worked further with Taneyev and Nikisch. His conducting début was at Odessa in 1896 and, after four years at the Kiev Opera (1900–04), he became conductor at the Zimin Opera Theatre, Moscow, where he gave the première of Rimsky-Korsakov's *The Golden Cockerel* in 1909. Moving to the Russian Imperial Opera, Moscow, in 1910 he conducted the company's first performances of the *Ring* and new works by Medtner, Myaskovsky, Rachmaninoff, Skryabin and others. Diaghilev engaged him to conduct the Russian operas he first took to Paris in 1908 and 1909, including *Boris Godunov* with Chaliapin, which Cooper conducted again on his (and Chaliapin's) London début at the Theatre Royal, Drury Lane, in 1913.

After the Revolution Cooper was invited by Glazunov to be conductor at the Kirov (formerly Mariinsky) Theatre, Leningrad, and of the Philharmonic Society there which organized the Leningrad PO. In 1922, however, Cooper decided to leave the USSR; he based himself in Paris but undertook widespread tours before becoming musical director of the Riga Opera (1925–8). He was principal conductor of the Chicago Civic Opera from 1929 to 1932, then lived in Europe until 1939, when he returned to Chicago. He moved to the Metropolitan (1944–50) where he conducted the New York premières of *Peter Grimes* (1948) and Musorgsky's *Khovanshchina* (1950, in a severely edited version). His New York performances were regarded as honest and dependably musical rather than inspired, and were sometimes thought dull or brutally forthright. From 1950 Cooper was conductor of the Montreal Opera Guild, where he broadened the repertory with works previously unperformed there, including operas by Prokofiev and Menotti. Some recordings remain of Cooper's performances at the Metropolitan, including well-regarded versions of *La Gioconda*, with Milanov and Tucker, and *Roméo et Juliette*, with Bidú Sayão and Björling.

M. MONTAGU-NATHAN/NOËL GOODWIN

Cooper, Imogen (*b* London, 28 Aug 1949). English pianist, daughter of MARTIN COOPER. She studied with Kathleen Long and at the Paris Conservatoire (1961–7) with Jacques Février and Yvonne Lefébure. She also studied with Alfred Brendel, Jörg Demus and Paul Badura-Skoda in Vienna, winning the Mozart Memorial Prize in 1969. Cooper made her Proms début in 1975 and has subsequently pursued an international career, playing with many of the major orchestras in Britain, Europe and the USA. She co-commissioned Thomas Adès's solo piano work *Traced Overhead*, of which she gave the première at the 1996 Cheltenham International Music Festival. She also played the piano part in the first performance of Brett Dean's quintet *Voices of Angels*. Her recordings include Schubert's late piano works (which she performed to acclaim at the Wigmore Hall in 1984), *Schwanengesang*, *Winterreise* and *Die schöne Müllerin* and Schumann's *Dichterliebe* (with Wolfgang Holzmair), Mozart's concertos for two and three pianos and solo music by Brahms and Schumann. Cooper's solo repertory is wide-ranging, but she is most admired for her lucid, sensitive interpretations of Mozart, Schubert and Schumann.

BRYCE MORRISON

Cooper, John. *See* COPRARIO, JOHN.

Cooper, Kenneth (*b* New York, 31 May 1941). American harpsichordist, pianist and musicologist. He studied the harpsichord at the Mannes College with Sylvia Marlowe (1960–63) and musicology at Columbia University with Paul Henry Lang, Joel Newman, Douglas Moore and Otto Luening. He made his international début in London in 1965 and his American début in the Alice Tully Hall, New York, in 1973, with a programme that included the world première of *Drive*, written for him by George Flynn. He has appeared frequently in festivals in the USA and Europe, and has performed as soloist with the American Opera Society, the Little Orchestra Society and the Clarion Concerts Orchestra; as a representative of the US State Department he has toured Russia, Romania, Greece and England. He has also performed chamber

music, with the Chamber Music Society of Lincoln Center, the Fine Arts Quartet and such artists as Henry Schuman, Paula Robison and Gerard Schwarz, and has made over a dozen recordings of 18th-century music. Highly regarded for the textual accuracy and musical vitality of his performances of the Baroque and Classical keyboard repertory, he also plays ragtime and contemporary music.

Cooper has taught at Barnard College (1967–71), Brooklyn College, CUNY (1971–3), Montclair State College (1977–92), and Mannes, where he was professor of harpsichord from 1975 to 1985. In 1983 he became artist-in-residence at Columbia University, and in 1984 he was appointed to teach and direct the Baroque orchestra at the Manhattan School of Music. Among his publications are a complete edition of Monteverdi's *Tirsi e Clori* (1967) and several articles for the *Musical Quarterly* and *High Fidelity*.

JAMES WIERZBICKI

Cooper, Martin (Du Pré) (*b* Winchester, 17 Jan 1910; *d* Richmond, Surrey, 15 March 1986). English writer on music. He was educated at Winchester and Hertford College, Oxford, and then went to Vienna where he studied under Egon Wellesz (1932–4). On his return he became music critic of the *London Mercury* and the *Daily Herald* (also contributing to *The Spectator*, 1947–54); he joined the *Daily Telegraph* in 1950 and was chief critic from 1954 until his retirement in 1976. He was editor of the *Musical Times*, 1953–6, and a member of the editorial board of *The New Oxford History of Music* as well as editor of the tenth volume.

Cooper's special interests were French and Russian music from the late 18th century onwards and German music of the early Romantic period; but his view of musical history was a broad one, based on an extensive cultural background and a fluency in several languages. His style of daily criticism was urbane and judicious, often more concerned with what was performed than with the performer; his regular articles in the *Daily Telegraph* demonstrated his unusual ability to discuss a particular topic in a wide cultural context, with clarity and elegance. Cooper's book on French music, probably his most important single contribution to music literature, notably shows this capacity while at the same time containing penetrating criticism of individual figures. His early study of Gluck is perceptive in its discussion of that composer's antecedents in 'reform opera', and the volume on Beethoven valuably sets his late works in the context of central European culture of the time.

STANLEY SADIE

Cooper, Paul (*b* Victoria, IL, 19 May 1926; *d* Houston, 4 April 1996). American composer. He studied at the University of Southern California (BS 1950, MA 1953, DMA 1956) with Ernest Kanitz, Halsey Stevens and Roger Sessions, among others. He also worked with Boulanger (1953–4). His teaching appointments included positions at the University of Michigan (1955–68), where he became a close associate of Ross Lee Finney, and the Cincinnati Conservatory (1968–74). From 1974 until his death he served as composer-in-residence and professor at the Shepherd School of Music, Rice University. During these years he enjoyed a close collaborative relationship with the Houston SO, which commissioned his Fifth Symphony (1982–3).

Although Cooper experimented with serialism, aleatory procedures (Symphony no.4 'Landscape', 1973–5) and unorthodox methods of sound production (*Variants IV*, 1986), much of his music functions within traditional parameters. His most important works, for large instrumental ensemble or the voice, demonstrate both structural clarity and contrapuntal skill. In the late works, he became preoccupied with issues of tempo, frequently applying principles of canonic mensuration. Expressive as well as intellectual, his music exhibits passages of lyricism that belie technical mastery. His vocal music is dominated by settings of poetry by Christiane Ebert Cooper, whom he married in 1953.

LAURIE SHULMAN

Cooper, Robert. *See* COWPER, ROBERT.

Cooper, Wilson M. (*b* 17 Dec 1850; *d* West Palm Beach, FL, 17 July 1916). American tunebook compiler, arranger and composer. In 1902 he published *The Sacred Harp, Revised and Improved* (Dothan, AL), a revision of B.F. White and E.J. King's *The Sacred Harp* (Philadelphia, 1844), in which he arranged the formerly three-part tunes for four voices. When J.S. James published another version of *The Sacred Harp* (1911) in four parts, Cooper filed a law suit claiming James had used his alto parts in the book; the suit was dismissed on the grounds that an alto voice alone was not an original composition. Further editions of Cooper's book appeared in 1907, 1909 (the last in which he is listed as the publisher) and 1927. With the 1949 edition the name of the Cooper revision changed to *The B.F. White Sacred Harp*; it reappeared under that title in 1960 and again in 1992. The last two editions have been widely used by Sacred Harp singers in northwest Florida, south Alabama, south Mississippi and east Texas. Cooper was also known to have published the *Zion Songster*.

Considered an outsider by those who had been associated with B.F. White before he died (1879), Cooper was criticized by Sacred Harp singers from Georgia and north Alabama, who charged that he had transposed tunes, changed familiar titles and added gospel songs to the Sacred Harp collection. His alto parts, however, became models for future alto additions. He also contributed approximately 19 new tunes, including three anthems: *The Crucifixion*, *Mother, the Dearest Friend*, and *Whom Shall I Fear?*. These, written in the style associated with in shape-note hymnody, though without the benefit of strophic, folk-like melodies, are especially worthy of mention. *The Crucifixion* (the only anthem by Cooper remaining in the 1992 edition) manages within these restrictions to create a memorable and appropriately stark expression.

WALLACE McKENZIE

Coover, James B(urrell) (*b* Jacksonville, IL, 3 June 1925). American music librarian and bibliographer. He attended Northern Colorado University, where he studied theory and composition, taking the BA in 1949 and MA in 1950. In 1953 he graduated from the library school of the University of Denver with the MALS. From 1950 to 1953 he was bibliographer and assistant director of the Bibliographical Center for Research in Denver. He was head of the George Sherman Dickinson Music Library of Vassar College from 1953 until 1967, when he became professor of music (holding the Birge-Cary chair, 1973–6, and the Albert Jr. and Henrietta Ziegele chair from 1982) and director of the music library at SUNY. He was made an adjunct professor in the School of Information and Library Science at Buffalo, NY, in 1980.

Coover has compiled several useful bibliographies, particularly *A Bibliography of Music Dictionaries* (1952), an extensive catalogue with a historical introduction, and the composer-title index to recorded anthologies *Medieval and Renaissance Music on Long-Playing Records* (1964).

PAULA MORGAN

Cope, David (Howell) (*b* San Francisco, 17 May 1941). American composer, writer on music and instrument maker. He studied composition with Grant Fletcher at Arizona State University (BM 1963) and with Halsey Stevens, Dahl and Perle at the University of Southern California (MM 1965). He then taught at Kansas State College (1966–8), California Lutheran College (1968–9), the Cleveland Institute (1970–73), Miami University of Ohio (1973–7) and the University of California, Santa Cruz (from 1977). His various awards include two NEA grants (1976, 1980). Cope's music employs a wide range of performance forces, musical structures and compositional methods, from the traditional to the avant-garde. Contemporary techniques, for istance involving unconventional manners of playing, prepared instruments or those he has invented himself, are often employed in his music, as are microtonal scales (such as his 33-note system of just intonation), atonality and polyrhythms. In 1981 he began developing a computer program called EMI (Experiments in Musical Intelligence); the program has become sophisticated enough to compose music in the styles of various composers, and some of the results have been published and recorded commercially. He is the

author of a number of important essays on notation and contemporary music; *Experiments in Musical Intelligence*, a book and CD-ROM, focusses on composing with computers.

DALE COCKRELL

Copenhagen (Dan. København). Capital city of Denmark. It has been the capital since the 15th century and until the middle of the 20th the centre of national musical life. Liturgical music survives from before the Reformation; shortly thereafter the Lutheran chorale was introduced in church and at court. The most important collections of Danish hymns of the Reformation period, published in Copenhagen, are *Hans Thomissøn's Salmebog* (1569) and *Niels Jesperssøn's Graduale* (1573). With the collection *Pratum Spirituale* (1620), Mogens Pedersøn (Christian IV's assistant *kapelmester*) left a monument of early Danish evangelical music. It was not until the mid-15th century that secular music developed significantly. Bands of trumpeters and singers were established by the court, and grew during the 16th and 17th centuries into instrumental and vocal ensembles of international standing. During Christian IV's reign (1588–1648) court musicians were sent to Venice to study music, and a number of musicians from abroad were invited to court to build up and train the musical establishment, including Dowland from England and Schütz from Germany. Alongside such Danish musicians as Pedersøn, Melchior Borchgrevinck and Hans Nielsen, they created a flourishing musical life in the early 17th century, making the city an international centre of music. In the late 17th century a group of French musicians was brought over and gave magnificent performances of French ballet in the palace.

At the beginning of the 18th century, an Italian opera company arrived and for a short time performed in a new building in Bredgade (which still exists, though no longer as a theatre). This venture came to an end, however, owing to lack of public support. Later a series of opera performances, open to the public, was arranged in the royal palace, including German operas by the Hamburg composer Reinhard Keiser. During the reign of the Pietist Christian VI (1730–46) theatrical performances were forbidden, but opera was again permitted under Frederik V (1746–66). The Italian impresario Pietro Mingotti arrived in Copenhagen in 1747 with a group of singers and gave several seasons of Italian opera at a theatre in the Charlottenborg palace, assisted by Danish instrumentalists. Gluck was among those who worked for this company; as homage to the Danish court he composed an opera, *La contesa de' numi*, performed at the Charlottenborg theatre in 1749. Italian opera enjoyed many years' favour under the direction of such composers as Giuseppe Sarti, Paolo Scalabrini and Mingotti himself. In 1748 a new, larger theatre was opened near the Charlottenborg in Kongens Nytorv, and in 1770 it became the Kongelige Teater.

A more distinctively national musical style developed during the second half of the 18th century, founded by German-born musicians including J.E. Hartmann (the first of a distinguished family of Danish composers), F.L.A. Kunzen, J.A.P. Schulz, and later C.E.F. Weyse and Friedrich Kuhlau. From the 1770s the repertory of the Kongelige Teater included Singspiels by Hartmann (*Balders død* and *Fiskerne*), Kunzen (*Holger Danske* and *Dragedukken*) and Schulz (*Høstgildet* and *Peters bryllup*). These laid the foundations for a Danish opera tradition, continued by Weyse and Kuhlau. The national play *Elverhøj* (1828), written by J.L. Heiberg with music by Kuhlau, is the most frequently performed play in Denmark. The basis of the Kongelige Danske Ballet was laid at the Kongelige Teater from the 1770s with Claus Schall's ballet divertissements and ballet numbers in dramatic works. Its great period (*c*1830–78) was under the direction of August Bournonville, many of whose ballets are still performed in Copenhagen, notably *Napoli* (1842) and *Et folkesagn* (1854) with music by Gade and Hartmann.

During the years without opera, 1730–46, sacred music was more widely cultivated, especially in the Christiansborg Slotskirke (palace chapel), and concert life had a considerable flowering. Musical societies grew up as collaborations between professional and amateur musicians. The earliest of these, founded on the English model in 1744 with the support of the composer J.A. Scheibe and the playwright Ludvig Holberg, was the Musikalske Societe. Weyse and Kuhlau dominated musical life in the first half of the 19th century, and Niels W. Gade and J.P.E. Hartmann in the second. After a few decades of decline in musical activity, the Musikforening (Music Society) was founded in 1836 and became the most important musical institution in the city. From 1849 to 1890 it was autocratically conducted by Gade, whose rather conservative taste dominated its repertory. The Caeciliaforening (1851–1934) performed mostly early vocal music. Other societies founded in the following years were Euterpe (1864–7), the Kammermusikforening (founded 1868 and still active), the Koncertforening (1874–93) and Palaekoncerterne (1895–1932). From their establishment in 1843 the Tivoli Gardens were an important concert venue under the musical management of H.C. Lumbye (see illustration). With the founding of the workers' clubs a workers' singing movement arose, with its own choirs and to some extent its own repertory. During the first decades of the 20th century the music

New concert pavilion at the Tivoli Gardens: lithograph after Bernhard Olsen from 'Illustreret tidende', xxi (1875)

societies gradually lost their position to the radio station Statsradiofonien (now Danmarks Radio), which has given public Thursday concerts since 1933. In the 1920s there arose a number of contemporary music societies, notably the Unge Tonekunstnerselskab (Young Musicians' Association), which was the Danish section of the ISCM from 1930 until it was replaced by the Musica Nova in 1994. Musical life in the first half of the 20th century was dominated by Carl Nielsen, who with his opera *Maskarade* (1906) created a monument to old Copenhagen.

The Falkoner Centre Theatre (2000 seats; inaugurated 1959) is used for opera and ballet, especially by foreign companies, and also serves as a concert hall. Concerts were also given in the halls of the Odd Fellow Palaet (opened 1888), of which the largest, which burnt down in 1993, seated about 1500. Other venues included the Statens Museum for Kunst, the Ny Carlsberg Glyptotek and churches. The large concert hall in the Tivoli Gardens (2000 seats; built 1956) has concerts and recitals almost every evening during the season from May to September, often with visiting artists and ensembles, and is also used regularly in winter. The Radiohus Koncertsal, opened in 1946, is the home of the Radio Symphony Orchestra (RSO). Concerts of contemporary music are given in the Pumpehus.

The Kongelige Opera performs on two stages of the Kongelige Teater: the so-called Gamle Scene (old stage), opened in 1874 on the site of the original Kongelige Teater building of 1748, and the adjoining Nye Scene (new stage), built in 1931. There are seasons of opera, ballet and drama throughout the year apart from a short summer break. In the 1960s and 70s the Studenteropera performed rarely heard works by Handel, Monteverdi, Mozart and Weyse, among others, and in 1994 the Anden Opera (Other Opera) was founded for the performance of contemporary music drama.

The Kongelige Kapel (Royal Orchestra) has an uninterrupted tradition dating from the 15th century, and has been active as an international orchestra since its reconstitution in 1780. As well as its regular work at the Kongelige Teater it gives concerts, often with foreign guest conductors, and tours in Denmark and abroad. In 1965 the Tivolis Sommerorkester began performing throughout the year and changed its name to the Sjaellands Symfoniorkester. The RSO is the third of the city's large professional orchestras. Smaller ensembles include the Radioens Underholdningsorkester. Among the best-known choirs are the Københavns Drengekor (Boys' Choir, founded 1924 by Mogens Wöldike), the Kongelige Teaters Operakor, the Radiokor and the Studentermusikforening (founded 1839).

The Kongelige Danske Musikkonservatorium, founded by the jeweller P.W. Moldenhauer in 1868, became the leading Danish institution of higher musical education; its joint first directors were Gade, Hartmann and H.S. Paulli. Attached to it is the Operaakademi (established 1956), where most of the singers of the Kongelige Opera are trained. The music department of Copenhagen University gives degrees in musicology and music education. Jazz and rock musicians are trained at the Rytmiske

Musikkonservatorium (founded 1985). The Danish Musicological Society was founded in 1954. The rights of Danish composers are protected by KODA (Selskabet til Forvaltning af Internationale Komponistrettigheder i Danmark, founded 1926).

The music collection of the Kongelige Bibliotek, which is the national library of Denmark and the main university library for musicology and other arts subjects, includes a comprehensive collection of Danish music, printed and in manuscript. The library also houses two national editions: the collected works of Gade and of Nielsen, both initiated in the early 1990s. The Dansk Musikinformationscenter (MIC) helps to market Danish music abroad and functions as a documentation centre for contemporary Danish music. The Musikhistorisk Museum (founded 1898) was combined in 1977 with the instrument collection of Carl Claudius, and has a fine collection of old and rare instruments as well as a specialist archive. The Dansk Folkemindesamling (founded 1904) is a centre for the collection, study and dissemination of traditional music and other folklore, primarily from Denmark.

The opening of Jazzhus Montmartre in the early 1960s established Copenhagen's status as an international jazz centre, thanks in part to resident American musicians such as Oscar Pettiford, Stan Getz and later Dexter Gordon, Ben Webster and Kenny Drew. Notable among Danish jazz musicians is the bassist Niels-Henning Ørsted Pedersen. The annual Copenhagen Jazz Festival attracts both Danish and foreign musicians. The most important venues for rock music are the KB-Hal, the Hus in Magstraede, the Grå Hal in the 'free state' of Christiania, and the Pumpehus. For really big names the national football stadium is used as a concert arena.

Coperti (It.: 'covered'). Indication for a MUTE to be used in drum music. The term originated in the practice of covering drums (especially timpani) with cloth to damp the sound.

Copinus, Alexander. *See* COPPINI, ALESSANDRO.

Copio [Copia, Coppia, Sullam], **Sara** [Sarah, Sarra] (*b* ?1592; *d* Venice, 1641). Italian poet and amateur singer. In 1614 she married Jacob Sullam, son of the Jewish Mantuan banker Moses Sullam, who, along with his parents, was Salamone Rossi's benefactor. With her husband and parents, she aided Leon Modena, a relative, in his publications (Modena was the moving spirit behind Rossi's collection of Hebrew works, *Hashirim asher lish'lomo*, 1622/3). Copio hosted a literary salon in her home, where she served as patron to aspiring young writers, among them the Christians Giovanni Basadonna, Baldassare Bonifacio and Numidio Paluzzi. After reading Ansaldo Cebà's epic poem *Ester* (1615–6), she exchanged letters with the author during the years 1618–22; Cebà broke off the correspondence when he realized that he was making little progress in his attempt to convert Sara to Catholicism. Cebà published 53 of his own letters, omitting Sara's, in 1623. In one, he refers to the pleasure of listening to Sara sing the heroic lament of Andromache from his epic, saying that old age and infirmity prevented him from leaving his native Genoa to hear her. Sara seems to have accompanied herself, on what may have been a Spanish guitar; in this she belongs to the Renaissance tradition of female poets who sang and played, with one difference: she is the only known Jewish female poet to have done so in her own time. Of her own poems, a handful were published among Cebà's letters and 14, some with noticeable musical imagery, were edited in 1887.

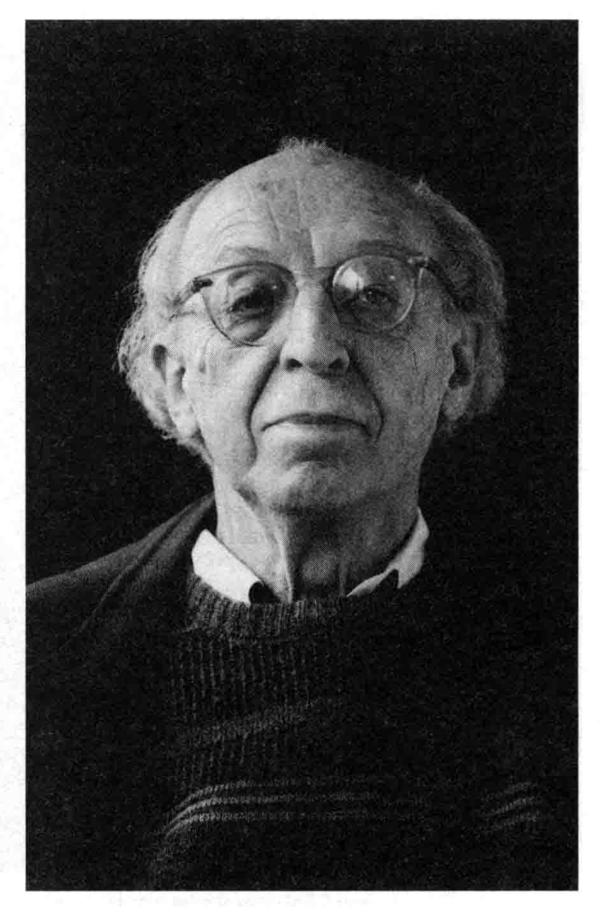
DON HARRÁN

Copla. A verse form of Hispanic origin, usually sung, consisting of four eight-, six- or five-syllable lines generally rhymed *ABCB*. Often improvised, *coplas* relate humorous incidents, amorous sentiments, current or historical events or merely comment on daily life or the natural environment of the singer. Witty use of slang expressions and double meanings add to their often erotic nature. *Coplas*

are commonly used in the *rajaleñas*, *torbellinos* and *guabinas* of Colombia, in the *corrido* of Mexico, and in the villancicos, *saetas*, *vidalas*, *chacareras* and *vidalitas* of Argentina.

WILLIAM GRADANTE

Copland, Aaron (*b* Brooklyn, NY, 14 Nov 1900; *d* North Tarrytown, NY, 2 Dec 1990). American composer, writer on music, pianist and conductor.



1. Life. 2. Works. 3 Style.

1. Life. One of his country's most enduringly successful composers, Copland created a distinctively American style and aesthetic in works of varying difficulty for a diversity of genres and mediums, including ballet, opera and film. Also active as a critic, mentor, advocate and concert organizer, he played a decisive role in the growth of serious music in the Americas in the 20th century.

Copland's parents were Jewish immigrants from small towns in Lithuanian Russia. His father, Harris, reached New York via Glasgow and Manchester while still in his teens, adopting an Anglicized version of the family surname, Kaplan, along the way; his mother, Sarah Mittenthal, arrived in the USA as a young girl and grew up in the American Midwest and Texas before settling in New York in 1881. After their marriage, the Coplands lived above their successful Brooklyn department store; Aaron later credited his business savvy to his experience helping to run the store. The youngest of five children, he was especially close to his sister Laurine, who introduced him to ragtime and opera, and taught him the fundamentals of piano playing. At about the age of seven, he began to make up tunes at the piano, and by the age of 12 was notating short pieces. He received his first formal piano lessons (1913–17) from Leopold Wolfsohn, who assigned him pieces by Mozart, Beethoven and Chopin.

In 1917 Copland began theory and composition lessons with Rubin Goldmark. Rather than pursuing a university degree after his graduation from Boys' High School in 1918, he continued his studies with Goldmark (until 1921), also studying the piano with Victor Wittgenstein (1917–19) and Clarence Adler (1919–21). To supplement his musical education, he regularly attended concerts, operas and dance recitals, including performances by Isadora Duncan and the Ballets Russes, and scoured New York's public libraries for the latest American and European scores. The Piano Sonata (1921) was completed for Goldmark as a 'graduation' piece. More adventurous efforts, however, such as *Three Moods* for piano (1920–21), the last movement of which features his first explicit use of jazz, and *The Cat and the Mouse* for piano (1920), his first published composition, were not shown to his teacher. In these endeavours he enjoyed the support of such friends as Aaron Schaffer, who expertly guided his knowledge of French literature, and Arne Vainio, who introduced him to the ideals behind American socialism.

Copland spent the summer of 1921 at the American Conservatory, Fontainebleau, where his teachers included Paul Antonin Vidal (composition) and Albert Wolff (conducting). He pursued further study in Paris between 1921 and 1924 with Ricardo Viñes (piano) and Nadia Boulanger (composition), by far his most important teacher. Among her many attributes, Copland especially valued her thorough grasp of music literature, her sensitivity to clarity, elegance and formal continuity ('la grande ligne'), and her confidence in her young American

1. Aaron Copland, 1980

students. He also appreciated the opportunity to meet the distinguished artists who came to her Wednesday teas, events he described as 'a continuing link in that long tradition of the French intellectual woman in whose salon philosophy was expounded and political history made'. The writings of her friend André Gide made a particularly strong impression on the young composer.

During his years in Paris, Copland also frequented Sylvia Beach's legendary bookstore, and attended classes, museums, plays, ballets and concerts, often in the company of his friend, cousin and room-mate, Harold Clurman, who later became an esteemed director and drama critic. In addition, he travelled to England, Belgium, Italy, Austria and Germany, all the while meeting composers, examining scores and hearing new music. He responded especially strongly to the music of Stravinsky, the 'hero' of his student days, and Milhaud, whose assimilation of French, Jewish and American traits he particularly esteemed. He also developed an admiration for the music of Fauré and Mahler, considering the contrapuntal textures of both composers progressive.

Under Boulanger's tutelage, Copland produced his first orchestral score, the ballet *Grohg*, which he completed upon his return to the USA. Even before he returned home, however, Boulanger arranged a major American première for another Copland work: an organ concerto to be performed by both the New York SO under Walter Damrosch and the Boston SO under Sergey Koussevitzky, with herself as soloist. The resultant Organ Symphony

(1924) initiated an important collaboration between Copland and Koussevitzky, who was to perform 12 Copland works, including several that he personally commissioned and introduced. In 1940 Koussevitzky also appointed Copland assistant director of the Berkshire Music Center, where he taught most summers until 1965. The conductor became for Copland a standard of 'courage' and 'vitality' in an often conventional and dull musical world.

Despite the support of Koussevitzky, the pianist John Kirkpatrick, critics Paul Rosenfeld, Lawrence Gilman and Edmund Wilson, patrons Claire Reis and Alma Wertheim, choreographer Martha Graham, and other composers and artists, Copland's 'strident' and 'nervous' music met initially with a largely sceptical audience and press. The jazzy Piano Concerto (1926), written for the composer to play with the Boston SO, received a particularly hostile reception. Only paltry commissions and part-time teaching appointments at the New School for Social Research, the Henry Street Settlement and Harvard University, along with grants from individuals and foundations, kept him from destitution.

Regardless of these difficulties, Copland eschewed a full-time university position, hoping that he and his American colleagues might earn decent livings from composition. Towards this end, he was active in New York's League of Composers, often writing for its journal, *Modern Music*, as well as for other magazines and newspapers. He organized the Copland-Sessions Concerts (1928–31) and Yaddo Festivals (1932–3), helped to supervise the Cos Cob Press, founded in 1929 for the publication of recent American music, assumed leadership of the ACA (1939–45), and co-founded the AMC (1939). These activities not only helped to foster his own career, but also those of older composers such as Carl Ruggles and Charles Ives, contemporaries such as Roger Sessions, Roy Harris, Walter Piston, Virgil Thomson and Carlos Chávez, and younger figures including Israel Citkowitz, Paul Bowles, Vivian Fine, Marc Blitzstein and Henry Brant. Over the following decades he also became an important mentor to David Diamond, William Schuman, Elliott Carter, Leonard Bernstein, Irving Fine, Lukas Foss, Jacob Druckman, David del Tredici, Barbara Kolb and many others.

During the 1930s Copland often lived and travelled with photographer Victor Kraft, his companion from 1932 until the mid-1940s. Although discreet about his private life, he was one of the first prominent homosexual composers to co-habit with a romantic partner. Politically, the Depression brought about an intensification in his socialist sympathies. In 1932, at Chávez' urging, he visited Mexico for the first time, finding the country's people, as well as its revolutionary government, an inspiration; he returned to Mexico for extended working vacations and hoped to travel to the Soviet Union. In 1934 he gave speeches on behalf of farmers in rural Minnesota, composed the worker's chorus *Into the Street May First*, and wrote an article about proletarian music for *The New Masses*.

In the late 1930s and early 1940s Copland's ballets, patriotic works and lighter efforts, such as *El salón México* (1932–6), brought popular and critical acclaim. *Appalachian Spring* (1943–4) won the Pulitzer Prize and the New York Music Critics' Circle Award. A good relationship with Boosey & Hawkes advanced his career, as did the rising fame of Bernstein, his most important champion after Koussevitzky. A successful score for the documentary *The City* (commissioned for the 1939 New York World's Fair), led to five feature Hollywood film scores, of which four earned nominations for an Academy Award, won finally by *The Heiress* (1949). During this period he travelled extensively in South America on behalf of both the Coordinator of Inter-American Affairs (1941) and the State Department (1947). As well as reporting on musical conditions, he developed friendships with many Latin American composers, including Ginastera, who, like Britten, Takemitsu and others from around the world, took inspiration from Copland's nationalism.

By the late 1940s Copland was widely regarded as the foremost American composer of his time. Though for many years a Manhattan resident, he felt compelled to leave the city in 1947. After an unsettled period, he purchased a converted barn, Shady Land Farm, in Ossining, New York, where he lived from 1952 to 1961.

As early as his participation in the 1949 World Peace Conference, he became the target of anti-communist smear campaigns. These attacks culminated in the cancellation in 1953 of *Lincoln Portrait* from a presidential inaugural concert, and a subpoena to appear before a closed hearing of a Congressional subcommittee. Throughout these trials he denied being a communist and successfully avoided implicating any friends or associates.

This unpleasant episode had virtually no effect on his growing reputation. He became the first American composer to serve as Harvard's Norton Professor of Poetics (1951–2) and was elected to the American Academy of Arts and Letters (1954), receiving the Academy's Gold Medal in 1956 and serving as its president in 1971. Other awards included a MacDowell Medal (1961), a Presidential Medal of Freedom (1964), a Kennedy Center Honor (1979), a Medal of the Arts (1986), a Congressional Gold Medal (1986) and numerous honorary doctorates. Moreover, he became a highly decorated figure internationally, receiving memberships or fellowships in academies in England, Italy, Argentina and Chile, along with the Federal German Republic's Commander's Cross of the Order of Merit (1970). In 1981 the music school at Queens College, CUNY, was named the Aaron Copland School of Music.

Throughout the 1950s and beyond, Copland continued to lecture, teach and write as vigorously as ever. Although he had occasionally conducted his own works, after his début with the New York PO in 1958 he embarked on a full-fledged conducting career, following which he conducted internationally for more than 20 years. While his concerts always featured his own music, he also programmed the work of over 80 other composers. He recorded much of his orchestral literature and some of his piano music. Rejecting the notion of a 'definitive' performance, he still liked to demonstrate 'how my music should go'.

In 1961 Copland moved to a larger home, Rock Hill, near Peekskill, New York, where he lived until his death. He composed very little after 1972. 'It was exactly as if someone had simply turned off a faucet', he said. He felt 'lucky to have been given so long to be creative. And resigned to the fact that it appears to be over'. In the mid-1970s he began to experience short-term memory lapses, later diagnosed as Alzheimer's or a similar condition. By the mid-1980s he was under regular medical supervision.

2. Opening of the autograph short score of Copland's 'Inscape', composed 1967

A few weeks after his 90th birthday he died of respiratory failure brought on by pneumonia. The bulk of his large estate was bequeathed to the establishment of the Aaron Copland Fund for Music, a non-profit organization for the support of contemporary music and young composers. In 1995 the Library of Congress opened its vast Copland Collection to the public.

2. WORKS. Copland favoured the large public venues of stage, screen, radio, television and concert hall on the one hand, and the extreme intimacy of the solo piano on the other. His two operas, *The Second Hurricane* (1936) and *The Tender Land* (1952–4), both deal with young people coming of age: the first, a 'play opera' for high school students, celebrates the joys and virtues of social harmony; the latter, a small-scale work for television and university performances, concerns a young woman's discovery of self. He also began work on a musical based on Erskine Caldwell's darkly humorous novel, *The Tragic Ground*, and considered operatic adaptations of Theodore Dreiser and Frank Norris, as well as collaborations with Thornton Wilder, Arthur Miller, William Inge and Edward Albee. His 'one regret' was not having written a 'grand opera'.

Copland's eight film scores (1939–61), composed for two documentaries and six feature films, set new standards for American cinema in their subtle underscoring and refined dramatic sensibility. In addition, he successfully helped to introduce Hollywood to a Modernist idiom, epitomized by the dissonant harmonies accompanying the fight between Lennie and Curley in *Of Mice and Men* (1939). He also demonstrated the efficacy of particularizing musical sonority and style to the individual needs of each film.

Parts of Copland's first ballet score, *Grohg* (1922–5), a macabre fantasy inspired by F.W. Murnau's film *Nosferatu*, were refashioned by the composer into a number of other works, including a second ballet, *Hear Ye! Hear Ye!* (1934), a satire on the American judicial system. Withdrawn during his lifetime, both of these works resurfaced only after his death. In contrast, the next three ballets, *Billy the Kid* (1938, for Lincoln Kirstein's Ballet Caravan), *Rodeo* (1942, for the Ballet Russe de Monte Carlo) and *Appalachian Spring* (1943–4, for Martha Graham) became three of his best-known works. Notwithstanding their similarities, each ballet has its own profile: *Billy* is a sober parable set in the American West; *Rodeo* is a charming romantic comedy; and *Appalachian Spring* is a poignant love story set against a frontier background. Copland's last ballet, *Dance Panels* (1959, rev. 1962), a homage to the waltz, was written for Jerome Robbins, although he never choreographed it. Among other dramatic works, *Quiet City* (1940), a short, introspective piece based on music written for Irwin Shaw's play about a businessman's midlife crisis, has had enduring success.

Of his orchestral works, Copland composed three in what he called 'the grand manner': the *Symphonic Ode* (1927–9); the Third Symphony (1944–6); and *Connotations* (1962). Some friends preferred his less grandiose efforts, in particular, *the Short Symphony* (1932–3), *Statements* (1935) and *Inscape* (1967; fig.2). General audiences, meanwhile, gravitated towards the lighter works, including *Music for the Theatre* (1925), *El salón México* (1932–6), *An Outdoor Overture* (1938), *Lincoln Portrait* (1942), the Clarinet Concerto (1947–8), and *Three Latin American Sketches* (1971).

Most of the chamber works are written for combinations of strings, often with piano; among these are the piano trio *Vitebsk* (1928), inspired by S. Ansky's play *The Dybbuk*, the Violin Sonata (1942–3), the Piano Quartet (1950) and the Nonet (1960). One of his last substantial pieces was a Duo for flute and piano (1971). The most imposing of the solo piano works, the Variations (1930), the Sonata (1939–41) and the Fantasy (1952–7), are important personal statements as well as major contributions to the repertory. Other efforts in this medium include the sprightly *Danzón cubano* for two pianos and various pieces for children. *In the Beginning*

(1947) for mezzo-soprano and *a cappella* chorus stands out among his choral works; *Twelve Poems of Emily Dickinson* (1950) among his output for voice and piano.

Copland's numerous articles and books include two successful music appreciation texts, *What to Listen for in Music* (New York, 1939, 3/1988) and *Our New Music* (New York, 1941, rev. and enlarged 2/1968 as *The New Music 1900–1960*) derived from his classes at the New School for Social Research. His Norton lectures, published as *Music and Imagination* (Cambridge, MA, 1952/*R*) were, in the words of William Austin, 'worthy successors to Stravinsky's *Poetics* and Hindemith's *Composer's World*, without the dogmatism of the former and the bitterness of the latter'. A selection of essays was published as *Copland on Music* (New York, 1960/*R*). He also co-authored a two-volume autobiography with Vivian Perlis (Boston, 1984; New York, 1989). Like his more popular scores, these publications were at once accessible and probing, appealing to layman and expert alike.

3. Style. Copland composed primarily at the piano, working sometimes with a single idea, sometimes with many. He often recycled materials from works or sketches composed years earlier; a particularly well-known example of this is his use of a discarded variation from the Piano Variations at a climactic moment in the film score for *The Heiress*. He orchestrated his works only after the creation of a piano score, arguing that 'any decision as to timbre, too quickly arrived at, is itself a limitation, since it prevents freedom of action on other pages'. Although he could write quickly when necessary, his typical pace was deliberate. When looking over his scores, he would sometimes point to a spot with undisguised pleasure and say, 'That was the note that cost'. He rarely revised a work after its initial publication. As a teacher, he emphasized the importance of critical self-awareness during the creative process.

Copland's earliest juvenilia reflect the styles of Italian opera, the piano works of Chopin and Liszt, and eastern European Jewish music. At the same time, they reveal distinctive elements such as tonal stasis, modal ambiguity and idiosyncratic formal structures. During his years as a student of Goldmark his music assimilated features of contemporary European composers, including Debussy and Skryabin, as well as American popular song. In Paris he learned from a wide range of sources, among them the quarter-tone writing of Alois Hába, which he appropriated in *Vitebsk* and other scores from the 1920s. Despite these many influences, he forged a strong individual voice that crystallized in *Music for the Theatre* (1925).

Copland's style is now recognized as distinctly American (although early in his career some regarded its jazzy urbanity as relatively exotic). It is derived less directly from such American predecessors John Alden Carpenter and Henry Gilbert than from the popular music with which he grew up, the jazz he sought out in Paris and New York, examples set by Walt Whitman and others, and his keen observations of everyday life. His interest in developing a distinctively American style originated in part from an inclination towards national styles in general. He admitted a 'deep psychological need' for listeners to find 'the note' that makes music 'characteristically itself', especially among composers from 'nations whose music is still unformed'. He aspired to 'affirm' a relation between his music and the world around him, even if this constituted only a means of 'revolt'. Such thinking found encouragement from his personal contact with writers and photographers associated with Alfred Stieglitz, such as Waldo Frank and Paul Strand.

In the mid-1920s Copland used what he considered to be the two characteristic expressions of jazz, the 'snappy' number and the blues, to evoke, respectively, the excitement and loneliness of modern urban life. By 1927 he had by and large moved beyond these overt references, but jazz remained an important underpinning of his musical style. Indeed, over the years he became increasingly aware and respectful of 'real' jazz, including the work of Duke Ellington, Albert Ammons, and later Lennie Tristano, Miles Davis, Charles Mingus and many others. His later music continued to reflect developments in the jazz idiom; the Clarinet Concerto (1947–8) makes reference to the 'swing' style, for example, and *Something Wild* (1961) reveals the impact of 'cool' jazz.

During the course of the 1930s, thanks in part to the emergence of a 'popular front' in American politics, Copland became appreciative of the distinctive qualities of American folk music. Whereas he had parodied the *Star Spangled Banner* in *Hear Ye! Hear Ye!* (1934), he used a tune from the American Revolution, *The Capture of Burgoyne*, for the rousing climax of *The Second Hurricane* (1936). He made intermittent use of such material as late as *Emblems* for band (1964), which quotes *Amazing Grace*. Even compositions that made only sparing use of folk melody revealed the influence of this repertory, especially dramatic works set in rural America, such as *Our Town* (1940), *Appalachian Spring* (1943–4) and *The Tender Land* (1952–4). At the same time, beginning with the finale of the Short Symphony (1932–3) and later in *El salón México* (1932–6), Copland's music absorbed Mexican folk styles. With his travels to South America in the 1940s, he began to adapt aspects of Brazilian and Cuban folk music as well. His mature style can be seen as incorporating elements derived from Jewish, Black American, Anglo-American and Latin American sources.

The secondary literature on Copland tends to recognize, with some justification, four style periods: an early jazz period; a more severe, abstract period; a populist or 'Americana' period; and, beginning with the Piano Quartet (1950), a late 12-note period. Writers, however, have often exaggerated the individuality of these phases. Considering that Copland explored the vernacular throughout his career, the designation 'Americana' for a prescribed time period seems particularly misleading. Similarly, the notion of a 12-note period does not allow for a number of important late works that make little or no use of that method, nor does it account for his early adaptation of the technique in the e.e. cummings setting, *Poet's Song* (1927), and the quasi-serial techniques used in the Piano Variations (1930) and other works. Rather than separate stylistic entities, these periods are better thought of as continually building and interlocking phases. 'No element ever appears abruptly in a work', observed Blitzstein about Copland's music, 'or gets cut off in another'. A clearly defined and individual personality can be heard throughout all of his stylistic changes and developments.

Copland's melodic writing is direct and vigorous, featuring frequent skips and leaps, even in the vocal works. At the same time, his melodies tend to avoid florid or chromatic elaborations. Even the 12-note works are

reserved in this respect, as they typically focus on sharply-defined row fragments. Melodies often feature a short, trenchant motive, developed bit by bit in a modular fashion, like separate parts of a mobile. Such an approach, which characterizes the thorny Piano Variations, the popular *Fanfare for the Common Man* and the 12-note Piano Fantasy, creates a heightened impression of spontaneity. William Austin suggests it is 'as if [Copland] wanted to expose the way his mind actually works with musical ideas, rather than the stylized finished product of its working'. Sometimes a motif expands with each successive repetition; this 'additive' technique can be found in nearly all of his compositions.

Copland's melodies and harmonies are closely coordinated. The central four-note motive of the Piano Variations yields biting 2nds and 7ths (ex.1); the 4ths and 5ths of the *Fanfare* melody produce quartal and quintal sonorities (ex.2); the diatonicism of *Appalachian Spring* creates so-called 'white-note' chords (also described as 'pandiatonic'); and the row for the Piano Fantasy generates densely chromatic harmonies (ex.3). Although a few works verge on atonality, he generally maintains some audible reference to tonality, retaining to some extent a distinction between major and minor modes as well. At the same time, his music contains modal and enharmonic ambiguities of various kinds and modifies traditional dominant functions by avoiding the leading tone. Modulations tend to be brief and unpredictable, typically involving the juxtaposition of key areas; some pieces, like the *Fanfare*, do not conclude in the key in which they begin.

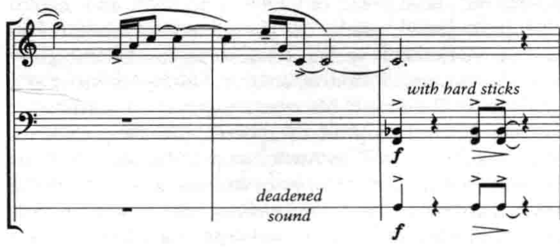
Piano



non legato, deliberamente

Ex.2 *Fanfare for the Common Man* (1942)

Copland's rhythms are often declamatory, suggesting the accentual patterns of prose, rather than conventional song or dance patterns (though their strong physical qualities have always attracted choreographers). In slower passages, prose-like rhythms suggest quiet hymns, shofar calls or solemn chants. In a lighter vein, however, such rhythms can be jaggedly skittish and nervously jazzy. Even his most straightforward scores contain subtle syncopation, polyrhythmic layering, and changing metres and tempos. For the convenience of performers, however, he often barred his orchestral works more regularly than he would have liked; in such cases, he sometimes added explanatory footnotes and dotted bar-lines to help clarify his intentions.

Ex.3 Piano Fantasy (1957)

Copland makes unusually frequent use of unison and two-voice writing (including the familiar device of two-part canon) and his transparent textures are considered one of his most distinctive and influential traits. Such lean textures are often filled out by the pairing of one or more parts with a parallel voice. A few of Copland's works, like the massive Third Symphony and the autumnal Nonet, include passages that are atypically rich and thick. Generally, however, textures display razor-sharp clarity and brilliance.

Copland's instrumental writing is similarly bright and crisp, specifying many types of accent and articulation. His orchestrations, thought by Stravinsky and Piston to be particularly distinguished, avoid the 'useless doublings' he criticized in Wagner in favour of the chamber-like sonorities he admired in Mahler. Unlike Mahler, however, he exploited the cantabile potential of the strings and other instruments with extreme restraint. He expected straightforward playing without excessive sentiment or vibrato. As a conductor, he often admonished the violins with the comment, 'It's too much on the Tchaikovsky side' (or 'the Massenet side'). His piano writing, featuring alternating passages of great delicacy and brash percussiveness uniquely suited his own piano playing, according to Bernstein. The application of some of these features in music for voice and chorus was even more provocative, but also effective and memorable.

Copland worked mostly in smaller forms, the large scope of the Third Symphony and the Piano Fantasy being exceptional. He had a life-long predilection for three-movement designs (often in a slow–fast–slow format), especially in larger instrumental works. His two concertos, however, each consist of two movements with a connective cadenza that anticipates the finale. Many other works are in single-movement forms. Like Stravinsky, Copland created his forms by piecing together smaller sections. He did not compose strictly from the beginning of a piece to the end, but juggled and rearranged motives, passages and sections. 'I don't compose; I assemble materials', he once stated. His occasional adaptation of traditional forms such as the sonata, variation and chaconne take on highly original expressions. Large movements more typically unfold in a general arch-like shape.

Although he thought it imperative for a good listener to apprehend, in a general way, a piece's formal structure, Copland considered composition as fundamentally an emotional experience, an act of 'self-expression' and 'self-discovery'. 'Music is largely the product of emotions', he said, explaining why he worked at night, 'and I can't get emotional early in the day'. He also spoke of 'musical instinct' and the 'heat of inspiration'. He believed that some contemporary composers overemphasized music's intellectual side, just as performers tended to overemphasize its purely technical aspects. At the same time, he criticized the emotional excesses of many Romantic and post-Romantic composers, identifying instead with the image of Beethoven attributed to Schubert, a composer who maintained 'superb coolness under the fire of creative fantasy'.

Copland's own emotional directness was frequently made explicit by detailed and unusual verbal directives in his scores. As early as *Three Moods* (1920–21) he explored three expressive modes comparable to those later identified by Paul Rosenfeld as characteristic: 'Embittered'; 'Wistful'; and 'Jazzy'. Larger works display a wider range of emotions, with middle sections often providing emotional contrast. His dialectical thinking and love of contradictions related well to his remarkably open-minded and balanced personality. For Clurman, he was a composer 'whose creation synthesizes the tensions between the loneliness, isolation and desire for withdrawal a sensitive person must feel in our stony and increasingly

joyless society with the equally strong impulse to affirm and assert with humor and an irrepressible vivacity the age-old aspirations of humankind' (Pollack, B1999).

WORKS

published unless otherwise stated

OPERAS

The Second Hurricane (school play-op, 2, E. Denby), 1936, New York, Henry Street Settlement Music School, 21 April 1937

The Tender Land (2, H. Everett [E. Johns]), 1952–4, New York, New York City Op, 1 April 1954; rev. 3 acts, 1955, Tanglewood, 2 Aug 1954, final rev. Oberlin, OH, 20 May 1955; orch suite, 1958

BALLETS

Grohg, 1922–5, rev. 1932, cond. O. Knussen, London, 20 June 1992; excerpt Dance of the Adolescent, arr. 2 pf, 1933

HOWARD POLLACK

Coppel (Ger.; Lat. *copula*). *See under* ORGAN STOP.

Coppens, Claude A(lbert) (*b* Schaarbeek, nr Brussels, 23 Dec 1936). Belgian pianist and composer. He studied at the Brussels Conservatory (1944–52) and with Jacques Février and Marguerite Long in Paris. He was a finalist of the Marguerite Long Competition in 1955, of the International Queen Elisabeth Competition in 1956 and of the International Piano Competition in Rio de Janeiro in 1957. In 1960 he studied law at the Free University of Brussels. He has given piano recitals all over the world, specializing in the music of Cage and Satie. In 1995 he recorded the complete piano works of Satie. He has taught the piano at the Ghent Conservatory since 1973. He is well known for his lectures on contemporary music and its interpretation. As a composer he is largely self-taught. He was one of the founders of the group Spectra (Ghent, 1963). The serialism of his early works has evolved into a post-serial technique which includes the use of experimental sounds. He has written electronic music and from 1967 to 1968, in *Pieces for Two*, was the first composer in Belgium to use stochastic methods on the computer. His working method is minute and detailed, leaning to formalism. He has written didactic piano pieces.

YVES KNOCKAERT

Copper Family [The Coppers]. English family of singers. The Coppers, who perform unaccompanied partsongs, have retained an unbroken family tradition over several generations. They are perhaps the most well-documented of English traditional singers and are unusual since the English tradition is usually considered to be primarily monophonic. The family, from Rottingdean, Sussex, first came to public attention when a selection of family songs was published in the inaugural volume of the journal of the newly formed Folk-Song Society, noted by Mrs Kate Lee (Honorary Secretary) from the brothers James 'Brasser' (1845–1924) and Tom Copper. Brasser's son, Jim (1882–1954), and his son Bob (*b* 1915) were recorded by the BBC in the 1950s, and in 1961 Caedmon Records issued a series of LPs entitled *Folk Songs of Britain* which included several songs by Bob Copper and his cousin Ron. Even Bob Copper's eight-and-a-half-year-old son John (*b* 1949) was recorded singing *The Brisk and Bonny Lad* and *The Fox* by the BBC in 1957. In 1971 a four-album boxed set of LPs entitled *A Song for Every Season* included performances of calendrical songs by Bob and Ron Copper as well as Bob Copper's children, John and Jill Copper. The album's release coincided with Bob Copper's book of the same title, a family history and evocation of old rural Sussex containing 47 songs from Jim Copper's handwritten family songbook. The Coppers have gained an international reputation, and albums, CDs and books continue to proliferate. At the centenary celebrations of the ENGLISH FOLK DANCE AND SONG SOCIETY held in 1998, the Coppers were honoured guests and Bob Copper's six grandchildren, the seventh generation of singers, performed.

DAVE ARTHUR

Coppini [Coppinus, Copinus], **Alessandro** [Alexander] (*b* in or nr Florence, *c*1465; *d* Florence, 1527). Italian composer, organist and theologian. In 1475 he began training for the priesthood at the Florentine convent of the SS Annunziata, parent house of the Servite Order, of which he eventually became a member. Later he studied in Bologna and in 1502 was awarded the degree of Master of Sacred Theology. He became a deacon of the Florentine College of Theologians in 1517 and earned the doctorate a few years later. He perhaps first studied composition with Arnolfo Giliardi, music teacher at the SS Annunziata in 1478–9. Coppini's musical career began in 1489, when he was engaged as singing teacher, assistant organist and chapel singer at the same church, positions that he held until 1497. Possibly during this time he undertook further studies in composition with Isaac and Alexander Agricola, both of whom were then employed at the SS Annunziata. Between 1497 and 1516 he served as organist at several Florentine churches, among them S Lorenzo, S Maria Novella and the SS Annunziata. In 1514 and 1515 letters, in which he was described as an intimate of the Medici and singer of the ruling pope Leo X (Giovanni de' Medici), were written on his behalf by the pope's brother and cousin. He later settled in Rome and was named a singer in the papal chapel in 1522.

His extant works include the *Missa 'Si dedero'*, four motets and 13 Italian secular pieces, comprising eight *canti carnascialeschi*, three ballatas and two canzonettas. The secular works are written in a chordal-homorhythmic texture that is occasionally enlivened by passing notes and other brief passages in imitation. In the motets, sections in pervading imitation alternate with passages in either free counterpoint or homophonic style, and phrases overlap frequently. *Fiat pax in virtute tua*, whose text is a

supplication to St Sebastian for deliverance from the plague, uses a cantus firmus in the tenor; motifs drawn from it appear freely paraphrased in the other voices. *Missa 'Si dedero'* is based on a song motet of the same name by Agricola. Although it is primarily a cantus-firmus composition, in the Gloria, Coppini drew on all three voices of the model simultaneously. This work, composed between 1493 and 1509, shows that Coppini was one of the first Italians who succeeded in combining the homophonic style of his native land with the most advanced contrapuntal practices of the North.

FRANK A. D'ACCONE

Coppini, Aquilino (*b* Milan; *d* 1629). Italian man of letters. He was associated with the circle of Cardinal Federico Borromeo, to whom he dedicated the first of his three collections of contrafacta (*Musica tolta da i Madrigali di Claudio Monteverde, e d'altri autori . . . e fatta spirituale*, 5–6vv, Milan, 1607 (ed. J.P. Jacobsen, 1998), 1608 (lost) and 1609). His *Epistolarum libri sex* (Milan, 1613) gives information on both his contacts with important figures of the day and on some of the most important stages of his career (which also found him in Turin), culminating in the appointment to the chair of rhetoric at the University of Pavia. His contrafacta are of interest for their concentration on madrigals by Monteverdi (especially the third, fourth and fifth books) and for his treatment of the poetic text. Rather than simply replacing the original text with a liturgical one, he 'spiritualized' then through a careful translation which, like an exercise in rhetorical expertise, reproduces the phonemes, accents and rhythms of the secular text.

ANTONIO DELFINO

Coppola, Piero (*b* Milan, 11 Oct 1888; *d* Lausanne, 17 March 1971). Italian conductor and composer. He studied the piano and composition at the Milan Conservatory until 1909, then began a distinguished career as a conductor, first at La Scala and later at La Monnaie in Brussels (1912–13). He spent a year in London, was in Scandinavia from 1915 to 1919, and then settled in Paris, where he became artistic director of the French branch of HMV. He made many recordings before World War II with the LSO and the Paris Conservatoire orchestra. These included Prokofiev's Piano Concerto no.3 with the composer, and Debussy's *Nocturnes* and *Ibéria*, which show the lucidity and vivid sense of atmosphere and texture that made him renowned for his performances of French music. In the opera house his experience included early performances of Puccini's *La fanciulla del West*, which he introduced at Florence and Brussels. His compositions include two operas, *Sirmione* (1910) and *Nikita* (1914), a symphony, which he conducted at the Concerts Pasdeloup in 1924, and other orchestral, vocal and chamber works. He wrote *Dix-sept ans de musique à Paris, 1922–1939* (Paris, 1944/*R*).

ROBERT PHILIP

Coppola, Pietro (Antonio) (*b* Castrogiovanni [now Enna], 11 Dec 1793; *d* Catania, 13 Nov 1877). Italian composer. His first teachers were his father Giuseppe and his brother Francesco. He then studied for a short time at the conservatory of the Pietà dei Turchini in Naples, finally completing his education by himself. From about 1810 he was a music teacher in Catania, where his family lived, and later succeeded his father as *maestro concertatore* at the theatre there. His first operas, *Il figlio del bandito* (1816), *Artale d'Aragona* (?1816) and *Il destino* (1825), performed in Naples and Catania, met with limited success.

In 1832–3 Coppola was appointed as Pietro Raimondi's replacement at the S Carlo in Naples. In 1835 his opera *La pazza per amore*, a reworking of the libretto of Paisiello's celebrated *Nina* of 45 years before, had such a resounding triumph in Rome that within a few years it had been performed in most of the theatres of Italy, as well as in Vienna, Berlin, Paris, Lisbon, Havana and Mexico City. In the next three years Coppola, now an important figure, took advantage of his success with four more operas, written for Turin, Vienna and Milan, none of which was very successful. In 1839 he was made music director of the Lisbon opera house, the S Carlos, and remained there until 1843, producing his earlier operas and writing two new ones, *Giovanna I* (1840) and *Inés de Castro* (1841). From 1843 to 1850 he was once more in Italy, where three new operas were performed in Rome and Palermo, but in 1850 he again took up his old post in Lisbon and held it until 1871. During this period he revised his earlier works and composed a Portuguese comic opera, *Oaunel de Salamão* (1853), for the private theatre of the Count of Farrobo.

In 1853 he refused the directorship of the Palermo Conservatory in protest against the reactionary Bourbon regime. He returned to Italy in 1871 and was *maestro di cappella* at Novara Cathedral for three years. There he composed a large amount of church music, including a

famous *Salve regina*. In autumn 1873 he moved to Catania, where he was made honorary director of the municipal musical organizations. His last compositions were two hymns and a Requiem commissioned by the city of Catania and performed in 1876 on the occasion of the removal of the ashes of Bellini from Paris to his native city.

Coppola was the typical exporter of a provincial and derivative operatic product, one largely outside the progressive path of Italian opera in his time. A facile melodist in the Bellinian vein, he was less successful when later he attempted brilliant comedy and Romantic subjects.

His father, Giuseppe Coppola (*b* Naples; *d* Catania, *c*1810), composed several operas for Naples that were performed during the last decade of the 18th century. He moved to Sicily in the 1790s where he held the position of *maestro concertatore* and conductor at the theatre.

STAGE

La pazza per amore [Nina] (melodramma semiserio, 2, J. Ferretti, after G.B. Lorenzi), Rome, Valle, 14 Feb 1835, *I-Mr**, vs (Milan, ?1835/*R*1986 in IOG, v, with introduction by P. Gossett); rev. 1871

GIOVANNI CARLI BALLOLA/R. M. MARVIN

Coprario [Coperario, Cooper, Cowper], **John** [Giovanni] (*b* ?*c*1570–80; *d* ?London, *c*June 1626). English composer, viol player and teacher. Playford referred to him as 'Mr John Coperario aliàs Cooper', John Aubrey as 'Jo. Coperario, whose reall name I have been told was Cowper', and Roger North as 'Coperario, who by the way was plain Cooper but affected an Itallian termination'. He himself spelt his name 'John Coprario'. In a document dated 1617 he is described as 'John Coperario, gentleman'. Dart (*ML*, 1961) conjectured that he may have been the John Cowper who became a chorister of Chichester Cathedral in 1575 but this seems improbable. He had already adopted his pseudonym by February 1601, when William Petre made a gift of 10 shillings to 'Coprario for Lessons hee broughte mee while in London' (*US-Ws* 1772.1; copy in Essex Record Office). Anthony Wood's notes seem to contain the earliest suggestion that the italianization of his name was a result of a sojourn in Italy, describing him as 'an English man borne, who having spent much of his time in Italy was there called Coprario, which name he kept when he returned into England'. Such an Italian visit is far from being out of the question, though evidence remains elusive. He was however on the Continent during 1603, for the privy purse expenses of the Secretary of State, Sir Robert Cecil, for 2–13 April include the sum of £3 'by my Lord's appointment unto Coperarey at his going into the Low Countries'. In 1606 he composed his *Funeral Teares* in memory of Charles Blount, Earl of Devonshire. For composing songs for the banquet given for James I by the Merchant Taylors' Company on 16 July 1607 he was paid £12. But it was Cecil, created Earl of Salisbury in 1605 and appointed Lord Treasurer in 1608, who seems to have been Coprario's chief patron during these years. When Cecil's musicians played for Queen Anne on 31 October 1605 Coprario received £5 as 'a Setter of Musick'. As Charteris (1974) has shown, the Cecil papers at Hatfield House indicate frequent payments to him between June 1607 and April 1613, covering lodging, the cost of stringing the instruments in his care (which included a 'lyra'), disbursements in connection with the boy George Mason, rewards for musicians hired probably for the entertainment of the King at Salisbury House in May 1608, a 'free gift to him' of £20 at Christmas 1609, and a gift of £10 from the second earl before his journey to Heidelberg in 1613; among the papers thus brought to light are some bearing his signature which conclusively establish that the famous manuscript of his *Rules how to Compose* (*US-SM* EL 6863) is in Coprario's hand (see illustration). Other patrons were Edward Seymour, Earl of Hertford (1539–1621), and Francis Clifford, Earl of Cumberland (1559–1641). Aubrey claimed that Coprario 'lived most' on Seymour's Wiltshire estates at Amesbury and Wulfall, and Fuller wrote that Seymour retained the boy William Lawes as a musical apprentice and 'bred him of his own cost in that Faculty, under his Master Giovanni Coperario'. Clifford's payments to Coprario included £7 in July 1614 for a 'lyro' viol 'sent by sea to Londsbrough' and £11 in January 1617 following 'his returne from the Cittie of Ragusin in Italy' (Hulse, 1993). It was presumably to cover this journey to Ragusa (Dubrovnik) that he was granted a pass from the Privy Council on 13 July 1616 'to goe into forraigne partes for one yeare about dispatch of his private occasions'. A further year's pass to visit Germany was issued on 28 June 1617.

Coprario's settings of Campion's *Songs of Mourning: Bewailing the untimely death of Prince Henry*, published early in 1613, include elegies addressed personally to James I, Queen Anne, Prince Charles, Princess Elizabeth and the Elector Frederick (to whom the set as a whole was dedicated). For composing music for Campion's *The Lords Maske*, the first of the masques to celebrate Princess Elizabeth's marriage to Frederick on 14 February 1613, he received £20; subsequently he was one of the retinue which accompanied the bridal pair on their journey to Heidelberg. Later that year he once again collaborated with Campion, for whose 'Masque of Squires' (given in December to mark the Earl of Somerset's marriage) he composed three songs.

Hawkins set down the tradition that he 'taught music to the children of James the First', Burney that Prince Charles was 'a scholar of Coperario, on the viol da gamba'. Though these assertions should be accepted with caution, it is clear that he came to occupy a special place in the Prince of Wales's household. In March 1618 he received 'for his highnes speciall use and service' the sum

How to use a 5, and 6 together.
if the Bass rise a 2 then the 6, or 13 must hold, and
then use the 11, or 4 then holding the sam you must use
the 10, or 3, the other 6 must rise a 2, and next the 5.
if the Bass fall a 3 the 10, or 3 maie hold and then
use the 11, or 4 to com unto the 7, or 10, holding the
other 3 must rise a 2, and next use the 5.
if the Bass rise a 4 then the part which uses the 8, or
15 must hold, and then use the 11, or 4 to com unto the 3,
or 10 holding, the part which uses the 10 must then use the
6, next the 5.

In the two last scores you must note the Bass holding
of his first note, and the next is a minim.
In the first (of the two last examples) the Bass rises
a 2, and then falls a 5.
In the last the Bass rises a 4, and in these two
the 6, and 5 are used both together in severall
parts, and cleane contrarie to the other three first
examples.

Passage describing 'How to use a 5, and 6 together' from the autograph MS of John Coprario's 'Rules how to Compose', c1610–16 (US-SM EL 6863, f.32v)

of £50, and from 25 March 1622 he was paid an annual stipend of £40 as one of the Prince's musicians-in-ordinary. Four fantasias by him may have formed part of an intended gift for Philip III ordered by the Duke of Buckingham at the time of Charles's projected Spanish marriage in 1623 (Rasch, 1991). In a petition dated 12 May 1625 to Charles, the violinist John Woodington described himself as 'Musition to King James 6 yeres, and to His Majestie in Coperario's musique 3 yeres'. It was doubtless during this period and for the ensemble to which Woodington belonged that Coprario composed the 'incomparable' fantasia-suites which, according to Playford, delighted Charles more than any instrumental music and in which he 'could play his part exactly well on the Bass-Viol'. Upon his accession in 1625 Charles appointed Coprario composer-in-ordinary, a position to which Ferrabosco succeeded in July 1626 'in the place of John Copreario deceased'.

To the composer's early period may be assigned the Italian villanellas, and, more important, the fantasias or 'instrumental madrigals' (as the majority may be better termed) of five and six parts which later came to be among his most celebrated works. Almost all of these are found bearing Italian titles, some of which may be identified as the incipits of madrigal, canzonet or villanella texts set by such composers as Marenzio, Anerio, Eremita, Gorzanis (whose *Primo libro di Napolitane* of 1570 supplied most of the verses used for the three-part villanellas) and

Vecchi. Only three of Coprario's five- and six-part pieces survive with fully underlaid texts: these include highly chromatic settings of lines from Petrarch's canzone *Che debb'io far* and from Guarini's *Il pastor fido*. The discovery (Braun, 1977; Charteris, 1986) that Moritz, Landgrave of Hessen-Kassel owned a set of manuscript partbooks of 'Madrigali a. 5. di Giovanni Coprario composte' in 1613 goes some way towards confirming the suspicion that most of the others too must have originated as madrigals, a genre which in England came to be considered as 'apt for viols or voices'. No such overt literary associations underlie his fantasias of two, three or four parts; indeed the sets for three and four viols are classic examples of this 'chiefest kind of musicke which is made without a dittie'. Some fine, idiomatic music for lyra viols survives; Wood, following Playford, named Coprario as 'one of the first Authors that set Lessons to the Viol Lyra-way, and composed Lessons not only to play alone but for two or 3 Lyra-Viols in consort, which hath been approved by many excellent masters'. His fantasias for two bass viols and organ, which seem to be late works and are in structure more like grave polyphonic airs, represent an innovation in consort music texture, with the organ providing important harmonic and contrapuntal enrichment. The keyboard takes a still more essential role in the suites of fantasia, alman and galliard for one or two violins, bass viol and organ; these pieces, which gave rise to the 'fantasia-suite' genre that flourished until the Restoration, are notable not only for their instrumentation and formal scheme, but also because they show Coprario's pithiness of line, rhythmic wit and bold dissonance treatment at their most advanced.

Coprario stands out as an original, influential and literate figure in the circle that included the younger Ferrabosco, Orlando Gibbons and Thomas Lupo. His songs are less important than his instrumental music, though the *Funeral Teares* and *Songs of Mourning* strike a style of declamatory elegiac rhetoric quite individual in English work of the period. For the former he may well have written the words (including *In darknesse let me dwell*) as well as the music. The contributions to Sir William Leighton's *Teares or Lamentacions* are his only devotional compositions. His treatise *Rules how to Compose* (which has occasional correspondences of detail with Campion's *A New Way of Making Fowre parts in Counter-point*) survives in a holograph manuscript that belonged to John Egerton, apparently before he was created Earl of Bridgewater in 1617 (see illustration); it is an eminently clear and practical guide, from first principles to learning 'How to maintayne a fuge', with the progressive Coprario showing through in the tacit unorthodoxies of some of the examples, and in a modified form ('Dr Blow's Rules for Composition', *GB-Lbl* Add.30933) was still being used nearly 100 years later. Thomas Tomkins dedicated one of his *Songs* of 1622 to him; later William Lawes paid his teacher eloquent tribute in his divisions on a 'Paven of Coprario' for harp, violin, bass viol and theorbo (MB, xxi, 1963, 2/1971) and in his 16 fantasia-suites.

WORKS

SACRED

Ile lie me downe, 4vv, broken consort; O Lord how doe my woes encrease, 5vv: 1614[7]; ed. in EECM, xi (1970), 45, 130

SECULAR VOCAL

Funeral Teares for the death of the Right Honorable the Earle of Devonshire, 1–2vv, lute, b viol (London, 1606/*R*): Deceitfull fancy; Foe of mankind; In darknesse let me dwell; My joy is dead; Oft thou hast with greedy eare; O sweete flower; O th'unsure hopes of men; ed. in EL, 1st ser., xvii (1959)

Songs of Mourning: Bewailing the untimely death of Prince Henry (Campion), 1v, lute, b viol (London, 1613/*R*): Fortune and glory; How like a golden dreame; O griefe, how divers are thy shapes; O poore distracted world; So parted you; Tis now dead night; When pale famine; ed. in EL, 1st ser., xvii (1959)

3 songs from the Earl of Somerset's Masque (Campion), 26 December 1613, in 1614[22]: Come a shore, come merrie maters; Goe happy man; While dancing rests; ed. in EL, 1st ser., xvii (1959)

Send home my long strayd eyes to mee (Donne), 1v lute, *GB-Ob*; ed. in EL, 1st ser., xvii (1959)

3 madrigals: Che mi consigli amore (Petrarch), 6vv; Deh cara anima mia, 5vv; Udite, lagrimosi spirti (Guarini), 6vv; ed. in CMM, xcii (1981) and R. Charteris, *J. Coprario: The Six-Part Consorts and Madrigals* (Clifden, 1982)

21 villanelle, 3vv: Amor falla sapere; Amor prega; Chiara più che'l chiar sol (2p. La vostra gran beltà, 3p. Ahi dura sorte); Donna mia (2p. Io ti non stato, 3p. Ahimè, donna mia); Duca, vi voglio dir una novella (2p. Era rosetta, 3p. Pur martellava, 4p. Pur a la fin); Lasso dal primo giorno (2p. Lasso di tanta fiamma, 3p. Lasso di tanti lacci, 4p. Lasso la tua beltà); Non mi date tormento; Questi capelli d'or (2p. La bella fronte, 3p. I dui begli occhi, 4p. Il naso profilato): *GB-Ckc* Rowe 321, *Lbl* Eg.3665, *US-LAuc* C6968M4

INSTRUMENTAL

Alman, 3 viols, ed. R. Charteris, *J. Coprario: the Two-, Three- and Four-Part Consort Music* (London, 1991)

6 fantasias, 2 viols; 10 fantasias, 3 viols, org ad lib; ?3 fantasias, 3 viols, org; 7 fantasias, 4 viols, org ad lib: all ed. R. Charteris, *J. Coprario: the Two-, Three- and Four-Part Consort Music* (London, 1991)

49 instrumental madrigals or fantasias, 5 viols, org ad lib: Alma mia tu mi dicesti; Al primo giorno; Caggia fuoco dal cielo; Chi può mirarvi; Credemi; Cresce in voi; Crudel perchè; Dammi o vita mia soccorso; Deh cara anima mia; De la mia cruda sorte; Del mio cibo amoroso; Dolce ben mio; Dolce mia vita; Dolce tormento (2p. Ingiustitia d'amor); Dove il liquido argento; D'un si bel fuoco; Fugga dunque la luce (2p. O sonno); Fuggi se sai fuggire; Gitene, ninfe; Illicita cosa; In te mio nove sole; In voi moro; Io piango; Io son ferito, Amore; Io vivo in amoroso foco; Ite leggiadre rime; La primavera; Leno; Lieti cantiamo; Luci beate e care; Lucretia mia; Lume tuo fugace; Nel sen della mia Margherita; Ninfa crudele; Occhi miei con viva speme; Ohimè la gioia è breve; O misero mio core; Passa madonna; Per far una leggiadra vendetta; Qual vaghezza; Quando la vaga Flori; Rapina l'alma; Se mi volete morto; Sia maledetto Amore; Voi caro il mio contento; others untitled: ed. in CMM, xcii (1981), together with 3 anon. pieces conjecturally assigned to Coprario

8 instrumental madrigals or fantasias, 6 viols, org ad lib: Al folgorante sguardo; Che mi consigli, Amore; Risurgente madonna; Sospirando; Su quella labra; Udite, lagrimosi spirti; others untitled: ed. R. Charteris, *J. Coprario: The Six-Part Consorts and Madrigals* (Clifden, 1982)

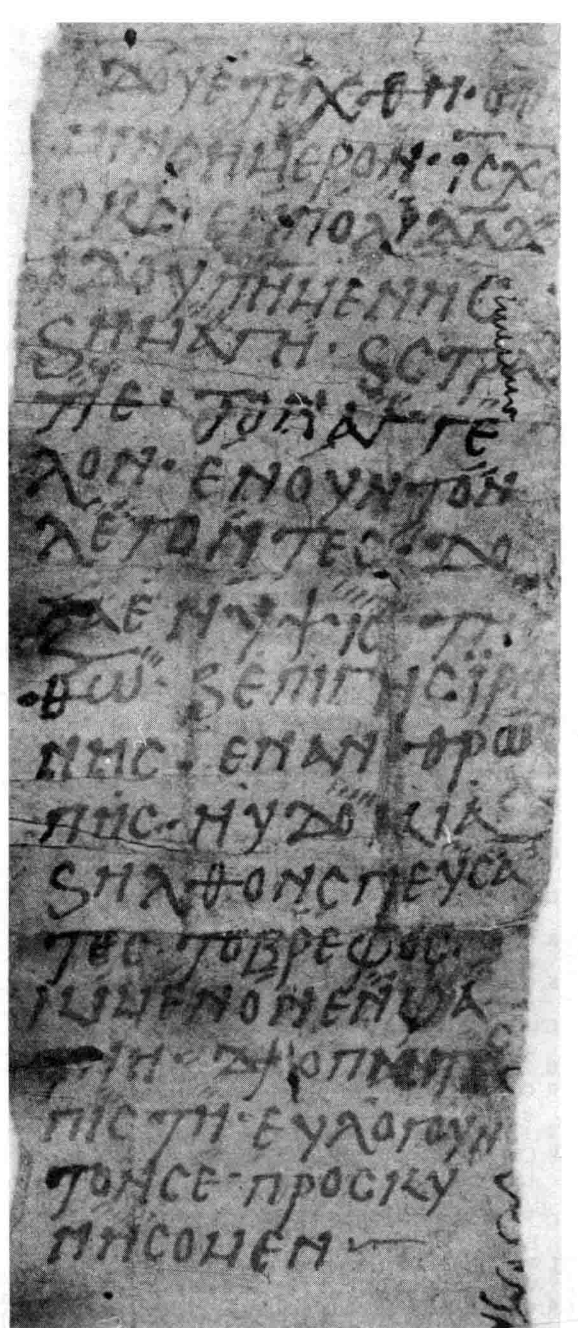
CHRISTOPHER D.S. FIELD

Coptic church music. A tradition of monophonic sacred music peculiar to the Coptic Orthodox Church of Egypt (for music of the Ethiopian Orthodox Church, also called 'Coptic', *see* ETHIOPIA, §II). Except for a few pieces that, on special occasions, are performed with a vigorous percussion accompaniment, the music is sung unaccompanied, solely by men. The texts of the chants are Coptic, with passages of Arabic interspersed according to local taste and need. Where Copts have emigrated to other lands, parts of the rite may now be sung in French, German or English; such linguistic changes, however, have had little effect on the music.

1. History and transmission. 2. General characteristics. 3. Laḥn. 4. The Divine Liturgy. 5. The Divine Office and Psalmōdia. 6. Musical instruments.

1. HISTORY AND TRANSMISSION. The term 'Copt' (Arabic *qibṭ*), now synonymous with 'Egyptian Christian', derives from the Greek *Aigyptos* ('Egypt'), which is itself derived from the Egyptian 'Ptaḥ', the name for an important deity of Pharaonic Egypt. The Coptic language is the latest stage in the development of Ancient Egyptian, which, during Ptolemaic times, was written in the Greek alphabet with seven additional characters from the demotic (Egyptian) script. Coptic has also borrowed many words and phrases from Greek, which was the original language of the rite. There are two main dialects – Sahidic for Upper Egypt and Bohairic for Lower Egypt; the latter has become the dialect now used in all Coptic rites and in the authorized version of the Coptic Bible.



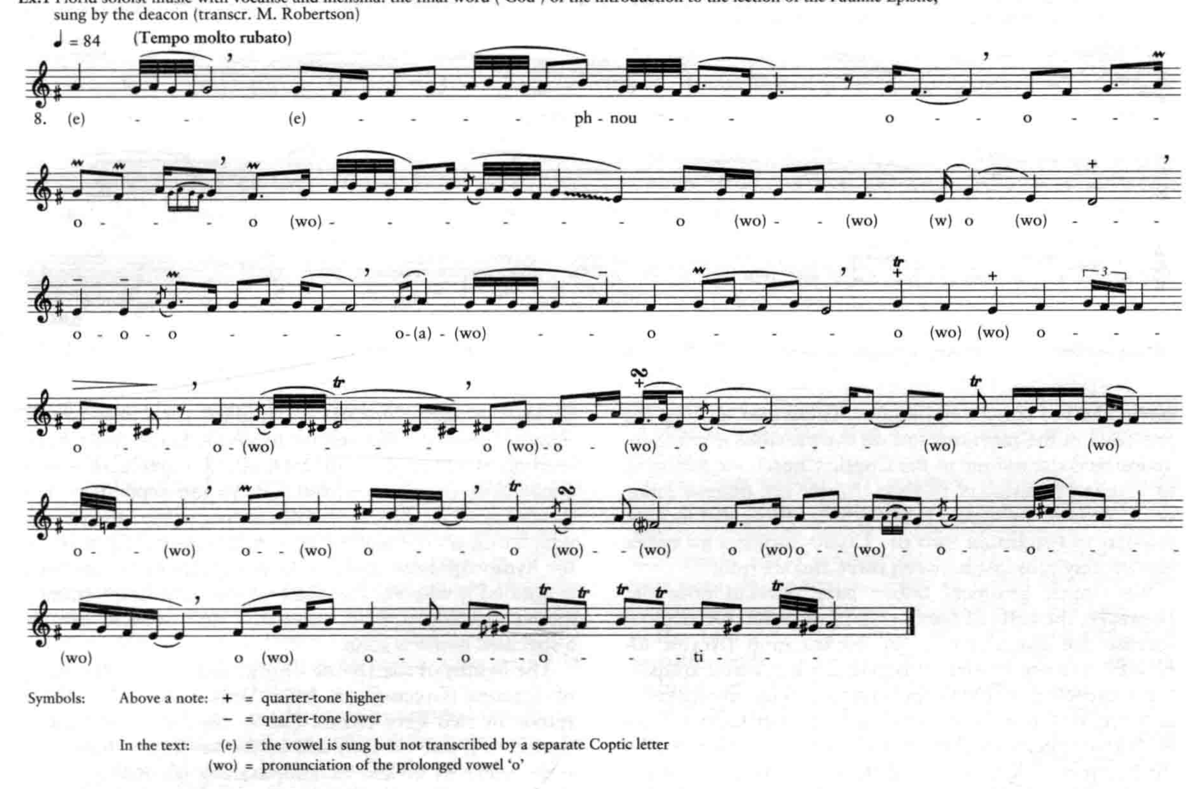
The origins of the Coptic Church lie in the patriarchate of Alexandria, which, according to tradition, was founded by St Mark. After the Council of Chalcedon in 451, the Church adhered to Monophysitism and was separated from the Byzantine and Roman Churches. The Copts, who had been an active Christian force throughout the eastern Mediterranean, deliberately withdrew from the other denominations and, except for some contact with the Syrian (Jacobite) Church (*see* SYRIAN CHURCH MUSIC), henceforth kept and developed their own distinctive musical tradition. After the Arab conquest of Egypt (640–41), the Copts continued to maintain their unique rites, although Arabic increasingly came to be used in some parts of the liturgy.

The Coptic rites developed gradually, with the alleluia, Sanctus and psalms among the earliest texts to be set to

music. The Divine Liturgies, translated from their original Greek counterparts, became fixed in the 4th and 5th centuries. One melody, a *laḥn ma'rūf* ('familiar melody'), which is still sung today, probably dates from the 7th century or even earlier. Long-enduring archetypal melodies have also been identified in the Anaphora of St Basil. Controversy exists as to whether there is a connection between simple Coptic melodies and the folksongs of Egyptian peasants (Arabic *fallaḥīn*). The music, in fact, probably derives from many regions of Egypt and from various centuries, and at the very least is a reflection of its ancient past. Certain practices appear to have persisted from ancient Egypt, such as the employment of professional blind singers, the use of percussion instruments echoing the sound of ancient sistra and bells, antiphonal singing, and the unusually long vocalises reminiscent of the 'hymns of seven vowels' sung by Pharaonic priests.

Over the centuries Coptic church music has been transmitted mainly through oral tradition, whereby trained cantors would teach each succeeding generation by rote. Ancient anecdotes state that because the melodies were held to be sacred, no deviation was permitted in performance. However, although the basic melodic outlines and rhythms seem to have remained the same, in a tradition where it is customary for each cantor to display his virtuosity, details of ornamentation will inevitably have changed. Today, in addition to teaching all the music, the cantors direct the singing of the choir of deacons during the rites. They are not ordained members of the clerical orders, but at times a special prayer in Coptic is said for each one 'who shall be made a singer'.

A few extant Coptic and Greek manuscripts from Egypt dating from between the 3rd and 6th centuries CE contain signs, as yet undeciphered, that may be systems of musical notation. These include a hymn fragment (Oxyrhynchus Papyrus 1786; ed. Grenfell and Hunt); a papyrus (*GB-Lbl* Inv.230; ed. Jourdan-Hemmerdinger) with a system of dots related to letters of the text; and a controversial set of parchments (Gulezyan Collection) covered with circles of varying colours and sizes. Other manuscripts from the 10th and 11th centuries – those in the John Rylands Library, Manchester (see Crum) and the Insinger Collection at the Leiden Museum of Antiquities – have unusual accents above the text that may be a rudimentary but now forgotten form of ekphonetic notation (see illustration).



Accents, possibly a rudimentary form of ekphonetic notation, in a Greek Christmas hymn (GB-Mr Coptic 26)

2. General characteristics. Coptic melodies use nuances of pitch and rhythm that are foreign to Western musical tradition. They contain numerous macro- and microtones, and the Western distinction between 'major' and 'minor' does not exist; there are, therefore, many 'neutral' 2nds and 3rds. The melodies are diatonic and have the ambitus of a 5th. Leaps greater than a 3rd are rare; the augmented 2nd is also uncommon, but the minor 3rd is used frequently and the diminished 4th is integral to some typical cadences. In performance, a wide vibrato, often akin to a quarter-tone trill, colours all the singing, especially that of the soloists.

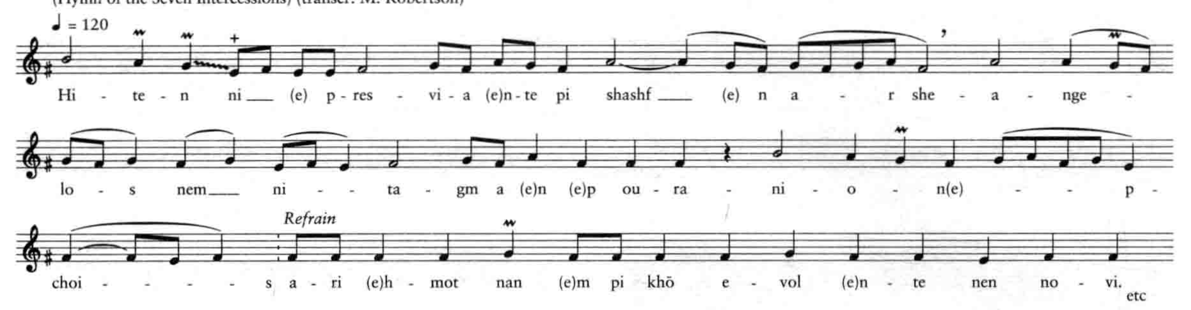
One of the most obvious characteristics of Coptic chant is the prolongation of a single vowel over several musical phrases: in phrases that have a definite rhythmic pulse this practice is called 'vocalise'; in those that use a rubato rhythm and rich embellishment it is known as 'melisma' (ex.1). Because vocalises and melismas are so common in the repertory, an analysis of the chant texts alone cannot always reveal the musical structure. The independence of the melody from the text is also evident in the enjambement that occurs when a musical cadence falls in the middle of a line of text, as, for example, in the prayers and pre-anaphoral hymns, and in the distortion, by the melody, of the natural length and stress of syllables, particularly in chants sung in Greek.

The longer melodies, both solo and choral, are built upon musical formulae that are common to many melodies but linked together in different ways in each chant. Coptic music is based on intervallic relationships, not fixed pitch,

Ex.1 Florid soloist music with vocalise and melisma: the final word ('God') of the introduction to the lection of the Pauline Epistle, sung by the deacon (transcr. M. Robertson)

and can therefore be performed at whatever pitch is suitable for the needs and voices of the singers. The tonal centre of a melody often migrates, usually upwards, by means of strategically placed macrotones, for example, the tonal centre of the Good Friday hymn *Golgotha* rises by a 3rd during the course of the chant.

3. Laḥn. The Arabic term *laḥn* (pl. *alḥān*: 'tune', 'melody'; Gk. *ēchos*), often found in Coptic music, refers to a specific melody or melody type that is easily recognized by the people and is identified by a distinct, often descriptive name, for example, *laḥn al-faraḥ* ('. . . of joy'), *laḥn al-ṣalbūt* ('. . . of the crucifixion') etc. *Alḥān* labelled *sanawiyya* (Arabic: 'annual') may be sung throughout the year, but others are reserved for particular seasons or days: those for the weekdays in Lent are designated *fī ayyām al-ṣūm al-kabīr*; those for Easter, *fī 'īd al-qiyāma al-majīd*; and those sung at Advent are named *kīyahkī*, after the Coptic month *Kīyahk*, which is roughly equivalent to December. The sorrowful *laḥn al-idrībī* is sung during Holy Week; its name may derive from the ancient Egyptian village Atribi or from Coptic *eterhēbi* ('one who mourns'). A single *laḥn* may have several different texts, or a single text may be set to more than one *laḥn*.



On auspicious occasions a given *laḥn* may be lengthened by introductory and interpolated vocalises; it is then known as *kabīr* (Arabic: 'great'). Examples include the Alleluia and 'Great Alleluia' for Holy Week; the *Eulogoumenos* (Gk.: 'blessed') and 'Great *Eulogoumenos*'; and the *Aspazesthe* (Gk.: 'greet') and 'Great *Aspazesthe*', which is reserved for solemnities such as the consecration of a bishop.

Two Coptic terms used to identify a *laḥn* are *Adam* and *Batos* (Arabic *Adām* and *Wāṭus*). *Adam* designates the pieces sung from Sunday to Tuesday and on other specified days; *Batos*, the pieces sung from Wednesday to Saturday, at the evening service and during Holy Week. These terms derive from the incipits of two *theotokia* (chants in honour of the Virgin) – *Adam eti efoi* (Coptic: 'When Adam became contrite') sung on Monday, and *Pibatos eta Moysēs nav erof* (Coptic: 'The bush that Moses saw') for Thursday; and they refer to two *theotokia* melodies – *Adam* for Monday and Tuesday, and *Batos* for Wednesday to Saturday. In other chant genres the distinction is more poetic than musical: *Adam*, for example, has fewer syllables and accents.

4. The Divine Liturgy. The Divine Liturgy (Arabic *quddās*) forms the core of the Coptic eucharistic service and all other rites connected with baptism, marriage etc. It is always sung complete, except for the synaxarion (martyrology), creed and dismissal. Three liturgies are performed today: that of St Basil the Great, celebrated throughout the year; that of St Gregory Nazianzen, sung at Christmas, Epiphany and Pentecost, the music of which is very ornate and highly emotional; and that of St Cyril (also called 'of St Mark'), the most Egyptian of the three, although it cannot be celebrated in its entirety because only very few melodies survive.

Each liturgy is preceded by specified introductory hymns and consists of two parts. The first, the Liturgy of the Catechumens (or 'of the Word'), contains prayers, hymns and specified scriptural lections and concludes with the Prayer of Reconciliation; the pre-anaphoral material is largely the same in all three liturgies. The second, the Anaphora or Eucharist, mainly consists of eloquent passages chanted in fervent preparation and

Ex.2 Simple syllabic choral melody: verse two, with refrain, of the pre-Anaphoral *hītaniyat* (Hymn of the Seven Intercessions) (transcr. M. Robertson (Hymn of the Seven Intercessions) (transcr. M. Robertson)

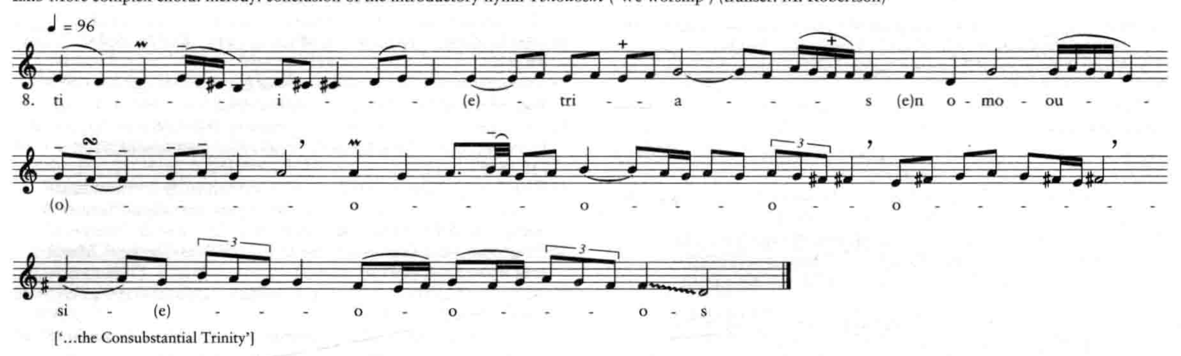
['Through the intercessions of the seven archangels and the heavenly hosts, Lord grant us forgiveness of our sins?' ♩

celebration of Holy Communion. These two sections are preceded in the morning and on the previous evening by an intoned rite unique to the Coptic Church – a Morning or Evening Offering of Incense (Arabic *raf' bukhūr bākir* or *raf' bukhūr 'ashiyya*). The Morning Offering of Incense is often incorporated into the Divine Liturgy; an entire service may thus last between three and six hours.

No Coptic liturgical books have musical notation. However, the texts of the Divine Liturgy and Offering of Incense are contained in the euchologion (Arabic *al-khūlājī*) and are written in Bohairic with Arabic translations; the words of the Proper chants and hymns are given in the final section. The euchologion also includes rubrics in Arabic specifying the procedures to be performed by the priest and deacon during the course of the Liturgy. Another liturgical book currently used in the Coptic rite, *Khidmat al-shammās* (Arabic: 'the service of the deacon'), is a compilation of chant texts and rubrics first assembled in 1859. Its purpose is to aid the deacon and cantor in the selection and performance of the hymns and responses in the celebration of the Divine Liturgy, the Office and other occasional services, and it contains instructions for the use of certain instruments and the particular *laḥn* to be sung. Other liturgical books set out the texts of prayers and chants recited at occasional ceremonies, such as marriage and baptism, or for particular events and seasons of the Church calendar.

The chanted sections of the Divine Liturgy include the lengthy embellished prose prayers (Arabic *awshiyāt*) sung by the priest and other high clergy who may be officiating. These prayers are performed in a freely rhythmic and ornamented melismatic style, according to the feast or season and dependent upon the skills and inspiration of the singer, and are interrupted by dialogues consisting of short admonitions (Arabic *ubrūsāt*) sung by the deacon, and by acclamations (Arabic *maraddāt*: 'responses') chanted by the choir of deacons and congregation; the Prayer of Thanksgiving (Coptic *Marenshepehmot*: 'Let us give thanks') is a typical example. The deacon's *ubrūsāt* are usually – though not always – less melismatic and less free in rhythm than the officiant's *awshiyāt*, while the *maraddāt* are syllabic in style and sung in fixed rhythm, except at the cadences. The *awshiyāt*, *ubrūsāt* and *maraddāt* may share the same concluding melodic formulae, of which there are about ten types, according to liturgical context.

The scriptural lections of the Liturgy of the Catechumens are chanted by the deacon; the texts are taken from a Pauline Epistle (*Paulos*; Arabic *būlus*), a Catholic Epistle (*katholikon*; Arabic *kāthūlūkūn*), the *Acts of the Apostles* (*praxis*; Arabic *abraksīs*), the psalms (*psalmos*; Arabic *mazmūr*), and the Gospels (*evangelion*; Arabic *injīl*). Each reading is chanted, with a standard introduction and conclusion, in a style whose elaboration depends on the solemnity of the occasion. The reciting of the synaxarion, which follows the lection from *Acts*, is often replaced by the hymn *Apekran ernishti* (Coptic: 'Thy name has been magnified'), wherein the name of the saint in question is merely mentioned. Before and after each of these lections a specified hymn is sung.



The hymns of the Divine Liturgy are sung by the choir of deacons (Greco-Copt. *laos*; Arab. *sha'b*). The choir stands in two lines (Arab. *baḥrī*: 'northern'; and *qiblī*: 'southern'), one on each side of the sanctuary door, and sings either in unison or antiphonally according to the directions in the ritual books; the southern choir, *qiblī*, is indicated by the Arabic letter *qaf* ('Q'). The music for the hymns ranges from frequently repeated, short, unadorned, very rhythmic and syllabic tunes (ex.2) to lengthier melodies complicated by extended phrases with definite but irregular pulse and much ornamentation (ex.3).

5. The Divine Office and Psalmōdia. The Copts observe seven Canonical Hours: First Hour, or Morning Prayer, said at daybreak; the Third, Sixth, Ninth and Eleventh Hours; Twelfth Hour, or Hour of Sleep; and Midnight Hour, to which the monks usually add a Prayer of the Veil (Arabic *ṣalāt al-sitār*). The Coptic day begins at sunrise, so the Third Hour is at approximately 9 a.m. The prayers for these services are contained in the *piajpia* (Coptic; Arabic *al-ajbīya* or *ṣalawāt al-sawā'ī*), the liturgical book equivalent to the horologion.

Each Hour begins with an invocation ('In the name of the Father, and the Son, and the Holy Spirit'), three chanted Kyries, the lesser doxology, the Lord's Prayer, the Prayer of Thanksgiving and Psalm cl, and concludes with the chanting of 41 Kyries, the 'Thrice-Holy' (Arabic *qaddūs qaddūs qaddūs*), the Lord's Prayer, the Prayer of Absolution, and the Petition ('Have mercy on us, O God'). Interpolated into these prayers and praises are 12 psalms, two *troparia*, two *theotokia*, and a lection appropriate to the Hour, chosen one each from the psalms, the Gospels and Epistles. The chants are generally recited in Arabic, except for the Kyries, which are sung in Greek. In some monasteries Coptic has been reintroduced into the liturgy.

During the Hours of Holy Week many special hymns are sung, often to a *laḥn ḥazinī* (Arabic: 'sorrowful'). Some pieces consist of rhythmic, syllabic verses set to simple melodies, for example, *Thōk te tigom* (Coptic: 'Thine is the power'), whereas others are lengthy and

Ex.3 More complex choral melody: conclusion of the introductory hymn *Tenouōsht* ('We worship') (transcr. M. Robertson)

melismatic, for example, *Ethve tianastasis* (Coptic: 'Through the resurrection'), which is sung at the Ninth Hour of Good Friday to a *laḥn al-tajnīz* ('of burial'). The 'Hymn of the Thief on the Cross', with its haunting incipit 'Remember me' (Coptic *aripamevi*; Gk. *mnēsthēti mou*) is sung to the aforementioned *laḥn ma'rūf* ('familiar'), which also appears in the Good Friday settings of *Ho monogenēs huios* (Gk.: 'The only-begotten Son') and the Trisagion. On Easter Eve – regarded as a time of transition between the sorrow of Good Friday and the joy of the Resurrection – each scriptural lection is sung partly in 'sorrowful' and 'joyful' *alḥān*.

Psalmōdia (Arabic *abṣulmūdiya* or *tasbiḥa*) is a choral service celebrated by monks twice daily (just after the Midnight and Morning Hours) and by the laity on Sunday eve. The texts and directions for the service are contained in a book known as *al-abṣulmūdīya al-sanawiyya*; the words for the hymns sung at Advent during the month of *Kīyahk* are found in a separate book, *al-abṣulmūdiyya al-kīyahkīya*. Both books contain the following genres of hymn sung at Psalmōdia and elsewhere:

(*i*) *Hōs* (from Ancient Egyptian *h-s-j*: 'sing', 'praise'; Arabic *hūs*, pl. *hūsāt*). Among the oldest Coptic hymns, these are sung to a rapid tempo, and their melodies consist of short, simple, rhythmic phrases ending in a refrain. The texts, taken from the Old Testament canticles and psalms, are unrhymed quatrains interspersed with Alleluias. Four *hōs* are chanted during Psalmōdia, the first three at the Midnight service, the fourth in the morning; another is sung at Christmastide and yet another at Easter.

(*ii*) *Theotokia* (a term both singular and plural in Coptic). As in the Byzantine rite, these are a series of hymns in honour of the Virgin Mary and are sung during the Divine Office and Psalmōdia (see above). In the Divine Liturgy one is regularly sung as an introductory hymn, and another is sung after the lection of the Catholic Epistle. A special series of *theotokia* sung only in Advent are of variable length and are composed to Coptic quatrains. Each day has its own set of hymns: 18 for Sunday, nine each for Monday, Thursday and Saturday, and seven each for Tuesday, Wednesday and Friday. The sets for Sunday to Tuesday conclude with the same *Adam* text; the other days conclude with the same *Batos* text. These sets are interpolated with many *bōl* (Gk. *hermēneia*: 'interpretation'), which paraphrase the texts. In any given set, each hymn has a common unifying refrain, and in practice one hymn may suffice to represent the whole set.

(*iii*) *Lōbsh* (Coptic: 'crown'; Arabic *lubsh* or *tafsīr*: 'explanation'). A *lōbsh* immediately follows the sets of *theotokia*, as well as each of the first three *hōs*. Though recited rather than sung, it is designated either *laḥn Adam* or *Batos*, indicating that at one time it was probably chanted.

(*iv*) *Psali* (from Gk. *psallein*: 'to pluck a string instrument' or, by extension, 'to sing the songs of David'; Arabic *abṣālīya* or *madīḥ*: 'praise'). These metrical hymns accompany either a *theotokia* or *hōs*. Each day has its own *psali*, designated as *Adam* or *Batoš*; there may also be one or more *psali* for a liturgical season. The long texts of the *psali* sometimes form Coptic or Greek alphabetic acrostics and may contain the name of the author. The melodies are rhythmic, syllabic and easy to sing.

(*v*) *Ṭarḥ* (Arab.: 'interpretation'). This is an Arabic paraphrase of a preceding *hōs*, *theotokia* or Gospel lection. Like the *lōbsh*, it was formerly sung (according to Coptic texts dating from the 9th century), but is now recited.

(*vi*) *Difnār* (from Gk. *antiphōnarion*) hymn. The *difnār* is a book containing biographies, written in hymnic form, of Coptic saints. When performed during Psalmōdia, because of the great length of these hymns, only two or three strophes may be sung in Coptic, the entire text then being read in Arabic. If the synaxarion is read, the *difnār* hymn may be omitted.

6. Musical instruments. Musical instruments dating from the 3rd to the 8th centuries found at the monastery of St Jeremiah, Saqqara, suggest that the Copts originally used many different types, for example, castanets, sistra, flutes, harps and lutes. However, the only term found in Coptic liturgical books to specify instrumental accompaniment is *nāqūs* (Arabic: 'bell'). The Copts may have used an ancient type of small bell that was sounded by striking the outside with a rod, but this has long since disappeared from the rite and is not known today. The only instruments now allowed in Coptic services are small hand cymbals (Arabic *ṣanj*, pl. *ṣunūj*, and colloquial *ṣajjāt*) of about 18 cm diameter, and the triangle (Arabic *muthallath*); both instruments are played by a deacon or the cantor. In monasteries a small ebony bar (also known as *nāqūs*) is sometimes used.

MARIAN ROBERTSON-WILSON

Copula (Lat.). *See under* ORGAN STOP (*Coppel*).

Copula, copulatio (copula: Lat.: 'that which binds', 'a bond of several parts'; copulatio: Lat.: 'the action of forming a bond'). In the early 11th century 'copulatio' was used by Guido of Arezzo in the *Micrologus* to describe the *symphoniae* as 'suaves vocum copulationes' (CSM, iv, p.116). 'Copula' and 'copulatio' were often used for the 'binding' together of notes to form a melody, or of voices to form a polyphonic composition. 'Copula' was sometimes used in the later Middle Ages to denote the binding together of several notes in a ligature.

In the teaching of polyphony about 1100, as shown in the organum treatises of Milan and Montpellier, 'copula' generally referred to the final interval between voices at the end of a phrase (unison or octave), while 'copulatio' generally implied the establishment of that interval, that is, the progression from penultimate to final. The final note of the *vox organalis* could be decorated with a melisma, as prescribed by the fifth *modus organizandi* of the Milan treatise (see Eggebrecht and Zaminer, p.80). Ex.1 illustrates this. In the 13th century the short, rhythmically free linking passages or closing phrases of the three-part Notre Dame plainchant settings, found in two forms and called 'copula ligata' and 'copula non ligata' respectively by Franco of Cologne in his *Ars cantus mensurabilis* (CSM, xviii, pp.75–7), come very close to this idea of binding together at a cadence.

Ex.1

To Johannes de Garlandia, in the second quarter of the 13th century, 'copula' signified a compositional idiom, a style of setting in the Notre Dame repertory that falls 'between discant and organum' (*De mensurabili musica*, ed. Reimer, p.88). It has the strictly modally rhythmic upper voice of DISCANT, and the sustained-note tenor of ORGANUM 'in speciali'. The designation 'copula' probably refers less to the function such music may sometimes serve as a linking passage than to the stylistic compromise it represents between the idioms of discant and organum. It may also imply a type of strophic construction that is characteristic of much music in this idiom, for 'copula' and the Provençal word *cobla* were poetic terms for 'strophe'. Garlandia explicitly described a copula passage in which the duplum divides, like a short strophe, into two parts of equal length and parallel musical structure (*antecedens* and *consequens*). Ex.2 shows a copula in the

Ex.2

two-voice *Alleluia Nativitas*, with *ouvert* and *clos* endings. In Hiermonymus de Moravia's reworking of Garlandia's treatise, the musical and poetic meanings of copula are brought together when the theorist, listing several devices that could be introduced into a polyphonic setting to enhance its effect ('loco coloris'), most likely at cadences, mentions both a 'cantilena nota copula' ('well-known song, or copula') and a 'clausula lay' ('phrase of a lai'; ed. Reimer, p.97).

As a polyphonic idiom, Garlandia's copula could be employed in any of the genres cultivated in the Notre Dame tradition. Its essential features – strictly patterned modal rhythm, symmetrical phrase structure – can be found throughout the two-voice organa, and they dominate the organa for three and four voices. Nevertheless, the distinction between copula and the other type of sustained-tone polyphony, 'organum in speciali', characterized by a free, unpatterned rhythmic flow, was largely a theoretical one, since it was formulated well after most of the music to which it was applied had been composed. In fact, much sustained-tone writing falls somewhere in between these two poles. Anonymous IV, writing late in the 13th century, subsumed both idioms under a single category, *organum purum*.

Passages of copula seem often to have been singled out for special treatment in performance. Franco remarked that the copula was performed much faster than the

notation suggests, probably a reflection of the cadential function that the idiom serves in his system. Anonymous IV mentioned distortion in performance of the durational values in the rhythmic modal patterns and unpatterned rhythmic designs used in *organum purum* (he called these liberties 'irregular modes'), and cited a specific passage from Perotinus's three-voice *Alleluia Posui adiutorium*, which he says is 'loco copulae', as an example (ed. Reckow, i, p.84). The St Emmeram Anonymous alluded to the 'more delicate way and more subtle voice' used in the performance of copula, a style that he equated with the rendition of organum 'in speciali', which is 'wreathed in a melodious sound' (ed. Yudkin, p.276). Thus, over the course of the 13th century the meaning of the term was expanded to embrace not only a polyphonic idiom and, occasionally, the function within the larger composition in which copula appears, but also a performance style.

Copus, Caspar (*fl c*1550). Composer. He may have lived in Austria and known Arnold von Bruck; his *Salve regina* (in *A-KN* 70, which contains most of his works) has the following dedication: 'Casparus Copus in gratiam Arnoldi de Bruck 1550'. Only 11 sacred vocal pieces (in RISM 1564[4], *A-KN, D-Dlb* 1/D/4, *Rp* A.R.900) can definitely be attributed to him; they are examples of solid, functional church music, though some of them show a tendency to mannerism. In his Proper settings Copus frequently used German hymns (e.g. *Christ ist erstanden*) as cantus firmi, so Albrecht has attributed another composition to him, the *Missa in aurora* ascribed by Georg Rhau to 'Nicolaus Copus' (1545[5]).

Copyright. The legal right in literary, dramatic, musical and artistic property.

I. General and international. II. Copyright collecting societies: operation and history. III. Great Britain. IV. Former British-administered territories. V. United States of America. VI. European mainland, Ireland and Scandinavia. VII. Asia, Israel, South Africa. VIII. Latin America. IX. Developing countries.

I. General and international

Copyright law is at once domestic and international. In each country protection is governed by local law which affects everyone who seeks to publish, perform or broadcast a work in that country, wherever he or she is from. (Masculine pronouns alone are used from here on.) A composer whose work is used in different countries will find that the details of protection in them will not be the same. Yet his work is treated in almost every foreign country in exactly the same way as that of composers who are local citizens, or whose works were first published in the country concerned.

This arises from the structure of the international copyright conventions, whose chief effect is not to require each country to give specific protection to literary, dramatic, musical and artistic works, but to give to such works, created by nationals of any member country, or first published in any member country, the same protection as is afforded to works created by nationals of the country in which protection is sought, or first published there. (There are detailed provisions for simultaneous, or nearly simultaneous, publication in several countries.) The conventions also specify various basic principles of protection, which give the copyright law of all countries certain similarities. But within these principles there is much variation, and when problems arise one should always consult a lawyer specializing in the law of the country concerned.

The earliest of the important international conventions was that concluded at Berne in 1886, which gives its name to the Berne Copyright Union. The Berne Convention was revised at Paris in 1896, at Berlin in 1908, at Rome in 1928, at Brussels in 1948, at Stockholm in 1967 and at Paris in 1971. The situation is complicated by the fact that some states have not acceded to the later revisions but have remained bound by one of the earlier versions. Thus one state may have its relations with some countries governed by one of the revisions and with others by another. The short interval between the last two revisions was due to the controversy over the special provisions made for developing countries.

The matter is further complicated by the different ways in which states implement the conventions. In some countries, treaties (the conventions are, in effect, treaties with numerous parties) are automatically part of the local law, and are interpreted by the courts. In such countries one will frequently find references in the national copyright statute to the protection given by the treaties. In other countries – Britain is one – copyright treaties are not part of the local law, but they are put into effect by local statutes and orders.

One of the fundamental principles of the Berne Copyright Union is that no formalities of any kind are required for protection within it. The legislation of a member of the union may not require, as a condition of protecting works first published in another member country or written by a national of such country, that a copy should be deposited with a national library, or that a notice reserving copyright should be printed on every copy, and so on.

Another principle of the Berne Union is that the period of protection for works such as musical works should extend for 50 years from the death of the author.

The other international convention of major importance is the Universal Copyright Convention, also called the UNESCO Convention, concluded at Geneva in 1952 and revised at Paris in 1971. Many countries are members of both the Berne Union and the Universal Convention, but a number of South American and other states are members only of the Universal Convention.

The requirements of this convention are less strict than those of the Berne Union. For example, protection need only last for 25 years, counting from the death of the author, or – in the case of countries which do not calculate the copyright term from the author's death – from the date of publication. A formality may be required, namely the placing of the symbol © in a reasonably prominent place on each copy, accompanied by the year of first publication and the name of the copyright owner.

The international copyright conventions, particularly the Berne Convention, have introduced broad consistency into what would otherwise be a patchwork of domestic copyright legislation in different countries. This is particularly true now that the USA has joined the Berne Union. More recently, the European Union has introduced common principles which its member states are required to adopt, in particular the extension of the term of copyright to a post-mortem period of 70 years.

There are also a number of conventions affecting the North and South American countries in their mutual relations. Apart from the conventions, there are innumerable bilateral treaties between pairs of countries, most but not all of which have lost their importance as a result of the multilateral conventions.

A list of countries in copyright relations with Britain is given in §III, 5 below, and this will indicate the scope of the conventions.

II. Copyright collecting societies: operation and history

The legal provisions described above, and also below as they pertain to specific areas, give rise to certain economic rights which are enjoyed by the owner of the copyright. In music the most important are the rights of public performance, broadcasting and diffusion, known as the 'performing right', and the right to reproduce musical works on sound carriers such as discs and tapes, which is the part of the reproduction right known as the 'mechanical right'.

When these rights are once established, the problem of collecting in respect of them arises. It is almost always impossible for a composer or publisher to hope to recover royalties on more than a very small number of the performances on which they are due. With popular music, in particular, it is quite impossible to know when and where a certain tune has been played. If it is very successful, a popular tune may be played many times on hundreds of coin-operated machines all over the world, and broadcast several times each day to an audience of millions. It may be performed live by groups on stage in large municipal concert halls, or in a small public hall in a remote village. Even if the right-owner could locate a few of the performances, he would be unlikely to have the means or the expertise to negotiate appropriate royalties and issue licences. Collection for performances overseas would be out of the question.

The music user would also be seriously embarrassed if he had to negotiate individually with each right-owner for each separate work. This would be bad enough for the small music user who would have no idea where to locate the right-owners, but far worse for such institutions as broadcasting organizations, which would have no means of protecting themselves against unintentional infringement of copyright. It is an immense advantage to music users to have a central body which can be approached for licences and which will clear the rights automatically with each individual right-owner, not only in their own country, but also in virtually every other country in the world. The system offers a blanket licence to the music user who would otherwise be put to considerable administrative expense in acquiring these rights, and would also have to pay the individual right-owners in respect of each use.

Societies have therefore been set up all over the world to collect royalties for the use of copyright music and to distribute the revenue among the persons entitled to it. The earliest true society, the Société des Auteurs et Compositeurs Dramatiques, set up in France in 1829, collected on behalf of all dramatic writers, both literary authors and composers of music for operas and ballets. These rights in dramatic performance became known as the *grands droits* in music, as distinct from the *petits droits*, non-dramatic rights of public performance, which were left unprotected.

The situation is now very different, but the distinction between dramatic and non-dramatic music is still of great importance. In many countries, even today, no collecting society exists in respect of *grands droits*, since dramatic performances can be staged only in a limited number of places, and can be traced comparatively simply. In Great Britain royalties for such performances are collected by publishers and agents. But it is much more difficult to collect in respect of the *petits droits*, or 'small rights', in music, and it is in administering these rights that the collecting societies have been most successful. The first society to do so was again French, the Société des Auteurs, Compositeurs et Editeurs de Musique (SACEM), founded in 1851. It was not until 1914 that similar organizations were set up in Great Britain and the USA.

Collection in respect of the mechanical right does not present so many problems. In many countries the rate of royalty is statutory, and therefore does not require negotiation. Moreover the licensees, which are generally substantial companies manufacturing records, are easier to contact than the innumerable establishments where performances of music may be given. Nevertheless it is very convenient for smaller publishers and other copyright owners to use a central collecting system, particularly as the record-manufacturing industry has become more fragmented. Collecting societies also greatly simplify the payment of royalties arising overseas. There are international associations of collecting societies in respect of both performing rights and mechanical rights; these are the Confédération Internationale de Sociétés d'Auteurs et Compositeurs (CISAC), founded in 1928, and the Bureau International de l'Edition Mécanique (BIEM). The societies in each country are affiliated through these associations, and there are reciprocal accounting systems.

In some countries the national mechanical and performing right societies have now been brought under the same administration – though not in Great Britain, where the

first mechanical right society, the Mechanical-Copyright Protection Society, was set up in 1910, some four years before the Performing Right Society. Generally the mechanical right was not recognized so early as the performing right in the laws of the first countries to adopt copyright systems.

Collecting societies also operate in a third area in the music industry: the administration of public performances of sound recordings. A separate performing and broadcasting right in a sound recording is not so widely established internationally as the performing right in musical works and the mechanical right. It was first recognized in Great Britain in 1934, as the result of a court decision, and is now set out in the Copyright, Designs and Patents Act 1988; collections in respect of it in Britain are made by Phonographic Performance Ltd (PPL). But the right does not exist in the USA; and it has not achieved universal acceptance. Nevertheless it is of considerable economic importance in those countries where it has passed into the law; and it is recognized internationally by the Rome Convention of 1961.

The members of the two international organizations of collecting societies, CISAC for performing right organizations and BIEM for mechanical right societies, are linked by international contracts of affiliation, whereby each society collects on its own territory for the works of its own members and the members of each other society with which it is affiliated. By the same contract each national society is empowered to grant licences on its own territory in respect of the repertories of each society with which it is affiliated, so that the society is able to offer its licensees access to a worldwide range of copyright music.

A licensee in London or New York thus has available virtually the whole catalogue of music likely to be needed, both classical and popular. There are certain geographical areas where states do not subscribe to the international copyright system or where no collecting societies exist, but, as they lie outside the system, they are not entitled to collect outside their own territory, and so the licensee in London and New York, having once paid a royalty, is free from any danger of remote foreign unaffiliated societies attempting to exact an additional fee.

Information on specific copyright collecting societies will be found in the discussions of individual countries and regions.

III. Great Britain

1. Historical and general. 2. The nature of copyright. 3. Works in which copyright can subsist. 4. Originality. 5. Nationality and place of publication. 6. Owner of the copyright. 7. Licences and assignments. 8. Duration of copyright. 9. Restricted acts. 10. Infringement. 11. Remedies. 12. Exceptions and defences. 13. Copyright Tribunal. 14. Other rights of authors. 15. Performers' rights. 16. Copyright collecting societies.

1. HISTORICAL AND GENERAL. Before 1640 there was no legislation in England to protect the rights of authors or publishers in their works: the only law regulating printing was intended to repress undesirable political or religious views, or to make a profit for the Crown by granting licences for printing. In 1640 an ordinance was enacted to prohibit the printing or importing of books without the consent of the owner, and similar provisions were repeated in 1643, 1647, 1649, 1652 and 1662. In 1679 this protection lapsed, and for the next 30 years by-laws of the Stationers' Company provided protection for its members.

In 1709 the first true copyright act was passed. This gave copyright to books and music, if recorded in the register of the Stationers' Company, for a period of up to 28 years. In 1814 the period of copyright was changed to 28 years or the life of the author, whichever was the longer. In 1833 and 1842 the performing rights in dramatic and musical works were protected for the first time. In 1842 the period of copyright was extended to 42 years from publication, or the life of the author and seven years thereafter, whichever was the longer. The penalty for unauthorized performances was £2 irrespective of the circumstances, and a man named Wall gained considerable notoriety by purchasing performing rights and enforcing the payment of this penalty from innocent infringers. As a result acts were passed in 1882 and 1888 making the right of public performance conditional on a notice of reservation being printed in every copy and giving the court discretion as to the penalty. In 1902 and 1906 summary penalties against infringers of musical copyright were enacted. In 1911 the term of copyright was altered to the modern one (the life of the author and 50 years thereafter) to conform with the international conventions. At the same time all formalities were abolished. The Stationers' Company register remained open for entries, as it still does, but registration is no longer necessary for copyright protection. The law continues to require a copy of the best edition of every published book (including sheet music) to be delivered to the British Library, and a copy of the largest edition to be made available to the Bodleian Library at Oxford, the University Library at Cambridge, the National Library of Scotland, the Library of Trinity College, Dublin, and (except for certain small editions) the National Library of Wales. But the penalty for non-compliance is a fine of £5 plus the value of the book, and copyright is not affected.

The statute law of copyright in Britain is contained almost entirely in the Copyright, Designs and Patents Act of 1988, which has 306 sections and eight schedules. It repeals all existing copyright statutes except certain provisions of the Copyright Act of 1911 not directly concerned with copyright. However, as with many other branches of the law, many details, and indeed some general principles, cannot be found in the acts of parliament but only in decisions of the courts. It is inevitable that if the law is to be fair it shall be complicated. This article describes the basic principles of copyright law, with special reference to musical works, but it is not possible to set out every exception and qualification to which general rules are subject. Legal advice should always be sought in cases of difficulty. Particular care should be taken in cases involving a foreign element or works written before 1 June 1957, when the Copyright Act of 1956 came into force. This act contains special provisions where the work is anonymous or pseudonymous or is of joint authorship. A joint work is one written in collaboration where the contributions of each author cannot be separately identified.

2. THE NATURE OF COPYRIGHT. The law of copyright protects certain kinds of works by making it unlawful to do certain acts in relation to those works without the permission of the owner of the copyright. The most obvious example is the copying of a book or musical work by reprinting it, but there are many others.

It is fundamental to the law of copyright that it is works and not ideas which are protected, protection being given

to the form in which the idea is expressed and not to the idea itself. Thus an idea which has not yet become a work – for example, an idea for a tune not yet recorded or written down – is not protected. Nor are traditional airs which were seldom written down or recorded, until recently at all events. It is possible to make use of another's ideas without falling foul of the law of copyright, although it might be a breach of confidence. The taking of ideas is not often applicable to music, where it is difficult to distinguish between the idea, which is not protected, and the form in which it is expressed, which is. But this can be of great importance in literature, where the plot or idea of an author's work may be taken without taking the words used and therefore without infringing copyright.

Another general principle of great importance is that copyright restrains copying. Unlike a patent, it does not give any monopoly. Thus if A wishes to prevent B from selling or performing a musical work which A alleges is a breach of his copyright, he must prove not only that B's work is similar to A's, but also that it was in fact derived from A's. If B's work, though identical with A's work, was independently produced, B's work will not be an infringement.

Under British copyright law protection is automatically given to the work from the moment of its creation (or in some cases publication). No registration or formality of any kind is necessary. It is requisite only that the work shall (*a*) be of a class which is capable of protection (see §3 below), (*b*) have been created by a person of appropriate domicile, residence or nationality, or first published in an appropriate country (see §5 below), (*c*) in the case of a literary, dramatic, musical or artistic work, be original in the sense explained in §4 below.

3. Works in which copyright can subsist. Copyright can subsist in the following classes of work: (*a*) literary works, (*b*) dramatic works, (*c*) musical works, (*d*) artistic works, (*e*) sound recordings, (*f*) films, (*g*) television and sound broadcasts, (*h*) published editions.

The expression 'literary work' has a very wide meaning: it includes anything from a full-length novel to a news item in a newspaper, and also compilations such as a telephone directory or list of horses or a newspaper itself. On the other hand it does not include such things as titles of books and advertising slogans, because they are too insubstantial or trivial.

A 'dramatic work' is defined as including a choreographic work or entertainment in dumb show, provided it is written down.

A 'musical work' is not defined in the 1956 act. The 1988 act defines it as 'a work consisting of music exclusive of any words or action intended to be sung, spoken or performed with the music'. The 1902 act defined it as 'any combination of melody and harmony, or either of them, printed, reduced to writing, or otherwise graphically produced or reproduced'. Modern methods of recording and reproduction have made the word 'graphically' inappropriate; and there is probably copyright in a tune which, before being written down, is played, sung or hummed into a tape recorder. But a tune which is hummed or played by its composer and is not recorded in any permanent form is probably not protected by the law of copyright.

'Artistic work' is widely defined and includes paintings, sculptures, drawings, engravings, photographs, works of architecture and 'works of artistic craftsmanship'.

'Sound recording' means a recording of sound from which the sound may be reproduced, regardless of the medium on which the recording is made or the method by which the sounds are produced or reproduced. It is important to appreciate that a disc or tape may involve more than one copyright. A recording of a song may involve three quite separate copyrights: those of the lyric of the song as a 'literary work', the music to which the words are sung and the accompaniment played as a 'musical work', and the disc itself as a 'sound recording'. 'Sound recording' does not include the soundtrack of a film, which is included in the next category.

A 'film' includes the sequence of visual images and the associated soundtrack. It is a recording on any medium from which a moving image may be produced by any means. As with sound recordings, there is one copyright in the film as such and separate copyrights in each of the works on which it is based, such as the script, music and so on.

A television or sound broadcast has a separate copyright from that in the book, play, music or film which is being broadcast.

The copyright in a 'published edition' is granted to protect a publisher who spends money on setting up a literary work in print, or on preparing a new manuscript of a musical work for publication. By a copyright quite separate from that in the literary or musical work concerned, the publisher can prevent anyone from making a photographic reproduction of the work and thus obtaining for nothing the benefit of his expenditure. This copyright is of particular importance where the work is not itself protected by copyright, for example because the author died more than 50 years previously.

4. Originality. Under the Copyright, Designs and Patents Act of 1988 one of the conditions for subsistence of copyright in literary, dramatic, musical and artistic works is that they should be 'original'. The meaning of the word is not defined in the act, but its meaning has become well established from cases in the courts. What is required is not a creative gift of a high order but that some time, skill and labour shall have been spent by the author in creating the work, and that it derives from him. The fact that the work is based on earlier work of another is not a bar to copyright in the derived work, provided that some new work has been done. There is no copyright in a mere copy of a musical work, but there certainly is in a new arrangement or adaptation of an earlier piece of music: a common example is a piano-vocal score of an opera. However, if a substantial part of the earlier work is used, the new work may be an infringement of the old work.

A difficult question, not yet finally answered, is whether the first person to write down the tune of a traditional air obtains copyright in it. The courts will have to decide whether the skill and labour required to write down a tune from ear in musical notation are sufficient to satisfy the test.

The requirement of originality does not apply to the derivative subjects of copyright, that is, sound recordings, films and broadcasts. Copyright in published editions applies to any edition which does not reproduce the typographical arrangement of a previous edition.

5. Nationality and place of publication. The provisions governing the qualifications of a national

character which a work or its author must have before it is protected in British law must now be explained.

Primarily, the 1988 act applies to literary, dramatic, musical and artistic works which, if unpublished, were made by a 'qualified person'. If they are published, copyright is given in the following three cases: (*a*) the author was a qualified person at the time of first publication (not at the time of creation of the work), (*b*) the author was a qualified person just before his death, and has died before publication, (*c*) the work was first published in Great Britain or another relevant country.

The definition of a qualified person is, in the case of an individual, a British subject or protected person or a citizen of the Republic of Ireland or a person who is domiciled or resident in Great Britain or another relevant country. In the case of a 'legal person' such as a company, it must be incorporated under the law of Great Britain or another relevant country to count as a qualified person. If, as is usually the case, the making of a work extended over a period, it is sufficient if the person concerned was a qualified person for a substantial part of that period.

In the case of sound recordings and films the maker must have been a qualified person at the time when the recording or film was made (or, in the case of a film, for a substantial part of that time), or, if it has been published, it must have been first published in Great Britain or another relevant country. These conditions are not relevant to broadcasts, as the first owner must be the BBC or the Independent Broadcasting Authority (IBA). Thus there is no copyright in 'pirate' broadcasts. In the case of a published edition, the publisher must have been a qualified person at the date of publication, or the publication must have taken place in Great Britain or another relevant country.

A relevant country is a country whose copyright law is basically the 1988 act or a previous British copyright act. This includes the Isle of Man, the Channel Islands and British colonies and dependencies.

In accordance with the international conventions described in §I, Great Britain has made arrangements for domicile, residence, incorporation or publication in many foreign countries to have the same effect for the purposes of protection in Britain as domicile, residence, incorporation or publication in Britain itself. A list of the countries concerned is given below, but it must be borne in mind that protection for different countries has started at different dates, and there are many detailed exceptions and qualifications which cannot be set out here. There is difficulty in determining whether copyright exists in Britain in works first published in the countries marked ¶ before certain dates (for instance before 27 September 1957 in the USA). The copyright in sound recordings originating in countries other than those marked * does not include the exclusive right to cause to be heard in public and to broadcast. There is no protection in Britain for sound broadcasts except those originating in the countries marked †, or for television broadcasts except those originating in the countries marked ‡.

¶Algeria; ¶Andorra; Argentina; *Australia; former and current Australian territories (Papua New Guinea, Nauru and Norfolk Island); *†‡Austria; ‡Belgium; Benin; *†‡Brazil; Bulgaria; ¶Cambodia; Cameroon; Canada; Chad; Chile; †‡Congo (People's Republic); *†‡¶Costa Rica; Côte d'Ivoire; Cuba; *‡Cyprus; *†‡Czech Republic; *†‡Denmark; *†‡¶Ecuador; *†‡Fiji; Finland; ‡France; French territories overseas; Gabon; *†‡Germany, Federal Republic

¶Ghana; Greece; ¶Guatemala; ¶Haiti; Hungary; Iceland; *India; *Ireland, Republic of; *Israel; *Italy; ¶Kenya; Japan; ¶Laos; Lebanon; ¶Liberia; Liechtenstein; Luxembourg

Madagascar; ¶Malawi; Mali; Malta; Mauritania; ¶Mauritius; *†‡Mexico; Monaco; Morocco; Netherlands (and Suriname and Netherlands Antilles); *New Zealand; ¶Nicaragua; †‡Niger; *¶Nigeria; *‡Norway; *Pakistan; ¶Panama; *†‡¶Paraguay; ¶Peru; Philippines; Poland; Portugal (including Portuguese provinces overseas); Romania

Senegal; *†‡Slovakia; South Africa (and South West Africa); *‡Spain; Spanish colonies; *Sri Lanka; *†‡Sweden; *Switzerland; Thailand; Tunisia; Turkey; ¶former USSR; ¶USA (and Guam, Panama Canal Zone, Puerto Rico and the Virgin Islands of the United States of America); Uruguay; Vatican City; ¶Venezuela; former Yugoslavia; Zaire; ¶Zambia

6. Owner of the copyright. Copyright is a form of property which can be bought and sold like any other. It comes into existence as soon as the book is written, the picture drawn, and so on; and there are rules to show who is the first owner. A manuscript and the copyright in that manuscript are separate items of property. The copyright may be divided so that one person owns the performing right, and another the publishing and reproduction right. It may be further divided so that one person owns, for example, the right to publish in sheet form in western Europe, another the right to reproduce by recording (usually called the mechanical right) in Australia otherwise than as part of a film soundtrack, another the right to reproduce in the whole world as part of a film soundtrack (usually called the synchronization right), and so on. Finally, the copyright may be further divided by a time limitation, such as the right to publish in sheet music form in England for three years. At the moment of creation one person usually owns all the rights, but that person may deal with the rights before the work comes into being.

Subject to certain exceptions, the first owner of the copyright in a literary, dramatic, musical or artistic work is the author. This means the person who conceives the form in which the work is produced. Thus if A suggests a plot to B, who writes a novel based upon it, B, not A, is the author. If B, instead of writing or typing himself, dictates his novel to C, who writes it down word for word, it is still B, not C, who is the author. If two or more persons working together produce a piece of music and their contributions can be distinguished, each is the author of his own contribution. If the contributions cannot be distinguished they are joint authors of the whole. In the case of a photograph, the owner of the negative (or other substance on which the original image is recorded) when the photograph is taken is the 'author'.

Where a literary, dramatic, musical or artistic work is made by an employee in the course of his employment, his employer is the first owner of any copyright in the work, subject to any agreement to the contrary.

When a work is made by an author in the course of his employment under a contract of service, the copyright belongs to the employer and not to the employee. For this rule to apply the contract must be one of service. This is the technical description of the relationship between employer and employee. It is not always easy to distinguish this from other contractual relationships, but generally anyone remunerated by a salary rather than individual fees for specific pieces of work is an employee, especially if he is subject to detailed control over the manner of his work. A person who is not an employee retains the

copyright in any work produced by him even though he is paid for his work by another. A common instance of this is architects' plans. This would also apply to work produced out of working hours or outside the scope of employment by someone who is an employee.

The first owner of the copyright in a sound recording is the owner of the tape or other material on which the sound is first recorded, unless the recording was commissioned and paid for – or agreed to be paid for – by another, in which case that other person is the first owner, unless agreed to the contrary.

The first owner of the copyright in a film is the person by whom the arrangements necessary for the making of the film are undertaken: that is, normally, the film company since the word 'person' includes a company.

The first owner of the copyright in a television or sound broadcast is the BBC or the IBA, as the case may be.

The first owner of the copyright in a published edition is the publisher.

7. Licences and assignments. The person who is the first owner of the copyright in a piece of music, for instance, is identified in accordance with the rules explained above. For the work to be exploited the owner of the copyright must permit publishers to reproduce and publish the work, concert promoters, dance hall proprietors and many others to perform it in public, record companies and film producers to reproduce it and perform it in public, broadcasting organizations to broadcast it and so on.

There are two basic ways of dealing with copyright: assignment and licence. By an assignment the owner actually transfers ownership to another. He need not assign the whole of the copyright: it can be subdivided by place, class of act or time. For example, an assignment may relate to the right to reproduce and publish a piece of music in sheet form in Great Britain for a period of ten years from a certain date. A contract may be made whereby a composer assigns certain parts of the copyright in return for a lump sum payment. It may also be provided that the composer is to receive royalties or a share of profits, but this carries a certain risk because the copyright may be assigned once more to a third owner, and the composer may find if the royalties cease to be paid that he has no effective remedy against anyone. He cannot recover the copyright, having parted with it outright.

If a composer is to be remunerated by periodical payments such as royalties on sales or performances, it is advisable that he should grant only a licence, that is, permission to do certain acts – for example, to print and publish in sheet music form in Great Britain for ten years – while retaining the ownership of the copyright himself. The owner usually has the right to determine a licence if there is any breach of the agreement by the person to whom it has been granted. A licence may be exclusive, that is, granted on terms which prevent the owner from granting a licence of the same rights to anyone else, or non-exclusive.

An assignment and an exclusive licence must be in writing and signed by the copyright owner or his agent. Both an assignment and an exclusive licence have the advantage that the person to whom they are granted can himself start proceedings to stop infringement. A non-exclusive licence, which need not be in writing (and indeed may not even be oral, but can be inferred from conduct, for example the sending of a letter to a newspaper), gives no right to stop the copyright owner granting similar licences to anyone else, nor does it give the right to sue for infringements of the copyright.

In some instances it is not practicable for an individual copyright owner to license every individual use of a work. For example, the owner of the copyright in a popular piece of music cannot know of everyone who wishes to perform it in a public place. Nor is it convenient for him to have to deal with all would-be licensees. To deal with these situations there are organizations of composers and other copyright owners which license persons wishing to perform or make other use of copyright works on behalf of numerous copyright owners, sharing the fees between them and suing for infringements. The special regulation of the fees charged and licences granted by these societies is dealt with in §13 below.

8. Duration of copyright. Until 1996 the historic period of copyright protection in Great Britain as laid down by successive copyright statutes was the life of the author of the work and 50 years thereafter. On 1 January 1996 the Duration of Copyright and Rights in Performances Regulations of 1995 came into force implementing the provisions of EU Directive 93/98. This provides that in respect of EU nationals, copyright protection for literary, dramatic, musical and artistic works is for the life of the author and 70 years thereafter. It is of critical importance that if a work enjoyed copyright protection in any of the 15 member states of the union on 1 July 1995, then copyright protection will revive in any other member state in which it has lapsed. The question is of considerable practical significance, because Germany has had an extended period of copyright protection since the 1960s; Spain and France also had longer periods than Great Britain before 1996.

These alterations do not affect the works of persons who are not nationals of an EU member state. Nor does a revival affect any rights that may have been acquired when the work was in the public domain, or any acts done in respect of the work during that period.

In the case of joint authorship, the post-mortem period starts at the end of the year in which the surviving author dies. The period of protection for broadcasts and cable programmes is 50 years from making, and for sound recordings, 50 years from manufacture. A special copyright for typefaces runs for 25 years from first publication. This reiterates the distinction between 'true copyright' in literary, dramatic, musical and artistic works, and a lesser protection for what some regard as non-intellectual manufactured products.

9. Restricted acts. The nature and extent of the restricted acts vary according to the class of copyright work. In this section an account is given of the restricted acts applicable to each class; those applicable to musical works are considered in more detail. It is important, however, to bear in mind two points. First, it is just as much an infringement to authorize another person to do a restricted act as it is to do the act oneself. Second, it is only necessary to be an infringement that the act is done in relation to a substantial part of the whole work. Substantiality depends upon the quality rather than the quantity of what is used.

The acts restricted by the copyright in a work are (*a*) copying the work; (*b*) issuing copies of the work to the public; (*c*) performing, showing or playing the work in

public; (*d*) broadcasting the work or including it in a cable programme service; and (*e*) making an adaptation of the work or doing any of the acts in (*a*) to (*d*) above in relation to an adaptation. An adaptation in the case of a musical work is an arrangement or transcription of the work. For artistic works the restricted acts are: (*a*) reproducing the work in any material form, (*b*) publishing the work, (*c*) including the work in a television broadcast and (*d*) causing a television programme which includes the work to be transmitted to subscribers to a diffusion service.

Copying is the most fundamental of the restricted acts. It includes such acts as writing the music in manuscript on a piece of paper, or photocopying, duplicating or printing copies; and also making a 'sound copy' of the work. This may be done, for instance, by recording a live performance, by re-recording an existing recording on to tape or disc, or by recording the work on the soundtrack of a film. If the result is to create a material form of the work, then the making of that form is copying. Even though such changes are made as to make the new work a copyright work in its own right (for example, a piano-vocal score of an opera), the copyright in the original is still infringed if the permission of the owner of the copyright in the original has not been obtained. The test of infringement is as much aural as visual.

Publication is the issue of reproductions of the work to the public. It is not necessary that any payment should be made for this to be an infringement.

Public performance is one of the most important rights for the composer of musical works. Performance takes place when the music is heard, whether it emanates from a live performance, a tape recorder, a jukebox, a television or radio receiver or a film projector. A public performance is one which is not domestic. It includes performances at clubs and background music in factories and offices. British law does not distinguish between the classes of performing rights known as *grands droits*, that is, dramatic performance such as the presentation of an opera on the stage, and *petits droits*, such as background music in restaurants. But the difference between these is of great significance for practical purposes, as will be explained in §13 below.

Broadcasting is the act of sending out the radio waves containing the music. This is a separate restricted act from public performance, although if an audience is present in the studio a public performance is occurring at the same time and, as we have seen, a public performance takes place whenever the programme is received by a set in the presence of a non-domestic audience.

Diffusion is the process of distributing broadcast programmes over wires. This applies, for instance, both to the relay networks in large towns which diffuse the broadcasts of the BBC and the IBA, and to local cable systems. In the case of broadcasts by the BBC and the IBA the diffuser will not be liable for infringement.

In the case of sound recordings there are three restricted acts. The first is re-recording on to another recording (for example, dubbing a disc on to a tape) and this applies whether the re-recording is done directly or from a broadcast including the disc. The second is causing it to be heard in public. This does not apply if what is played is a broadcast including the recording. It is not an infringement to play it as part of the activities of, or for the benefit of, a club, society or other organization if the following conditions are met: (*a*) the organization is not established or conducted for profit and its main objects are charitable or otherwise concerned with advancement of religion, education or social welfare; and (*b*) the proceeds of any charge for admission to the place where the recording is heard are applied solely for the purposes of the organization. The third restricted act is to broadcast a sound recording. The 1988 act provides that there can be no infringement of the copyright in a sound recording which has been published in Great Britain unless at the time of publication the recording or sleeve bore some indication of the year of first publication.

In the case of films, the restricted acts are making a copy of the film, showing it (or playing the soundtrack) in public, broadcasting it and diffusing it. A person who shows a film in public on a television set because it is broadcast by the BBC or IBA, or who diffuses a film which is broadcast by the BBC or IBA, is not liable for infringement.

The copyright in a television broadcast is infringed by making a film copy of it for other than private purposes (including making a photograph of the whole or any substantial part of the images), by making a recording of the sound part other than for private purposes, showing it or playing the sound part in public to a paying audience (which includes a special room in a public house where drinks are more expensive because of the television set) and by rebroadcasting it.

In the case of a sound broadcast the restricted acts are making a recording for other than private purposes, and rebroadcasting it.

The only restricted act in the case of a published edition of a work is the making of a reproduction of the typographical arrangement of the edition by photographic or similar means.

The fact that different restricted acts apply for the various classes of copyright works means that when something contains more than one copyright work, complicated situations may arise. For example a film may involve the copyrights of A in the film, B in the music of a disc played on the soundtrack, C in the disc, D in the script, and so on. To show the film in public the licences of A, B, C and D would be required, but to show it in a holiday camp, for instance, only the licences of A, B and D, as the right to cause a sound recording to be heard in public does not include the exclusive right to do this in a place where people reside and sleep as part of the amenities provided for residents or inmates, and therefore C's permission is not required. Some of these licences may be obtained through the organizations referred to in §13 below.

10. Infringement. The basic form of infringement of copyright is to do one of the restricted acts set out above without the consent of the owner of the copyright, and in certain cases of an exclusive licensee. This is subject to certain exceptions and defences, set out in §12 below. The person liable to be sued for an infringement is the person committing it. In the case of an infringement by reproduction the person holding the pen or operating the printing press or photocopying machine is liable. If the reproduction is by making a recording, the person operating the recording apparatus will be the infringer. In the case of a public performance, the person actually playing the music, or switching on the gramophone, is liable.

To prevent evasion, the law makes persons other than the immediate operator liable in certain instances. There is a general provision that a person authorizing an infringement is as much liable as the person actually committing it. Thus the person who hands the score to the photocopier operator and the employer of the recording technician are liable as well as the operator or technician himself.

Where a person engages an orchestra or a singer to perform at a function, and in the course of the performance infringements are committed, whether the person who engaged the orchestra or singer is liable for authorizing an infringement is a difficult question, the answer to which depends on the facts of each case, particularly the extent to which such a person had control over the choice of music.

There are provisions whereby certain matters will be presumed: for example subsistence and ownership of copyright are presumed unless put in issue.

Certain other acts, ancillary to the restricted acts, are also infringements of copyright. These concern the importation (other than for private and domestic use), sale, letting for hire, offering or exposing for sale or hire for commercial purposes of infringing articles, exhibiting such articles in public for commercial purposes, and the distribution of such articles for commercial purposes (or for other than commercial purposes but to so large an extent that the owner of the copyright is prejudiced). However, these infringements require proof of knowledge by the offender of certain facts relating to the making of the article. Proof of knowledge is not necessary in the case of committing or authorizing restricted acts (the limitations on this principle are explained in §12 below).

In the case of a literary, dramatic or musical work it is also an infringement to permit a place of public entertainment (which includes a place occasionally let for public entertainment, such as a church hall) to be used for a public performance which is an infringement. If the person permitting made no profit out of the letting, or did not know, and had no reasonable grounds for suspecting, that the performance was an infringement, he is not liable. This kind of infringement cannot be committed with relation to artistic works, films, recordings or broadcasts.

These are not in themselves restricted acts, and therefore it is only the person committing them, and not any person authorizing him, who is liable. It is, however, a general principle of the law that an employer is liable for the acts of an employee, and if this relationship exists the employer is liable (authorization is a wider concept, and there is no need for an employer-employee relationship).

A special provision governs liability for giving public performances of literary, dramatic and musical works, and causing films, recordings and broadcasts to be seen or heard in public, by means of a radio or television receiver, record player (including a jukebox) or tape recorder. The occupier of the premises where this happens is liable even if he is not the person operating the apparatus.

11. Remedies. The remedies for infringements of copyright fall into two categories: those designed to prevent the occurrence, continuance or repetition of the infringement, and those designed to give financial compensation for infringements which have already occurred.

To prevent an infringement from occurring, continuing or being repeated, an application is made for an injunction, that is, an order of the court prohibiting the infringement. As it is difficult to put an exact figure on the loss suffered by a copyright owner as the result of an infringement, injunctions are frequently sought and granted in copyright cases. An injunction is often applied for as soon as the infringement, or the possibility of it, comes to the notice of the copyright owner. If the owner can demonstrate that he has a good chance of showing, when a trial is eventually held, that his copyright has been infringed, and that he will suffer more damage if the infringement is not temporarily stopped than the alleged infringer will suffer if it is, a temporary injunction, lasting until the trial, will be granted. The person obtaining the temporary injunction will be liable to compensate the alleged infringer for being stopped if it turns out that he was not infringing. An injunction of this kind can be obtained in a few weeks, or, if the matter is particularly urgent, in a few days or hours.

Under the 1988 act it is possible for someone enjoying performing or recording rights to obtain an order for delivery up of an illicit recording of a performance which another person has in his possession, custody or control in the course of a business. An illicit recording of a performance, found exposed for sale or hire in circumstances under which a person having performing or recording rights would be able to obtain an order for delivery up, may in certain circumstances be seized and detained.

Often the parties settle their differences after the question of whether a temporary injunction should be granted has been fought out. But if the matter proceeds to a full trial, and it is found that infringement has taken place, a permanent injunction to restrain it may be granted. If an injunction of either kind is broken the court may punish the offender by imprisonment or a fine or, if the case is not a serious one, by ordering him to pay all the costs of the contempt proceedings.

A plaintiff whose copyright has been infringed is entitled to be financially compensated. Damages are calculated under two heads. First, the plaintiff is entitled to be paid as infringement damages the equivalent of the licence fee he would have charged if he had granted a licence to do the act which was done without a licence. Second, the law treats the owner of the copyright as being the owner of any infringing copy of his work – for example, sheet music copies or recordings made without his permission – so that he is entitled to claim damages for conversion in the same way as if those actual articles had belonged to him and had been disposed of without his permission; this entitles him to be paid the value of the articles. Where only part of the articles is infringing, for example one track on a recording, a proportion will be calculated. The law also entitles him alternatively to claim damages on the conversion basis, and to call for the articles, if they are still under the defendant's control, to be delivered up to him or destroyed. As an alternative to claiming damages, the plaintiff may seek to be paid all the profits which the defendant has made out of the unauthorized use of the work. The court in assessing infringement damages also has power to order additional damages to be paid if, on taking into account the flagrancy of the infringement and any benefit which the defendant has had from the infringement, as well as all the other circumstances, it considers that the plaintiff will not otherwise be adequately compensated.

An order can be made for the delivery or destruction of a film, or payment of its value, only if it is an infringement of the copyright in another film, not a literary, dramatic, musical or artistic work. No injunction can be granted to prevent a building whose construction has been started from being completed, or to have it demolished.

It is a criminal offence to make for sale or hire, or sell or let for hire, or by way of trade to offer or expose for sale or hire, or by way of trade exhibit in public, or to import into Great Britain (other than for private and domestic purposes) or to distribute for purposes of trade or for other purposes but to such an extent as to prejudice the copyright owner, a recording which the person involved knows to be an illicit recording. A person guilty of offences under these provisions is liable on summary conviction by a magistrates' court to imprisonment for up to six months or a fine. In certain circumstances a person may be liable to conviction on indictment in the Crown Court, where there is a liability to imprisonment of up to two years, or a fine, or both. Similar penalties may apply where a person does the following acts in respect of an article which he knows or has reason to believe is an infringing copy of a copyright work. These acts are: (*a*) making for sale or hire; (*b*) importing other than for private use; (*c*) possessing with a view to infringing in the course of business; (*d*) in the course of business selling or letting for sale or hire, exhibiting in public or distributing.

Another remedy available to the owner of the copyright in a literary, dramatic or musical work is that on notice being given to the Customs and Excise in specified form the Customs will confiscate printed copies brought into Great Britain by any person (except for private and domestic use) which would have been infringements had they been printed in Britain. The Commissioners of Customs and Excise may require a person giving such notice to provide them with security in respect of any liability or expense which they may incur in consequence of the notice because of the detention of any article or anything done to a detained article. This requirement of security is very unusual, as the commissioners have wide powers to seize goods the importation of which is restricted or prohibited.

12. EXCEPTIONS AND DEFENCES. The Copyright, Designs and Patents Act of 1988 provides a number of defences and exceptions from infringement where a person is alleged to have infringed copyright. One important defence whereby a person may to some extent avoid liability is by showing that he was ignorant of the facts which made what he has done an infringement.

Two situations must be distinguished. The first is where a person can show that he did not know, and had no reasonable grounds for suspecting, that copyright subsisted in the work infringed. This is very rare, as the general law – which everyone is presumed to know – gives copyright in virtually every work. However, if the defendant genuinely thought that the author had been dead over 70 years, or that the work had first been published in a country which has no copyright relations with Britain, then he will be able to make out this defence. He is not then liable to pay any damages, but he must still pay over to the plaintiff the profits he has made out of the infringement, and may still be ordered not to repeat the infringement and to deliver up infringing copies.

The second situation is where the defendant can show that he believed, and had reasonable grounds for believing, that the infringing copies were not in fact infringing copies. This could apply if the defendant had been ordered to make the copies by someone whom he reasonably believed to be entitled to give such instructions, but who in fact was not: for instance, a printer ordered to print sheet music by a music publisher. In this case the defendant is still liable to orders for an injunction, delivery up or destruction, and damages based on what the fee for a licence would have been, but not on the basis that the infringing copies are the property of the copyright owner. On this latter basis the damages are normally heavier, so this defence is of particular value.

The exceptions apply only where a *prima facie* infringement is proved or admitted, and if they are established the plaintiff is not entitled to any relief. One important exception is that in certain cases a 'fair dealing' with a literary, dramatic, musical or artistic work is not an infringement. What is a 'fair dealing' in any particular case is a matter of great difficulty, but one significant consideration is whether there is competition between the two works. The amount taken is not the only test, but if it is a great deal the defence is more difficult to make out. 'Fair dealing' applies to literary, dramatic or musical works in cases of: (*a*) research or private study; (*b*) criticism or review (including criticism or review of another work); (*c*) reporting current events in a newspaper, magazine or similar periodical; and (*d*) reporting current events by means of broadcasting or in a film. (*a*) and (*b*) apply also to artistic works. In (*b*) and (*c*) a 'sufficient acknowledgment' of the source must be given – in general the name of the work and the author.

A number of special exemptions apply to copyright material used for educational purposes. In certain circumstances short passages from published literary or dramatic (not musical or artistic) works may be included in collections published for use in schools. Literary, dramatic, musical and artistic works may be freely copied by teachers and pupils in the course of instruction provided a duplicating process is not used. This allows copyright works to be written on blackboards and in exercise books (but not to be duplicated for pupils). Copies made in this way may not be distributed to the public. A performance by a teacher or pupil to an audience consisting of a class or of people directly connected with the school is not a 'public' performance of a literary, dramatic or musical work, nor is a sound recording, film or television broadcast seen or heard in such circumstances seen or heard 'in public'. This exception does not extend to occasions to which parents are generally invited.

A broadcasting organization which has been licensed to broadcast a literary, dramatic or musical work, but not to record or film it, may nevertheless record or film it for the purposes of broadcasting it, provided the film is destroyed or the recording erased within 28 days after the first broadcast.

The special exceptions relating to artistic works are beyond the scope of this article.

A number of exceptions apply to works in libraries. A single copy of one item (which includes a musical item) in a magazine or other periodical publication can be made by a library of a government department, public body, educational establishment or professional institution for a person or for another library (including one abroad). If

copies are made for individuals, the library may not be a profit-making one. If the copies are for another library, both the sending and the receiving libraries may be profit-making, provided they are of one of the classes mentioned above, or alternatively it may be any library which lends material to the public free of charge. The same provisions apply to parts of publications other than periodicals, if the librarian making the copy does not know and cannot reasonably discover the identity of the person who can give permission. Only a reasonable proportion of the work may be supplied to an individual, but the whole may be supplied to another librarian. If the making of a copy is permitted by the above provisions, it is not an infringement of the copyright in the typographical arrangement of any published edition, even if the librarian knows the identity of the copyright owner.

The making for private and domestic use of a recording of a broadcast or cable programme solely for the purpose of allowing it to be viewed or listened to at a more convenient time does not infringe any copyright in the broadcast or cable programme or in any work included in it.

13. Copyright Tribunal. Composers of musical works often assign or license part of their copyright to a collecting society. The parts assigned or licensed are the *petits droits*, that is, the right to perform in public, but not as a dramatic presentation of an operatic work (which is one of the *grands droits*). The broadcasting and diffusing rights are often also dealt with in this way. As a result the society may have a virtual monopoly in the supply of copyright music to places of entertainment and broadcasting organizations. To prevent abuse of this situation the 1956 act set up the Performing Right Tribunal (renamed the Copyright Tribunal in the 1988 act), which is empowered to fix the rates and other conditions of licences granted by (*a*) bodies licensing the public performance or broadcasting of literary, dramatic or musical works of more than one author, (*b*) owners of the copyright in sound recordings, for causing it to be heard in public, and (*c*) the owners of the copyright in a television broadcast, to show it in public. Thus the jurisdiction of the tribunal extends to the Performing Right Society, because it grants licences for the public performance and broadcasting of the works of many authors, but not to agents granting licences on behalf of individual authors. However, in the case of sound recordings the jurisdiction extends to individual record companies as well as to Phonographic Performance Ltd. The tribunal fixes the rates, terms and conditions of the licence schemes which the licensing societies operate for classes of users, such as dance hall proprietors or jukebox operators. It can determine the conditions and charges when an applicant claims that he is within the terms of a licence scheme but has not been granted a licence. The tribunal also fixes the rates and conditions when there is no scheme (for example in broadcasting, because of the small number of users) and the applicant claims that he has not been granted a licence or that the charges, terms and conditions proposed for a licence are unreasonable.

In 1960 the tribunal was asked to determine the jukebox tariffs of the Performing Right Society for music and Phonographic Performance Ltd for records: in each case the tariffs were in substance confirmed. In 1965 the tribunal determined the terms and charges on which the Isle of Man Broadcasting Company could broadcast records, and in 1967 and in 1972 the tribunal determined the terms and charges on which the BBC could broadcast music.

The tribunal consists of a legally qualified chairman and two to four lay members. There is a right of appeal to the High Court on a question of law. The 1988 act extended the tribunal's jurisdiction, in particular providing for adjudication on rates as between right-owner and right-user.

14. Other rights of authors. The law of copyright generally does not protect the title of a work. That is usually considered to be too insubstantial. But an author is protected in certain respects from attempts to pretend that he is responsible for a work which is not his. The law of 'passing off' is employed by traders wishing to prevent rivals from using the names or marks associated with their goods, and can likewise be used by an author to prevent anyone from confusing the public as to the authorship of a work of literature, drama or music.

If the nature of the work falsely attributed to an author is such as to lead members of the public to think less of his skill or taste he may also have remedies in the law of libel or malicious falsehood.

Under the 1988 act the author of a copyright work has the right to be identified as such, but the right must be specifically asserted. Similarly the author has the right not to have his work subjected to derogatory treatment in the form of addition to, deletion from, alteration to or adaptation of the work. There is no specific protection against false attribution of authorship.

15. Performers' rights. For many years the principle applied to performers such as actors, singers and variety artists was to exclude them from copyright protection, leaving them to make arrangements for compensation entirely through contract. If they had not protected themselves by contract (and, given the weakness of their bargaining position, it was unlikely that in many cases they had done so), their remedies were to try to initiate criminal proceedings. There were obvious practical difficulties, and the criminal sanctions were rarely used. However, the 1988 act introduced rights of performance. The consent of performers to the exploitation of their works is now necessary.

A performance means a dramatic performance, including dance or mime, a musical performance, a reading or recitation of a literary work, or a performance of a variety act or any similar presentation. A performer's rights are infringed by recording the performance, broadcasting it live, showing or playing it in public, and also by importation. These rights are not assignable, although they may be transmitted by will. An infringement of any of the rights of a performer is actionable as a breach of statutory duty. The 1988 act provides for criminal offences in respect of illicit recordings.

The same penalty is applicable to the offence of broadcasting or diffusing a live performance without the written consent of the performers. It is also an offence to relay the performance over wires even to a single receiving set if that set causes the performance to be heard or seen in public.

In the case of a recording, film, broadcast, diffusion or relay made without consent it is a defence that the recording film, broadcast, diffusion or relay was made for the purpose of reporting current events, or that the

recording, film, broadcast, diffusion or relay was of another matter and the performance was only background or incidental.

It is also a defence that the person responsible for the recording, film, broadcast, diffusion or relay had the written consent of a person who said he was authorized by the performers to give such consent on their behalf, and that the person responsible had no reasonable grounds for believing that the person saying this was not telling the truth. It is an offence (maximum fine £400) to give consent on behalf of performers when one is not in fact authorized to give such consent.

16. COPYRIGHT COLLECTING SOCIETIES.

(i) Performing Right Society Ltd (PRS). A performing right in musical works was introduced into the law of Great Britain as early as 1842, but it was not until 1914 that the Performing Right Society was set up in London, although similar organizations had already come into being in several countries including France, Italy and Spain. Indeed the French society had employed an agent since about 1880 to collect royalties in Great Britain for performances of music under its control. Copyright law in Britain was extremely piecemeal before 1911, its various provisions being contained in a large number of different statutes, several of which were rather obscure. This may have helped to prevent British copyright owners from enforcing their rights effectively, for in 1911 a greatly improved Copyright Act was passed which stated the position in a single clear code, and shortly after it reached the statute book British composers and music publishers began to consider setting up a collecting society.

Accordingly the Performing Right Society was registered in 1914 as a company limited by guarantee and without share capital. There is no entrance fee or commission, and all royalties collected by the society are distributed among the members according to the success of their works, after the deduction of administration costs. There are 24 directors, of whom 12 are music publishers and 12 composers and authors; they are not remunerated for their services.

Unfortunately the society began its operations just at the outbreak of World War I, and this set back the expansion of the organization. The society had to fight several court actions for infringement during the first two decades in order to establish its rights, but after that the composers' entitlement was widely recognized by music users, and PRS had come to represent virtually all the composers and publishers of copyright music in public demand.

On joining the society, a member vests in PRS the control of the public performing right in his works. This enables the society to grant permission on behalf of the member for the public performance, broadcasting and diffusion of his works, and to collect royalties for the issue of licences granting this permission. The society is concerned only with non-dramatic musical works, and not with ballets, operas, musical plays and other dramatico-musical works performed in their entirety by living persons on stage, nor with non-musical plays or sketches.

The society's licence covers not only the works of its own members, but by virtue of the contracts of affiliation it also includes a worldwide repertory of the works of members of foreign societies. The licence provides music users with a general permission to avail themselves of any of the works under the society's control. PRS operates direct in Great Britain and Ireland, and through agencies in some of those Commonwealth countries where there is no independent society. By the contracts of affiliation with foreign societies, payment for the performance of works of PRS members is collected abroad.

Licences are granted for an annual royalty to the proprietors of premises at which music is publicly performed, or to promoters of musical entertainments not covered by a licence issued to the proprietors of premises. Sometimes a licence is issued for the use of the society's repertory at a single performance or a short series of performances. Generally the terms of a licence are fixed by agreement with a body representing the music users to whom a particular tariff is to apply, but a music user or his representative may refer any tariff that he considers unreasonable to the Copyright Tribunal. This is now established under the Copyright, Designs and Patents Act 1988 to resolve disputes between licensing bodies and any music user requiring a licence from them. It replaces the former Performing Right Tribunal, which had been set up in 1956. A number of the society's current tariffs have been approved by the tribunal, including those relating to commercial dance halls, variety entertainments, popular concerts, bingo clubs and jukeboxes.

Over 100,000 places of entertainment in the British Isles are covered by the society's licence, and these include theatres, concert halls, cinemas, hotels, restaurants, discothèques, shops, cafés, piers, holiday camps, caravan parks, bandstands, clubs, dance halls, schools of dancing, skating rinks, town halls, church and village halls, public houses, factories, bingo halls, aircraft, cruise ships, amusement arcades and fairgrounds. The broadcasting organizations are also licensed for their sound and television broadcasts. The society's licence for both live performances and broadcasts stipulates that regular returns of the music to be performed are to be made by the licensee. It is on the basis of these returns and the length and nature of each work performed that the royalties collected by the society are shared out among the members and affiliated foreign societies. The society has established rules binding on all members for the division of royalties between the composers, authors and publishers concerned. The normal basis of division for an original work is two-thirds to the writers and one-third to the publisher. These divisions may by agreement be varied within certain limits, the publisher's share not to exceed 50%. The rules also require the publisher to pay the writers' shares directly to the composer and author concerned, and such royalties thus become the writers' property unaffected by their contracts with publishers.

The society's licence is required for any public performance of the copyright music it controls, regardless of the object of the entertainment or the nature of the premises, and irrespective of whether a charge for admission is made. It is immaterial whether the performance is given by live performers, or by such means as a radio, television, gramophone, sound film or tape recorder. The society is a member of CISAC.

(ii) Mechanical-Copyright Protection Society Ltd (MCPS). In several countries a mechanical rights society was formed before a performing rights society, and this happened in Great Britain. There had been no mechanical right in that country before the Copyright Act was passed in 1911, but a Parliamentary Committee on Copyright in

1910 recommended that it should be introduced, and in anticipation of the new right the Mechanical Copyright Licences Company Ltd was founded in the same year. Shortly afterwards a similar organization, the Copyright Protection Society Ltd, was founded, and in 1924 the two bodies were amalgamated to form the present Mechanical-Copyright Protection Society Ltd.

The only source of revenue in the early days was the income from gramophone recordings, but in the period before World War II new receipts began to flow in from sound films and from radio broadcasting; and they increased rapidly in the postwar years, particularly after the rise of television. Members do not assign their relevant rights to the society, as they do with the PRS. Instead the society collects its members' entitlement to recording royalties as their agent only. The former statutory licence has been abolished. In its stead a scheme has been introduced under which licences are made available for record companies to manufacture and distribute records. The rate is now 8·5% of the published dealer price, and was fixed by the Copyright Tribunal in its decision on a reference made to it in 1991. Thus the income of the society is largely linked to the sales of the gramophone industry, and its income has increased as record manufacturers have succeeded as a result of technical improvements and for other reasons. MCPS is now a member of BIEM and also of CISAC.

(iii) MCPS-PRS Alliance. While MCPS and PRS remain separate societies in terms of income, constitution, membership and guardianship of certain rights, on 1 January 1998 the MCPS-PRS Alliance was formed for corporate identity purposes, and as a unified operational force. It is served by a jointly owned operating company into which the assets have been transferred, with a combined staff and a single chief executive.

(iv) Phonographic Performance Ltd (PPL). In 1934 in a British case of supreme importance to the record industry it was decided that the Copyright Act 1911 did not, as had been widely supposed, merely protect manufacturers against their records being copied by rival manufacturers, but also gave them a performing right in the record. Thus people giving public performances of music by means of recordings must obtain a licence not only from the owner of the copyright in the music (generally through PRS), but also from the record manufacturer (through PPL). Shortly after this decision PPL was incorporated in 1934 to exercise the right; it is a company limited by guarantee without share capital, and was founded by the leading British record manufacturers in order to control the public use of their recordings and to issue licences for that purpose. All revenue accruing from licence royalties is distributed among the recording companies, and the recording artists and musicians. There are similar organizations exercising the record manufacturers' right in Australia, New Zealand, Germany, Scandinavia and India.

IV. Former British-administered territories

Generally the former British colonies tended to follow the mother country in copyright matters when they became independent, but as Great Britain has followed EU principles a divergence has sprung up within the Commonwealth.

1. Australia and New Zealand. 2. Canada. 3. Other regions. 4. Accredited agents.

1. Australia and New Zealand. In Australia the Copyright Act of 1968 provided for a post-mortem term of protection of 50 years. By the Copyright Amendment Act of 1986, protection for computer programs was introduced. New Zealand copyright law closely follows that of Australia.

The Australasian Performing Right Association (APRA) was founded in 1926; it controls in both Australia and New Zealand, as well as in Fiji, Papua New Guinea and certain other territories in the region, the performing rights in its members' musical works. The head office and administrative centre of the organization is in Sydney. Because of the vast size of the territories controlled and the sparseness of population, complete control of the use of its repertory has often proved difficult, and consequently the administrative cost of collecting the royalties has sometimes been rather high. APRA is a member of CISAC.

Mechanical rights in Australasia are administered by AMCOS (Australian Mechanical Copyright Owners Society Limited). This society is owned by the Australian Music Publishers' Association Limited. It covers musical works, library sound recordings and mechanical royalties from small labels for its publisher members.

2. Canada. Canada's original copyright law dates from 1921; the latest amendments were in 1995 and 1996. Canadian legislation provided for a register which was not compulsory, but which established *prima facie* evidence of the facts registered. Canada was a pioneer in the establishment of a Copyright Tribunal, setting an example which was eventually followed in Great Britain; it conducts regular reviews of the charges made by authors' societies.

The Société Canadienne des Auteurs, Compositeurs et Editeurs de Musique (SOCAN), an internationally affiliated society known also as the Society of Composers, Authors and Music Publishers of Canada, administers the performing right in the works assigned to it. It was formed in 1990 when the two previous Canadian performing right societies, CAPAC and PROCAN, merged their operations. SOCAN is a member of CISAC.

Mechanical reproduction and synchronization rights are administered by the Canadian Music Reproduction Rights Agency (CMRRA) and the Société de Droits de Reproduction des Auteurs et Compositeurs (SODRAC), both of which are members of CISAC and BIEM.

Canada was a pioneer in establishing a body with a supervisory jurisdiction over copyright collection. The original title of the Canadian collecting society was the Canadian Performing Right Society, and it was incorporated in 1925. In 1931 the Canadian government introduced a system whereby any society carrying on in Canada the business of acquiring copyrights or performing rights of dramatico-musical or musical works and concerned with issuing or granting licences for their performance in Canada must file an annual statement of its fees for the coming year. The Copyright Appeal Board set up under this system considers objections to the proposed fees, alters the statements as it thinks fit, and transmits the statements to the minister, who publishes them in the *Canada Gazette*, and they are then binding for the coming year. The Copyright Committee which recommended the setting up of the Performing Right Tribunal in Great Britain considered with approval the operations of the Copyright Appeal Board of Canada.

3. OTHER REGIONS. Newly established local collecting societies that have been set up in former British-administered territories are listed together at the end of this section.

GHANA. The Copyright Act of 1961 provided more limited protection than that of Great Britain. Indeed Ghana was at one time a prominent advocate of the rights of copyright-user countries in the emerging Third World, against what it perceived as exploitation by the copyright-owning countries in the developed world.

HONG KONG. Hong Kong returned to control by the People's Republic of China in 1997. While it remained a colony of the United Kingdom, the copyright legislation of Great Britain was extended to Hong Kong by Order in Council.

INDIA. The Copyright Act of 1957 has its roots firmly in the law of Great Britain. It followed the British Copyright Act of 1957 very closely, but it also established a register of copyright. However, registration is not a precondition for the existence of copyright, and there is no formality for protection. The 1957 act was amended in 1983 to allow India to adhere to the revised Berne and Universal Copyright Conventions. It was amended again in 1984 to deal with the problems caused by film and recording piracy.

MALAYSIA. A Copyright Act was introduced in 1969, following independence. This replaced previous colonial legislation which had applied in the various states. The current copyright law dates from 1987. Furthermore, Malaysia does not adhere to any of the international copyright conventions.

SINGAPORE. The Copyright Act of 1987 replaced the various provisions previously in force, some dating from colonial times. It established a modern Copyright Tribunal, and Singapore has taken significant steps to combat piracy.

The following collecting societies are all members of CISAC.

GHANA. Copyright Society of Ghana (COSGA)

HONG KONG. Composers' and Authors' Society of Hong Kong (CASH)

INDIA. Indian Performing Right Society Limited (IPRS)

KENYA. Music Copyright Society of Kenya (MCSK)

MALAWI. Copyright Society of Malawi (COSOMA)

MALAYSIA. Music Authors' Copyright Protection (MACP)

MAURITIUS. Mauritius Society of Authors (MASA)

NIGERIA. Music Copyright Society (Nigeria) Limited (MCSN)

SINGAPORE. Composers' and Authors' Society of Singapore Limited (COMPASS)

SRI LANKA. Sri Lanka Performing Right Society (SLPRS)

TRINIDAD AND TOBAGO. Copyright Organisation of Trinidad and Tobago (COTT)

ZAMBIA. Zambia Music Copyright Protection Society (ZAMCOPS)

ZIMBABWE. zimbabwe Music Rights Association (ZIMRA)

4. ACCREDITED AGENTS. The PRS has accredited agents in the Bahamas, Barbados, Bermuda, Cyprus, Dominica, Gibraltar, Jamaica and Malta.

V. United States of America

1. The requirement of originality. 2. Nature of musical works protected. 3. Common law copyright. 4. Works protected by United States copyright law. 5. Formalities. 6. The rights of the copyright owner of a musical work. 7. Rights in sound recordings. 8. Term of protection. 9. Copyright Royalty Tribunal. 10. Assignments and other transfers of rights. 11. Infringement actions. 12. Remedies. 13. Criminal actions. 14. Copyright collecting societies.

1. THE REQUIREMENT OF ORIGINALITY. Only works which are 'original' may be the subject of copyright protection. A work is original if it owes its origin to the author, that is, is independently created and not copied from other works. Thus a work may be lacking in 'novelty' in that it may not be the first of its kind and yet be regarded as 'original' and therefore protectable as long as the author did not copy from any prior work. As Judge Learned Hand put it: 'if by some magic a man who had never known it were to compose anew Keats's "Ode on a Grecian Urn", he would be an "author", and, if he copyrighted it, others might not copy that poem, though they might of course copy Keats'. Moreover, a very modest degree of originality will suffice to support a copyright. Thus, even if most of a given work is not original, if the author's work constitutes a 'distinguishable variation' due to his own independent efforts, this in itself will warrant copyright protection. However, such protection will attach only to the independently created matter, and not to the matter copied from others. Moreover, if the matter copied from others is itself protected by copyright then the copier may himself be an infringer even though he may claim copyright in the material which he has himself independently contributed. As long as a work is original, it will command copyright protection regardless of its artistic or creative merit. Justice Oliver Wendell Holmes long ago made the point:

> It would be a dangerous undertaking for persons trained only to the law to constitute themselves judges of the worth of pictorial illustrations [or, one may add, musical compositions] outside of the narrowest and most obvious limits. At one extreme, some works of genius would be sure to miss appreciation. Their very novelty would make them repulsive until the public had learned the new language in which their author spoke ... At the other end, copyright would be denied to [works] which appealed to a public less educated than the judge.

2. NATURE OF MUSICAL WORKS PROTECTED. The United States Copyright Act allows both 'musical compositions' and 'dramatico-musical compositions' to be protected. Since the nature of the protection accorded to these two forms of musical works varies somewhat, it is important to distinguish between them. A dramatico-musical composition consists of a dramatic work accompanied by musical compositions which form an integral part of the dramatic action. Operas and operettas constitute the paradigm form of dramatico-musical composition, but modern American musicals, such as those by Rodgers and Hammerstein or Lerner and Loewe, also qualify in this regard. Since 15 February 1972 musicians as well as composers have been able to claim some measure of copyright protection. This is because all sound recordings first made after this date may be subject to copyright protection. The copyright in sound recordings applies only to the actual sounds contained in them as

distinct from the underlying musical compositions. Therefore a sound recording copyright protects the contributions of the musicians, singers and record producers rather than the composers' underlying contributions, which must find protection under the more traditional categories of musical composition and dramatico-musical composition.

3. Common law copyright. The problems formerly posed by common law copyright in the USA no longer exist.

4. Works protected by United States copyright law. A person who is the author can claim protection for these classes of works: (*a*) literary works, which now include computer programs in American law; (*b*) musical works, including any accompanying lyrics; (*c*) dramatic works, including any accompanying music; (*d*) pantomimes and choreographic works; (*e*) pictorial, graphic and sculptural works; (*f*) films and other audiovisual works; this category has been extended by the North American Free Trade Agreement; (*g*) sound recordings, which does not include a right to public performance; (*h*) architectural works, which embraces the design of a building as embodied in any tangible expression of that design, such as a building or architectural plans or drawings.

5. Formalities. Since 1 July 1982 the previous stringent manufacturing requirements have ceased to have effect.

On all occasions when a work protected under American copyright law is published in the USA or elsewhere with the authorization of the copyright owner, a notice of copyright should be placed on all copies distributed to the public. This should comprise (*a*) either the symbol © or the word 'copyright' or the abbreviation 'copr.', with (*b*) the year of first publication of the work and (*c*) the name of the copyright owner. Under the amendments to United States copyright law brought about by American ratification of the Berne Convention, protection is now afforded both to American works and to works of foreign origin which were first published in the USA after 1 March 1989 without having a notice of copyright attached to them. The advantage of attaching the claim to copyright is that it allows a right-owner to bring an infringement action. In any case, authors should always put copyright notices on their works as this is a considerable deterrent to plagiarism. If no copyright notice is present, it is likely that any award of damages made by a court will be lower.

Within three months of publication the owner of the copyright or the exclusive right of publication of a work published with notice of copyright in the USA should deposit in the Copyright Office two complete copies of the best edition of the work, or if a sound recording two copies of that recording. This deposit is for the benefit of the Library of Congress, although it is no longer mandatory.

Registration of copyright in the USA is no longer mandatory. But the owner of any copyright work first published outside the USA may register a work by making application to the Copyright Office with the appropriate fee, and by depositing one complete copy of the work. Copies deposited with the Library of Congress may be used for this purpose. Although registration is no longer necessary for foreign works from Berne Copyright Union countries, it is still advisable. In the event of any litigation there would still be considerable advantages if the work were registered. The USA interprets the Berne Convention as permitting formalities which are not in themselves conditions for securing copyright protection, but which lead to improved protection.

Previously the provisions of United States copyright law on the subject of performance in public were not so favourable to copyright owners as those obtaining in Great Britain. For example, before 1976 a performance of a musical work was an infringement only if it was for profit. The formidable American coin-operated record-playing machine industry, otherwise known as the jukebox lobby, had managed to secure an exemption for jukeboxes from being classified as vehicles of profit, so their owners were not at that time obliged to pay royalties for making use of musical works in copyright.

Under the new legislation one of the exclusive rights of the copyright owner is to perform a work publicly, without any question of profit. This applies equally to literary, dramatic, musical and choreographic works, as well as to pantomimes, films and other audiovisual works. However, under §114 of the new United States copyright statute, the exclusive rights of the owner of copyright in a sound recording are stated in terms that do not include any element of public performance.

Jukeboxes are now covered by §116A of the statute, which was passed on 31 October 1988. It deals with negotiated licences, and limits exclusive rights in the absence of a negotiated licence. These extensions to the American right of public performance should benefit the incomes of authors, composers and publishers of musical works who enjoy significant performance of their works in the USA.

In situations where sound recordings of a non-musical work have been made available to the public in the USA with the authority of the copyright owner, by process of law any other person may obtain a compulsory licence to make and distribute sound recordings of that work. This is the right which in Great Britain used to be known as the mechanical right. The appropriate notice must be served on the owner of copyright. He is entitled to a royalty for each of his recorded works of either 2·75¢ in total or 0·5¢ per minute of playing time, or fraction thereof, whichever amount is the greater. A failure to file or serve the appropriate notice forfeits the chance to obtain a compulsory licence. In the absence of a compulsory licence, to make or distribute records in these circumstances constitutes an actionable infringement of copyright.

6. The rights of the copyright owner of a musical work. The rights of the copyright owner of a musical work include the exclusive right to copy, print, vend, publish, arrange or adapt it, publicly perform it for profit and record it. Of these, the most significant rights are to copy, perform and record.

(i) The right to copy. A copyright owner is granted the exclusive right to make copies of his work. With musical works this applies mainly to printing sheet music. But it also includes such other forms of copying as reproducing lyrics unaccompanied by musical notes, and music as a part of the soundtrack of a film. Apart from soundtracks, however, the right to copy does not include the right to prohibit the making of sound recordings of a musical work. Such protection must be afforded under the right

to record. The making of copies constitutes an infringement even if they are not made for commercial purposes.

(ii) The right to record. Under both common law copyright and statutory copyright the authors of a musical work have an exclusive right to prohibit the recording of their work. However, under statutory copyright, once the copyright owner of a musical work consents to its recording, a 'compulsory licence' is imposed upon the work. This means that anyone other than the first person to make such a recording may also make a recording of the same work provided he pays to the copyright owner 2¢ for each recording which he manufactures based upon the work. For the copyright owner to be entitled to receive this royalty, he must first file a notice of use with the Copyright Office. Then if the person making the recording fails to pay the statutory royalty of 2¢ per record, he may upon court order be required to pay a total royalty of up to 8¢ per record. There is some dispute in the courts whether one who pays his 2¢ per record royalty may not only record anew the musical composition in question but may also simply reproduce the sounds of the first authorized recording. Clearly to do the latter would infringe the statutory copyright in the sound recording itself (if the original recording were first made on or after 15 February 1972) and might infringe the common law copyright in the recording (if it were first made before 15 February 1972). The question is whether such conduct would also infringe the copyright in the musical composition as distinct from that in the sound recording.

(iii) The right to perform publicly. An unauthorized performance of a copyright work does not automatically constitute copyright infringement. The copyright owner has the right to control only public performances of his work. Moreover, with respect to musical compositions (unlike dramatic works), the copyright owner may only control public performances of his work for profit. Thus a private performance or a public performance not given for profit will be immune from the control of a copyright owner.

A performance is public if it is open to members of the public generally. They need not be assembled in order to hear the performance. Thus it has been held that a radio broadcast of a musical work constitutes a public performance even though no members of the public are within the radio studio at the time of the broadcast, and the people who hear it over the radio do so in their individual homes rather than in an assembled group.

A performance is 'for profit', even if no charge is made for admission to it, so long as the performers directly or indirectly reap some remuneration from it. Thus a musical performance in a restaurant was held to be for profit, even though the patrons paid no additional sum for it. As Justice Holmes said of such a case,

> the defendants' performances are not eleemosynary. They are part of the total for which the public pays, and the fact that the price of the whole is attributed to a particular item which those present are expected to order is not important. It is true that the music is not the sole object, but neither is the food, which probably could be got cheaper elsewhere. The object is repast in surroundings that to people having limited powers of conversation or disliking the rival noise give a luxurious pleasure not to be had from eating a silent meal. If music did not pay, it would be given up. If it pays, it pays out of the public's pocket. Whether it pays or not, the purpose of employing it is profit, and that is enough.

As stated above in §II, copyright collecting societies, or performing rights societies, control only *petits droits*, or non-dramatic performing rights, as distinct from *grands droits*, or dramatic performing rights. The latter concern the performance of a musical composition as part of a dramatic presentation. An operatic performance is, of course, a dramatic or grand performance. But so is the presentation of a musical work as a part of a film where the musical performance furthers the action in the story. The authorization for a grand or dramatic performance must be obtained directly from the copyright owner, since such rights are not available from the performing rights societies.

The distinction between a musical composition and a dramatico-musical composition is relevant here, since the copyright owner of a musical composition may prohibit only public performances of his work for profit, while the copyright owner of a dramatico-musical composition may prohibit any public performances of his work whether for profit or not.

7. RIGHTS IN SOUND RECORDINGS. The copyright in a sound recording (the sound of the performers as distinct from the music being performed) is more limited than the rights accorded to a musical composition. The right of reproduction, which is the primary right granted in a sound recording, prohibits only the duplication of the actual sounds in the recording and does not protect against imitation or simulation of such sounds.

8. TERM OF PROTECTION. A fundamental change in United States copyright law was effected by the Copyright Act of 1976. The term of copyright for a work created on or after 1 January 1978 now lasts for the author's life and 50 years thereafter. Thus American law has been brought into line with that of other advanced countries, particularly as further amendments in 1988 allowed the USA to ratify the high-standard Berne Convention. However, the EU has moved ahead of the USA with a post-mortem period of 70 years.

Any copyright whose first term under the previous law was still subsisting on 1 January 1978 now lasts for 28 years from the date when it was originally secured. The copyright owner or his representative may apply for a further term of 47 years within a year before the original term expires. The duration of any copyright, the renewal term of which was subsisting at any time between 31 December 1976 and 31 December 1977, or for which renewal registration was made between those dates, is extended for 75 years from the date when copyright was originally secured.

9. COPYRIGHT ROYALTY TRIBUNAL. The Copyright Act of 1976 established a Copyright Royalty Tribunal, charged with setting reasonable rates of copyright in connection with the exercise of rights, particularly those in the music field. Its sphere of operation is akin to that of the Copyright Tribunal in Great Britain. The American tribunal seeks to achieve several economic objectives: (*a*) to maximize the public availability of creative works; (*b*) to give the copyright owner a fair return for his creative work and a fair income in the light of prevailing economic conditions; (*c*) to reflect the relative roles of the copyright owner and the copyright user in the product made available to the public, having regard to relative creative contribution, technological contribution, capital investment, cost, risk and contribution to the opening of new markets for creative expression and media for their communication; (*d*) to minimize any disruptive impact on

the structure of the industries involved and on generally prevailing industry practices. A decision of the tribunal may be appealed to the United States Court of Appeal within 30 days.

10. Assignments and other transfers of rights. Copyright may be sold or made the subject of a gift or otherwise assigned. It may also be inherited either by will or by intestacy. An assignment must be in writing and signed by the copyright owner. Compliance with the relevant statute of wills (usually requiring documentation and witnesses) must be observed in order to transfer copyright by will.

11. Infringement actions. In order to prevail in an infringement action the copyright owner must prove that the defendant has copied his work. If the defendant's work is similar to that of the copyright owner's, but if such similarity is due to coincidental independent creation by the defendant, then no infringement action will lie. But how can the plaintiff prove that the defendant has copied from him? The courts have held that the plaintiff need only prove two elements in order for the court to infer the fact of copying. These are access and substantial similarity. Access generally means the opportunity to copy. That is, the plaintiff's work must have been available to the defendant so that the defendant could physically copy the plaintiff's work if he were inclined to do so. Substantial similarity requires showing that the two works, the copyright owner's and the defendant's, are largely the same. Infringement occurs even if the two works are not absolutely and completely identical. On the other hand, if the only similarity between the two works is that of the abstract idea upon which both are based, then no infringement action would lie even if a defendant copied the idea from the plaintiff. Ideas as such are not subject to copyright protection. (Neither is the title of a work unrelated to the work itself.)

Every work is capable of being expressed in various degrees of abstraction. The most abstract level of expression cannot be protected. The most specific level (word-for-word copying) can obviously be protected. Somewhere between the most abstract level and the most specific level the courts draw a line which divides permissible copying of ideas from impermissible copying of what is called the 'expression' of ideas. Even when the similarity is verbatim, if it is sufficiently insubstantial in quantity and sufficiently unimportant in quality, it may be copied under what is sometimes called the doctrine of 'fair use'. In a musical context, there is a belief that up to three bars of music may be copied verbatim without constituting copyright infringement. That is not so. If the three bars are of great importance in the original work, then copying them will constitute copyright infringement. On the other hand, in certain instances it may be possible to copy more than three bars without infringing copyright if the amount copied is both quantitatively and qualitatively unimportant.

12. Remedies.

(i) Damages. An infringer must pay as damages to a copyright owner an amount of money equal to the actual damages suffered as a result of the infringement and the defendant's actual profits realized by reason of the infringement. In statutory infringement actions, if the plaintiff is unable to prove actual damages or profits, he then is entitled to recover statutory 'in lieu' damages. The minimum recoverable is $250 per infringing transaction. The maximum recoverable is $5000 per infringing transaction, but this does not apply to infringements occurring after the copyright owner has given written notice to the defendant. All copies produced at substantially the same time will probably be regarded as part of a single infringing transaction, giving rise to only one statutory minimum award. Copies produced at substantial intervals will be regarded as separate transactions each giving rise to its own statutory minimum recovery.

Where the copyright owner satisfies the court that the infringement was committed wilfully, the court has discretion to increase an award of damages to not more than $50,000. If the infringer manages to prove that he was unaware that his acts constituted an infringement of copyright, and that this was a reasonable belief on his part, the court may reduce statutory damages to not less than $100.

In all civil proceedings in copyright matters in the USA at the court's discretion, costs may be recovered in full against any party except the state. Reasonable attorneys' fees may also be recovered. A time limit of three years applies to both criminal and civil proceedings in copyright matters.

(ii) Injunctive relief. A preliminary injunction may be obtained before the trial in an infringement action if the plaintiff can show that he will probably succeed at trial. If the plaintiff does prevail at the trial he may then be entitled to a permanent injunction against further infringement of his work. Injunctions of this kind can be served anywhere in the USA on the person named in them. They can be enforced by proceedings in any American court enjoying jurisdiction.

(iii) Impounding and destruction. Pending a trial a defendant may be required to deliver up for impounding by the court all articles alleged to infringe the copyright as well as the means for making such copies. Upon prevailing at trial the plaintiff may require that the defendant deliver up for destruction all infringing copies and all means for making such infringing copies.

(iv) Cost of suit and attorneys' fees. In a statutory infringement action it is mandatory that all costs of suit be awarded to the prevailing party. Such costs do not include attorneys' fees. However, within the discretion of the court reasonable attorneys' fees may also be awarded to the prevailing party. But this is usually done only where some element of moral blame is shown – if, for example, a defendant is a deliberate infringer or a losing plaintiff has pursued the action in bad faith.

13. Criminal actions. Any person who deliberately infringes copyright for commercial advantage and private financial gain is liable to a fine not exceeding $10,000 or imprisonment for up to one year, or both. In the case of infringement of film rights the maximum fine can increase to $25,000 for a first offence and $50,000 for a second offence. The term of any prison sentence can also be increased for subsequent offences.

Following conviction for criminal infringement a court may additionally order forfeiture and destruction of all infringing copies.

To place a copyright notice on any article falsely and fraudulently attracts a fine not exceeding $2500, as does

the removal of a copyright notice properly attached to any article.

14. Copyright collecting societies.

(i) American Society of Composers, Authors and Publishers (ASCAP). A new copyright law was passed in the USA on 19 October 1976, the first substantial revision since the basic American copyright law of 1909. Proposals to introduce a modern statute had been fiercely debated, but clashes between various interested groups had always resulted in deadlock, and special legislation was required to keep in force copyrights that would otherwise have expired.

As part of the 1998 Copyright Term Extension Act, the term of protection now provided is the life of the author plus a post-mortem period of 70 years. An amendment to this act exempts bars and restaurants from paying licensing fees for copyright music performed on radio and television on their premises. The National Licensed Beverage Association has negotiated new licence agreements covering all music usage and exempting all premises under 3500 square feet (325 square metres). The so-called Aitken Exemption in practice means that many retail outlets in the USA such as bars, shops and restaurants do not have to pay for music licences. A new type of 'per programme' licence also makes religious music cheaper for religious format broadcasters.

The performing right in gramophone records has been specifically excluded from the new statute; protection for sound recordings has been limited basically to unauthorized reproduction. The jukebox lobby, which was previously outside the definition of performance for profit in American copyright law, has lost its battle to be exempt from liability to royalties. Legislation of 1988 now provides for the negotiation of licences (see above, §5). If licences are not negotiated, then limitations are placed on the exclusive licence. These new measures are likely to swell the incomes of authors and composers in the USA.

Until 1897 Congress had not included in copyright law a performing right in musical works, and this delayed the development of a copyright collecting society in the USA. Only in 1914 was ASCAP founded as a voluntary unincorporated non-profit association, the same year as the Performing Right Society was founded in Britain. A performing right gave a collecting society in America enormous scope, for although the territory was large communications were good, and the population was spread much more evenly than in Australia and Canada, so that collection in the larger towns was practical. As various types of popular music spread across the country, there were countless performances in dance halls and clubs, restaurants and cafés which had previously been beyond the control of an individual right-owner but which a central collectivity such as ASCAP could effectively police. Then in the 1920s came a further enormous increase of popular music with the introduction of radio broadcasting, and within a year there were over 500 broadcasting stations in the USA. Naturally not all music users immediately accepted the claims of the new society, and ASCAP was obliged to establish its position by court action against broadcasters and such users of live music as dance halls.

ASCAP is managed by a board of 24 directors, of whom 12 are writers and 12 publishers. Three writer directors and three publisher members represent classical music, and directors hold office for two years. A two-thirds vote is necessary to carry a motion, with a quorum being 13 directors. Board candidates are selected by a writer nominating committee and a publisher nominating committee, whose members are appointed by retiring directors, and board members are not entitled to serve on these committees.

Members of ASCAP are elected by a majority of the board, and on election must assign to the society the right to license the non-dramatic public performance of their works for the period of any existing agreement between the society and its members. Members do not assign to ASCAP any part of the right in live performances of musical plays or dramatico-musical compositions, whether given in whole or in part. But they do assign vocal, instrumental and mechanical renderings of all kinds, including transmissions by radio and television broadcasting, telephony, wired diffusion systems and reproductions on film soundtracks. They assign rights in all compositions then or thereafter written, composed, published, acquired or owned by the member, whether alone, jointly or in collaboration with others. The society acquires the right to sue in the member's name, because the previous American copyright law did not acknowledge divisibility of copyright, and any lawsuit had to be brought in the name of the copyright owner. By the new law the ownership of copyright may be transferred in part or subdivided.

Royalty distribution is controlled by the board, and is divided into two equal accounts, one for writer members, the other for publisher members. The writer directors constitute the writers' classification committee, and the publisher members the publishers' classification committee, each of which meets at least once a year to classify each member's status for the purposes of receiving a share of the amount to be distributed. A dissatisfied member may protest to the appropriate classification committee, with a further right of appeal to the society's board. Royalties are distributed quarterly after administrative expenses and payments to foreign affiliated societies have been deducted. When a member dies his rights terminate, but ASCAP may pay a share of royalty distributions to the member's next of kin no greater than the member would have received if living. A member may not assign the rights and obligations of membership, and payment of royalties may be suspended if a member goes bankrupt or compounds with his creditors.

Radio and television broadcasting organizations may elect between two forms of licence, under either of which a licensee may perform any work in the entire ASCAP repertory. Under a 'blanket licence' a broadcasting organization pays a percentage of the total advertising revenue, plus a fixed sum for music used on unsponsored programmes. 'Per programme' licensees, on the other hand, pay a relatively higher percentage of their advertising receipts, but pay only on income from programmes making use of ASCAP music. All radio networks and most local radio stations unaffiliated with a network have blanket licences. In television, by contrast, most of the independent stations have 'per programme' licences. There is an elaborate system of programme analysis; the programmes of national networks are analysed in full, and credit is given for each station affiliated to the network by use of a multiplier. Programmes of stations with 'per programme' licences are also fully analysed, and a sample

is taken of local stations by analysing ten of them in different parts of the USA. Where samples are taken, they are multiplied by formulae established by statistical research to produce the most equitable total national performance, without undertaking the formidable administrative expense of logging individually every broadcasting station in the USA.

ASCAP's sampling system is to send tape-recording teams throughout the country to provide taped recordings of the programmes as broadcast by the stations to be analysed; these are then subject to ASCAP's process of identification. By contrast BMI (see below, §ii) asks licensees to supply once a year a log of music used in a month designated by BMI; this is prepared by the broadcasting authority itself. ASCAP considers that it justifies the extra expense of its system because of its secrecy, which prevents the entries logged from being manipulated. Against this, BMI claims that writers and publishers cannot tell which stations are going to be analysed and that any interference from this direction is forestalled and a broader basis for analysis obtained.

Anti-monopoly law or, as it is known in the USA, anti-trust law, is highly developed in that country, and the government has intervened to use it in an attempt to promote competition concerning musical performing rights. In 1941 the US Department of Justice took action against the society under the anti-trust legislation known as the Sherman Act. As a result ASCAP submitted to a consent decree (ASCAP was not taken to have infringed any law, no evidence was taken and no judgment given on the facts) by which it undertook not to license a performance for profit of any musical work on a broadcasting network, unless the single licence fixing a single royalty permitted the simultaneous broadcasting of the performance by all stations on the network, without each station needing a separate licence.

If ASCAP and a potential licensee fail to agree on a royalty, they may apply for the assessment of a reasonable fee to the Federal Court for the Southern District of New York, which supervises the judgment against the society. Pending judgment the applicant may have access to works in the society's repertory, while ASCAP can ask the court to fix an interim royalty. The consent decree has also established that a writer need have only one normally published work in order to become a member of ASCAP. The 'per programme' licence which is open to broadcasters also resulted from the decree.

An important case in 1948, Alden-Rochelle *v.* ASCAP (78USPQ197), also involved the society's monopoly position, and was brought by some cinema proprietors who sought exemption from paying a performance royalty after they had obtained the right to exhibit the film from the film production company. It was held that by forbidding a member from assigning the film performing rights in music to the film production company when the recording right was assigned, the market for exhibition of the film was narrowed to those exhibitors having a licence from ASCAP for the performance of the music synchronized with the film, and that this was achieved by an unlawful combination with the film production companies. ASCAP was directed to divest itself of all film performing rights for musical works synchronized with films, and to reassign them to the owners of the musical works; the society was further restrained from acquiring the film performing rights in musical works, and from contracting with film producers to require exhibitors to obtain an ASCAP licence. This judgment has placed far-reaching restrictions on foreign composers of film music used in the USA.

The consent judgment has been amended from time to time since it was originally signed, and covers nearly every aspect of the society's operations.

ASCAP is a member of CISAC.

(ii) Broadcast Music Inc. (BMI). A number of broadcasting organizations opposed ASCAP's attempts to license them in the early days of radio, but ASCAP succeeded in setting up procedure for licensing them for a fixed lump sum until 1932, when the concept of a percentage of the broadcaster's revenue was introduced. That was unwelcome to the National Association of Broadcasters, but they had to accept the society's terms. That situation continued until 1940, when once again ASCAP sought to introduce new licence terms. This time the National Association of Broadcasters' members decided to boycott ASCAP music by using material in the public domain which was free of copyright, and by arranging for new music to be composed for the broadcasters, which would not pass into ASCAP's net.

ASCAP's repertory was very extensive indeed, and at that time the society had an effective monopoly, like the collecting societies in most countries outside the USA. The broadcasters were not expected to succeed, but they set up BMI to control their operation, and the boycott of ASCAP music began. It was surprisingly successful, and as ASCAP was involved at the same time in anti-trust proceedings it was obliged to settle its dispute with the broadcasting organizations. But BMI remained, and ever since has been in competition with ASCAP, although its repertory is smaller. Its initial success was largely due to its having discovered writers and composers who were not members of ASCAP, but who produced music which the public was prepared to listen to, so that BMI was able to build up its own catalogue. The prospectus under which stock in BMI was originally offered to broadcasters stated that no dividends were to be expected from the company, and no dividends have been paid. All the revenue collected by BMI is redistributed among its composer and publisher members, less a deduction for administrative expenses and reserves. Like ASCAP, BMI is subject to a consent decree under anti-trust legislation, but this deals only with music users and does not cover BMI's relations with its publisher and writer members. Dual membership of BMI and ASCAP is not allowed, but a member can resign from one organization and join the other. Both ASCAP and BMI are affiliated to foreign authors' societies, and often they are affiliated to the same foreign society. Both societies now charge for collecting on behalf of their members from foreign societies. Unlike ASCAP, BMI takes from its members the right to license dramatic performances of up to 30 minutes of opera, operettas and musical comedies, but in practice does not exercise that right.

As BMI is a private company, it is perhaps more able to temper the product it offers to meet the market than a normal authors' society with its more rigid constitution. The contracts between the company and its writers and publishers are not necessarily standard, but can be varied to meet individual cases. It also tries in various ways to make its licence more attractive to individual broadcasting organizations. BMI also provides an advisory service for

its young writers and publishers to help them with such problems as finance and investment. The board of directors of BMI is drawn from the broadcasting industry, and the stock in the company is owned by members of the broadcasting industry, who are music users. Disputes between BMI and licensees are settled according to the arbitration laws of New York with arbitrators selected by the American Arbitration Association. BMI is a member of CISAC..

(iii) SESAC Inc. SESAC is now the official name of the organization formerly known as the Society of European Stage Authors and Composers, formed in 1930. It is a private licensing company which is privately owned by one family, and it represents a number of music publishers who have put their catalogues under its control. Each year a committee decides on the relative importance of each catalogue in its repertory, and the amounts available for distribution are split up according to this variable formula. There is thus no fixed basis of distribution as with ASCAP and BMI. Both these other societies levy their royalties as a percentage of the licensee's revenue, but SESAC's charges are based on fixed lump sum payments, taking into account the location of a station, its power and hours of broadcasting. Its licence is taken out by most broadcasting organizations in the USA.

Details of musical works in SESAC's repertory are not public knowledge, as it does not prepare a printed catalogue, so it is difficult to calculate how much they are used. Unlike ASCAP and BMI, SESAC is involved in various revenue-producing activities besides simply collecting copyright royalties. It provides broadcasters with sales and production aids in connection with advertising, and offers transcribed programmes of its music to licensees. It also gives its publishers promotional aid, and licenses and collects royalties for mechanical rights in a similar way to the Harry Fox Agency (see below, §iv).

The scale of the activities of the three American organizations can be compared by looking at their receipts from performing rights licences in particular years. Thus in 1952 ASCAP received over 17 million, BMI over $5 million and SESAC about $1 million. By 1957 ASCAP's receipts were about $27 million and BMI's about $9·5 million, while SESAC's remained at $1 million. In 1963 ASCAP's income had risen to $38 million and BMI's to about $15 million, while SESAC's was still $1 million.

(iv) The Harry Fox Agency. Before 1909 there was no copyright protection in the USA for the mechanical right, that is, the right to reproduce a musical work on gramophone record or some other mechanical device such as the soundtrack of a film. But under the Copyright Act of 1909 this right was introduced for the first time. Under the new law, the royalty in respect of each work on a gramophone record is either 2·75¢ in total or 0·5¢ per minute of playing time (or fraction thereof), whichever is the larger. The Music Publishers' Protective Association set up the Harry Fox Office (now the Harry Fox Agency) to act as its members' agent in administering mechanical right licences, and it also acts for publishers outside the association if they wish to use its services. The Harry Fox Agency charges 3·5% of receipts for publishers whose receipts are above a certain sum, and 5% if the publisher's receipts are below that sum. The agency grants licences to record manufacturers and others availing themselves of the mechanical right, and collects the statutory royalty from them. The receipts are then distributed to the entitled copyright owners after the agency has deducted its percentage. Record companies' accounts are audited regularly to ensure that these royalties are correctly accounted for.

The Harry Fox Agency is a member of BIEM. American publishers can have mechanical royalties arising in foreign countries collected for them through the Fox Agency by local mechanical societies which are members of BIEM. The foreign society will collect as agent, and remittances will be made through the Harry Fox Agency and will be subject to the deduction of both the Harry Fox percentage and the charge of the local society. For collections in Europe, other than in Scandinavia, the Mechanical-Copyright Protection Society acts as agent for the Harry Fox Agency. Where the Fox Agency has direct connections with the local mechanical right society, the charge to the American publisher is lower than if the arrangements are made through the central organization of BIEM.

VI. European mainland, Ireland and Scandinavia

ALBANIA. Albania's fledgling society, ALBAUTOR, came into existence in December 1992 shortly after the enactment of the country's first law on copyright. This provides for most aspects of protection found in older-established European copyright systems. Already the society represents over 300 members, although its work has been hampered by the poor financial and social situation of the country, and the resistance to payment of copyright royalties as a form of taxation.

AUSTRIA. The Staatlich Genehmigte Gesellschaft der Autoren, Komponisten und Musikverleger (AKM) collects in Austria in respect of the performing right in musical works. A collecting society under this name was originally founded as long ago as 1897, but when Hitler occupied Austria in 1938 AKM was forcibly dissolved, and its members were obliged to join STAGMA, the German society set up by the Nazi government (see under Germany: GEMA). When Austria was liberated in 1945 a new society was set up called AKM, acting under the copyright law of 1936, which is exclusively entitled to exercise the rights it controls in Austria. Austrian copyright law was amended in 1986. AKM is a member of CISAC.

Mechanical rights in Austria are controlled by the Gesellschaft zur Wahrnehmung Mechanisch-Musikalischer Urheberrechte mbH ('Austro-Mechana'), founded in 1946, which is a member of BIEM. It is administered by 12 authors, 18 composers and 15 music publishers.

BALTIC STATES. Estonia, Latvia and Lithuania have all set up independent collecting societies since gaining independence. These are the Estonian Authors' Society (EAU), the Copyright and Communication Consulting Agency/Latvian Copyright Agency (AKKA/LAA) and the Agency of Lithuanian Copyright Protection Association (LATGAA). All are members of CISAC.

BELGIUM. The internationally affiliated Société Belge des Auteurs, Compositeurs et Editeurs (SABAM) also handles mechanical rights and is a member of both CISAC and BIEM. The society was established in 1922 and administers performing, mechanical, literary, dramatic, plastic, graphic and photographic rights, as well as home copying, rental and lending rights. A new copyright law, the Loi Lallemand, on authors' and neighbouring rights came into force in 1994, replacing the previous legislation of

1886. The term of protection is now 70 years post mortem.

BULGARIA. The Bulgarian Society of Authors and Composers for Performing and Mechanical Rights (MUSICAUTOR) was established in 1992, when a new copyright law was introduced. A previous society known as JUSAUTOR was dissolved at the same time. MUSICAUTOR is a member of CISAC, and claims to be the only significant collecting society in Bulgaria. It represents almost 1000 authors and composers, but has to contend with a severe problem of music piracy.

CZECH REPUBLIC. By a decree of 1936 a national authors' society for the former Czechoslovak Republic was granted the exclusive right to administer performing rights in that country. This was Ochranny Svaz Autorsky (OSA), based in Prague, which continued to carry out international copyright administration for the whole country until 1969. Following the formation in that year of a federation between the Czech Socialist Republic and the Slovak Socialist Republic, it was agreed that Slovensky Ochranny Zvaz Autorsky (SOZA) would carry out international copyright administration for copyright owners living in the Slovak area, while OSA would continue to perform the same function for copyright owners living in the Czech area. OSA is both a performing right and a mechanical right society, and belongs to both CISAC and BIEM. Following the break-up of Czechoslovakia into two separate states in 1992, the two societies continued operations with OSA taking responsibility for the new Czech Republic, and SOZA becoming the society for Slovakia.

DENMARK. The Danish copyright statute dates from 1961, and as a member of the EU Denmark is obliged to grant protection for the author's life plus 70 years. Selskabet til Forvaltning af Internationale Komponistrettigheder i Danmark (KODA) is the collection society for performing rights. Founded in 1926 as a direct result of the commencement of broadcasting by Danish Radio, KODA has since 1935 held an exclusive right from the Danish Ministry of Cultural Affairs to license the public performance of copyright music in Denmark, Greenland and the Faeroe Islands. KODA is a member of CISAC. In 1987 the society amended its rules to administer mechanical rights on behalf of its members. It is estimated that 99% of its membership has assigned both broadcasting and mechanical rights to KODA. The old copyright law of 1961 was replaced in 1995 by a revised law. This has extended the term of protection from 50 to 70 years post mortem, and has also implemented a number of EU directives on rental and lending, transmission by cable and satellite, and software.

Nordisk Copyright Bureau (NCB) operates in respect of mechanical rights all over Scandinavia, as well as in Denmark, although its head office is in Copenhagen. NCB is a member of both CISAC and BIEM.

Gramex is the name of a collecting society set up jointly by the Danish Group of the International Federation of the Phonographic Industry, the Council of the Joint Artists' Organizations and the Danish Actors' Union to exploit the right to equitable remuneration for the public performance or broadcasting of records. This right is enjoyed by the record manufacturers and recording artists, and is similar to the record manufacturers' right administered by PPL in Great Britain. There is a representative of the Ministry of Cultural Affairs on the board of Gramex, as well as representatives of the record manufacturers' and the performers' organizations. The revenue available for distribution is divided equally between the record manufacturers and the performers. The right-owners have only a compulsory licence, and in the absence of agreement with a licensee the matter must be referred to a tribunal appointed by the Minister of Cultural Affairs. Revenue from the Danish state broadcasting organization (Danmarks Radio) is collected at a fixed rate per minute of music used. Collection from the great number of individual users through public performance is always more difficult than collection from large, easily accessible licensees, such as broadcasters. Rather than go to the great expense of setting up a new collecting system, Gramex has come to an arrangement with KODA to present a joint account through the Gramex system, and Gramex pays KODA for this service.

Distribution of the revenue is facilitated by a sophisticated computer system, as the state broadcasting organization supplies elaborate logging details of protected records which it has used. Distribution to the qualifying artists who performed on records which have been used in licensed broadcasts is worked out by a graded system of points according to the artist's contribution. This is multiplied by the actual playing time and further multiplied according to the category of music recorded. The same technique cannot be applied to records which have been publicly performed, as there are no sufficiently accurate returns. Accordingly the record producers' share is paid out according to each record company's share of the market, while the funds available for artists are shared out among the Danish Musicians' Union, the Danish Conductors' Association, the Danish Union of Choirs, the soloists' organizations and the Danish Actors' Union. Funds are reserved for individuals who do not belong to these organizations, and also for foreign right-owners. Since Denmark ratified the Rome Convention of 1961, the performances and broadcasts in Denmark of certain foreign recordings have been protected. It is not difficult to distribute these royalties to foreign record manufacturers, but it is harder in the case of artists living abroad, as there is not an international network of affiliated societies acting as CISAC does for performing rights.

FINLAND. As a member state of the EU, Finland has extended its protection period to life plus 70 years. Its basic law dates from 1961. Saveltajain Tekijanoikeustoimisto (TEOSTO) is the internationally affiliated performing right society in Finland; it was founded in Helsinki in 1928 to safeguard its members' musical copyrights in Finland and abroad. Members assign to TEOSTO all musical performing rights vested in them, including future rights to be acquired during their membership. These are administered in the normal way by authorizing public performances and collecting royalties, and the society may take civil and criminal action against infringement. TEOSTO is much assisted by a decree of 1941 which stipulates that when permission is given for a public entertainment the licence must contain a warning that copyright law is to be complied with. This also applies to licences for such establishments as cafés and hotels. Royalties collected are distributed among members less a deduction for administrative expenses. TEOSTO is a member of CISAC.

FRANCE. The protection of the author's right, and particularly the performing right, appears to be a cornerstone of the law. In common with other major countries which have traditionally been in the forefront of copyright protection, during the 1980s France perceived the need to overhaul and modernize its copyright legislation in response to the rapid changes brought about by technology. Accordingly, a new copyright law was enacted in 1985. France is a member of the major international copyright conventions. As a member of the EU it will have to extend protection to a post-mortem period of 70 years.

Since the true home of the concept of collecting societies for authors' rights is France, it is somewhat surprising that there is no law specially governing them there. The first such body was a bureau for collecting royalties for writers and composers of dramatic works which was established as long ago as 1791, the year that the right of public performance was introduced into French law. This became in 1829 the Société des Auteurs et Compositeurs Dramatiques (SACD), which is still active today. Indeed, there are still many countries in which dramatic authors have been unable to set up a parallel society for the defence of their rights.

(i) Société des Auteurs, Compositeurs et Editeurs de Musique (SACEM). Set up in 1851, SACEM was the first society for collecting performance royalties for musical works. It was established following the refusal in 1847 of the composers Alexandre Bourget and Victor Parizot to pay their bills at a restaurant where the proprietor used copyright music, performing it publicly without payment. They then embarked on an action before the Tribunal de Commerce de la Seine to prevent the unauthorized performance of Bourget's works. This decision was finally confirmed by the Cour d'Appel de Paris, and the two composers formed a group which founded the Agence Centrale pour la Perception des Droits d'Auteurs et Compositeurs de Musique in 1850; in the following year this became the organization now known as SACEM.

Initially the struggle to establish its position and authority was extremely difficult, and SACEM was often obliged to resort to the courts, where it was generally successful. Gradually it increased in strength, and the royalties collected for distribution to the members grew. Eventually SACEM wished to extend its operations outside France, and in 1878 an agency was set up in Belgium. A persuasive campaign led by SACEM resulted in the Belgian parliament's passing a law for the protection of literary and artistic property in 1885, after which agencies sprang up in a number of other countries, including the Netherlands, Switzerland, Spain, Greece, Monaco, Portugal, Egypt, Romania, Syria and eventually Great Britain. Foreign authors in countries which lacked a national collecting society were glad to allow an agency of the French society to protect their interests. In due course foreign authors began to form their own national societies, which became affiliated to SACEM and replaced the agencies. There is no doubt that it was the example of SACEM which led to similar societies being successfully established all over the world.

SACEM is administered by a tripartite committee consisting of five author members, five composer members and five publisher members. If possible the royalties collected are based on a percentage of receipts, but where this is not feasible an annual lump sum payment may be made. The state broadcasting organization pays a single lump sum for the use of the rights controlled by the following four organizations: SACEM, the dramatic right society SACD, the literary society Société des Gens de Lettres de France and the international mechanical right organization (BIEM, and SDRM; see below). SACEM is a member of CISAC and BIEM.

SACEM also administers authors' rights in French overseas territories, Luxembourg, Lebanon and most of the former French colonies in Africa.

(ii) Société de Droit de Reproduction Mécanique (SDRM). The mechanical right was first recognized by the French courts in 1905, and collections in respect of it were originally made exclusively by individual companies. SDRM, an offshoot of BIEM, was founded in 1935 and is a non-profit organization exercising the mechanical right and organized by the right-owners themselves. Collection for the manufacture of recordings is based on a percentage of the retail price of recordings sold, which is distributed to the entitled members. While SDRM exists as a separate legal entity, it technically has no staff, and all its activities are now undertaken by SACEM. The administration of the two societies is now integrated, and mechanical right royalties collected by SDRM are passed over to SACEM for distribution. SDRM is a member of BIEM.

GERMANY. Germany has been responsible for many changes which have taken place in copyright law in recent decades. The Federal Republic of Germany was the first state to adopt protection for the life of the author plus 70 years, in its copyright statute of 1965, and this was the model which the EU later imposed on all member states. The former German Democratic Republic was absorbed into the German Federal Republic, which is a member of the main international copyright conventions.

Performing and mechanical rights in Germany are administered by the Gesellschaft für Musikalische Aufführungs- und Mechanische Vervielfältigungsrechte (GEMA). Shortly after a new copyright act was passed in Germany the Genossenschaft Deutscher Tonsetzer participated in setting up an institute of musical performing rights, Anstalt für Musikalische Aufführungsrechte (AFMA), in 1903. This was the forerunner of GEMA, which carried on operating an authors' society until 1933. In that year the society was converted into the Staatlich Genehmigte Gesellschaft zur Verwertung Musikalischer Urheberrechte (STAGMA), under which name it continued until the end of World War II. The society then resumed its operations under Allied supervision. The present title was adopted in 1947 (retaining the old acronym GEMA), since when the society has succeeded in establishing itself as an extremely effective means for administering copyright in musical works. Since 1938 the Anstalt für Mechanisch-Musikalische Rechte (AMRE) has been affiliated to GEMA as a special department.

In 1971 GEMA was the subject of a decision by the Commission of the EEC which may have far-reaching consequences for authors' societies. It was the result of an investigation brought under the anti-monopolistic provisions of the Treaty of Rome, in particular article 86 thereof, and in certain respects the decision strikes at the very roots of the principles upon which successful authors' societies have hitherto operated, namely that no society may collect upon the territory of a foreign society to

which it is affiliated, and that no individual may be a member of more than one society at a time, being encouraged to join his national society. It remains to be seen what effect this will have on collecting societies within the EU and elsewhere, for in the Netherlands and Switzerland the state intervened to create in each country a monopoly position because competition between authors' societies had not been found to benefit either music user or copyright owner, and laws were passed to prevent the agency of a foreign society acting there.

When the German Democratic Republic was established within the Soviet bloc after World War II, a separate organization, Anstalt zur Wahrung der Aufführungsrechte auf dem Gebiete der Musik (AWA) was set up in that territory. In October 1990, on the occasion of German reunification, GEMA assumed responsibility for the activity formerly carried out in the DDR by AWA. GEMA membership was offered to AWA's members, and GEMA started up licensing operations in the east. GEMA had expected that the starting up of operations in the former DDR would be a financial liability for some years, but after only one year the investment had been recovered, and the operation was in surplus. GEMA is a member of both CISAC and BIEM.

GREECE. The Société Anonyme Hellénique pour la Protection de la Propriété Intellectuelle (AEPI) is both a performing right and a mechanical right society. By Greek law societies for the protection of authors' rights are entitled to represent their members before any administrative or judicial body, to control the sales of printed music, discs and other mechanical reproductions of music and the visual arts for copyright purposes, and to administer the copyright in performances of musical works. OPI, the Greek copyright organization, is responsible for supervising the operations of collecting societies. AEPI is a member of both CISAC and BIEM.

HUNGARY. Before World War II there was an authors' society in Hungary known as MARS, which administered the performing rights in non-dramatic music but did not control dramatic performances. This society continued operations until 1953, when its functions were taken over by ARTISJUS. ARTISJUS controls both performing rights and mechanical rights, and is a member of both CISAC and BIEM. A new copyright law for Hungary was introduced in 1996.

ICELAND. Iceland's revised copyright law dates from 1972. It has not joined the EU but is a member of the European Economic Area. Samband Tonskalda og Eigenda Flutningsretter (STEF) was formed in Reykjavik in 1948, four years after a fully independent republic was re-established in Iceland. Apart from the difficulties of operating a collecting society in a state whose population was then less than 200,000, there was considerable resistance from potential licensees in the early days, and STEF had to resort to an unwelcome amount of court action to establish its rights. The society did, however, achieve a pioneering success in a direction where larger societies had not been so successful. In an action for infringement by the unauthorized performance of copyright works on the radio of the American forces' base in Iceland, STEF successfully established the society's entitlement to copyright royalties. Its operations are now fully accepted in Iceland's culturally advanced society. STEF is a member of CISAC.

IRELAND. Like other member states of the EU, the Republic of Ireland follows the union's copyright rules. Until 1 January 1995 the administration of performing rights in Ireland was carried out by the PRS in London. But on that date the Irish Music Rights Organisation (IMRO) took over operations in Ireland formerly administered by PRS. Mechanical rights in Ireland are administered by MCPS Ireland, which works in close conjunction with IMRO.

ITALY. The structure of copyright law in Italy has been rather antique, and the basic law of 1941 has had to be amended on a number of occasions in order to reflect technological changes. Italy is a member of the Berne and Universal Copyright conventions, and in common with other member states of the EU has adopted a term of copyright protection of the author's life plus 70 years.

The Società Italiana Autori ed Editori (SIAE) was founded originally in Milan in 1883 and transferred its administrative centre to Rome in 1926. The society's position is extensively dealt with under the copyright act of 1941, amended in 1979, which gives it the status of a corporation of public law, its staff being regarded as public employees and its agents as public officials. Its annual accounts must be submitted to the ministry responsible for commerce, which also exercises general supervisory powers over the society. SIAE has the exclusive right to act as intermediary in collecting royalties for the rights it controls, although the author as right-owner may act directly if he chooses. SIAE is therefore effectively a monopoly, despite being in a member state of the EU. It is also responsible for collecting royalties for works in the paying public domain, which is a particular feature of Italian copyright law. In addition the society collects for certain dramatic performances, state-subsidized films and the entertainments duty. SIAE represents those right-owners who have given it a specific mandate entrusting the society with the protection of their entire copyright. In line with the EU directive, the term of copyright protection has been extended to 70 years from the death of the author. Although it is an autonomous organization, SIAE has unusually close links with the Italian government, and two of its main board directors are government-appointed. SIAE is a member of CISAC.

The Società Esercizio Diritti Riproduzione Meccanica (SEDRIM) was until 1971 an internationally affiliated society for administering mechanical rights, with its head office in Milan, and it was a member of BIEM. In that year its functions were taken over by SIAE.

NETHERLANDS. Until 1932 there were two organizations in the Netherlands collecting authors' rights. One was the Bureau voor Muziek-Auteursrecht (BUMA), which at that time was formed by the Society of Netherlands Composers and the Association of Dutch Music Dealers and Publishers. The other was the agency of SACEM, the French performing right society. Competition between the two societies led to difficulties, and the national copyright law was amended in 1932 to provide that intermediaries handling musical performing rights must be licensed by the Minister of Justice. The basic copyright law of the Netherlands is contained in an act of 1912, but this has also been amended, in 1972, 1990 and 1995. The licence was granted to BUMA, the Dutch organization, and, as SACEM was not allowed to continue, it transferred its repertory in the Netherlands to BUMA, and ceased to be

an independent performing right organization there. It was suggested that this conflicted with the provision of the Berne Copyright Convention that the rights granted should be enjoyed and exercised without being subject to any formality, but the Minister of Justice held that this was not so. An individual author was not compelled to join BUMA, but remained free to control his rights himself. The rights of the convention were vested in the author, not the intermediary, and the new Dutch law only affected the operation of the intermediary.

Two new societies became members of BUMA to provide for a broader representation. One was the association of men of letters, the other the trade union of writers of light music. Thus the four organizations are members of BUMA, and their members in turn are automatically eligible for affiliation with BUMA. But writers and publishers who are not members of one of the four organizations may nevertheless become affiliates of BUMA. The board consists of representatives of the four associations and certain members appointed by the Minister of Justice. Directors hold office for two years, with half their number retiring each year. A government commissioner assisted by a committee of consultation is appointed by the Minister of Justice. He acts as an impartial observer in disputes involving the management and board of BUMA, and has overall responsibility for seeing that the rules of good management are adhered to.

The society is a non-profit organization which distributes all its receipts among its members after deducting administrative expenses. Licensees submit returns listing works performed; these returns are analysed, and broadcasting and performance royalties distributed on the basis thereof. The nature of the work is an important consideration in arriving at distribution entitlement. 'Serious' music is also given more credit than light and popular music and is also subsidized by BUMA in other ways: for example, live performances are not charged with administration expenses. Part of BUMA's income is used to support organizations furthering the development of Dutch musical life. BUMA is a member of CISAC.

Mechanical rights in the Netherlands are administered by the Stichting tot Exploitatie van Mechanisch Reproductie Rechten der Auteurs (STEMRA), a non-profit organization closely connected with BUMA. The director and committee of STEMRA are appointed by the general committee of BUMA. STEMRA is a member of BIEM.

BUMA and STEMRA have now amalgamated many of their operations and, though still individually responsible for the performing and mechanical right elements, generally operate as BUMA/STEMRA.

NORWAY. Norway has remained outside the EU but is a member of the European Economic Area. Its basic law on copyright dates from 1961 and reflects the close cooperation and consultation of the member states of the Nordic Council.

Norsk Komponistforenings Internasjonale Musikkbyra (TONO) was formed in 1928, and has its head office in Oslo. It offers two categories of membership to music writers and copyright owners: full membership, which carries with it voting rights, and associate membership, without voting rights. The society administers all performing rights for its members except for non-musical dramatic works and literary works. TONO is a member of CISAC.

POLAND. Stowarzyszenie Autorów (ZAIKS), the Polish society of authors, composers and publishers, was formed as long ago as 1918, and its membership extends to most writers and publishers of music in the country. It controls performing rights and mechanical rights, and is a member of both CISAC and BIEM. A new copyright law was passed in 1994 which extended copyright protection to 50 years post mortem, from the previous period of 25 years. Protection to neighbouring right-owners was granted for the first time, together with tougher penalties for piracy. This law also effectively removed the *de facto* monopoly position that ZAIKS had enjoyed, in consequence of which many new collecting societies have come into force in Poland.

PORTUGAL. The Sociedade Portuguesa de Autores (SPA) was for many years known as Sociedade de Escritores e Compositores Teatrais Portugueses (SECTP) and was founded in 1925 to protect its members' interests and to administer both their performing and their mechanical rights. The society is the only body authorized to act as a copyright collecting society in Portugal. Portuguese copyright law was for many years unusual in that copyright was perpetual, but from 1966 the more usual period of 50 years from the author's death was in force. The post-mortem period is now 70 years, in line with EU policy. SPA is a member of both CISAC and BIEM.

ROMANIA. The Uniunea Compozitor si Muzicologilor din Romania/Association Droits d'Auteur (UCMR/ADA) achieved fully independent status from the old Romanian Musicians' Union in 1996. A new intellectual property law was passed that year bringing Romania to the same international standards as most of the rest of Europe in respect of authors' and neighbouring rights. The duration of protection for composers is now 70 years post mortem. The new law also abolished the legal monopoly which the society had previously enjoyed. All composers are accepted as members without preconditions. But, in the face of the economic and social conditions in Romania, the society is struggling to change the perceptions of copyright users, the public and its own members in their attitudes towards copyright and the protection of intellectual property in general.

RUSSIA. See below under (former) USSR.

SLOVAKIA. (See former history under CZECH REPUBLIC.) After the break-up of the former Czechoslovakia into two separate states in 1992, OSA continues its responsibility for the new Czech Republic while SOZA has become the society operating in Slovakia.

SPAIN. The original law regulating intellectual property rights in Spain dates from 1879 and granted a post-mortem period of protection of 80 years. As with the rest of the EU that period has now been set at 70 years after the death of the author. Spain's current copyright law dates from 1987 and was amended in 1992. As well as including a *droit de suite* for the benefit of creators of artistic works, it provides protection for computer programs. Spain adheres to the main international copyright conventions.

The first authors' collecting organization in Spain was the Sociedad de Autores Españoles, founded in 1899. This served its members well, but with the passage of time it was found that a society controlling the entire copyright would be better suited to meeting new technological

developments. Thus the Sociedad General de Autores de España (SGAE) was formed from the following independent interests: dramatists, authors of variety shows, performing rights, poets, film authors and representatives of reproduction rights. SGAE is the sole organization entitled to collect royalties for authors' rights. The society is obliged to return a periodic report to a government department, and the state is represented on its administrative council.

Certain performances cannot receive official authorization unless copyright royalties have been paid in advance. Spain operates a system of payments for works in the public domain, and SGAE acts as the agent of the state in collecting those royalties. The society operates a benevolent fund for authors' dependants, the capital for which is provided by a deduction from members' royalties. Spanish copyright law provides for 'author's seats': the author of a musical or dramatic work is theoretically entitled to claim two first-class seats every time the work is performed, but now the cost of one seat is payable to the author. SGAE is both a performing right and a mechanical right society, and is a member of both CISAC and BIEM.

SWEDEN. Sweden was the first of the Nordic Council member states to revise its copyright laws, doing so in 1960. As a member of the EU it is obliged to protect copyright for the life of the author plus 70 years.

The Foreningen Svenska Tonsåttares Internationella Musikbyra (STIM) was formed in 1923 as a registered society without personal liability. Its statutes are supervised by the government, which appoints the president of its executive committee. Its members assign the performing and mechanical rights to the society in present and future works, and it handles a wider range of copyright than many foreign authors' societies. Licences may be charged on a fixed tariff according to the kind of use to which the music is put, or as a percentage of receipts. The latter arrangement is fairer to authors in an era of inflation. Licensees are obliged to make periodic returns showing the musical works used, which STIM uses as a basis for distributing royalties in conjunction with a points award system. NCB of Copenhagen (see above, under Denmark) acts as agent for STIM in administering mechanical rights. STIM is a member of CISAC.

SWITZERLAND. As in several other countries, the first collecting society in Switzerland, Société Suisse des Auteurs et Editeurs (SUISA), was an agency of SACEM (see above, under France). Eventually in 1924 a Swiss performing right society, GEFA, was set up, and for a time the two societies worked in competition. But this arrangement was of no benefit to music users, and alleged to be of little benefit to copyright owners. The state intervened, and by a law of 1940 ordained that only one Swiss organization could administer performing rights, and that in granting this concession preference should be given to a Swiss organization. Accordingly SUISA was set up in 1941 as successor to GEFA to administer in Switzerland and Liechtenstein the performing rights in the present and future works of its members. SUISA is under government supervision, and its tariffs have to be published and approved by an arbitration commission. SUISA is a non-profit organization which distributes all its receipts, less administrative expenses, to members. The society is a member of CISAC.

The copyright act of 1993 was amended in 1995. A new law was passed in 1996 regulating the operations of the Federal Office of Intellectual Property (OFPI). This provides that authors' societies must submit their tariffs and distribution rules to OFPI. Both performing and mechanical rights are now administered by SUISA. Until 1980, mechanical rights in Switzerland had been administered by Mechanlizenz, an organization which has now been fully integrated into the administration of SUISA.

USSR, FORMER. With the ratification by the Soviet Union of the Universal Copyright Convention on 27 May 1973, a complete change in the approach adopted by the USSR in its international copyright relations had taken place. The attitude to the problem had always been anomalous, for, even before the October Revolution, Tsarist Russia alone among the major European powers of the day had chosen not to enter the international copyright system set up by the original Berne Convention of 1886, to which France, Germany, Great Britain, Italy and Spain had all subscribed. After World War II the USSR and Albania were the only Comecon countries in Europe that belonged to no copyright convention. Bulgaria, Czechoslovakia, Hungary, Poland, Romania and Yugoslavia all continued to adhere to the Berne Convention; in Czechoslovakia (OSA and SOZA), East Germany (AWA), Hungary (ARTISJUS), Poland (ZAIKS) and Yugoslavia (SAKOJ) there were internationally affiliated authors' societies during the period of communist rule.

Until the USSR entered the Universal Copyright Convention there was no internationally affiliated society in that country which could receive on behalf of its members any payments made by foreign authors' societies for performances in their territories of works controlled by authors living in the USSR. This was a grave disadvantage for Soviet authors and composers resident there, but at that time no foreign works were protected by copyright law, and so no society in the USSR could undertake reciprocal obligations to account to foreign societies for performances in the USSR of foreign works. There was in each of the 15 republics of the USSR a civil code containing provisions on copyright, and also model publishing agreements having the force of law governing relations between author and publisher. But protection could extend to the works of a foreigner only if they were first published in the Soviet Union, and even then royalties could probably not be remitted abroad. When the convention was ratified in 1973 there appeared to be two societies exercising performing rights on behalf of their members. One was the Moscow Society of Playwrights and Composers (MOPDIK). The other was the Ukrainian Society of Playwrights and Composers (UTODIK).

Until 1973, the only international copyright agreement into which the USSR had entered was a bilateral treaty with Hungary, whereby each country recognized the copyrights of resident nationals of the other state in respect of works first published in that other state. But by adhering to the Universal Copyright Convention, the USSR accepted the principle that each member state undertook to give the unpublished works of the nationals of all other member states the same protection as it gave to the unpublished works of its own nationals. It also undertook to give to the published works of the nationals of the other member states wherever first published, and to published works of the nationals of any country if first

published in one of the member countries, the same rights as it gave to works first published in its own territory.

At that period the Soviet authorities appeared to intend to remodel the collecting arrangements for public performance in the USSR so that any new authors' society could enter into reciprocal relations with the societies of other countries. Following the collapse of the USSR, the situation in its former territories has become confused and chaotic. Various societies have been created in the new states but have had little or no success in operating for the benefit of their members. In Russia itself, the Russian Authors' and Composers' Society (RAO) was set up in 1993 under the auspices of President Yeltsin. It attempts to administer both performing and mechanical rights, and by 1997 claimed to have over 8000 members. RAO is a member of CISAC but not yet of BIEM. Russia's new law on copyright and neighbouring rights came into force on 3 August 1993. But in a situation where the central government has defaulted on its overseas debts and is unable to collect its internal tax revenues, and where representatives of overseas businesses seeking to collect outstanding debts within Russia are liable to assassination, the prospects for collecting royalties for the performance of copyright works are not high.

YUGOSLAVIA, FORMER. There continues to be considerable confusion about the position of authors' societies in the territories which constituted the former Yugoslavia. There had been an internationally affiliated authors' society in Yugoslavia before World War II, but not until 1955 did a society, known as ZAMP, come into existence which was sufficiently representative of Yugoslav authors and composers to be able to enter into reciprocal contracts with foreign societies. Before the break-up of the Yugoslav federation a collecting society of the Union of Yugoslav Composers had become a member of both CISAC and BIEM, and administered both performing and mechanical rights. This was known as Savez Kompozitora Jugoslavije (SOKOJ).

BOSNIA-HERCEGOVINA. A collecting society known as BIHOMA is in existence, but its activity is minimal and it is not yet affiliated to CISAC.

CROATIA. Two organizations are currently listed as operating in Croatia, the Croatian Union of Composers (Hrvatsko Društvo Skladatelja; HDS-ZAMP) and the Croatian Authors' Agency (Hrvatska Autorska Agencija; HAA).

MACEDONIA. The Macedonian Association of Composers (SOCOM) was established in 1993 when the country gained independence. It has been an associate member of CISAC since then. A new Macedonian law of copyright came into force in 1996.

SERBIA AND MONTENEGRO. The original Yugoslav society, SOKOJ, is still operating from Belgrade, although with the reduction in size of Yugoslavia and the economic turmoil and war in the last years of the 20th century, its remit and activity have been considerably reduced.

SLOVENIA. Following Slovenian independence, SOKOJ ceased to operate in that part of former Yugoslavia. The Society of Slovenian Composers (Društvo Slovensko Skladateljev; DSS) was created in 1992, and the Slovenian Society of Composers, Authors and Publishers (Zdruzenje Skladateljev Avtorjev in Zaloznikov za Zascito Avtorskih pravic Slovenje; SAZAS) was founded a year later as a licensing, collecting and distributing society for members of those professions. DSS and SAZAS have now merged their operations. The resulting organization is a member of CISAC.

VII. Asia, Israel, South Africa

Many states in South-east Asia besides those discussed below have now established their own copyright collecting societies. To the internationally affiliated organizations mentioned under individual countries should be added the Filipino Society of Composers, Authors and Publishers Inc. (FILSCAP) and Music Copyright Thailand (MCT).

CHINA. The People's Republic is heir to a rich historical tradition of copyright protection, the first vestiges being traceable to the Song Dynasty in the 10th century. In this, as in much else, developments in China were well in advance of those in the West. The intentions of the People's Republic in the areas of both domestic and international copyright protection are unclear. The Music Copyright Society of China (MCSC) collects on behalf of its members.

INDONESIA. The copyright law is contained in the Copyright Act of 1982. It was amended in 1987 to control unauthorized use of copyright, in particular the activities of pirates. Indonesia does not adhere to any of the international copyright conventions, as its domestic legislation is not framed in terms which would allow it to do so. Yayasan Karya Cipta Indonesia (KCI) is the national copyright collecting society.

ISRAEL. The Copyright Act of 1970 completely revised the protection available, and adopted its obligations under the international conventions. It has frequently been amended to cover public lending right and unauthorized reproduction as a result of new technology.

The Société d'Auteurs, Compositeurs et Editeurs de Musique en Israel (ACUM) was originally founded in 1934 and now has its head office in Tel-Aviv. Israel remains the only country in its geographical location with an internationally affiliated musical rights society. ACUM is both a performing right and a mechanical right society, and is a member of both CISAC and BIEM.

JAPAN. The Japanese Society of Rights of Authors and Composers (JASRAC) is a non-profit organization incorporated under the civil law of Japan, and is the only copyright collection society officially licensed by the commissioner of the Agency for Cultural Affairs under Japan's special law relating to collecting organizations for copyrights. JASRAC covers the whole of musical copyright, including performing rights, publishing, mechanical and film synchronization rights. Royalties for musical works are collected according to fee scales approved by the commissioner of the Agency for Cultural Affairs. JASRAC is granted permission to operate these scales after the commissioner has consulted the music users' organizations and the copyright system council.

JASRAC was founded in 1939 after a special law on copyright collecting organizations was passed as a result of the endeavours of a group of Japanese music writers. It handles rights for nearly all Japanese composers and authors, and its activities and the income it has collected have increased rapidly in recent years. The society is managed by 12 directors and a president, elected by a council of 60 members, and five further directors who are appointed by the president with the council's approval. The head office is in Tokyo, with 23 regional offices;

about 800 people are employed either full- or part-time. The society is a member of both CISAC and BIEM.

SOUTH AFRICA. An internationally affiliated copyright collecting society was set up in Johannesburg in 1962 and was known as the South African Society of Composers, Authors and Music Publishers Ltd (SAFCA). In 1966 it changed its name to South African Music Rights Organisation Ltd (SAMRO), under which title it has continued operations ever since. SAMRO is a member of CISAC.

SOUTH KOREA. The copyright law is contained in the Copyright Act of 1986. There are additional statutes for the protection of computer programs, sound recordings and films. The national copyright collecting society is the Korea Music Copyright Association (KOMCA).

TAIWAN. A comprehensive copyright law was adopted in 1985. Although registration is not a specific requirement for protection, there are a number of references to registration in the law. Taiwan does not adhere to any of the international copyright conventions. Its collecting society is the Copyright Holders' Association (CHA).

VIII. Latin America

A list of internationally affiliated collecting societies operating in the region will be found at the end of this section, after the general discussion of authors' societies that follows the breakdown by country. In Central and South America a number of special situations affect copyright, and there have from time to time been limited conventions on the subject of a local nature among groups of countries in the region. There have been particular problems of enforcement of rights. Owing to the large areas and sparse populations, policing the unauthorized use of copyright has often proved difficult.

ARGENTINA. The basic copyright law dates from 1933 and was substantially amended in 1957. It includes a paying public domain, and some stages of the Berne and Universal Copyright conventions have been ratified.

BRAZIL. The foundation of copyright protection is the statute of 1973, which has been substantially amended, notably in 1980 and 1983. A statute of 1987 extended protection to computer programs.

COLOMBIA. Copyright legislation was overhauled in 1982. A certain degree of registration is required, and this has adversely affected Colombia's ability to adhere to the main international copyright conventions. Registration is nevertheless said to be optional in the case of foreign-owned works.

DOMINICAN REPUBLIC. The copyright law was completely overhauled by a statute of 1986, which extended protection to computer programs. The country adheres to certain local copyright conventions in Latin America, and to a revision of the Universal Copyright Convention.

MEXICO. The basic copyright protection is contained in a statute of 1956, which was subsequently modified, notably in 1963 and 1981. Some revisions of the Berne and Universal Copyright Conventions have been adopted.

Although there are authors' societies in various states which are within the community of internationally affiliated authors' societies, they do not provide complete coverage, and in some parts of Latin America there is no effective protection of authors' rights. As a rule there is an adequate national copyright law, sometimes of great antiquity, but the laws are often difficult to apply, to the material loss of both Latin American and overseas authors. Collection in respect of mechanical rights has not raised such grave problems, but the sums collected by certain societies for performing rights have been very low in proportion to the population and known extent of use, and composers have suffered considerably thereby.

In some parts of the continent this is due to the geography, for some populous areas which make substantial use of copyright are so remote from the administrative capital that effective control and collection are impossible. Moreover the sums to be collected are often small, while administrative costs are proportionately very high, certainly by European standards. This deters the societies from trying to enforce their rights more effectively by litigation or recruiting representatives to cover the remoter areas.

The known weakness of certain societies has made it difficult for them to renegotiate old or unfavourable tariffs, or licences which have remained at constant rates for many years, despite substantial inflation of the local currency. Authors' societies in some Latin American states are also weakened when there is more than one society handling the same right in the same territory, resulting in competition for members and licensed users. In states where copyright is recognized only grudgingly, the existence of more than one society is generally fatal, and although a satisfactory copyright law may have been on the statute books for many years, it is not so well enforced as in other parts of the world which have introduced copyright protection relatively recently. The situation in Central America can be said to have improved in the last decades of the 20th century, and copyright collecting organizations have now been brought into existence in several states.

The following Latin American countries have internationally affiliated collecting societies:

ARGENTINA Sociedad Argentina de Autores y Compositores de Música (SADAIC)

BOLIVIA Sociedad Boliviana de Autores y Compositores de Musica (SOBODAYCOM)

BRAZIL União Brasileira de Compositores (UBC)

BRAZIL Sociedade Administradora de Direitos de Execução Musical do Brasil (SADEMBRA)

BRAZIL Sociedade Brasileira de Administração e Protação de Direitos Intelectuais (SOCINPRO)

BRAZIL Sociedade Brasileira de Autores Teatrais (SBAT)

BRAZIL Sociedade Independente de Compositores e Escritores de Musica (SICAM)

BRAZIL Sociedade Brasileira de Autores, Compositores e Escritores de Musica (SBACEM)

BRAZIL Associação de Musicos Arranjadores e Regentes (AMAR)

CHILE Sociedad Chilena del Derecho de Autor (SCD)

COLOMBIA Sociedad de Autores y Compositores de Colombia (SAYCO)

COSTA RICA Asociación de Compositores y Autores Musicales de Costa Rica (ACAM)

CUBA Agencia Cubana de Derecho de Autor Musical (ACDAM)

ECUADOR Sociedad de Autores y Compositores Ecuatorianos (SAYCE)

GUATEMALA Asociación Guatemalteca de Autores y Compositores (AGAYC)

MEXICO Sociedad de Autores y Compositores de Música (SACM)

PANAMA Sociedad Panamena de Autores y Compositores (SPAC)

PARAGUAY Autores Paraguayos Asociados (APA)

PERU Asociación Peruana de Autores y Compositores (APAC)

URUGUAY Asociación General de Autores y Compositores (AGADU)

VENEZUELA Sociedad de Autores y Compositores de Venezuela (SACVEN)

IX. Developing countries

The international exercise of copyright gives rise to balance of payment problems. Those countries which are rich in successful composing talents, and which have flourishing publishing industries, are copyright exporting states, and their copyright balances of payment are generally in credit. These include the USA and many countries in western Europe. But those which do not have internationally successful composers or successful publishing industries are copyright importing countries, for they are obliged to resort to the intellectual products of other states and, if they accept the international copyright system, to pay for such use, which puts their copyright balances of payment into deficit. They include most of the independent states which were formerly colonies of the European powers, and which have either inherited their copyright law from the departing governing country, or have introduced laws of their own after independence.

In certain territories, where no local affiliated authors' society exists, a foreign authors' society may appoint an agent to collect in that territory on behalf of its members, and to issue licences in the territory on behalf of his principal.

In the final hours of 1994 the Uruguay Round of the General Agreement on Tariffs and Trade (GATT) was signed at Marrakesh. This brought into existence the World Trade Organisation (WTO). A highly significant innovation was the addition of the Agreement on Trade-Related Aspects of Intellectual Property Rights, Including Trade in Counterfeit Goods (TRIPS). Under WTO administration, this is likely to alter substantially the copyright relationships between developed and underdeveloped states in the years ahead.

PETER KLEINER, E.P. SKONE JAMES/GAVIN McFARLANE (I, III–IV); GAVIN McFARLANE (II, VI–IX); MELVILLE B. NIMMER/GAVIN McFARLANE (V)

Coquard, Arthur(-Joseph) (*b* Paris, 26 May 1846; *d* Noirmoutier, Vendée, 20 Aug 1910). French composer and critic. He was a fellow pupil of Duparc at the Jesuit college in the rue Vaugirard, where in 1865–6 he received instruction in harmony from César Franck. His ambitions, however, lay in a legal career; he gained his doctorate of jurisprudence in 1870 and became, after distinguished service in the National Guard, secretary to Senator Martel. He continued to practise law until 1881; only *Le chant des épées*, a ballade for baritone and orchestra (Colonne Concerts, 1876) had been performed. On returning to composition he cultivated this genre assiduously, notably in the *monologue dramatique Le songe d'Andromaque* (1884). His interest in classical literature and French classical drama is reflected in his incidental music, although for his operas, such as *L'épée du roi* (1884), he chose more contemporary subjects. He was one of the most industrious of Franck's circle and spent much time in the propagation of the music of others; he assisted in the orchestration of Franck's *Hulda* and *Ghiselle* (Act 4). He also completed, from sketches, Lalo's *La jacquerie* (Monte Carlo, 1895). His magnum opus was *La troupe Jolicoeur* (1902), for which he also wrote the libretto, a tale of circus life inspired no doubt by the contemporary naturalism of Zola's novels. He was a music critic for *Le monde*, *Echo de Paris*, *La vérité*, *La quinzaine* and other journals, and wrote a moving tribute to Franck on his death. His historical interests were expressed in the treatise *De la musique en France depuis Rameau*, which was awarded the Prix Bordin by the Académie in 1892. He was director of music at the national institute for young blind people from 1892 to 1899.

Much of Coquard's music is characterized by a straining after expressiveness, thus reflecting the influence of Franck. Some of his best passages are in the works for solo voice and orchestra; *Le songe d'Andromaque* contains sections of real dramatic power, recalling Massenet's *Hérodiade*. He lacked, however, the sustaining power necessary for large-scale works and the effect of the whole is often stilted. A delightful and unaffected setting of Musset's *Mimi Pinson*, which achieved some popularity, suggests that his gifts might have been better employed in less grandiose projects.

WORKS

all printed works published in Paris

STAGE

Cassandre (drame lyrique, 2, H. de Bornier, after Seneca: *Agamemnon*), Paris, Société Chorale d'Amateurs, 13 May 1881

L'épée du roi (oc, 2, A. Silvestre), Angers, Grand, 20 March 1884 (n.d.)

Le mari d'un jour (oc, 3, A. d'Ennery, Silvestre), OC (Favart), 4 Feb 1886, vs (?1886)

Pompée (drame lyrique, 3, H. Moreau), Paris, Société Chorale d'Amateurs, 13 April 1888

L'oiseau bleu (fantaisie poétique, 2, S. Arnaud), Paris, d'Application, 6 March 1894 (n.d.)

La reine de Beauce (comédie musicale, 3), 1897–8

Jahel (drame lyrique, 4, Arnaud and L. Gallet), Lyons, Grand, 24 May 1900 (n.d.)

La troupe Jolicoeur (comédie musicale, 3 and prol, A. Coquard and C. Coquard, after H. Cain), OC (Favart), 30 May 1902 (n.d.); excerpts pubd separately

Isdronning (oc, 2, C. Fournery-Coquard), 1903

Oméa (drame musical, 4)

Incid music: Helvetia (G. Longhaye), 1880; Esther (J. Racine), 1888; Christophe Colombe (P. Collin), 1892; Philoctète (Sophocles), 1897; Agamemnon (H. de Bornier)

Completion of E. Lalo: La jacquerie (oc, 4, E. Blau, Arnaud), Monte Carlo, 8 March 1895, (?1894), vs (1894)

Orchestrations of music by Franck

OTHER WORKS

Lyric scenes: Le chant des épées (de Bornier), ballade, Bar, orch, Paris, Concerts Colonne, 1876 (?1876); Héro et Léandre, 1881 (?n.d.); Une noce au village, solo v, orch, 1882; Le songe d'Andromaque (F. Bertin), monologue dramatique, S/A, orch, 1884 (1887); Le gaulois captif, 1892; Haï Luli, ballade, S, ?orch, 1893 (?n.d.)

Other vocal: Une trilogie sacrée: Jeanne d'Arc, orat, solo vv, chorus; other sacred and secular choral works; songs, incl. Jolies et

douleurs, poème d'amour (C. Fournery-Coquard) (n.d.); 12 mélodies, v, pf (?1881); 4 mélodies (Collin, ?1883)
Orch: Ossian, sym. poem, 1882; Légende, vn, orch, ?1882, arr. vn, pf (?1882); En Norvège, suite, 1907; Eté, suite; Impressions pyrénéennes; Sérénade, vc, orch, arr. vc, pf (?n.d.)
Kbd: 16 pièces pour hmn (?n.d.); 2 pieces, org; Gavotte, pf, 1887

JOHN TREVITT

Cor (Fr.). *See* HORN. The term is used specially to indicate a blowing horn and, among musical horns, the large 'cor (or 'trompe') de chasse' and the 'cor d'harmonie' (the full name used for the orchestral horn in the French instrument trade), as opposed to a small 'cornet' ('à bouquin', 'de poste', 'à pistons') or a non-musical 'corne d'appel' made for signalling. 'Corne de chasse' in Telemann etc. is gallicized Italian. In older French, as in medieval romances and chronicles, 'cor' may be generally interpreted as an instrument of arcuate shape, small or large, made of oxhorn, ivory or metal and with or without finger-holes. The tenor cor was introduced by Besson in Paris about 1860 (*see* MELLOPHONE).

ANTHONY C. BAINES

Cora. *See* KORA.

Cor à clefs (Fr.). *See* KEYED BUGLE.

Coradigni [Coradini], **Francesco.** *See* CORRADINI, FRANCESCO.

Coradini, Nicolò. *See* CORRADINI, NICOLÒ.

Coradus de Pistorio. *See* CONRADUS DE PISTORIA.

Coralli, La ['Corallina']. *See* LAURENTI family, (4).

Cor alto (Fr.). Term used to refer to the role of 'first' horn (as opposed to *cor basse* or 'second' horn); the *cor alto* usually specialized in playing only the top register. The term especially applies to hand-horn playing, although the division of roles has remained in use in the modern orchestra, where two distinct registers are normally assigned to pairs of players. *See also* HORN, §2(iii).

(2) *See* MELLOPHONE.

Cor à main (Fr.). Hand horn. *See* HORN.

Cor anglais (i) (Fr.). English horn. *See* OBOE, §III, 4(iv).

Cor anglais (ii) (Fr.). *See under* ORGAN STOP (*Cor anglais*).

Coranto. *See* COURANTE.

Cor à pistons (Fr.). Valve HORN.

Cor basse (Fr.). Term used to refer to the role of 'second' horn (as opposed to *cor alto* or 'first' horn); the *cor basse* usually specialized in playing only the lower register. The term especially applies to hand-horn playing, although the division of roles has remained in use in the modern orchestra, where two distinct registers are normally assigned to pairs of players. *See* HORN, §2(iii).

Corbelli, Alessandro (*b* Turin, 21 Sept 1952). Italian baritone. After studying with Giuseppe Valdengo, he made his début as Marcello at Bergamo in 1974. He sang Pacuvio (Rossini's *La pietra del paragone*) at the Piccola Scala and in Edinburgh (1982), Dandini at Philadelphia (1984) and Glyndebourne (1985), and made his Covent Garden début as Taddeo (*L'italiana in Algeri*) in 1988. His repertory includes Mozart's, Paisiello's and Rossini's Figaro, Papageno, Guglielmo, Don Alfonso, which he sang at Salzburg (1991) and Florence (1994), Prosdocimo (*Il turco in Italia*), Raimbaud (*Le comte Ory*), Malatesta, Belcore, which he sang in Chicago (1991), Ford, Belfiore (*Un giorno di regno*) and Ping. At La Scala Corbelli has sung roles such as Varbel (*Lodoïska*), Lord Cockburn (*Fra Diavolo*), De Siriex (*Fedora*) and Leporello, possibly his best part. Though his light, flexible voice, superb diction and great gifts as an actor make him naturally suited to comedy, as can be heard in several Rossini recordings, he sings more serious roles such as Sharpless and Escamillo with equal conviction.

ELIZABETH FORBES

Corbet, August (Louis Marcel) (*b* Antwerp, 7 March 1907; *d* Antwerp, 27 March 1964). Belgian musicologist and art historian. He studied music at the Antwerp Conservatory and art history in Ghent, taking the doctorate in 1939 with a dissertation on Peter Benoit. He also studied 16th-century stage music with E.J. Dent in Cambridge in 1936. While pursuing a career as a journalist, he joined the staff of the Antwerp Conservatory in 1935, later becoming administrative secretary (1938–47; 1953–64). He also held posts at the Brussels Conservatory as interim librarian (1949–51) and in the Belgian Ministry of Education (1951–3). Corbet's main interests were music drama and nationalist Flemish music, especially that of its pioneer, Peter Benoit; his writings on Benoit remain authoritative. Together with the Dutchman Wouter Paap he published the *Algemene muziekencyclopedie* (1957–63), the first venture of such magnitude in the Dutch language. Apart from short, scholarly articles in encyclopedias and journals, he wrote a large number of popular articles on all types of cultural topics.

WRITINGS

GODELIEVE SPIESSENS

Corbett, William (bap. London, 18 July 1680; *d* London, 7 March 1748). English violinist, composer and collector. His earliest compositions were songs and incidental music for the Lincoln's Inn Fields Theatre, where he also played. In 1705 he was engaged to play in the orchestra at the new Queen's Theatre in the Haymarket, where the following year the semi-opera *The British Enchanters, or No Magick like Love*, with music mostly by Corbett, had 11 performances. He was greatly admired as a solo performer, often being billed as the chief attraction at the benefit concerts of colleagues in London. He also appeared further afield: he played at Nottingham during race week (1707 and 1709) and at York during Assize week (1709). An instinctive showman, Corbett emphasized the unusual in his concerts and in his own compositions; the viola d'amore, archlute and mandolin made appearances at his benefit concerts (1699, 1704–7), and in 1724 he advertised a concert 'on a particular new instrument never yet heard of in England' (Burney).

Corbett was appointed to the royal orchestra in 1709, the salary of which position he was paid until his death, despite a total of 13 years' residence abroad at various times up to 1731. He settled in Italy where he built up a collection of instruments of such value as to give rise to the suspicion (Hawkins) that he could afford it only because he was being paid by the government to spy on the Old Pretender. He married the opera singer Anna Lodi, née Signoni, in 1703, with whom he appeared at benefit concerts until 1715, when he left England. In 1724 he had a benefit concert in London, and advertised in the *Daily Journal* (16 May) a sale of his music, along with violins by Amati, Stradivari, Maggini, Gasparo da Salò, Albani and Stainer, including instruments once owned by Corelli and Torelli. He went back to Italy, but in July 1727 was recalled to London to renew his oath of allegiance following the accession of George II. He took the opportunity the following March to launch the publication of his concertos *Le bizzare universali* (composed 'on all the new Gusto's in his Travels thro' Italy') and to have a concert at Hickford's Room, 'benefit Corbett, lately arriv'd from Italy, being the first and last time of his Performing in Publick'.

Le bizzare universali contains his most interesting instrumental writing, in which he adroitly parodied various musical styles, national, local and of individual composers. His music is characterized by an attractive turn of phrase, a melodic spontaneity and a strong rhythmic sense. While he is generally most successful in his impetuous and often dramatic fast movements, slower ones like the sonorous and powerful overture of his concerto 'alla francese' show an impressive command of harmonic and orchestral effect. His only large-scale vocal work is *Lost is my Love*. This is an 11-movement composition for solo tenor and orchestra including horns. The vocal part requires considerable virtuosity and the orchestral writing is imaginative. Although the poem stems from the tradition of the pastoral, Corbett's work is shorter than compositions of that kind by other English composers such as Locke, Blow and Purcell, and too long for the conventional 18th-century English secular cantata, which consists normally of two or three arias each preceded by a recitative. It may instead be considered to be an ode. It was probably first performed at court on Queen Anne's birthday in February 1712.

Although he had sold some of his music and instruments in 1724 and again in 1741, a substantial collection, including the most valuable violins, was in Corbett's possession on his death. His bequest of the instruments to Gresham College, with a £10 annual stipend for a person to display them and keep them in order, was not accepted, but not, as alleged, on the grounds that the college did not have room for them. His musical effects were eventually sold by auction in 1751.

WORKS

op.	
1	12 sonate à tre, 2 vn, vc, bc (org) (Amsterdam, *c*1700)
2	6 Sonatas, 2 fl, bc (London, 1705); also pubd in 8 sonates, 6 de Mr Corbett (Amsterdam, *c*1701)
3	6 Sonatas with an Overture and Aires in 4 Parts, tpt, 2 vn, 2 ob, fl, bn/hpd (London, *c*1708); as 6 Sonatas, tpt/ob, 2 vn, bc, avec une ouverture & suitte, 2 tpt/ob, 2 vn, va, bc (Amsterdam, *c*1708); ov. and airs as A New Set of Tunes (London, *c*1708)
4	6 Sonatas, 2 rec/fl, bc, libro primo (London, *c*1713); 6 Sonata's, 2 vn, bc (spinet/hpd), libro secondo (London, *c*1713)
7	Lost is my Love (ode), T, orch (?London, *c*1712)
8	Le bizzarie universali, 2 vn, va, bc (hpd) (London, 1728); as 35 Concertos or 3 Compleat Setts of Universal Bizzaries, 4 vn, va, vc, hpd (London, *c*1728); as Concerto's or Universal Bizzaries (4 vn, va, vc, hpd)/(2 vn/fl/ob) (London, 1742)

Pubd instrumental and vocal music in the following stage works: Henry IV (?T. Betterton, after W. Shakespeare), 1699; As you find it (C. Boyle, Earl of Orrery), 1703; Love Betray'd, or The Agreeable Disappointment (W. Burnaby), 1703; The British Enchanters, or No Magick like Love (semi-op, G. Granville, Lord Lansdowne), 1706

Songs pubd singly and in 18th-century anthologies

OWAIN EDWARDS

Corbetta, Francesco [Corbette, Francisque] (*b* Pavia, *c*1615; *d* Paris, 1681). Italian guitarist and composer. He was considered by his contemporaries to be the greatest guitar virtuoso of his time. By 1639 he was established as a guitar teacher in Bologna, where he numbered Granata among his pupils. After serving the Duke of Mantua (*c*1643) and the Archduke of Austria (*c*1648) he was brought by Cardinal Mazarin to Paris, where he became guitar master to the young Louis XIV. In the early 1660s he followed Charles II to London, where he taught the king and members of the nobility. By 1671 he was back in Paris as guitar master to the dauphin. After a second stay in London, during which he took part in Crowne's masque *Calisto* in 1675, he returned to Paris.

Corbetta's works for five-course Baroque guitar comprise five extant collections, and there is evidence that two more books have disappeared. His first book contains

mainly dance pieces in the *battute* (strummed) style. However, the second and third books contain pieces exhibiting greater mastery and sophistication in which *battute* and *pizzicate* (plucked) textures are combined. While these first three books are mainly in the Italian tradition, Corbetta's later (and finest) books, both entitled *La guitarre royalle*, are firmly in the French style – the result of his residence in France and at the French-influenced English court of Charles II. The first, dedicated to Charles II, contains 14 suites, a large number of miscellaneous pieces, and four pieces arranged for voices, guitar and continuo. The second is dedicated to Louis XIV and contains 39 pieces, the first 12 of which are guitar duets. In these last two books, written for a guitar tuned *a/a–d'/d–g/g–b/b–e'*, Corbetta achieved an ideal balance between the *battute* element characteristic of the instrument and the more refined textures of contemporary lute music; he produced works that together with those of Visée represent the high point of the Baroque guitar literature in the French style. Like other guitarists of the era Corbetta also cultivated the art of figured bass accompaniment, and three of his books (1643, 1648 and 1671) include instructions for continuo playing on the guitar.

ROBERT STRIZICH

Corbin, Solange (*b* Vorly, Cher, 5 April 1903; *d* Bourges, 17 Sept 1973). French musicologist. At the Schola Cantorum, Paris, she was a piano pupil of Blanche Selva; she took a diploma at the Ecole Pratique des Hautes Etudes with a dissertation on Portuguese music in the Middle Ages prepared under the direction of Louis Halphen in Paris and P. David in Coimbra (1944). At the Sorbonne she took an arts degree in 1946 and the doctorat d'Etat in 1957 with dissertations on the neumatic notation of French manuscripts and the liturgical deposition of Christ on Good Friday. In 1940 she joined the CNRS, where she became *chargée de recherche* (1958); concurrently she taught at the Ecole Pratique des Hautes Etudes, as *chargée de conférences* (1950–59) and as director of studies (1959–73). She created the department of musicology at the University of Poitiers, where she was professor (1961–70), taught at the Faculté Libre Internationale Interdisciplinaire in Paris and made lecture tours of the USA (1970, 1973), England (1970) and Poland (1971).

In her research Corbin concentrated on medieval music and was an authority on neumatic notation and its use in religious and secular texts. Although she made several important studies of secular music, such as those on cantillation of Latin classics and on songs of the trouvères and troubadours, her primary interest was the sacred repertory, especially the liturgical drama and rhymed offices.

CHRISTIANE SPIETH-WEISSENBACHER

Corbisieri [Corbisiero], **Francesco** (*b c*1733; *d* Naples, after 1802). Italian composer. He is said to have been the younger brother of Antonio Corbisiero. He entered the Neapolitan Conservatorio di S Maria della Pietà dei Turchini on 3 June 1744 and studied there with Lorenzo Fago and Gualberto Brunetti. Nothing is known of his activities from then until 1 September 1764, when he was named *organista soprannumerario* of the royal chapel in Naples. Four years later, on 23 July 1768, he was awarded the paid position of an *organista ordinaro*. On 16 February 1771 he succeeded Domenico Merola as first organist, and on 2 December 1779 Giuseppe Marchitti as *vicemaestro*. After the death of Pasquale Cafaro in 1787 he was denied the promotion to *primo maestro* in favour of Vincenzo Orgitano, and remained *vicemaestro* until his death.

Francesco Corbisieri composed three *opere buffe* but his church music, though uneven in quality, is historically more interesting. Most of his surviving mass sections, motets and psalm settings with orchestra, written during the 1770s and 1780s, are characterized by sinfonia style, homophonic texture with quasi-polyphonic imitative sections, and a brevity suitable to functional service music. His Kyrie–Gloria in F comprises an allegro Kyrie in concerto-sonata form featuring a contrasting theme in minor mode, an expressive modulatory mid-section (Christe), and a tonic recapitulation (Kyrie); the Gloria has no formal solo numbers but consists of three choral movements (fast–slow–fast, in D, a and F, the key of the opening Kyrie). Some works, though surviving in dated manuscripts with the initials 'F.C.', have been assigned to Abos and Gallo (*I-Nc*). In other cases, Francesco Corbisieri may have been confused with Antonio Corbisiero (*F-Pc*), and vice versa (*I-Nc*). The oratorio *Gioas, re di Giuda* (score in *DK-Kk* lost 1794), mentioned in Gerber as a work by 'Corbisiero', was assigned by Eitner to Francesco Corbisieri. A handwritten catalogue of oratorios and *drammi sacri* performed in Venice during the 18th century (*I-Vmc*) lists the composer of *Gioas* (performed in 1753 and 1762) simply as 'M.º Corbisier'.

WORKS

OPERE BUFFE

La Mergellina (F. Cerlone), Naples, 1771, Act 1, *I-Nf**

La maestra (C. Goldoni), Naples, Nuovo, wint. 1773

L'osteria di Pausilippo (Cerlone), Salerno, wint. 1775

SACRED

Corbisiero, Antonio (*b* Marzano di Nola, 21 May 1720; *d* Naples, 7 Jan 1790). Italian composer. From 1733 to 1739 he studied in Naples at the Conservatorio di S Maria della Pietà dei Turchini, when Nicola Fago was its *primo maestro* and Andrea Basso, Leonardo Leo and Lorenzo Fago served in succession as *secondo maestro*. Corbisiero settled in Naples, and between 1749 and 1754 gained a measure of success with his comic operas. He also wrote oratorios and Passion music. During his later years he is said to have earned his living as a singing teacher. Some of his sacred music may have been wrongly attributed to Francesco Corbisieri, and vice versa.

WORKS

OPERE BUFFE

Monsieur Petitone (A. Palomba), Nuovo, Naples, aut. 1749

Il mercante innamorato (P. Trinchera), Fiorentini, Naples, aut. 1750; aria 'A dar pace', *GB-Lbl*

Lo finto innamorato (Trinchera, based on his libretto to *La vennegna*), Nuovo, Naples, aut. 1751; aria 'Tu non mi ascolta', *Lbl*

La finta marchesa, Naples, 1754

'Lei mi faccia un po' l'occhiello', aria, *I-Nc*

SACRED MUSIC

Il Saulo (sacred drama), Aversa, 20 Jan 1746, lib *I-Rsc*

Aronne chiamato da Dio al grado sacerdotale (orat, N. Stoppa), Naples, 27 Dec 1752, lib *Nn*

Componimento per musica solennità del Corpus Domini, Naples, 1781, lib *Rsc*

Passio Domenico Palmarum, Passio popula meus, Passio secundum Joannem, Passio secundum Mattheum et secundum Joannem (all *I-Nc*); Mag (*Nc*, listed under Francesco Corbisieri)

'Nel prendere il Santissimo Viatico', sacred aria, S, vns, bc, Jan 1780

Doubtful works (possibly by Francesco Corbisieri): Ky–Gl, A, *D-Dl* ('Corbisiero'); Ky–Gl–Cr, June 1772, *F-Pc*; Gioas, re di Giuda (orat), Venice, 1753 ('Corbisier'), music lost

For bibliography *see* CORBISIERI, FRANCESCO.

HANNS-BERTOLD DIETZ

Cor des Alpes (Fr.). *See* ALPHORN.

Corboz, Michel(-Jules) (*b* Marsens, 14 Feb 1934). Swiss conductor. He studied at the Ecole Normale at Fribourg. His first post was as music director at a church in Lausanne, where he formed a small choir which gave *a cappella* programmes in various churches. In 1961 he

founded the Ensemble Vocal de Lausanne, to which an instrumental group, the Ensemble Instrumental de Lausanne, was later added. He has made numerous recordings with his Lausanne forces, including Monteverdi's *Orfeo* and Vespers, works by Giovanni Gabrieli, Bach's Mass in B minor and *Christmas Oratorio* and sacred works by Schubert. In 1969 he was appointed director of the Gulbenkian Foundation Chorus in Lisbon, with which he has recorded both Baroque and Romantic works, including fresh, dramatic readings of Mendelssohn psalms, *Elijah* and *St Paul*.

ALAN BLYTH

Corbrand [Corbronde], **William** (*fl c*1470). English composer. He was a member of the Confraternity of Christ Church Cathedral Priory, Canterbury, and master of the Lady Chapel choir there from 1471 to 1475. His only surviving compositions are two settings (both for two voices) of *In manus tuas*: *Redemisti* (*GB-Cmc* Pepys 1236; ed. in CMM, xl, 1967) which were probably written for the Almonry Chapel at the Priory. Since he is not known to have been an ordained priest, he cannot safely be identified with the William Corbrand who was chaplain of the free chapel of Bokingfold, Kent, 1481–93; nor is it likely, unless he enjoyed an exceptionally long career, that he was the singer active in London in 1502–15. He may, however, be the composer cited by Morley at the end of his *Plaine and Easie Introduction* (1597). (H. Baillie: 'Some Biographical Notes on English Church Musicians, Chiefly Working in London (1485–1560)', *RMARC*, no.2 (1962), 18–57, esp. 31)

Corcoran, Frank (*b* Borrisokane, Tipperary,1 May 1944). Irish composer. He studied music at St Patrick's College, Maynooth (1961–4), music, philosophy and theology in Rome (1964–7) at the Pontificio Istituto di Musica Sacra and the Università del Laterano, and composition in Berlin with Blacher (1969–71). He has served as music inspector for the Irish Department of Education (1971–9), been a guest of the Berlin Artist's Programme (1980–81) and has taught at the Staatliche Hochschule für Musik, Stuttgart (1982–3) and the Staatliche Hochschule für Musik und Darstellende Kunst, Hamburg (from 1983). He was elected to Aosdána, the Irish academy of creative artists, in 1983.

Corcoran has developed a distinct and complex language of aleatory macro-counterpoint in which sound layers are superimposed polyphonically but retain independence through distinctive polymetric, agogic and dynamic indications. This technique is evident from the early Piano Trio (1978) to *Ice Etchings no.1* and *Mad Sweeney* (both 1996). His many cultural interests are reflected in the texts of his vocal works; the opera *Gilgamesh* (1990), for example, is based on a Sumerian epic. The *Irische Mikrokosmoi* for piano (1993) are based on traditional Irish melodies and rhythms.

WORKS
(*selective list*)

GARETH COX

Cordans, Bartolomeo (*b* Venice, 10 March 1698; *d* Udine, 14 May 1757). Italian composer. He entered the order of minor observants in Venice, and in 1724 obtained papal dispensation and remained a secular priest. In 1735 he was appointed *maestro di cappella* of Udine Cathedral, a position he held until his death. Between 1728 and 1731 he appeared in theatrical performances (at S Cassiano and S Moisè, Venice), and in 1733 he was *maestro per modum provisionis* for a few months at the Ospedale dei Derelitti, replacing (Giovanni) Antonio Pollarolo. The oratorio *San Romualdo* (1727), usually attributed to him, is in fact the work of Francesco Rossi.

After becoming *maestro di cappella* at Udine he wrote only sacred music. He maintained his connections with Venice (particularly with the Ospedale della Pietà) and became a member of the Accademia Filarmonica in Bologna, for which he wrote some concertante works on a grand scale. He also cultivated the *a cappella* style: in addition to works necessary for the daily liturgy (psalms, motets and short masses for two or three voices) he wrote a collection of *Dodici Messe a Cappella, ed una per gli Anniversari* (1756), expressly inspired by Palestrina's style. His liturgical compositions for two and three voices with continuo survive in the archives of various musical chapels in Italy, Austria, Germany and Slovenia. A portrait of Cordans is in the castle museum, Udine.

Cordans's brother, Giuseppe Maria, also a minor observant, wrote the treatise *Regole per apprendere il canto fermo* in Venice in 1744 (MS, *I-Vnm*).

Cordeilles, Charles (*fl* Lyons, 1540–48). French composer and wind band leader. The 'C. Cordeilles' who contributed four pieces to the sixth and seventh books of Moderne's *Le parangon des chansons* (Lyons, 1540) is probably identical with 'Charles Cordeilles meneur d'aulboys' who, with Charles Peyronet, organized a band of nine shawms, 'dolcians', cornetts and sordun for the municipality of Lyons during the celebrations of September 1548 for the arrival of the new king, Henri II. His music did not have a wide circulation (none was published outside Lyons), probably because of his lack of skill in part-writing. The melodies of his four surviving chansons are effective, however, suggesting that he was a wait who had learnt only in the aural tradition, and who was more practised in improvisation or deciphering instrumental tablatures than in polyphonic composition.

FRANK DOBBINS

Cordeiro da Silva, João. *See* SILVA, JOÃO CORDEIRO DA.

Cordella, Geronimo [Girolamo] (*b* ?Naples; *fl* mid-18th century). Italian composer. He is often confused with the composer and organist Mariano, father of Giacomo Cordella, who was involved in a famous lawsuit concerning the social role of *maestri di cappella* in 1785. His known works are mainly comic operas; their production record suggests that he began his career as a composer in Naples about 1747 and visited north Italy 1754–62.

No complete operas by Cordella have survived, but his oratorio *Gesù crocefisso* (1776) shows only a modest talent. His melodic invention depended heavily on simple triadic patterns, and though this may have been appropriate for some arias of dramatic force it was inadequate for texts requiring pathetic expression. All the arias are da capo in form, some of them composite in tempo and metre; he achieved variety in his treatment of the first section of the arias, sometimes using an *ABA* arrangement and sometimes a rondo-derived construction, as well as the normal two-section form, before the contrasting second part. Harmonic treatment is characteristic for the time, and there are few surprises, although Cordella was especially fond of Neapolitan progressions. In his orchestration he assigned the second violins an unusual independence.

WORKS

COMIC OPERAS

JAMES L. JACKMAN/ROSA CAFIERO

Cordella, Giacomo (*b* Naples, 25 July 1786; *d* Naples, ? 8 May 1846 [or ? 8 Aug 1846, 8 May 1847]). Italian composer. He was perhaps the son of Geronimo Cordella (according to Florimo) or, more probably, of Mariano Cordella (according to the libretto of *Il tempio di Gerosolima*, 1798). His teachers were Fenaroli and Paisiello. At the age of 18 he composed a sacred cantata and at about the same time Paisiello secured him a commission for his first opera, the *farsa Il ciarlatano*, for Venice, where it had a good reception; it was also performed in Milan, Turin, Padua and the Netherlands. Cordella is said to have returned to Paisiello for further study. He composed fewer than 20 operas, often at widely spaced intervals, and only three after 1826. Except for two disastrous attempts at *opera seria* he worked, generally with success, in the comic or semi-serious genres. His greatest success was *Una follia*, first given in 1813 at Naples, where most of his operas had their premières. His other vocal works include substitute arias; one for Weigl's *Amor marinaro* led to the attribution to him of an opera with this title. According to an autobiographical notice of 1825 (*AMZ*, xxvii, 717), he had by then also composed many sacred works, including masses, Vespers, motets and a *Te Deum* for two choirs.

After Luigi Mosca died in November 1824, Cordella succeeded him as *secondo maestro* of the royal chapel. He was at the same time named inspector of singing and *partimento* in the non-resident division of the conservatory, and in 1827 he became *solfeggio* master at the conservatory. From at least 1832 he was music director at the S Carlo, first jointly with Pietro Raimondi, then alone and from about 1840 jointly with Giuseppe Lillo. The two were still there in the 1842–3 season.

According to Florimo, Cordella was a good organist, and his 1825 biography states that he had made a special study of accompanying singers at the keyboard.

DENNIS LIBBY/MARCO BEGHELLI

Cor de nuit (Fr.). *See under* ORGAN STOP.

Corder, Frederick (*b* London, 26 Jan 1852; *d* London, 21 Aug 1932). English conductor, translator, composer and teacher. After studying at the RAM (1873–5), he went to Cologne on a Mendelssohn scholarship to study with Ferdinand Hiller (1875–8), later moving on to Milan (1878–9); on his return he became conductor at the Brighton Aquarium (1880–82) where he greatly improved the standard of the concerts. Unable to support himself by composition, he turned to literary work, often in collaboration with his wife Henrietta Louisa (née Walford). The most famous of the collaborations signed H. and F. Corder were their pioneering English translations of Wagner, which did much to spread an appreciation in England of the composer Corder admired above all others. Their first translation, *Parsifal* (1879), reflects much of the manner of Wagner's original, but misses the complexity and subtlety of a drama whose real depths of meaning they hardly discerned. The *Ring* (1882) was for long the preferred English version, being used both for reading and in performance (e.g. *Die Walküre* at Covent Garden in 1895). Though no longer acceptable by reason of its many contortions of language in the attempt to match Wagner's *Stabreim*, it is remarkably faithful to the detail and much of the spirit of the German; its most crucial fault is that what is archaic in German sounds merely quaint in English.

Of Corder's own operas, only *Nordisa* met with any success, being widely performed after its première on 26

January 1887 by the Carl Rosa Opera Company at the Royal Court Theatre, Liverpool. But after the death of Carl Rosa, Corder was forced to abandon his hopes of a career as a composer for an established English opera, and turned to teaching. From 1888 he was a professor of composition at the RAM (curator, 1889), and there taught many composers, most notably Bax, Bantock and Holbrooke, encouraging a late Romantic, German-derived technique; in some cases he also helped them later in their careers. In 1890 he was appointed orchestral director at Trinity College, London, and in 1896 he lectured at the Royal Institution on Berlioz, Wagner and Liszt; in 1905 he founded the Society of British Composers. His writings include a valuable history of the RAM (1922) and an exaggeratedly defensive biography of Liszt (1925).

His son, Paul Corder (1879–1942), also a composer, studied at the RAM and from 1907 taught harmony and compostion there.

JOHN WARRACK, ROSEMARY WILLIAMSON

Cordero, Ernesto (*b* New York, 9 Aug 1946). Puerto Rican guitarist and composer. He was brought up from infancy in Puerto Rico; he studied guitar and theory at the Madrid Conservatory (1967–70), the Accademia di S Cecilia in Rome and the Accademia Musicale Chigiana, Siena (1973–4). As a guitarist he has made many recital appearances in Puerto Rico, Europe and the USA, performing Spanish and Latin American music as well as his own works, receiving high recognition and several awards. Since 1971 he has been a member of the faculty of the University of Puerto Rico, teaching both guitar and composition. Cordero composes primarily for guitar. His style is characterized by neo-classical adherence to traditional harmony and forms, with occasional dissonance related to certain aspects of guitar tuning and technique. His music occasionally incorporates rhythmic and melodic elements reminiscent of Puerto Rican folk music.

DONALD THOMPSON

Cordero, Roque (*b* Panama City, 16 Aug 1917). Panamanian composer, conductor and teacher. From a modest family background with no connections with the classical music world, he nevertheless began to write band music at an early age and to conduct, gaining a local reputation and winning several prizes. Cordero pursued his musical studies in his native city with Herbert de Castro and Alfredo Saint-Malo, and acquired further training in the USA. In 1943 the New York International Education Institute granted him a scholarship to study music at the University of Minnesota. There Mitropoulos, then music director of the Minneapolis SO, after reading Cordero's *Capricho interiorano* of 1939 and praising its orchestration, decided to introduce him to Krenek, at Hamline University, who became his teacher of composition for the next four years. Concurrently, Mitropoulos taught him orchestral conducting and helped him with a private scholarship. Mitropoulos 'was like a father to me', Cordero once said. He graduated *magna cum laude* from Hamline in 1947. His *Obertura panameña* (1944) was first performed by Mitropoulos and the Minneapolis SO on 5 April 1946. In 1947 he received honourable mention in the Detroit Reichold Music Contest for his First Symphony (1945).

With a grant from Koussevitzky he studied orchestral conducting with Stanley Chapple at the Berkshire Music Center in 1946, and with Leon Barzin in New York. In 1949 he was awarded a Guggenheim Fellowship for composition and conducting. On his return to Panama in 1950 he became associate director of the National Conservatory (1950–53), then director of the National Music Institute (1953–64) and director of the Panama National SO (1964–6). From 1966 to 1969 he was associate director of the Latin American Music Center and professor of composition at Indiana University (Bloomington). He served as music consultant in New York for the publishers Peer-Southern, and joined the faculty at Illinois State University (1972) as professor of composition. He retired from that institution in 1987 as Distinguished Emeritus Professor of Music.

Cordero has received numerous commissions: from Mitropoulos, the Koussevitzky and Coolidge Foundations, the Caracas Third Festival, the Second Festival of Guanabara (Rio de Janeiro), the National Endowment for the Arts, the Kennedy Center, the Panama National Institute of Culture and Sports, the Illinois Arts Council, the Cincinnati SO, the Peoria SO (Illinois), the University of Alabama and Illinois State University. He has also received numerous honorary titles and degrees from universities. Several of his works have won national and international prizes: the Ricardo Miró Prize (Panama, 1953) for his *Rapsodia campesina*, the Caro de Boesi Prize (Caracas, 1957) for his Second Symphony, the Koussevitzky International Recording Award (1974) for his Violin Concerto and the Chamber Music Prize of San José (Costa Rica, 1977) for his Third String Quartet. He has conducted major orchestras in Argentina, Brazil, Chile, Colombia, El Salvador, Guatemala, Panama, Puerto Rico and the USA. Many of his compositions have been recorded and performed by major orchestras and artists in Latin America, the USA, Europe, Israel and Australia.

Cordero's influence as an educationist is reflected in the results he obtained when he first established the music education programme in the Panama National Music Institute, which granted the first degrees for music teachers and the first diplomas for composition studies. He therefore contributed substantially to the organization of professional musical life in Panama. His teaching ideas were extended to the whole Latin American continent with the wide use of his *Curso de solfeo* (published by Ricordi in Buenos Aires and Mexico) and to the USA, where he has taught dozens of composition students. Several master's and doctoral theses on his works were written.

With the exception of a few choral works (both *a cappella* and with orchestra) and the ballet *Sensemayá*, for mixed chorus and drum, most of Cordero's music is instrumental. Up to about 1946 he composed in a nationalist, mostly tonal vein, as in such works as *Capricho interiorano* (1939), *Sonatina rítmica* (1943) and *Obertura panameña* (1944), but he did so by combining national elements with modern compositional techniques. He did not consider his music deliberately nationalistic nor did he classify it in any particular trend. On several occasions, he expressed his independent attitude, but always remained truthful to his Panamanian origins. The national elements of the early works are expressed through certain melodic and rhythmic traits, especially those of such typical folk and popular dances as the mejorana, punto and tamborito. But even there he does not resort to an overt, folk-like style but attempts to develop a uniquely modern Panamanian idiom. The *Sonatina rítmica*, in three movements, illustrates that idiom. The writing is tonal, although at times the tonality darkens, primarily through key fluctuations, frequent altered chords, and chromatic aggregates in melodic motives. Typical accompanimental rhythmic patterns or melodic-rhythmic figures of the mejorana recur especially in the outer movements. Formal designs are traditional: sonata-allegro, song form and rondo for the three movements respectively. But, despite the individuality of such a style, Cordero's international recognition was due primarily to his later style, based on a free utilization of 12-note methods.

His study with Krenek motivated him to begin adopting elements of 12-note technique in the *Ocho miniaturas* for small orchestra, first written in 1944 and revised in 1948. But his first truly 12-note composition was the Sonatina for violin and piano of 1946 (and not 1954 as stated in Sider, 1967). The Sonatina was praised not only by Krenek and Mitropoulos but by Cowell, Varèse, Piston, Copland and Stravinsky. In it, Cordero is closer to Berg than to Schoenberg or Webern in the way he conceived and manipulated the basic set. That set is used in the three movements of the work (expressed thematically in the first five bars of the first movement) and consists of major and minor thirds, minor seconds and their inversions; it is used freely, i.e. with melodic and harmonic repetitions and many octave doublings. Characteristic of this style is the frequent melodic and harmonic occurrence of the seventh and a contrapuntal texture whose parts are often built from several forms of the set. In addition the pitches of the basic forms of the set are frequently distributed between the two instruments. A few passages of the outer movements contain rhythmic patterns associated with Latin American folk music, such as the habanera rhythm (and its altered version known as the Cuban tresillo: two dotted quavers and a quaver in a 2/4 metre), the syncopation of a semiquaver, quaver and semiquaver, and the simultaneous or successive combination of 6/8 and 3/4 metres.

Cordero's Second Symphony (1956) illustrates his mature serial writing. Cast in one movement, the symphony is based on three related note rows, freely treated, and it follows a compound sonata form. One trait of this work typical of Cordero is its frequent use of ostinato, which is derived from the rhythm of the Panamanian punto (and not the cumbia as mentioned by Sider, 1967). Since the 1960s Cordero has refined his serial techniques, while retaining the same general traits, with the exception of an increased concern for timbral effects and rhythmic intricacies, and a new irregularity of punctuation and phrasing. On occasions, and for special reasons, he has returned to a new, amplified tonality, as in his *Rapsodia campesina* (1953) and the *Dos pequeñas piezas corales* (1966).

The Violin Concerto (1962) is a virtuoso work, with a technically demanding solo part which pauses rarely. The orchestra is also treated in a virtuoso manner, particularly in the last two movements. In the second movement, it is reduced to a chamber ensemble, emphasizing short solo passages for winds and blending unusual colours, such as violin harmonics with the clarinet in its low register at the end of the movement. The 12-note set of the concerto

opens with a major 7th, characteristic of the composer's previous music. The retrograde form of the set makes up the second theme of the sonata-form design. The music critic Paul Hume (1965) considered this work a 'unique achievement', whose 'sinews are lean, but for all their lack of fat, they offer generous amounts of pure lyric beauty. That they are based on economical lines never deprives them of a sense of largeness of design'. Cordero's later works, from the early 1970s to the mid-1990s, consolidate his strong individuality in handling serial technique with fine idiomatic instrumental writing (as, for example, in the six *Soliloquios*, 1975–92). Furthermore, they retain his Panamanian accent, but without being nationalistic.

WORKS
(*selective list*)

Cordes (Fr.). *See* SNARES.

Cordes avallées [à corde avallée] (Fr.: 'lowered strings'). A term sometimes found in lute, guitar and mandore music to designate the alteration in tuning of at least one course of strings from the normal pattern. Such alterations afford players a greater compass of notes, more open strings for resonance and ease of playing. Because of the nature of the tablature notation for these instruments, it is as easy to read and play music in the altered tuning as it is in the normal one.

Apparently, the term appears first in the 16th-century printed sources for four-course guitar (G. Morlaye: *Quatriesme Livre . . . de Guyterne*, 1552 ['corde avallée'], and *Le Second Livre*, 1553 ['à corde avallée']; A. Le Roy: *Cinqiesme livre de guiterre*, 2/1554, and *Second livre de guiterre*, 2/1555). Here the term indicates that the fourth (i.e. lowest) course is to be tuned a whole tone lower than usual.

The Spanish term for the normal guitar tuning is *temple nuevos* and, for the equivalent of *corde avallée*, *temple viejos* (see J. Bermudo: *Declaración de instrumentos musicales*, 1555). The latter tuning, without mention of any term, is used by Alonso Mudarra (*Tres libros*, 1546) for some of his four-course guitar music. In Italy, the altered four-course guitar tuning is used, without designation, by Scipione Cerreto (*Della prattica musica*, 1601) and in the anonymous collection *Conserto vago* (1645).

In lute music the French term first appears in Anthoine Francisque's *Le trésor d'Orphée* (1600), but here two of the lute's six primary courses are altered, resulting in the tuning *G–B♭–f–b♭–d′–g′*. This tuning is also used by Joachim van den Hove (*Florida*, 1601) in two pieces. J.B. Besard (*Thesaurus harmonicus*, 1603) uses the term for the tuning *F–B♭–f–b♭–d′–g′*, in which three courses are altered. This tuning, with or without the designation, also is found in several other lute sources from the first half of the 17th century.

Indications in lute music to alter the tuning by lowering only the lowest (sixth) course by a whole tone are found in Italy in Francesco Spinacino's *Libro secondo* (1507), where the term 'basso descordato' is used, and in German sources (e.g. H. Gerle: *Tabulatur auff die Laudten*, 1533), which use the term *im Abzug* (*see* ABZUG (1)). There appears not to be an equivalent English term, but this tuning is used for the lute solos in John Maynard's *The XII Wonders of the World* (1611), in which a tuning chart in tablature is provided.

For the mandore, *corde avallée* is used to indicate that the first (highest) course is to be tuned a whole tone lower than its normal pitch (F. de Chancy: *Tablature de mandore*, 1629).

Information on tunings not designated *cordes avallés* are described in SCORDATURA, §3.

Cor d'harmonie (Fr.). *See* HORN.

Cordier (Fr.). *See* TAILPIECE.

Cordier, Baude (*b* Reims; *fl* early 15th century). French composer. The only undisputed biographical facts associated directly with his name are contained in the composer's own words in the elegantly notated rondeau *Tout par compas suy composés* (*see* RONDEAU (i), fig.2 for illustration). The third of four rondeau texts accompanying this circle canon proclaims that the composer's music is known from Reims, his birthplace, to Rome. In it, Cordier is called 'Maistre', indicating that he was a master of arts. The work also suggests Italian influence in being a two-voice canon at the unison over an independent tenor, like the caccia. Both this piece and the rondeau *Belle, bonne, sage* use diminution in the notation, which suggests a dating of 1400 or later. Moreover, the two pieces form a supplement to the late 14th-century Chantilly Manuscript (*F-CH 564*), notorious for its complex notation. Although *Belle, bonne, sage* has the typical three-part texture of a cantus with accompanying textless tenor and contratenor, it also opens with imitation between all three parts. However, it has been suggested (see Wright) that 'Baude Cordier' was the professional sobriquet of Baude Fresnel, a harp player ('cordier') and organist at the court of Philip the Bold and friend of the Burgundian composer Jean Tapissier. Fresnel was from Reims (and was sometimes called Baude de Rains), entered Philip's service on 10 January 1384 and was in Milan and Avignon with him in 1391 and again in Avignon in 1395. He married in 1395 and died in 1397 or 1398, leaving a wife and daughter. This identification would place his compositions in the decade and a half before 1400; however, it has not been universally accepted (see Günther, 1984, p.90; Hoppin, 686).

The remaining nine secular songs (eight in *GB-Ob* Can misc.213, an Italian manuscript from the Venetian area containing many French compositions) show Cordier to be a genuinely transitional composer, his works ranging from complex rondeaux like *Amans, amés secretement*, which has no fewer than 23 mensuration signs within 15 bars of modern transcription, to simple works like *Ce jour de l'an que maint* or *Je suy celuy qui veul*. Cordier had a melodic gift which is complemented by his straightforward accompaniments. A good example is the attractive rondeau *Tant ay de plaisir*, which uses both duple *tempus* and *prolatio minor*. Syncopation is usually modest, though the more rhythmically complex works tend to employ short syncopations together with simultaneous conflicting rhythms, as in *Pour le deffault du noble dieu Bachus*. The greater length of the ballade, musically in comparison with the rondeau, made it a popular vehicle for rhythmic complexity in the early 15th century as well as the late 14th. Thus, *Dame excellent ou sont bonté* has many bars involving the simultaneous performance of duple and triple rhythms, whether *tempus* or *prolatio* is concerned. Also, while the piece is mainly in 6/8 in transcription, it ends in 4/4. The most up-to-date rondeau is probably *Se cuer d'amant par soy* (*I-Bc* Q15). The work has the more flowing rhythms of the mid-15th century, and its transcription involves frequent use of 9/8 within a prevailing 6/8 metre (see Strohm, 141–3).

The main features of the three-voice Gloria are its division into four main sections, and some limited word-painting. The duple rhythms are typical of the simple mass movements of the late 14th century, doubtless intended to obtain the approval of the church, which was more concerned with the audibility of the words than with the artistry of the music. In spite of this, the contratenor has many syncopations, often merely displacing the note-against-note movement of the other parts. The Amen introduces *prolatio maior*, as does Tapissier's Credo, possibly a companion-piece to Cordier's Gloria (both are in *F-APT* 16bis and *I-Bc* Q15); the Amens of both differ from one manuscript to the other, but the two are stylistically related.

GILBERT REANEY

Cordier, Jacques [Bocan, Bocham, Bocquain, Bocquam, Boucan] (*b* Lorraine, *c*1580; *d* ?Paris, before 1655). French violinist, dancing-master and composer. He was widely known by the name Bocan and variants of it. He worked for a time in England. In 1612 he was a musician in the service of James I's queen, Anne of Denmark. He played in court masques such as Jonson's *Love Freed from Ignorance* (1611) and Campion's *Lord's Masque* (1614). He later returned to France and became dancing-master to the royal family. He accompanied Queen Henrietta Maria to London in 1625 but was obliged to return to France in 1628. In records for 1655, his wife was listed as a widow.

Although deformed and apparently untutored in music he played both the rebec and the violin; his natural gifts and buoyant playing were so extraordinary that he was always fashionable, and he received high praise from Mersenne (*Harmonie universelle*, 1636–7, 'Traité des instruments à cordes', i/2). A branle by Cordier (his only surviving work) is in François de Chancy's *Tablature de mandore* (Paris, 1629); it was alleged that the final entrée of the *Ballet du grand bal de la douairière de Billebahaut* (1626) satirized his compositions.

Cordiera (It.). *See* TAILPIECE.

Cordoneanu, Constantin (*b* Galaţi, 20 May 1852; *d* Bucharest, *c*1918). Romanian music critic, flautist and teacher. He studied at the Bucharest Conservatory with Luigi de Santis (flute) and Gheorghe Brătianu (theory). After working for a short period as a flautist in the orchestra of the Romanian Philharmonic Society, he became a teacher at the Pedagogical Seminary and at the Gheorghe Şincai secondary school in Bucharest. In 1890 he founded and directed the important music journal *România Musicală*, and began his activity as a music critic; he also initiated the collection *Biblioteca Lirică*, editing more than 50 booklets on Romanian and European music. He formed an artistic salon in Bucharest, inviting outstanding Romanian and foreign musicians to give concerts in his own home. For the Götzl company of Austria he invented a new type of flute. Cordoneanu drew up the *Curs elementar de musică pentru uzul şcoalelor în genere* ('An elementary course of music for general school use', Bucharest, 1893–4) and conceived an original system for studying vocal music in secondary schools (*Metodul scriptosonic*, Bucharest, 1908). He also prepared Romanian translations of many textbooks, including E.F. Richter's *Die praktischen Studien zur Theorie der Musik* (Bucharest, 1892). His compositions include solo vocal, choral, and instrumental chamber works.

VIOREL COSMA

Corea, Chick [Armando Anthony] (*b* Chelsea, MA, 12 June 1941). American jazz pianist, electric-keyboard player and composer. He began playing the piano at the age of four, learning the fundamentals of music from his father, a professional musician. He first joined the Latin bands of Mongo Santamaria and Willie Bobo (1962–3), and a love of Latin music has been evident throughout his career. He then worked extensively with the hard-bop trumpeter Blue Mitchell (1964–6) and Stan Getz (1967) and made his first recordings as a leader.

In 1968 Corea began playing electric piano in Miles Davis's group, which was turning towards jazz-rock. His involvement with Davis marked the beginning of his exploration of free improvisation. He appeared on many of Davis's important jazz-rock albums including *In a Silent Way* (1969, Col.) and *Bitches Brew* (1969, Col.). Along with Dave Holland he left the group in 1970. The two men formed the group Circle with the drummer Barry Altschul and Anthony Braxton on reed instruments. Corea soon felt a need to establish a more lyrical context for his music, in part because he began the study of Scientology, which pushed him towards creating popular and accessible music. The two solo albums *Piano Improvisations*, recorded for ECM in 1971 shortly before Circle disbanded, clearly reflect this urge.

From late 1971 to 1973 Corea attracted a wider audience with the first of his groups called Return to Forever, which made use of expansive melodies, romantic vocal lines and infectious Latin rhythms. The original members of this group included electric bass guitarist Stanley Clarke and percussianist Airto Moreira. The second Return to Forever group was a powerful rock band in which Corea played electric piano, electronic keyboards and synthesizers; by the mid-1970s he had become popular with rock audiences. Several of his compositions, among them *Windows* (1967, on Getz's album *Sweet Rain*, Verve), *Spain* (1972, on *Light as a Feather*, Pol.) and *Crystal Silence* (1972, on *Crystal Silence*, ECM), have become jazz standards. In the late 1970s he formed a third group under the name Return to Forever that incorporated small string and brass ensembles, made less use of electronics and drew on elements from the Latin, Spanish and classical traditions.

Corea continued to perform and record regularly in a wide variety of acoustic jazz settings, including solo performances, duos with Gary Burton or Herbie Hancock, a quartet with Mike Brecker, and the group Trio Music, formed in 1981. In 1985 he established the Elektric Band, a trio with the bass player John Patitucci and the drummer Dave Weckl, which makes use of both electric and acoustic instrumentation. He recorded some duos in the early 1990s with the singer Bobby McFerrin, and Mozart concertos with Gulda, Harnoncourt and McFerrin.

BILL DOBBINS/R

Corelli, Arcangelo (*b* Fusignano, 17 Feb 1653; *d* Rome, 8 Jan 1713). Italian composer and violinist. Despite the modest size of his output, comprising six collections of instrumental music and a handful of other authentic works, and its virtual restriction to three genres – solo sonata, trio sonata and concerto – Corelli exercised an unparalleled influence during his lifetime and for a long time afterwards. This influence, which affected form, style and instrumental technique in equal measure, was most closely felt in Italy, and in particular in Rome, where he settled in early manhood, but soon spread beyond local and national confines to become a European phenomenon. As a violinist, teacher of the violin and director of instrumental ensembles Corelli imposed standards of discipline that were unusually strict for their period and helped to lay the groundwork for further progress along the same lines during the 18th century. To Corelli belong equally the distinctions of being the first composer to derive his fame exclusively from instrumental composition, the first to owe his reputation in large part to the activity of music publishers, and the first to produce 'classic' instrumental works which were admired and studied long after their idiom became outmoded.

1. Early life. Fusignano, Corelli's birthplace, is a small town midway between Bologna and Ravenna. The Corellis were a family of prosperous landowners, whose elevated social status undoubtedly contributed to the high regard in which the composer's future patrons were to hold both him and his family. Arcangelo was named after his father, who died a month before he was born. Together with four older children, Ippolito, Domenico, Giovanna and Giacinto, he was brought up by his mother Santa Corelli, née Raffini. His childhood has been the subject of fanciful anecdotes of doubtful veracity, but there is no reason to disbelieve the testimony of Crescimbeni (who as a leading member of the Arcadian Academy must have known Corelli well) that he first took music lessons from a priest in the nearby town of Faenza, continued his studies at Lugo, and finally went, in 1666, to Bologna. That city, which boasted one of the largest churches in Christendom in the basilica of S Petronio, was the home of a flourishing school of composers, whose outstanding figures included Cazzati, Perti, Colonna, G.B. Vitali and, nearer the end of the century, Torelli. Padre Martini claimed that here Corelli took violin lessons first from Giovanni Benvenuti and later Leonardo Brugnoli, both pupils of Ercole Gaibara, the doyen of Bolognese violinists. Burney, on the other hand, cited B.G. Laurenti as Corelli's teacher. Both accounts must be taken with some reservation, as 18th-century historians often named arbitrarily as teachers of the famous those whom they considered especially worthy of the responsibility. Hawkins's assertion that G.B. Bassani taught him, often dismissed in the past on the grounds of Corelli's supposed seniority, could well be true, as Bassani's date of birth is now believed to fall before 1650 and his activity as an organist in Ferrara to date from 1667. In 1670 Corelli, at the age of 17, was admitted to the Accademia Filarmonica of Bologna.

2. First years in Rome. His presence in Rome is attested from 1675, when he appeared as a violinist in the orchestra recruited for a series of Lenten oratorios at S Giovanni dei Fiorentini and, on 25 August, as the third of four violinists engaged to play for the annual celebration of the feast day of St Louis of France in the church named after the saint. His whereabouts during the four or so preceding years remain uncertain. Padre Martini stated that Corelli spent only four years in Bologna, but the initial appearance of his name in Roman payment books as 'Arcangelo bolognese' (confirming, incidentally, the nickname of 'Il Bolognese' on the title-pages of his opp.1–3) and his generally subordinate position among the orchestral violinists in 1675, and for some years after, suggest that he was a newcomer to Rome. Either this surmise is wrong, and Corelli arrived in Rome around 1671; or Padre Martini underestimated the length of his stay in Bologna; or Corelli went to live elsewhere during the intervening years. There exists an anecdotal account, apparently originated by Rousseau, of a visit to France, where Corelli aroused Lully's jealousy. The dating of this visit is none too precise, and it has been assumed in modern times that the account is a garbled version of Cavalli's encounter with Lully. A subsequent visit to Spain mentioned by Padre Cesare Felice Laurenti is still more nebulous.

In the next few years Corelli became one of the foremost violinists in Rome. In 1676 and the three following years he performed in Lenten oratorios in S Marcello, a church under the patronage of Cardinal Benedetto Pamphili. In 1676 and 1678 he was once again present in S Luigi dei Francesi on 25 August, playing second violin to Carlo Mannelli, whom he also partnered in an 'Esposizione delle 40 ore' at S Marcello on 20 September 1678. On 6 January 1679 he played at the inauguration of the Teatro Capranica with Pasquini's *Dove è amore è pietà*. The earliest glimpse of the man behind this impressive series of public appearances comes from a letter he wrote on 13 May 1679 to Count Fabrizio Laderchi, an official of the Tuscan court. Corelli mentioned that he had entered the service of Queen Christina of Sweden as a chamber musician and was busy composing sonatas for her first 'academy'; these completed, he would supply the count with a sonata for violin and lute. In another letter to Laderchi of 3 June 1679 he reported the sending of the sonata, whose bass part could also be played on the cello. It has been suggested that this composition is the Corelli work included in an anthology of sonatas for violin and cello published in Bologna during the 1690s. In 1681 Corelli dedicated his first opus, 12 trio sonatas of the 'church' variety, to Queen Christina, describing them,

perhaps with exaggeration, as the 'first fruits [*primitie*] of his studies'. Christina was before long replaced by Cardinal Pamphili as Corelli's most important patron, but she was still able to call on his services for special occasions. An *accademia per musica* by Pasquini performed in Christina's Palazzo Riario in honour of Roger Palmer (Earl of Castlemaine), James II's ambassador to the Holy See, by 150 string players led by Corelli and 100 singers on 2, 7 and 9 February 1687 evoked much admiration. In March 1689 Corelli directed a large band of players in two solemn masses, the first in Il Gesù and the second in Santa Casa, Loreto, to celebrate Christina's recovery from illness (a short-lived rejoicing, as she died the next month). Both ensembles included trumpets, and on the second occasion Corelli contributed 'a new sinfonia with trumpets'. This mention of a trumpet sinfonia increases the likelihood that the well-known trumpet sonata attributed to Corelli in a 1704 publication of Walsh and in various Italian and English manuscripts is a genuine work, whether or not identical with the sonata he is alleged to have composed for Mr Twiselton, trumpeter to the Duke of Aumont, in an advertisement in the *Daily Courant* of 16 March 1713.

Corelli's whereabouts between 3 June 1679 (the date of the second letter to Laderchi) and 30 April 1681 (the date of the dedication of op.1) are uncertain. One could easily believe that he remained in Rome were it not for reports of a visit to Germany around this time. The claim by the composer Caspar Printz, elaborated by J.A. Hiller, that Corelli visited the Bavarian court seems in part to result from a confusion of Corelli with Giuseppe Torelli. Chrysander's mention of a visit to the Hanoverian court is no better substantiated. In 1682 Corelli reappeared at S Luigi, now as leader of ten violins. The second violin was Matteo Fornari, a pupil to whom he became devoted and who from then on was rarely to be absent from his side. On every subsequent 25 August up to and including the year 1708, when old age and failing health forced his retirement, Corelli paid his annual visit to the church. In 1684 he was inscribed, together with Alessandro Scarlatti, as a member of the Congregazione di S Cecilia, a body of whose instrumental section he became head in 1700. Also in 1684 he began to play regularly for musical functions organized by Fornari's employer Cardinal Pamphili, taking responsibility for the engagement and payment of the players. The academies held on Sundays at the cardinal's Palazzo al Corso were a focal point of Roman musical life, and it was perhaps at these that Corelli's first set of chamber trios, published in 1685 as op.2 and dedicated to Pamphili, were first heard. A sequential passage in the Allemanda of the third sonata (reproduced in *Grove5*) gave rise to one of those acrimonious disputes concerning musical propriety so characteristic of the age. When first played in Bologna, where the sonatas had been brought out later that same year, these bars caused astonishment on account of a series of ostensible parallel 5ths between the first violin and the bass. At Colonna's instigation a certain Matteo Zani wrote a courteous letter to Corelli asking for his explanation. Corelli took the request in rather bad part: since, in his view, the 5ths were indirect and therefore legitimate, the Bolognese musicians must be ignorant of the rules of music. Thereupon the matter broadened into an inter-city dispute, each side enlisting support from local musicians, so that the correspondence continued for some months. It is unlikely that the Bolognese musicians, initially at least, were motivated by resentment at their former colleague's move to Rome, as has been hinted, for even now many will find the passage inherently contentious.

3. Later years in Rome. On 9 July 1687 Pamphili engaged Corelli as his music master at a monthly salary of ten Florentine piastres. Corelli went to live at the cardinal's palace, accompanied by Fornari and a servant, Bernardino Salviati. Another musician employed by Pamphili was the Spanish cellist G.B. Lulier, often nicknamed by the Romans 'Giovannino del violone'. Corelli, Fornari and Lulier often performed together as a trio or, in the context of orchestral music, as a concertino of soloists. Lulier was also a composer, and a good example of the way in which his talents were harnessed to those of Corelli can be seen in the oratorio *S Beatrice d'Este*, which was performed early in 1689 in Pamphili's residence in honour of the visiting Cardinal Rinaldo d'Este. The music was by Lulier, and a very large orchestra under Corelli was mustered for the occasion, consisting of 39 violins, 10 violas, 17 cellos (*violoni*), 10 double basses, one lute, two trumpets and (presumably) one or more keyboard instruments – over 80 players, among whom were Bernardo Pasquini and Francesco Gasparini. (A Roman orchestra of more typical size, such as the one Corelli directed at S Marcello in 1690, had a concertino supported by harpsichord, with a concerto grosso of four violins, two violas, one cello, two double basses and organ.) The oratorio was taken later that year to the Este court at Modena, and for this revival, if not already for the Roman performance, Corelli supplied an Introduzione (overture) and Sinfonia (probably the overture to the second part). The same division of labour between Corelli and the composer of the vocal music must often have occurred at Pamphili's court. On 20 September 1689 Corelli dedicated his third opus, 12 more *sonate da chiesa*, to Francesco II, Duke of Modena. It has been supposed that Corelli travelled to Modena then, but on slender evidence.

Pamphili's move for some years to Bologna in 1690 gave Cardinal Pietro Ottoboni, a rival Maecenas, an opportunity to assume the patronage of Corelli. The 22-year-old Ottoboni had been raised to the purple at the end of 1689 through an act of flagrant nepotism by his uncle, Pope Alexander VIII, and filled a succession of high ecclesiastical offices. Corelli went to live in his palace, the Cancelleria, where academies were regularly held on Monday evenings. Ottoboni acted towards the composer more like a friend than an employer, and his correspondence shows the affection he had for the entire Corelli family. Op.4, a second set of chamber trios, was dedicated to Ottoboni in 1694. Corelli continued to write sinfonias and concertos (the terminological distinction is often unclear). In 1693 he contributed some 'concerti' to an *Applauso musicale a quattro voci* by Lulier, and on 10 December 1700 was paid 30 scudi for composing a concerto and sinfonia for the Feast of the Translation of the S Casa, Loreto. These orchestral works attracted considerable notice. As early as 1682 Georg Muffat, a German composer who became acquainted with both Lully and Corelli, imitated them on his return from Rome in the sonatas of his *Armonico tributo*. In 1689 Angelo Berardi da S Agata wrote: 'Concertos for violins and other instruments are called "sinfonie", and today those of

Signor Arcangelo Corelli, the famous violinist . . . the new Orpheus of our days, are prized and esteemed'.

Corelli also directed operatic performances at the Cancelleria and the Teatro Tordinona. An interesting entry for 1 May 1702 in a Neapolitan diary records Corelli's arrival in Naples to play in the opera (possibly Scarlatti's *Tiberio, imperator d'Oriente*). Perhaps this brief visit, which cannot have been prolonged beyond the middle of August, is the one commemorated in Burney's famous anecdote: mistrusting the ability of the Neapolitan players, Corelli took with him Fornari and a cellist (possibly Lulier); to his surprise, his hosts played a concerto of his so well at sight that he exclaimed 'Si suona a Napoli' ('they play at Naples') to Fornari. The sequel to this episode was less fortunate: having agreed to direct the orchestra in an opera by Scarlatti, who was present, Corelli first found difficulty in executing a certain passage in a high register which the Neapolitans managed with ease, and then deepened his disgrace by making two false starts in C major to an aria in C minor.

On 26 April 1706 Corelli was admitted, with Pasquini and Scarlatti, to the Arcadian Academy in Rome, receiving the name of Arcomelo Erimanteo. There are records of Arcadian functions, unfortunately undated, in which he participated. Other engagements at the Pamphili and Ruspoli palaces brought him into contact with Handel. He played (none too successfully, according to Hawkins) in Handel's *Il trionfo del tempo e del disinganno* in May 1707, and led the orchestra in two performances of *La resurrezione* (9 and 10 April 1708).

After 1708 Corelli retired from public view. He busied himself with the composition, or more probably revision, of concerti grossi. A Christmas Concerto perhaps identical with op.6 no.8 had been composed as far back as 1690 for Ottoboni, and other concertos may well have matured for far longer, going back to the time of Muffat's visit or beyond. Possibly Corelli felt compelled to increase their quotient of virtuosity, converting what were originally sinfonias for church or theatre into more scintillating works able to stand comparison with the concertos of Torelli, Albinoni, Valentini and other pioneers, and profiting from the technical advances made in his op.5, the celebrated set of violin sonatas dedicated in 1700 to the Electress Sophie Charlotte of Brandenburg. In a notice concerning the papal contralto Matteo Simonelli, Andrea Adami da Bolsena observed in 1711 that Corelli (whom he claimed to be Simonelli's pupil) was just then perfecting his sixth opus, consisting of concertos, which he would shortly publish. On 21 April 1712 Corelli concluded an agreement with the Amsterdam publisher Estienne Roger for the set's publication; his recompense was to be 150 free examples, presumably for resale in Italy. The dedication, penned with the assistance of Ottoboni on 3 December 1712, was to the Elector Palatine Johann Wilhelm, an admirer to whom the composer had sent a *Concertino da camera* in 1708. At the end of 1712 Corelli moved out of the Cancelleria into the Palazzo Ermini, a pied à terre normally occupied by his brother Giacinto, his nephew Arcangelo and the many possessions, including valuable paintings and musical instruments, that he had accumulated. On 5 January 1713 he wrote his will, bequeathing to cardinals Pietro Ottoboni and Carlo Colonna one painting each, and to Matteo Fornari all his violins, his manuscripts, the plates of his op.4 ('4' is probably in error for '5') and the free examples of his op.6 to come. (After Corelli's death Fornari took out a papal privilege for the concertos and replaced the original dedication with one of his own, similarly inscribed to Johann Wilhelm; in 1716 the elector responded to a petition from Corelli's elder brother Ippolito by conferring on the family the Marquisate of Ladenburg). Corelli died on 8 January 1713 and was embalmed and buried in S Maria della Rotonda (the Pantheon). The anniversary of his death was marked for several years afterwards by solemn performances of his concertos in this church.

4. Reputation and influence. Hawkins's description of Corelli as 'remarkable for the mildness of his temper and the modesty of his deportment' sums up the impression of contemporaries, who found those qualities admirable in a man so famous and so rich. Contemporary portraits, of which the best known is one by the Irishman Hugh Howard (see illustration), who visited Italy during 1697–1700, emphasize the composer's archangel-like serenity. The style of his playing was in keeping – 'learned, elegant and pathetic' – though one might not gather this from one witness, who claimed that 'it was usual for his countenance to be distorted, his eyes to become as red as fire, and his eyeballs to roll as if in an agony'. When directing string ensembles he was said to insist on unanimity of bowing among the players of each part, as Lully had done some years earlier. The number and eminence of his pupils make Corelli the most outstanding and influential violin teacher of his time. The Italians among them included Carbonelli, Castrucci, Gasparini, Geminiani and Somis (possibly also Bonporti, Locatelli, Mascitti and Mossi); the foreigners included the Frenchman Anet, the Spaniard Herrando, the German Störl and the English amateur Lord Edgcumbe.

Arcangelo Corelli: mezzotint by John Smith after Hugh Howard, after 1700

Corelli's influence and reputation spread as much through the dissemination of his works, which coincided with the remarkable boom in music publishing around 1700, as through his teaching. The sheer number of reprints of his collections is unmatched before Haydn: op.1, for example, went through 39 known editions between 1681 and 1790 (not counting collective editions of opp.1–4 and innumerable arrangements, selections and pastiches for all manner of instruments and even voices). The most popular opus was the fifth, of which at least 42 editions had appeared by 1800. In England, particularly, his op.6 concertos were regarded as classics; they continued to be played, and preferred even to those of Handel, well into the 19th century. Some composers tried their hand at arranging Corelli's music. Geminiani's refashioning of six op.3 sonatas and the whole of op.5 as concerti grossi was a skilful, if misguided, effort, facilitated by the lack of any pronounced stylistic difference between Corelli's works for different media. Other composers used his music as a springboard for original composition: Bach borrowed the subject of the second movement of op.3 no.4 for an organ fugue (BWV579): F.M. Veracini left a set of *Dissertazioni sopra l'opera quinta del Corelli*, which elaborately reconstitute all 12 works; Tartini wrote a set of variations on the ever-popular Gavotte of the tenth solo sonata, entitled *L'arte dell'arco*. Rachmaninoff (using the folia theme in op.5 no. 12) and Tippett have paid their homage more recently.

Corelli's own variation movements – the *ciaconna* forming by itself the final chamber sonata in op.2, and folia variations rounding off op.5 – were widely imitated. Dall'Abaco's sonata op.3 no.11 (1712) ends with a similar chaconne, while folia variations are found in T.A. Vitali's op.4 (1701), Albicastro's op.5 (1703), Vivaldi's op.1 (1705) and Reali's op.1 (1709, dedicated to Corelli). A *Suario o capriccio ... all'imitationo* [sic] *del Corelli*, modelled on Corelli's folia, was composed by G.B. Tibaldi. Other composers besides Tibaldi deliberately aped Corelli's manner as a stylistic exercise: Bellinzani's trio sonatas 'ad imitazione d'Arcangelo Corelli', Galuppi's concerto 'sul gusto del Corelli' and Telemann's *Sonates corellisantes* are all works of this kind.

The composers who slavishly imitated Corelli without acknowledgment were legion. John Ravenscroft (Giovanni Redieri) published at Rome in 1695 a set of trio sonatas so Corellian that Le Cène ventured to bring out nine of the works about 1730 as Corelli's 'op.7'. Other composers honoured Corelli more worthily by naming works or movements after him, either in an act of dedication, as in Valentini's sonata op.5 no.7, or in a stylistic evocation, as in Dandrieu's movement *La Corelli* (from his second harpsichord book, 1727) and Couperin's famous pair of programme works *Le Parnasse, ou L'apothéose de Corelli*, in which Corelli's ascent to Parnassus is depicted, and *L'apothéose de Lully*, in which the respective champions of the French and Italian styles achieve reconciliation.

5. STYLE. If today Corelli's idiom often seems predictable, over-simple or even commonplace, it is paradoxically as a result of its very originality as perceived by his contemporaries, who, by appropriating and developing its most advanced features, turned what were once exciting novelties into dry clichés. His admission in the first letter to Laderchi that the sole purpose of his compositions was to 'show off' ('fare campeggiare') the violin may have been sincere, but does scant justice to the range of originality evident in opp.1 and 2. The agile violin writing, already characterized by an abundance of broken-chord figuration, steers a happy course between Bolognese academicism, as typified by G.B. Vitali, and Venetian extravagance, as typified by Legrenzi. Extremes of register, which could detract from the cantabile quality, are avoided (the lowest string of the violin, made of unwound gut in Corelli's day, is rarely used, and the 3rd position is seldom exceeded, the *f'''* at bar 97 of the second concerto being the highest note he ever required). Conjunct upward or downward progressions of first-inversion chords, sometimes disguised by intervening chords, are already present in force; similarly, sequential progressions in which the roots of successive chords travel alternately a 5th in one direction and a 4th in the other. Both devices contribute to the notably modern sense of tonality, and are used to steer the music neatly into related keys as required. A memorable feature of Corelli's counterpoint is the 'leap-frogging' of the two violins, in which each part rises in turn by a 4th, having just fallen by step to resolve a suspension – the classic 18th-century method of producing a rising sequence in which the suspensions still resolve downwards. Corelli popularized certain rhythmical stereotypes, in particular the 'walking' or 'running' bass in which an inessential note is interposed between each two harmony notes. Ironically, the one device with which he is associated by name – the 'Corelli clash' (where the late resolution on to the leading note at a cadence coincides with the anticipation of the tonic note in the companion upper part) – is an asperity fashionable in dance music around 1680, but which hardly appears in his works outside op.2.

In formal matters, Corelli is often credited with the clearest exposition of the difference between the 'church' and 'chamber' varieties of sonata, and the establishment of four movements as the norm in both. These generalizations require much qualification. As early as opp.1 and 2 the first signs of convergence of the two varieties are apparent. All but three of the op.2 works have preludes (Corelli's term was taken up by many other composers) modelled on the opening slow movement of his typical church sonata, and nos.3 and 4 contain additional 'abstract' movements. In op.3 the church idiom comes closer to the chamber idiom in harbouring a greater proportion of movements in quick tempo and binary form, while the representation of abstract movements in the op.4 chamber sonatas shows a slight increase over op.2.

A further significant stage in the process of convergence is reached in opp.5 and 6: two of the finales of the ostensibly *da chiesa* works making up the first half of op.5 are styled 'Giga', while the penultimate sonata among the six *da camera* works has no dance titles at all for four out of its five movements. It was left to Corelli's successors to complete the amalgamation. The four-movement plan in church sonatas is merely an incipient tendency in op.1, but is virtually the norm in op.3. The chamber sonatas are as likely to be in three, or occasionally five, movements as four. Both the solo violin sonatas and the concertos (of which *da chiesa* works make up the first eight, and *da camera* works the rest) tend to observe a five-movement norm, the additional movement being in quick tempo. Not by coincidence are these the works in which solo display is most conspicuous: the extra

movement is there to give the violinist (or the concertino) an opportunity to show a degree of technical dexterity that the more traditional contrapuntal movements cannot accommodate. Op.5 is a locus classicus of two types of movement that were much imitated: an opening slow movement which, as in the first work, is punctuated after each cadence by a passage of cadenza-like display writing, and a fugal movement in which the single violin simulates through double stopping the interplay of the upper parts in the trio medium. The slow movements, though they may appear statuesque as notated, were intended to be lavishly embellished. In 1710 Roger published a new edition of op.5 with embellishments, allegedly (and in fact probably genuinely) provided by Corelli himself to illustrate the correct manner of performance of the 12 slow movements in nos.1–6. There are numerous other 18th-century sources giving ornamental versions of one or more movements, including some by Geminiani and Dubourg. (For illustration *see* ROGER, ESTIENNE.)

The medium chosen by Corelli for his concerti grossi was a favourite Roman one of the time, for which Stradella had already written a handful of instrumental works. The replacement of two violas by a second violin and a viola as the inner parts of a four-part layout, already seen in the final version of Stradella's *Il Danone* (1677), suited Corelli well, as it permitted him to reproduce the technique and style of his trio sonatas with little modification, although elements of the Bolognese trumpet sonata (e.g. the antiphony at the start of the second movement of the last concerto) and of the solo sonata were also included. The role of the orchestral violins is generally to double, or in virtuoso passages to reinforce, the concertino, producing a chiaroscuro effect not so different from the loud–soft alternation already exploited in the chamber works. As Corelli stated on the title-page, the orchestra ('concerto grosso') is optional. However, the viola's role is ambiguous. Since it may be duplicated, and never plays apart from the concerto grosso instruments, it clearly belongs with them; yet, since no concertino instrument is normally doubled by the viola, on the rare occasions when it presents important material (e.g. at the outset of the Largo of no.6) it can be omitted only at the price of having the cello of the concertino take over its line until it retreats into thematic anonymity – a poor makeshift. Perhaps this is the reason why Pepusch's score of the concertos places the viola in the concertino, and why Geminiani and Locatelli sometimes treated the viola in their similar concertos as a concertino instrument. As in some of the chamber sonatas, the first violin often dominates its partners, suggesting the solo concerto. A novelty for Corelli in these concertos is the adoption of French-style *saccadé* rhythms in nos.3 and 7. The form of the concertos proved less influential than their style, since newer, more dynamic formal concepts appeared from Torelli, Albinoni and Vivaldi even before op.6 was published. Only in conservative Rome and England were they accepted by some as a self-sufficient model. A combination of Corellian style and Vivaldian form may be seen in many German concertos, including Telemann's.

The traditional view of Corelli is summed up by Newman in speaking of 'a remarkable sense of balance in the concentration and direction of all his musical forces'. Balance is not the most positive of virtues, and one can praise Corelli on other counts. His contrapuntal skill is most evident not in his fugues, which are admittedly sometimes too stiff when they are strict and too haphazard when free, but in a movement such as the Largo e puntato of op.1 no.12, where over a ground bass consisting of seven evenly spaced notes in a descending scale he wove ingenious patterns worthy of his contemporary Purcell. Ostinatos in his upper parts often create a splendidly abrasive harmonic effect against mobile bass lines. The instrumentation of his concertos has many happy touches: the bagpipe-like drone of the Pastorale appended to the eighth concerto is a worthy ancestor of the Polonaise in Handel's op.6, and the doubling of the concertino cello by the orchestral violins in the second Adagio of the fourth concerto is another imaginative stroke which makes it impossible to regard the concerti grossi merely as inflated trio sonatas. Few composers achieved so much so quickly, and with such economical means, as Corelli.

MICHAEL TALBOT

Corelli, Franco [Dario] (*b* Ancona, 8 April 1921). Italian tenor. He studied at Pesaro and made his début in 1951 at Spoleto in *Carmen*, subsequently appearing in various Italian theatres. In 1954 he sang at La Scala, returning there until 1965. He made a sensational Covent Garden début, as Cavaradossi, in 1957, and was first heard in 1961 at the Berlin Städtische Oper and at the Vienna Staatsoper in 1963. After his Metropolitan début as Manrico (1961), he was engaged at that house every year during the following decade, singing 282 performances of 18 roles. He appeared at the Paris Opéra and the Vienna Staatsoper in 1970 and at the Verona Arena in 1970 and 1972.

The possessor of a large, stentorian voice, Corelli was limited at first to *verismo* roles in the middle of the tenor range. But later he developed a strong and extended upper register and acquired the ability to inflect and vary his tone. Long the finest exponent of the Italian *spinto* tenor repertory (Ernani, Manrico, Radames, Don Alvaro, Andrea Chénier, Calaf, all preserved on disc), he successfully tackled some extremely difficult roles at La Scala between 1958 and 1962: Gualtiero in *Il pirata*, the title role in Donizetti's *Poliuto* and Raoul in *Les Huguenots*. His handsome appearance and, in certain operas (especially *Carmen*), his vivid acting, made him a magnetic presence on stage. Among his recordings, those of Poliuto from La Scala and Pollione (*Norma*) in the studio (both with Callas), Calaf (to Nilsson's Turandot) and Don Alvaro (in a video from Naples) show why Corelli is widely regarded as one of the great tenors of the 20th century.

RODOLFO CELLETTI/ALAN BLYTH

Corena, Fernando (*b* Geneva, 22 Dec 1916; *d* Lugano, 26 Nov 1984). Swiss bass. He studied with Enrico Romani in Milan. After his début in 1937 he returned to Zürich for the war but made a postwar début in Trieste in 1947 (Varlaam). He appeared throughout Italy in roles as disparate as Escamillo, Sparafucile and Scarpia, and in 1949 sang in the première of Petrassi's *Il cordovano* at La Scala. The *buffo* repertory soon became his abiding speciality, however; he made his Metropolitan début as Leporello in 1954, becoming the logical and worthy successor to Salvatore Baccaloni. He sang in Edinburgh two years later (Verdi's Falstaff) and at Covent Garden as Dr Bartolo in 1960 and 1969. He also appeared in Vienna, at the Salzburg Festival, notably as Osmin in Strehler's production of *Die Entführung aus dem Serail*, and in Berlin, Buenos Aires, Verona and Amsterdam; his other roles included Don Pasquale, Gianni Schicchi, Dulcamara, Don Alfonso, Sulpice in *La fille du régiment*, Mustafà and Lescaut in *Manon*. With the passing of time, Corena made up in comic invention for what he began to lack in vocal opulence. His wit, style and flair for improvisation remained exemplary. He is well represented in recordings of both serious and comic roles.

MARTIN BERNHEIMER

Corfe. English family of musicians from Winchester, possibly descended from Robert Corfe, a bellringer at Winchester Cathedral from 1669 to 1706. Two brothers Corfe, John (*c*1672–1743) and Thomas (*d* 1701), held appointments as chorister and lay vicar respectively at Winchester Cathedral; both were lay vicars at Salisbury Cathedral. John had five sons concerned with music: Robert (*b* 1696), who held posts at Salisbury and possibly Limerick cathedrals; John (1702–72), a chorister at Salisbury Cathedral; Joseph (*b* 1705), not a professional musician, but father of a line of musicians; Charles (1708–42), who in 1730 took part in the first concert recorded in Salisbury, and (1) James, below.

(1) James Corfe (*b* Salisbury, bap. 26 Feb 1713). Tenor and organist. He was a chorister at Salisbury Cathedral from 1722 to 1729. He sang in *Rosamond* at Lincoln's Inn Fields in 1733, in Handel's operas and oratorios from *c*1733 to 1744 and in *Messiah* in Bath on 17 May 1755. He became organist at the Portuguese Embassy Chapel. About 1740 he published *Twelve English Songs with their Symphonies* (op.1), *Six English Songs for Two and Three Voices* (op.2) and *A Collection of Songs for One, Two and Three Voices* (op.3).

(2) Joseph Corfe (*b* Salisbury, bap. 9 Feb 1741; *d* Salisbury, 29 July 1820). Organist and tenor, son of Joseph Corfe (*b* 1705). He was a chorister at Salisbury Cathedral, 1752–3, lay vicar, 1759–60, and was apprenticed to the cathedral organist John Stephens. He was made a Gentleman of the Chapel Royal in 1783 and in 1784 sang at the Handel Commemoration. He was also organist of Salisbury Cathedral from 1792 to 1804. Joseph was a respected singing teacher with Nancy Storace and Mrs Second among his pupils. He married Mary Bernard on 14 April 1766 and they probably had

three sons. His published works include *A Treatise on Singing* (1799), *Sacred Music* (1800), *The Beauties of Handel* (1803), *Beauties of Purcell* (*c*1805), *Thorough Bass Simplified* (1805) and *Church Music* (*c*1810), as well as glees, songs and anthems.

(3) Arthur Thomas Corfe (*b* Salisbury, 9 April 1773; *d* Salisbury, 28 Jan 1863). Organist, son of (2) Joseph Corfe. In 1783 he became a chorister at Westminster Abbey, and later studied with Clementi. He succeeded his father as organist of Salisbury Cathedral in 1804 and held this post until his death. His works include *The Principals of Harmony and Thorough-Bass Explained*.

His son John Davies Corfe (1804–76) was a chorister at Salisbury Cathedral and organist of Bristol Cathedral, 1825–76; another son, Charles William Corfe (1814–83), was organist of Christ Church, Oxford, 1846–82.

BETTY MATTHEWS

Corfini [Corsini], **Jacopo** (*b* Padua, *c*1540; *d* Lucca, 1591). Italian composer. He was a pupil of Brumel in Ferrara, as he himself stated in the dedication of his first book of motets addressed to the Duke of Ferrara. On 2 February 1557 he was appointed to succeed Nicolao Malvezzi as organist at S Martino, Lucca, where he remained until his death (his successor, Gioseffo Guami, was elected on 5 April 1591). As a composer he was evidently respected by his contemporaries: Andreoni referred to Corfini as a 'compositore raro di musica', and Nerici, citing a letter of Cesare Angiloni to the poet and singer Eleonora Belatti, stated that Angiloni 'would hold himself very happy if four of his verses were set to music by Messer Jacopo Corfini'.

Corfini's training with Brumel is evident from his confident mastery of counterpoint. His *Primo libro de' motetti* contains a number of cantus-firmus motets, and both it and the *Secondo libro* include canonic pieces. Such techniques are not confined to Corfini's sacred music: *Il secondo libro de madrigali* contains one work (*Si quae sub curru* for seven voices) addressed to a member of the Lucchese nobility, which is composed around a cantus firmus in the tenor voice. Corfini's other main compositional interest lay at the other end of the stylistic spectrum, namely in large-scale motets whose deployment of texture, colour and sonority virtually excludes imitative writing. The second motet book already includes pieces for two and three choirs, and polychoral works lie at the heart of the *Concerti* of 1591. Here eight-voice settings predominate (a number are cast as dialogues), but the book also contains two motets for three choirs and a final one for four. As its title suggests, an important influence in this final collection is that of the Venetian school in general, and of Andrea and Giovanni Gabrieli's *Concerti* of 1587 in particular.

PHILLIP D. CRABTREE/IAIN FENLON

Corfu (Gk. Kerkyra). Capital city of the island bearing the same name and of the Ionian Islands. The islands, under Venetian rule for 400 years (until 1797), were the only part of Greece to avoid Ottoman occupation. Corfu is now regarded as the cradle of Greek art music and represents the earliest and most prominent Greek operatic centre, as well as one of the most important in the eastern Mediterranean and the Balkans. The Teatro S Giacomo (now the Town Hall) was completed in 1691; the earliest opera performances date from 1733, and from 1771 regular performances stimulated a lively musical culture (*see* GREECE, §III). Folk, popular and church music constituted the background against which opera became virtually a cult among the Ionian population.

During the 19th century opera spread to the other Ionian islands. The earliest known performances on Zákinthos were in 1813; opera on Kefallinia began in 1838 with performances by visiting Italian companies, subsidized by the British authorities (see Evanghelatos). The second half of the 19th century saw the opening and closing of several small theatres on both islands; the two most important theatres, the Kefalos on Kefallinia (inaugurated 1858, cap. 500) and the Foscolo on Zákinthos (inaugurated 1875, cap. 750), were destroyed by the earthquakes of 1953. A modern theatre, also named Kefalos (cap. 500), was erected on Kefallinia in 1994.

The construction of a larger, modern theatre in Corfu began in 1893. The Dhimotikon Theatron (City Theatre), with 64 boxes in three tiers, was inaugurated with *Lohengrin* in 1902. After 1900, when the Elliniko Melodrama company from Athens came to life, companies, mainly Italian, alternated with Greek opera and operetta presentations. Another theatre, the Phoenix, had both winter (500 seats) and open-air summer (*c*1050 seats) premises; it was active between 1895 and 1945, with operetta companies appearing in the larger venue. Visits by Italian companies were almost completely suspended from 1923, when the Fascists bombarded the city and occupied the island. The City Theatre was heavily damaged by fire in 1943, when it seems that the theatre archives as well as Ionian composers' manuscripts were destroyed. The building was demolished in 1952, to be replaced in 1980 by a much smaller theatre.

As important as opera for the propagation of secular music in the Ionian Islands were the philharmonic societies, essentially wind bands; the first of these societies appeared in Zákinthos in about 1817, and the famous Corfu Philharmonic Society was founded in 1840. Thanks to these societies, the Ionian Islands became a prime source of wind players in continental Greek bands and orchestras. Besides the Corfu Philharmonic, several other wind bands, including the Mantzaros (founded 1890) and

the Capodistrias (founded 1980), still existed at the end of the 20th century. Another important feature of the Ionian musical landscape is male choruses, notably the Horodhia Kerkyras (Corfu Chorus), and mandolinatas specializing in *kantadhes* (Ionian popular partsongs). In 1894 the Odheion Kerkyras (Corfu Conservatory) was founded, while the Kefallinian composer Yerassimos Rombotis (1903–87) settled in Corfu, opened a music school and established a full symphony orchestra, both active from 1928 to 1934. In 2000 Corfu had a City SO and a (mixed) City Chorus. The Corfu Festival, inaugurated in 1981, was short-lived due to a lack of funds.

The 1990s saw the opening of several educational establishments in Corfu. The Music School, founded in 1991, is considered to be one of the best in Greece, while five new conservatories opened in 1996–7: the Ionian Conservatory, branches of the Athenian Philippos Nakas and Hellenic conservatories, the Communal Conservatory of Ano Korakiána, and the conservatory in Lefkimmi. The music department of the Ionian University was founded in 1992 by the composer Mihalis Adamis, who was succeeded in 1993 by Haris Xanthoudakis. It has established a network of contacts with foreign universities and promotes the publication of texts on the history of Greek art music. The department is also notable for its mixed chorus and the resident Trio Korypho (piano, violin, clarinet), both of which give frequent concerts in Corfu, Athens, Thessaloniki, Patras and other Greek cities.

GEORGE LEOTSAKOS

Corghi, Azio (*b* Ciriè, nr Turin, 9 March 1937). Italian composer. After starting out as a painter, he took diplomas at the Turin Conservatory in the piano (1961), composition (1965, studying with Bettinelli), choral music (1966) and conducting (1967), as well as polyphonic vocal composition (1969) at the Milan Conservatory. He came to prominence by winning the RAI-Ricordi competition (1967), the Gaudeamus prize (1969) and the Jeunesses Musicales prize (1972). Among his commissions are works for IRCAM (1982) and La Scala (1990). He taught composition at the conservatories in Turin (1967–71), Milan (1971–6) and Parma (1976–8), returning to a permanent appointment in Milan in 1978; in 1995 he began to teach at the Accademia di S Cecilia in Rome.

Corghi's music retains two fundamental elements from an early interest in Berg and Debussy: contrapuntal textures and the manipulation of timbre. Rigorously organized, his pieces have experimented with avant-garde methods, including extended instrumental techniques and electro-acoustic elements, for example in *Intavolature*, '… *in fieri*', *Jocs floreal* and *Actus I*. The voice took on greater importance in the 1970s (e.g. *Symbola*) as did folk music and poetry (e.g. *Ninnios*, *Viòire*). After *Symbola* (which involves a mime artist), the music-theatre piece *Tactus* and the ballet *Actus III*, he moved on to larger-scale compositions for the theatre, with *Gargantua*, *Blimunda* and *Divara*. Of great dramatic complexity, these works re-examine historical forms and styles through a modern perspective and with a keen critical sensibility.

WORKS

Stage: Tactus (music theatre), vv, insts, tape, 1974, Como, 27 Sept 1974, ballet version, Turin, 10 Nov 1980; Actus III (ballet, P.P. Pasolini), 1977, Florence, Comunale, 28 June 1978; Gargantua (op, 2, A. Frassineti, after F. Rabelais), 1984, Turin, Regio, 2 May 1984; Mazapegul (ballet, texts from Emilia-Romagna region), 1985, Reggio nell' Emilia, Municipale Valli, 17 Jan 1986; La piovana (incid music, Ruzzante), 1985, Verona, Romano, 30 July 1987; Blimunda (op, 3, Corghi and J. Saramago, after Saramago: *Memorial do convento*), 1989, Milan, Lirico, 20 May 1990; Un petit train de plaisir (ballet), Pesaro, Rossini, 23 Aug 1992 [after Rossini]; Divara: Wasser und Blut (op, 3, Corghi and Saramago), Münster, 31 Oct 1993; Isabella ('teen-op', 1, Corghi, after A. Anelli), 1996, Pesaro, Auditorium Pedrotti, 9 Aug 1998 [after Rossini: *L'italiana in Algeri*]; Rinaldo & C. ('baroccoper', Corghi, after A. Hill), 1997, Catania, Massimo, 31 Oct 1997 [after Handel]

Orch: Intavolature, 1967; …in fieri, 1968; Alternanze, 1970, Rapsodia in Re(D), 1997–8

Other inst: Divertimento, 12 insts, 1964; Jeux, cl, pf, 1965; Continually, pf, 1967; Musica 3, vn, cl, pf, 1967; Stereofonie × 4, fl, vc, org, perc, 1967; Hop-Frog, hpd, 10 str, 1969; Jocs Florals, str qt, 1970; Recordari, pf, vn, va, vc, 1970; Sumer is icumen in …, 10 str, 1972; Arc-en-ciel, 2 vn, va, 1973; Consonançias y redobles, gui, 1973; Actus I, 10 wind, 1975; Actus II, va, pf, 1976; Viòire, fl, hpd, gui ad lib, 1978; Sym. 'Dell'esercito di Arlecchino', 10 wind, perc, live elecs, 1982; Introduzione, Intermezzo I e II, Finale, ob, 1986; Intermedi e canzoni, trbn, 1986; Chiardiluna, fl, gui, 1987; '… promenade', fl, cl, vn, vc, 1989; Animi motus, str qt, Live elecs, 1994; '. . . ça ira', pf, 1996

Vocal: Ricordando te, lontano (G. Ungaretti, A. Bertolucci, S. Aleramo), S, pf, 1962–3; Gli uomini vuoti (cant., T.S. Eliot), 6vv, 9 insts, 1966; Symbola (textless), 1v, fl, vc, pf, perc, synth, tape, opt. mime, 1971; Umbra (textless), chorus, 1973; Ninnios (It. trad.), S, 2 vn, va, 1976; Lumina solis (Lucretius), 1v, ob, pf, 1986; '… promenade' dans l'île de la liberté (E. Sanguineti), S, fl, cl, vn, vc, 1989; 'chansons d'élite …' (popular songs of the Fr. Revolution)), 1v ad lib, pf, 1989; La cetra appesa (cant., Pss, Bertolucci, S. Quasimodo, T. Solera), S, spkr, chorus, people's chorus, band, orch, 1994; La morte di Lazzaro (Saramago), spkr, mixed chorus, children's chorus, wind, perc, 1995; . . . sotto l'ombra che il bambino solleva (Saramago), 1v/spkr, orch, 1999

VIRGILIO BERNARDONI

Cori (It.). *See* COURSES.

Coriandoli, Francesco (*b* probably Ferrara; *d* Ferrara, 1670). Italian composer and guitarist. In his only known work, *Diverse sonate ricercate sopra la chitarra spagnuola* op.1 (Bologna, 1670/*R*), he implied that he was not a professional composer but did not identify his profession. The contents resemble those of Granata's 1646 collection in style, combining *battute* and pizzicato techniques. Dance genres, loosely grouped by key, predominate: there are twelve sarabands, ten allemandes, six gigues, four courantes and a brando, in addition to two preludes. Some of the pieces show a lack of fluency and sophistication; the volume contains many typographical errors.

GARY R. BOYE

Coria Varela, Miguel Angel (*b* Madrid, 24 Oct 1937). Spanish composer. He studied with Gerardo Combauç and others at the Madrid Conservatory, where he won the Fugue Prize (1961). In 1965 he won a grant from the Gaudeamus Foundation (the Netherlands), which allowed him to work with the composers Xenakis and Haubenstock-Ramati. Another grant, from the Juan March Foundation, enabled him to study at the University of Utrecht (1966), where he was taught electronic music by G.M. Koenig. The same foundation awarded him the Fine Arts Pension (1968). He was general delegate of the Spanish Radio and Television SO and Choir (1981–6) and consultant to the municipality of Madrid and the Ministry of Culture. He is a member and co-founder of the Alea Laboratory of electro-acoustic music and of the Association of Spanish Symphonic Composers.

Coria's works, highly refined in their treatment of instruments, reveal an affiliation to Weber (especially in the early period), increasingly filtered by a sensuousness derived from French Impressionism. In 1973 he embarked on his postmodernist period, in which he attempts to evoke the spirit of the music of the past, but without literal allusions (*Ravel for President*, *Falla Revisited* and *Ancora una volta*).

ANGEL MEDINA

Corigliano, John (Paul) (*b* New York, 16 Feb 1938). American composer, son of the violinist John Corigliano. After studying with Luening, among others, at Columbia University (BA 1959), he worked as a music programmer for the *New York Times* radio station, WQXR, and as music director for WBAI. He also produced recordings for Columbia Masterworks (1972–3) and worked with Leonard Bernstein on the Young People's Concerts series for CBS (1961–72). He has taught at the Manhattan School (1971–86), the Juilliard School (1992–) and Lehman College, CUNY (1973–), where he was named distinguished professor in 1984. During the period 1987–90 he served as the first composer-in-residence of the Chicago SO. His awards include a Guggenheim Fellowship (1968), the Grawemeyer Award (1991), two Grammy awards for Best Contemporary Composition (1991, 1996) and the Composition of the Year award from the International Music Awards (1992) for his opera *The Ghosts of Versailles*. He was elected to the American Academy and Institute of Arts and Letters in 1991.

Corigliano's collaborations with mainstream musicians and institutions, his occasional forays into film scoring (*Altered States* won an Academy Award nomination in 1981; *Revolution* won Britain's Anthony Asquith Award in 1985), his oft-stated commitment to intelligibility and his mostly tonal early works have sometimes obscured the extent of his technical range and his often daunting progressivism. *Pied Piper Fantasy* for flute and orchestra (1981), an intricate, largely non-tonal concerto, features extended instrumental techniques and notations, as well as controlled aleatory procedures. The work's musical aspects, however, can easily be upstaged in performance by its (usually) costumed soloist and theatrical finale, incorporating parades of children playing pipes and drums. An attention to dramatic elements may similarly obscure the diverse musical materials of *The Ghosts of Versailles* (1987), the Metropolitan Opera's first commission since 1967, in which a large-scale operatic form is constructed from 18th-century tonal techniques, serial and timbral counterpoint, and a modified *verismo* idiom.

Corigliano's first period, which he described as a 'tense, histrionic outgrowth of the "clean" American sound of Barber, Copland, Harris and Schuman', extends from the Violin Sonata (1963) through the choral symphony, *A Dylan Thomas Trilogy* (1960–76). The Oboe Concerto (1975) and, more definitively, the Clarinet Concerto (1977), introduced by Bernstein and the New York PO,

inaugurated a change in style, abandoning an earlier restriction to conventional notation and embracing an 'architectural' method of composition. In these works, abstract dramatic designs, often sketched through words and/or images, precede and control the inclusion and inflection of a wide range of musical materials (i.e. tonal, microtonal, timbral, serial, aleatory). The Symphony no.1 (1989) and its companion choral work, *Of Rage and Remembrance* (1991), memorials to the victims of AIDS, project characteristically disparate materials in a tragic mode of public address. Following the symphony's 1990 première, it was performed internationally by nearly 100 orchestras. Later works include the nostalgic guitar concerto *Troubadours* (1993), the Grammy-winning String Quartet (1996) and *The Red Violin* (1997), based on themes from the film of the same name.

WORKS

Dramatic: A Williamsburg Sampler (film score), 1974; Altered States (film score, dir. K. Russell), 1979; Revolution (film score, dir. H. Hudson), 1985; The Ghosts of Versailles (opera buffa, 2, W.M. Hoffman, after Beaumarchais: *La mère coupable*), 1987, New York, Met, 19 Dec 1991; The Red Violin (film score), 1997; incid music

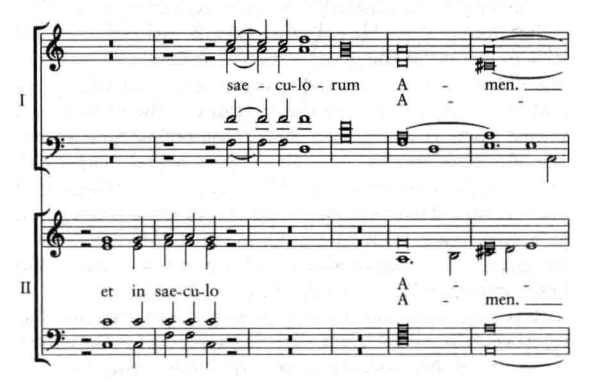
MARK ADAMO

Cori spezzati (It. 'broken choirs'). Singers divided into distinct groups, sometimes placed in different parts of a building; also the technique of the music composed for them.



1. Beginnings to 1550. 2. Lassus, the Gabrielis and their north Italian contemporaries. 3. Rome, Spain and England; later developments.

1. Beginnings to 1550. The practice of *cori spezzati* goes back to Jewish and early Christian liturgical music, but the Italian term itself dates from the 16th century and the polychoral music that became popular then. Though its history may extend back to monophonic psalmody, double-choir polyphony seems to have emerged in the second half of the 15th century and to have developed in two distinct ways: through the application of polyphony to antiphonal psalmody, as in the two choirbooks *I-MOe* cod.late.454–5, and, in the music of such composers as Pierre de la Rue, Josquin and Mouton, through the splitting of multi-voice texture into distinct voice groups, often in a canonic or imitative relationship.

In the early 16th century psalms and canticles for *cori spezzati* seem to have been most popular in and around Venice: a number of composers at Bergamo, Padua and Treviso were interested in such music and several new developments came about. Psalm settings for double choir could be through-composed, as in the music for Vespers and Compline by Francesco Santa Croce, who was *maestro di cappella* at Treviso Cathedral for two periods between 1520 and 1551. In his polychoral music he sought a new balance between homophony and imitative counterpoint. He still used a little imitation, but for long stretches a simple chordal style prevails, giving great clarity to the words and relying for musical variety on the alternation of the choirs (see ex.1). This music is much simpler to perform than the contrapuntal Flemish works of the period, and its harmonic progressions are surprisingly modern. Ruffino d'Assisi used the technique in a mass setting as well as in psalms, illustrating that double-choir textures were no longer associated solely with liturgical antiphony.

It was probably from such works that Willaert learnt the possibilities of *cori spezzati* and it was, above all, his famous psalm settings for double choir published in 1550 that led to the vogue for polychoral music during the second half of the 16th century. In some ways these settings are more advanced than Santa Croce's, though the harmony is simple and diatonic. As Zarlino was to point out (*Le istitutioni harmoniche*, iii, 1558), the harmony of each choir is complete in itself, an important precept if the two bodies of singers are at some distance from each other. Paradoxically, we know that at S Marco, Venice, Willaert's psalms were performed with the performers bunched together, with one choir sung one to a part. This may account for the relative lack of effective

Ex.1

dialogue in these works, for their little conscious use of contrasting sonorities and for their lack of tutti writing, the latter usually reserved for the conclusion of the Doxology. They were, however, highly popular, perhaps because they fulfilled the requirements of the Council of Trent concerning the audibility of the words. At S Marco itself they became something of an institution; this may explain why there are no settings of vespers psalms by the Gabrielis. Elsewhere vespers psalms were especially popular, and polychoral settings of them can be traced through the latter part of the 16th century well into the 17th. Vicentino, who dealt in detail with polychoral writing in *L'antica musica ridotta alla moderna prattica* (1555/*R*), emphasized register contrast between the choirs; this was subtle in early psalms, but became dramatic in the music of the later Venetians.

The parallel emergence of polychoral textures in polyphonic writing reached a watershed in Phinot's double-choir motets published in Lyons in 1547 and 1548 and often reprinted, particularly in German anthologies. Phinot's technique is highly developed, with varied antiphonal pacing and impressive punctuating tuttis, although without harmonic independence of the choirs.

2. Lassus, the Gabrielis and their north Italian contemporaries. From the middle of the century other composers began to write for two choirs. Initially the most important of these was Lassus. He used *cori spezzati* for great ceremonial motets, some with secular Latin texts in praise of his patrons, and also in masses, *Magnificat* settings and, significantly, more intimate, expressive works such as Marian antiphons. In contrast to Willaert but more akin to Phinot, he tended to use the tutti of the two choirs a great deal, and in the pursuit of contrapuntal independence for each voice his polychoral music is sometimes very complicated in rhythm. The result is a lack of clarity in the words but a much more brilliant sound, probably made even more brilliant at times by the use of instruments. Lassus also employed *cori spezzati* in secular music in the vernacular and was one of the earliest composers of dialogues and echo music (*see* Dialogue). Hardly ever did he adhere to Willaert's rule about the harmonic self-sufficiency of the choirs. He resembles Willaert most closely in the alternation of groups in his dialogue technique, although the alternation varies according to the construction of the text; sometimes a choir is required to take up the movement from the other with little interlocking or overlapping.

The greatest of Lassus's pupils was Andrea Gabrieli, who combined the natural vivacity of the earlier Italian composers with Willaert's seriousness and Lassus's love of sonority. Like Lassus he usually set ceremonial texts rather than psalms. He composed nearly all his polychoral motets for use at the great Venetian festivals. Sometimes one choir consists of upper voices only, while the other may be a *coro grave*, and the tessitura of the highest and lowest parts is often such as to require instruments. In one or two works one choir is marked 'cappella', indicating a ripieno group of voices or of voices and instruments. That the remaining choirs were often given to a solo voice with instruments can be deduced from some of Giovanni Gabrieli's later works and from Praetorius (*Syntagma musicum*, iii, 1619/*R*).

Bassano, Bellavere, Croce, Donato and Giovanni Gabrieli all followed Andrea Gabrieli's example. They took for granted his harmonic and dialogue style and the sometimes pronounced contrast between his various groups of voices and instruments. It is a tribute to his modernity and imagination that few of them could add any really novel feature in an age in which innovation was almost a watchword. Only works by Giovanni Gabrieli and Croce, in fact, are at all in advance of Andrea's *Concerti* of 1587. The earliest works of both composers are close to his in style. Croce employed *cori spezzati* in the composition of parody masses. In these, as well as in his double-choir motets, the dialogue technique and diatonic harmonies are quite clearly derived from Andrea. Giovanni Gabrieli also followed his uncle closely. Very little of his church music is written for a single choir, and most of the texts set by him were those set by Andrea in his 1587 collection. In his *Sacrae symphoniae* (1597) Giovanni used the choral and instrumental groupings and in general the harmonic idiom of his uncle. The contrasts between the groups are now sharper, and although he did not yet specify the precise scoring of the vocal works, he included instrumental pieces employing polychoral techniques. The motets in his *Sacrae symphoniae* published posthumously in 1615 show the logical development of these traits. By introducing the basso continuo, he made possible the use of the accompanied solo voice, and elaborate ornamentation now differentiates it strongly from choral style. Arresting harmonic effects involving augmented chords or mediant progressions are characteristic. The instrumental ensemble is given separate sinfonias, as well as being involved in the climactic tutti sections. In fact because of such obvious contrasts of timbre the choirs no longer need to be separated, and several of the works can be performed with the forces grouped *en bloc*.

With the work of Giovanni Gabrieli the fame of *cori spezzati* was complete. Almost every major composer of church music in Italy made use of the technique, and a Venetian influence can be traced in Germany. A further development was the separation of the soloists from each other. In his *Sacri concentus* (1612) Ignazio Donati recommended a method that he called 'distant singing'. Monteverdi used effects of this kind in his famous *Vespro della Beata Vergine* (1610). The potential complexity of such music can be seen in Croce's posthumously published psalm *Laudate pueri*. In this work the four soloists are split up to give echoes of one another, and there is a ripieno choir in another part of the church and yet a further group consisting of trombones accompanying an alto voice.

3. Rome, Spain and England; later developments. In Venice and its surrounding state, polychoral music soon declined, and by 1630 it was no longer the main form of ceremonial music, having been superseded by more flexible forms of sacred concerto. Its popularity continued for a short time, however, in both Rome and Germany. In Rome Palestrina had composed and published motets for two choirs as early as 1572. Their texts indicate that they were intended for great ceremonial occasions, but although this might denote the influence of Venetian composers the actual style shows that Palestrina was less interested in the resources of *cori spezzati* than in the greater sonority made possible by eight voices. There is little contrast between the choirs, and although a free dialogue style is sometimes used the main interest is in imitative counterpoint. Palestrina's motet volume of 1575 is in a more modern style, with triple-time passages, homophonic dialogue between harmonically complete

choirs, and so on. Even so, the more characteristic and powerful passages, such as the beginning of *Surge, illuminare*, depend on counterpoint rather than polychoral devices. There are long imitative phrases and interesting, independent melodic lines, both of which the Venetian composers completely ignored in the later part of the century.

Palestrina's pupils and imitators continued to follow his style for some years, and polychoral music occupied a special place in the feast day celebrations of the wealthier confraternities. The forces involved were not prohibitively large, since one-to-a-part singing was common. The proliferation in the number of choirs, often in SATB range, in the 'Colossal Baroque' style is apparent in the music of Benevoli. There was, as also in northern Italy, a move towards more diversified textures; *cori spezzati* passages were contrasted with solos, duets or sections in imitative style within more sectionalized formal patterns, a style known as *concertato alla Romana*.

Victoria, whose first polychoral compositions were also published in 1572, began in a manner close to that of Palestrina, though in some of his later works, written after his return to Spain, he approached Venetian composers in general style. It is likely that the Spanish fondness for instrumental participation resulted in a comparable richness of colour. In Iberia as in Italy the amount of polychoral music produced during the late 16th century and the early 17th was enormous, and the idiom was exported to Central and South America.

In Germany the vogue for separated choirs was very important in the 17th century. The style was well known there from the time of Lassus and was encouraged by a number of Andrea Gabrieli's pupils, of whom the most distinguished were Hans Leo Hassler and Aichinger. Schütz, who studied with Giovanni Gabrieli, was fond of polychoral devices and had much the same talent as his master for using space as part of the musical pattern. His earlier works, typified by the *Psalmen Davids* (1619), are clearly indebted to Venetian models, but he rationalized the classification of choirs, distinguishing clearly between solo [*favoriti*] and ripieno forces. Later he went further in the dramatic use of *cori spezzati*. Michael Praetorius, though not capable of such power, is important because he explored with Germanic thoroughness the possibilities accruing from the use of space and codified them in his *Syntagma musicum*, iii. The most complex work of all for separated choirs was written for some great ceremonial occasion at Salzburg Cathedral. This is the mass for 53 voices formerly ascribed to Benevoli but now believed to be by a later 17th-century composer such as Biber or Andreas Hofer. The performers are divided into eight groups, all constituted differently. The chordal structures are extremely simple, and the whole depends strongly on the element of surprise provided by the spatial separation.

In England church choirs were divided into two (*see* DECANI AND CANTORIS), but when, in music from the late 16th century on, the groups alternate and dovetail, the style is meditative with no lively dialogue and in the tuttis like parts from each side join on the same line. The only important English example of *cori spezzati* technique is Tallis's extraordinary *Spem in alium* for eight five-part choirs, possibly composed for the 40th birthday of Elizabeth I. Tallis takes imitation systematically through all 40 voices as well as creating wave-like antiphony and stunning harmonic effects.

In Venice, the practice persisted into the 18th century. Vivaldi wrote not only church music in the idiom but also concertos and solo motets in which the orchestra was divided into groups on opposite sides of the church. Galuppi wrote masses with as many as four separated groups. Bach, too, used the device, mainly in his festival works, such as the *St Matthew Passion* and the motets, long after it had ceased to be generally popular in Germany. There are genuine spatial effects in these works, but in general he used such divisions more because they made for increased sonority. This also applies to the few later examples, such as the *Te Deum* of Berlioz and Walton's *Belshazzar's Feast*, where the wide separation of performers is incidental and forced on the composer by the very size of his resources.

Cork. City in Ireland. It is the second city of the Republic of Ireland (Eire). Cork has a population of 174,000, and among its musical establishments are Roman Catholic and Church of Ireland cathedrals, an opera house, a university department of music, the Cork School of Music,

the regional broadcasting studios of Radio Telefís Éireann (RTÉ), local radio stations, two arts centres, a theatre and, in its city hall, a large concert hall with a seating capacity of 1300.

Records of opera and concert performances in Cork go back to the 18th century. In the latter half of the 19th, three theatres and several small concert halls were in use, and evidence of the intensive cultivation of music is clear from the large-scale concerts held in connection with the Cork exhibitions of 1852, 1883 and 1901–2. Today Cork hosts an International Choral and Folk Dance Festival, held annually at the end of April or beginning of May, with a university seminar on contemporary choral music running concurrently. Cork is an important centre for choral music and Cumann Náisiúnta na gCór (Association of Irish Choirs), which publishes choral music and runs a choral library service, is based in the city. A competitive music festival (Feis Maitiú) is held annually from February to April, and the very popular Guinness Jazz Festival in October. The Cork Orchestral Society is an important concert-giving body, sponsoring an annual series of chamber music concerts. There are six orchestras based in the Cork School of Music, ranging from preparatory level to a senior symphony orchestra. The Cork SO, of which Aloys Fleischmann (professor of music in University College, Cork, from 1934 to 1981), was the long-serving conductor until his death in 1993, performs regularly. The Vanbrugh String Quartet are artists-in-residence in University College, Cork, and an army band (the Band of the Southern Command) is stationed in the city.

Since the 1960s Cork has been a centre for excellence in Irish traditional music. The early innovator, Seán Ó Riada, held the Irish music lectureship in University College, Cork, from 1963 until his death in 1971, and in 1975 Mícheál Ó Súilleabháin, composer, pianist and ethnomusicologist, took up the position. The music department has a developed curriculum within which traditional and classical music studies have equal importance. The international traditional music festival, Éigse na Laoi, is organized annually by the Traditional Music Society and the music department. Cork city is also home to a large community of traditional musicians and several traditional groups.

ALOYS FLEISCHMANN/R

Corkhill, David (*b* Bebington, Cheshire, 29 Sept 1946). English timpanist and percussionist. He originally entered the RAM as a harpsichordist in 1964 before switching to percussion in his second year, studying with James Blades, Roy Jesson and Maurice Miles. He made his professional début with the LSO in 1967 in a performance of Britten's *War Requiem* under Sir David Willcocks and joined the English Chamber Orchestra as principal timpanist in 1970. He had a close working relationship with Benjamin Britten who wrote the timpani parts for *Death in Venice*, *Owen Wingrave* and *Rejoice in the Lamb* under Corkhill's guidance. Since then he has been one of Britain's foremost orchestral percussionists. In 1975 he became professor of timpani and percussion at the GSM, and the following year was appointed principal percussionist of the Philharmonia Orchestra. A leading exponent of chamber music for percussion, he has recorded Bartók's Sonata for two pianos and percussion twice, most notably with Sir Georg Solti, Murray Perahia and Evelyn Glennie, for which he won a Grammy award in 1988. Corkhill was the timpanist, at Solti's request, for the World Orchestra for Peace in 1995 to celebrate the 50th anniversary of the United Nations.

MATTHEW DICKINSON

Corkine, William (*fl* 1610–17). English composer. The dedication of his first collection (1610) to Sir Edward Herbert (later Lord Herbert of Cherbury) and Sir William Hardy suggests that he served his apprenticeship under them. Little is otherwise known of his life. A receipt dated 2 February 1612 shows that he performed with John Dowland and Richard Goosey at a Candlemas entertainment at the Middle Temple. In 1617 he was one of a group of musicians given permission to go and work at the Polish court.

Corkine's books of *Ayres* contain both songs and pieces for the lyra viol. Most of the songs have an accompaniment for lute and bass viol, but some of those in the second book are accompanied by bass viol only; the wording on the title-page, 'to the Base-Violl alone', seems to preclude the addition of a chordal continuo part. Some of Corkine's songs, such as *Some can flatter* and *Sweet restraine these showers of kindnes*, recall the 'light airs' of Thomas Campion, with their simple textures and flowing groups of two notes per syllable. Corkine's graceful melodic style, with its happy use of sequence, is heard at its best in *What booteth love*. Other songs, however, such as the setting of Donne's *Tis true tis day*, foreshadow the new declamatory style in their wayward melodic contours and irregular rhythms. Corkine's music for the lyra viol, which is intabulated and chordal like that of the lute, consists of dances and variations on popular grounds. His settings of *Walsingham* and *Come live with me and be my love* represent early high points in the repertory of the lyra viol.

WORKS

Ayres, to Sing and Play to the Lute and Basse Violl, with Pavins, Galliards, Almaines and Corantos for the Lyra Violl (London, 1610/*R*); ayres only ed. in ESLS, 2nd ser., xii (1926); 2 inst pieces in MB, ix (1955/*R*)

The Second Book of Ayres, some to Sing and Play to the Base-Violl alone: others to be Sung to the Lute and Base Violl, with new Corantoes, Pavins, Almaines; as also divers new Descants upon old Grounds, set to the Lyra-Violl (London, 1612/*R*); ayres only ed. in ESLS, 2nd ser., xiii (1927)

DIANA POULTON/DAVID GREER

Cornacchioli, Giacinto (*b* Ascoli Piceno, 1598–9; *d* ?Ascoli Piceno, after 1 Sept 1673). Italian composer, organist, musician and singing teacher. He is first heard of on 28 December 1607 when he received payment in grain for

his service during the year as a choirboy at Ascoli Cathedral. He was organist there from June 1612 to 28 December 1615, when he was removed from the post. Following a petition he was reinstated on 9 January 1616 but was finally replaced on 28 December 1616. From a deed of 22 February 1619, in which his father, overcome by debts, sold his house, we know that Giacinto was the oldest child and was no more than 20, and that among the witnesses were two Parisian relations. Between May and November 1619 he served as organist of the church of the Buon Gesù, Carcassai.

In 1629 his opera *Diana schernita* (text by G.F. Parisani) was performed in Rome, possibly for an academy during Carnival in the house of Baron von Hohen Rechberg. The work was subsequently printed by G.B. Robletti, with a dedication dated 6 June to Prince Taddeo Barberini, nephew of Pope Urban VIII. In 1633 Cornacchioli was *maestro di cappella* in Siena, where between July and December he met Galileo Galilei, who had just come from his trial by the Holy Office in Rome and was guest of Archbishop Ascanio Piccolomini. Galilei heard and enjoyed the singing of a 'castratino' pupil of Cornacchioli. In 1635 he was chaplain, musician and singing teacher at the Munich court, where he met Galilei's nephew, Alberto Cesare, a violinist and lutenist at the court. In 1640 and 1642, in the service of Archduke Leopold Wilhelm of Austria, he was often in Italy to recruit musicians and buy musical materials (these activities are detailed in 17 letters to the Archduke and his adviser, now in the Staatsarchiv, Vienna). He engaged in futile negotiations for the post of Kapellmeister with Carissimi and Francesco Foggia; even the recommendations of his friend G.B. Ghiavarino failed to bring him success. From a letter dated 9 December 1642 we know that Cornacchioli intended to enter the Cistercian monastery of Heiligenkreuz, Lower Austria, but his name never appears in their registers. It appears that in December 1647, not 23 February 1653 as believed up until now, he was a witness to Luigi Rossi's will. He may have been *maestro di cappella* of Ascoli Cathedral in 1651 and/or after 1658, but this cannot be ascertained. It is certain, however, that on 27 September 1657 he was elected *maestro di cappella* of Fermo Cathedral, bringing with him at his own expense a 'castratino da M. Alto [Montalto Marche]', but on 2 August 1658 the post was already vacant. On 1 September 1673 he was guaranteed 36 scudi a year by his younger brother Simone (1600–74), in exchange for a donation received.

Cornacchioli's only known work, *Diana schernita* (score in *GB-Lbl*, *I-Rsc*), a *favola boscareccia* in five acts, is one of the earliest comic operas. Parisani's text, clearly influenced by the work of Marino, mixes three myths of love under the rule of Cupid. It presents an original approach to the themes of Florentine courtly opera, treating the characters in a more realistic manner and introducing comic elements into the pastoral for the first time. The alternation between fixed poetic structures and freer verse forms in the prayer to the moon, act 3, may symbolize the contemporary vicissitudes of Galilei (after initially receiving support from Pope Urban VIII, he was made to recast his views in 1633). Support for Galilei was strong among Germans and Protestants, and this may explain the dedication of the work to Baron von Hohen Rechberg.

THEOPHIL ANTONICEK/UGO GIRONACCI

Cornago, Johannes (*b* ?Cornago, nr Calahorra, *c*1400; *d* ?Burgos, after 1474). Spanish composer. He is the earliest composer in Spain from whom a substantial number of compositions survives. He may have been the Johannes Eximii de Cornago of the diocese of Calahorra who requested benefices from Pope Martin V between 1420 and 1429 and who may have received his musical training at Tarazona Cathedral. In 1449 Cornago obtained a bachelor's degree in theology from the University of Paris. By 6 April 1453 he was already serving King Alfonso I of Naples; his reputation as a composer must have been firmly established. On the day of Calixtus III's coronation in April 1455, the pope issued a bull to Cornago identifying him as Alfonso's chaplain and confirming privileges already granted to him on 19 June 1453. On 12 October 1455 Cornago, described as a Franciscan, was referred to as enjoying an annual salary of 300 ducats, a figure confirmed by documents of 15 September 1456 and 8 January 1457. Not even Josquin des Prez at the height of his career received so great a salary. In 1466 Cornago served Alfonso I's successor Ferrante I as chief almoner. He is last recorded among the singers at the court of Ferdinand the Catholic in 1475.

Cornago's surviving compositions comprise a Mass, a motet and 11 Spanish and Italian songs. His *Missa 'Ayo visto lo mappamundi'*, based on a Sicilian popular song in *barzelletta* form, is one of the earliest surviving masses on a secular cantus firmus. The Mass resembles English masses in some characteristics, such as duets at the beginnings of movements, a head motive, asymmetrical phrases, repetitive rhythmic patterns and colourful harmonic progressions. The cantus-firmus statements are augmented except at the end of the Gloria and Credo. Cornago may have become acquainted with the new English mass genre during his studies in Paris in the late 1440s. The Mass seems to have been sent as a present for Calixtus's coronation, though it must have been composed for an earlier occasion. A superscription associates the Mass with the Virgin Mary; a misinterpretation by Pope (*Grove6*) led her to attribute an anonymous *Missa 'Meditatio cordis'* with associated motet *Gaude Maria* to Cornago, but this is not supported by stylistic evidence. Cornago's only surviving motet is a freely composed four-voice composition, *Patres nostri peccaverunt*, a very early setting of a text from the Lamentations of Jeremiah.

The nine Spanish songs are among the earliest polyphonic canciones in Castilian. Cornago's songs are characteristic of the mid-15th-century chanson, governed by a duet between discantus and tenor and syllabic declamation at the beginnings of phrases followed by melismas. Cornago's tenor and discantus parts are often close in range and even cross extensively, as in *Yerra con poco saber*, a song probably composed after 1457 when

the poet Pedro de Torellas visited Naples. Cornago drew his texts from several other renowned Castilian poets, including the Marqués de Santillana and Juan de Mena; indeed, five of the nine Spanish songs are by known poets.

Unlike the Spanish canciones, *Morte o merce* is a through-composed Italian composition that may date from the late 1460s, when Cornago served in Ferrante's court, more italianate than his father's. The song, in a homorhythmic and declamatory style, is an early example of emerging humanistic attitudes emphasizing the subordination of music to the words. The Petrarchan imagery of the text and the simple musical style distinguish this from Cornago's other songs.

The large number of alternative versions of Cornago's songs reflects the versatility of the song repertory; they were not fixed compositions, but improvisatory and adaptable ones. Some of the reworkings, such as those of *Pues que Dios te fizo tal*, were conceivably composed by Cornago himself, but others may be seen as evidence of the esteem in which he was held; Ockeghem, for instance, composed two new contratenors for the discantus and tenor of Cornago's *¿Qu'es mi vida preguntays?*. It is more likely that the two composers met while Cornago was studying in Paris than that (as was formerly proposed) Ockeghem arranged Cornago's song during or after his visit to Spain in 1469; Cornago was then in Naples.

WORKS

for 3 voices unless otherwise stated

Edition: *Johannes Cornago: Complete Works*, ed. Rebecca L. Gerber, RRMMA, xv (1984)

Missa 'Ayo visto lo mappamundi'

Patres nostri peccaverunt, 4vv

¿Donde stas que non te veo?; Gentil dama non se gana (also with added 4th voice); Infante no es nascido [= Señora qual soy venida]; Moro perche non day fede; Porque mas sin duda creas; Pues que Dios te fizo tal (3 versions); ¿Qu'es mi vida preguntays? (also arr. 4vv by Ockeghem); Segun las penas me days; Señora qual soy venida; Yerra con poco saber

Morte o merce (2 versions); Non gusto del male

REBECCA GERBER

Cornamuda tuerto (Sp.). *See* CRUMHORN.

Cornamusa (i) (It., Sp.; Fr. *cornemuse*). A wind-cap instrument of the 16th and early 17th centuries. It was like a straight, quiet CRUMHORN. The use of the word 'cornamusa' in some languages to mean bagpipe (see (ii) below) suggests that the wind-cap cornamusa may have been developed from a bagpipe chanter (*see* WIND-CAP INSTRUMENTS, §3). It seems to have been more or less restricted to Italy, though the lack of firm evidence and the ambiguities in nomenclature indicate that even there it cannot have been widely known. The rare records of apparently similar instruments in practical use in Germany do not call them by that name; it is remarkable therefore that the only known description of the instrument is given by Praetorius (2/1619), who described it as a straight wind-cap instrument, having a covered bell with 'small holes on the sides through which the sound comes out'. He mentioned five sizes, each with a range of a 9th: *Bass* (lowest note *F*), three *Tenor* and *Alt* sizes (*B♭*, *c*, *d*) and *Discant* (*b♭*) (there being no logic in making an instrument only in these sizes, his description may be based on instruments belonging to two or more sets); 'they sound like crumhorns except that they are quieter, gentler and very soft'. These instruments evidently had a cylindrical bore like the crumhorn, and Praetorius stated that they were similar in appearance to his SCHRYARI. His use of the word 'cornamusa' is unique in German sources (though Troiano, writing in Italian, used it in a treatise published in Munich in 1568); however, apparently similar instruments called 'straight crumhorns' are listed in the inventories from the court of the dukes of Saxony at Dresden (1593) – Praetorius may have based his descriptions on these instruments, for he is known to have visited the city – and the castles of the Rožmberk family at Česky Krumlov (1599) and Třebon (1610).

Cornamuse are mentioned in various Italian sources, including the treatise of 1592 by Zacconi (from whom Praetorius may have taken the name), who listed them among the consort instruments and the tongue-articulated woodwind, and said that '*sordoni* sound like *cornamuse*'. Rognoni (1620) stated that the compass of the bass *cornamusa* could be increased by means of keys, which is reminiscent of the extended crumhorn.

Cornamusa (ii). In Romance languages 'cornamusa' (Fr. *cornemuse*) is used of the bagpipe. In Italy it may sometimes also have been applied to the crumhorn (Baines, 1966), though in some sources the two words are not synonymous. The inventory of instruments belonging to the Spanish court in Madrid in 1602 contains one of the rare uses of the word 'cornamusa' outside Italy that do not clearly mean 'bagpipe'; it mentions two sets of 'wooden *cornamusas* from Germany', which strongly suggests crumhorns.

Cornazano [Cornazzano], **Antonio** (*b* Piacenza, *c*1430; *d* Ferrara, Dec 1484). Italian dancing-master and dance theorist. Born into one of Piacenza's leading noble families, he was educated in classical and modern languages, the theory and practice of military arts and of politics, and dancing. He spent the first 20 years of his life in Piacenza, except for five years when he studied at the Studio di Siena (*c*1443–8). In Piacenza he was a pupil of DOMENICO DA PIACENZA, whom he greatly admired and whose theoretical and aesthetic concepts are reflected in his *Libro dell'arte del danzare* (1455). Early in 1454 Cornazano joined the household staff of Francesco Sforza as 'consigliore, segretario, o ciamberlano' and teacher of his children. He dedicated the first version of his treatise to the young Princess Ippolita, whom he instructed in the art of dancing.

After Sforza's death in 1466 Cornazano went to Venice, where he spent the next 11 years as military adviser to General Bartolommeo Colleone. After a two-year period of political activities in Piacenza, Cornazano was called to Ferrara by Ercole I d'Este in autumn 1479. Soon after his arrival he married Taddea de Varro, a member of an old noble Ferrarese family. He was held in high esteem; on his death he was buried in the Chiesa de' Servi.

The *Libro dell'arte del danzare* (*I-Rvat* Capponiano 203) is the second of the important dance instruction books of the early Renaissance, preceded only by Domenico's treatise. Of the original version only the dedicatory sonnet survives. It is impossible to say which parts of the second version, written about 1465 and dedicated to Sforza 'Secondo' (perhaps Galeazzo Maria), are from the first and which are later additions. Cornazano's indebtedness to his teacher's treatise is evident in an almost identical arrangement of theoretical material, beginning with the six principles necessary for all good dancing, followed by definitions and descriptions of the basic step units for each of the fundamental dance tempos, the individual steps and their tempo relationships. The dances themselves – eight balli (including the *Balletto Sobria*) with their mensurally notated music (*in canto*, *in canto da sonare*) and three bassadanzas – are also taken from the work of the older master (1 ed. I. Brainard in *The Musical Manuscript Montecassino 871*, ed. I. Pope and M. Kanazawa, Oxford, 1978, pp.531–3). The three *tenori da bassedançe et saltarelli gli megliori et piu usitati degli altri* are written in even note values similar to the notation found in Burgundian basse danse manuscripts but unlike that of most 15th-century Italian dance manuals. Their varying length makes them adaptable to different choreographies of the Italian repertory; they illustrate at least one of the procedures for providing musical accompaniment. Particularly noteworthy is Cornazano's definition of balletto as a dramatic dance form 'che po contenire in se tutti gli . . . movimenti corporei naturali, ordinato ciascun con qualche fondamento di proposito', the first instance of the term's use in a modern sense.

INGRID BRAINARD

Cornazzani, Phileno Agostino (*b* Vienna, *c*1543–5; *d* Munich, July 1628). Italian instrumentalist and composer active in Germany. He was a son of Baldassare Cornazzani (*c*1520–*c*1601), a musician at the Viennese court of the Emperor Ferdinand I from *c*1552 to *c*1564 who served subsequently at Graz and Munich. In about 1559 Phileno Cornazzani arrived in Munich and from 1568 until his death he served in the Bavarian court band, eventually becoming its senior instrumentalist. Praetorius (*Syntagma musicum*, ii, 31) praised him as an outstanding trombone player. As a composer he was influenced by Lassus and the Venetian school. Madrigals, motets and litanies survive in various anthologies (including RISM 1616² and 1624¹) and in manuscripts. Lost works include a 'piece for four choirs' of 1597 in which trumpets were used 'so Zuvor unerhört, eleganti harmonia', and also a mass and offertory for three choirs, dating from 1603.

HELLMUT FEDERHOFER

Corneille, Pierre (*b* Rouen, 6 June 1606; *d* Paris, 1 Oct 1684). French poet and dramatist. Educated at Rouen by the Jesuits, who introduced him to plays and speech-making, he set out to practise law. However, the success of an early comedy (*Mélite*, 1629) persuaded him to attempt a career in the theatre. He was one of the original members of the Académie Française and was protected by powerful patrons such as the Duke of Liancourt, the Duke of Vendôme, Cardinal Richelieu, Nicolas Fouquet and the Duke of Montausier. Between 1629 and 1674, when he retired, he produced some 33 dramatic works of great diversity and range – comedies, tragedies, *drames lyriques* and tragi-comedies – exploring historical, Christian, Roman, heroic and bourgeois themes. He admired the theatre as a magical world of illusion and spectacle, as an arena for the discussion of morals and politics and as a place for experimenting with language, different sorts of character and new dramatic structures. For some 30 years from about 1635 he was the dominant figure in the Parisian theatre, recognizing its rules and the prevailing tastes but responding to both very freely (in his *Examens* and *Discours*, 1660, he analysed and defended his style and methods). His independent spirit aroused antagonism as deep-seated and long-lasting as the admiration that both Mme de Sévigné and Seigneur de Saint-Evremond unfailingly expressed for his heroic plays.

In many plays (e.g. *La veuve, La galerie du palais, La suivante, La place royale, Le Cid* and *Polyeucte)* Corneille interrupted the flow of action with reflective moments usually written in a verse form distinct from the alexandrine and called *stances*. He considered these lyrical pauses as embellishments in the same way that he judged Dassoucy's music for *Andromède* (produced on 26 January 1650) as having nothing to do with the action of his tragedy. This work, originally commissioned by Cardinal Mazarin in 1647, was to be 'mi-chantée, mi-parlée' and adorned with spectacular sets by Giacomo Torelli. Corneille turned it into an attack on Italian opera and the extravagant singing of Luigi Rossi (in Rossi's own *Orfeo*, 1647). Although he acknowledged that spectacle enhanced the drama, about music he emphatically stated in the preface to *Andromède*:

> I have taken good care to have nothing sung that was necessary to the understanding of the play, since as a rule words that are sung are imperfectly heard by the audience because of the confusion that results when a number of voices sing together.

Choruses and *airs* were incidental; there was no recitative. In his tragedy *La toison d'or* (1660) machines played the same dominant part and music a similar reduced role. It was not until he collaborated with Lully, Molière and Quinault in *Psyché*, a *tragi-comédie et ballet* produced on 17 January 1671, that he was forced to accord more importance to music; but even here it was largely restricted to the prologue, epilogue and interludes, where an orchestra of 300 accompanied some 70 dancers in the vast theatre at the Tuileries. The dancing and the spectacle were memorable; the acoustics were appalling. Never again did Corneille allow himself to be involved in such collaborative efforts, in plays into which, to quote Saint-Evremond's letter *Sur les opéra*, 'one is obliged to introduce dances and music, which can only damage the presentation'. Many opera librettos of the late 17th and early 18th centuries, especially in Italy, were based on Corneille's plays, and *Le Cid* and *Polyeucte* in particular remained popular sources for operas until the 19th century. Corneille also wrote poems, a few of which were set to music in his own day and by later composers.

MARGARET M. McGOWAN

Corneille, Thomas [M. de l'Isle] (*b* Rouen, 20 Aug 1625; *d* Les Andelys, 8 Dec 1709). French playwright and librettist. Although overshadowed by his brother Pierre, he was a prolific and successful writer who embraced virtually all dramatic genres of the period. With Donneau de Visé he edited the *Mercure galant*, and his election in 1684 to the Académie Française encouraged scholarly pursuits.

Corneille's background made him an obvious substitute for Quinault, Lully's principal librettist, who in the late 1670s was in disgrace at court. Like Quinault he had made his name in spoken drama, and he had collaborated with Donneau de Visé on machine plays such as *Circé* and *L'inconnu* (both 1675) with incidental music by Marc-Antoine Charpentier. A number of his dramas have been the source of operas, particularly early 18th-century Italian works (see Strohm). In addition Corneille was responsible for three librettos. The revision of the *tragédie-ballet Psyché* (Lully, 1678), possibly undertaken with Fontenelle, preserves some of the original text and music, yet reveals Corneille's familiarity with the characteristics of the *tragédie en musique*. The language, however, is at times too complex and less lyrical than Quinault's, and the work betrays the difficulty of integrating the divertissements, a problem also evident in the *tragédie en musique Bellérophon* (Lully, 1679), possibly written with Boileau and Fontenelle. A third *tragédie en musique, Médée* (Charpentier, 1693), is considered by Girdlestone (1972) one of the best 17th-century French librettos. It demonstrates Corneille's versatility, particularly in finding the right balance between tragedy and spectacle and in allowing Medea to develop into a complex character who spearheads a fine, subtle climax.

T. MICHAEL TURNBULL

Cornejo, Rodolfo S(oldevilla) (*b* Manila, 15 May 1909; *d* Manila, 11 August 1991). Filipino composer, conductor and pianist. In 1930 he graduated from the Conservatory of the University of the Philippines with teacher's diplomas in piano and in theory and composition; he then studied

at the Chicago Musical College (BMus 1932, MMus 1933) and the Neotarian College of Philosophy, Kansas City (PhD 1947). He taught at the University of the Philippines Conservatory (1930–34) and was director and professor at the Manila (1934–9, 1949–52) and Cosmopolitan College (1948–9) conservatories. During World War II he appeared as a pianist and conductor in the USA, Canada, Europe and Hawaii. He was a state cultural adviser (1958–60) and founder-president of the National Federation of Music. He lectured in humanities at the University of the City of Manila (1968–75), and after 1978 worked mainly in the USA, appearing as a composer-conductor at the Seattle Opera House.

LUCRECIA R. KASILAG

Cornelius, J. (*fl c*1430). Composer. He added a tenor to a canon by J. DE CLIMEN that was recorded in *F-Sm* 222 (now lost). The work, however, survives in the copy of the manuscript made by Coussemaker.

TOM R. WARD

Cornelius, (Carl August) Peter (i) (*b* Mainz, 24 Dec 1824; *d* Mainz, 26 Oct 1874). German composer, writer about music, poet and translator.

1. Education and early career. 2. Weimar. 3. Vienna. 4. Munich. 5. Music and writings.

1. EDUCATION AND EARLY CAREER His parents Carl Joseph Gerhard Cornelius (1793–1843) and Friederike Cornelius, née Schwadtke (1789–1867), were both actors. He was the fourth of six children. In recognition of the boy's talent, his father prepared him for a double career as musician and actor, which necessitated his withdrawal from school in 1838. His father oversaw the theatrical training, while Josef Panny taught him violin and music theory. At the same time, he began composing lieder. In 1840, he joined the second violins in the theatre orchestra and made his début as an actor. Cornelius travelled to England in 1841 as a violinist with the touring Mainz opera troupe. That year he also began study of composition with Heinrich Esser, the most important music teacher from his youth. Compositions from the period include string quartets, songs and choruses. Cornelius was appointed Nassau court actor in Wiesbaden in early 1842, but gave up that position after his father's death in late 1843.

To relieve some of the family's financial burden and to continue Peter's studies, his older brother Carl Adolf arranged for their uncle Peter von Cornelius (1783–1869), the noted Nazarene painter, to take Peter under his supervision in Berlin, where the young composer resided between 1844 and 1852. In his uncle's house, Cornelius made the acquaintance of such prominent figures as Alexander von Humboldt, the Grimm brothers, Friedrich Rückert and Mendelssohn. In October 1844 he entered the tutelage of Siegfried Dehn, who taught him (with interruptions) until 1849 and above all encouraged the composition of sacred music and chamber music. Despite his having acquired extensive compositional experience and having received the praise of Dehn, evaluations of his work from other sources, including Wilhelm Taubert and Otto Nicolai, were largely unfavourable, while Friedrich Schneider recognized Cornelius's musical talent and promise. At the same time, Cornelius's romantic interests caused him to engage in intense poetic activity. His literary abilities found further expression at the end of the Berlin period, when he wrote music criticism for Berlin journals and papers (1851–2), made the acquaintance of Joseph von Eichendorff, and entered into a lasting, close friendship with the poet Paul Heyse. Cornelius's important friendship with Hans von Bülow also dates from his later Berlin years.

Peter Cornelius: portrait by Julia Schily-Koppers, 1892 (Peter-Cornelius-Konservatorium, Mainz)

2. WEIMAR. Cornelius was not able to secure a position in Berlin, however, and also yearned for an artistic role model, whom he found in Liszt. He visited Weimar in early 1852, where he heard Berlioz's *Benvenuto Cellini* and met Liszt, Joachim Raff, Joseph Joachim and the painter Friedrich Preller. Cornelius left Berlin, and upon Liszt's advice spent the summer composing sacred music. He travelled widely in Germany before settling in November 1853 in Weimar, where he stayed for five years. During an earlier visit to Weimar, he had already become acquainted with Bettina von Arnim, Hans von Bronsart and Leopold Damrosch, and in Basle in October 1853 he had met Wagner for the first time. The years in

Weimar were decisive for Cornelius's development as a composer and writer, for it was in the welcoming Liszt circle there that he found a home, under the influence of Liszt's compositional style, the New German aesthetic position and the congenial spirit of Liszt's Weimar. Once in Weimar, Cornelius took up the activities of secretary and translator for Liszt, propagandist for the movement in general, and poet-composer. He enjoyed close contact with fellow Liszt pupils and associates Bülow, Bronsart, Joachim, Pohl, Raff, Alexander Ritter and Preller, who with Liszt, the poet Heinrich Hoffmann von Fallersleben and other Weimar intellectuals, comprised the informal social and artistic association called Neu-Weimar. Most of these friendships, such as that with the singers Feodor and Rosa von Milde, lasted beyond Cornelius's days in Weimar. His work for Liszt primarily involved translation of articles and a book from French into German. Cornelius also translated for Berlioz (*Benvenuto Cellini*, among other works), who had befriended him and who esteemed his musical and literary abilities. His propaganda work took the form of articles and reviews for *Echo* and *Neue Zeitschrift für Musik*, which fairly, yet also passionately, argued on behalf of the music and ideals of Liszt and Berlioz. Nevertheless, Cornelius managed to maintain a position of 'independent partisanship' in his critical activities. Furthermore, in the course of his residence in Weimar he came to regard such work as onerous, and turned increasingly to writing poetry and music. Poetry usually originated under the inspiration of deeper emotions, such as those accompanying his various romantic infatuations. In Weimar he composed above all music with text: the 6 *Lieder* op.1, the song cycles *Vater unser* op.2, *Trauer and Trost* op.3, the 3 *rheinische Lieder*, the *Brautlieder* and the *Weihnachtslieder* op.8, and the comic opera *Der Barbier von Bagdad*. These were his first important mature works, exclusively based upon his own texts. In a diary from 1855, he noted that his goal from that time on would be 'poetry of word united with music'. *Der Barbier von Bagdad* successfully incorporated this unity, but its performance became entangled in the anti-Liszt musical politics in Weimar, which resulted in the notorious fiasco at its première on 15 December 1858 that ostensibly caused both Cornelius and Liszt to leave Weimar. Even before the fiasco, Cornelius had decided to leave Weimar, which had come to signify for him a hindrance to creative activity.

3. VIENNA. Choosing between Munich and Vienna as his next residence, Cornelius settled on the latter, in part because of its similarities with the Catholic Mainz (although he officially remained a Lutheran his whole life, Cornelius maintained a strong affinity for Catholicism). After a short stay in Mainz, he settled in Vienna in April 1859, where – despite repeated visits to Weimar and trips to Mainz, Zürich and Munich – he lived until the end of 1864. In Vienna Cornelius worked on his second opera, *Der Cid* (1860–65), and from 1861 began a friendship with Wagner. Also important were his friendships with the dramatist Friedrich Hebbel, Carl Tausig and the music patron Josef Standhartner, and his contact with Brahms. Besides the opera, which originated under the influence of Wagner's earlier works, especially *Lohengrin*, Cornelius composed lieder and sonnets to poetry by Hebbel, Kuh, Bürger, Droste-Hülshoff and himself, duets, and the important *Requiem* (to a text by Hebbel). He also wrote numerous poems and sonnets for Rosa von Milde (including *Von Wiener Gräbern*), Marie Gärtner (the object of his infatuation in 1860), and Bertha Jung (his fiancée, after 1864), as well as poetic tributes to Liszt and Wagner, and he also translated Liszt's book *Die Zigeuner und ihre Musik in Ungarn*. Translation work served to augment Cornelius's meagre income in Vienna, which otherwise consisted of subventions from his family and earnings from lessons and coaching. After their meeting in May 1861, Cornelius undertook various tasks for Wagner in Vienna, who came to rely upon Cornelius's friendship during the days of the *Tristan* rehearsals in Vienna. While a close personal relationship and mutual artistic influences resulted, Cornelius came to experience Wagner's dependence as oppressive, and realized that he could not follow Wagner's direction in *Tristan*. Thus the completion of *Der Cid*, against Wagner's objections, came to signify an act of independence. Nevertheless, in the wake of his financial difficulties in Vienna, Cornelius was compelled to accept Wagner's invitation in late 1864 to join him in Munich under the protection of Ludwig II.

4. MUNICH. Cornelius's last long-term place of residence, Munich, became a site of both personal satisfaction and inner turmoil. On the one hand, the years were marked by the realization of his domestic desires, through marriage to Bertha Jung (1834–1904) in 1867 and the birth of four children, and by financial stability, at first informally as Wagner's cohort and then (after 1867) as instructor of harmony and rhetoric at the Royal School of Music. On the other hand, Cornelius's troubled relationships with Wagner, Liszt and the New German School in general came to a head in Munich as he attempted to pursue his own course. Bülow was a source of friendship during his early years in Munich, which caused Cornelius all the more distress over Wagner's affair with Cosima, whose influence would ultimately separate Wagner from Cornelius. Cornelius himself did not join Bülow, Wagner and associates at the *Tristan* première, ostensibly because of the première of *Der Cid* in Weimar in May 1865. The disinclination of the lead singers Rosa and Feodor von Milde towards *Der Cid* had initially hindered the performance, and the première was a *succès d'estime*. Wagner's influence, if not his approval, clearly helped decide Cornelius's next and final large-scale compositional project, the opera *Gunlöd*, based on Norse myth, which he never completed. Despite the outpouring of poetry, songs and duets before his wedding, and of choral works after 1869 as the result of his friendship with the Leipzig choral conductor Carl Riedel, Cornelius's Munich years were not particularly productive, probably due to the demands of domestic life and heavy teaching responsibilities at the conservatory, as well as self-doubt over his abilities as composer. Important performances of *Lohengrin* and *Tannhäuser* in Munich (1867), of Liszt's *Die heilige Elisabeth* in Meiningen (1867) and of *Die Meistersinger* in Munich (1868) led Cornelius to engage again in New German propaganda in the press, and he also took on a number of translation projects (including vocal texts by Liszt and Gluck). Trips to Tyrolia (1867), Vienna (1867), Wagner's villa Triebschen (1868), Paris (1869), Bayreuth (1872) and Mainz (1874) did bring relief from his workload and served to renew friendships. His untimely death in 1874 as the result of diabetes was widely lamented in German musical circles, by both friend and foe of the New German School.

5. MUSIC AND WRITINGS. In the designation of himself as 'Dichter-Musiker' ('Peter Cornelius', *Musikalisches Wochenblatt*), Cornelius recognized the dual poles around which his life and music revolved, those of word and tone, which he attempted to maintain in balance in the production of song, opera and sacred music. He felt ill at ease when the word predominated, through such activities as translation and music journalism, although his sophisticated literary abilities served him well. Other dominant factors in his life were his Christian faith, a sensitivity to the feelings and actions of others, a strong sense of loyalty to his friends, an integrity in personal matters, and a certain insecurity about his own abilities. These factors tended to govern his relationships with Berlioz, Liszt and Wagner, among others.

Cornelius's lieder and operas are works of high literary merit and striking musical originality. All three operas, and over half of the approximately 80 songs, are settings of texts by Cornelius himself, which distinguishes him from New German colleagues (other than Wagner). In the songs, he avoided setting standard Romantic nature lyrics, preferring *Gedankenlyrik* in complex verse forms that inspired new musical forms and novel melodic constructions. The Wagner-influenced chromaticism of the relatively few late songs anticipates Wolf. Unlike Liszt and his New German colleagues, Cornelius tended to group his songs in poetically and musically unified cycles, rather than issue them separately.

His earliest complete opera, *Der Barbier von Bagdad*, reveals Cornelius to be a gifted, independent composer for the stage (Liszt initially rejected the work's comic libretto). The intersection of orientalist subject matter and verse forms and humorous plot afforded him an opportunity to create a new, complex musical language in this comic opera, which is unique in 19th-century Germany (despite the influence of Lortzing). Wagner's influence is clear in *Der Cid* and, above all, in the unfinished *Gunlöd*, which Wagner himself criticized. By Cornelius's own admission, these works reflect melodic and harmonic influences from *Lohengrin* rather than *Tristan*.

His sacred works are almost without exception early compositions, dating from his years of study in Berlin with Dehn, and are conservative in style. The later secular choral works (after 1860) are largely written in a densely contrapuntal, chromatic style, although certain of them are simple and folklike. Cornelius's last works in general are either retrospective, drawing upon earlier models and sources, such as the *3 Psalmlieder* after Bach op.13 or the *Reiterlied* after Schubert op.17, or point to the future in their chromaticism, like the *3 Männerchöre* op.12.

Cornelius's critical writings stand out from other New German literary productions as works of deep personal conviction and independent thought. Praised for their insights and fairness, his writings are characterized by a search for organicism and seriousness in musical artworks and a highly literary, and occasionally humorous, style. While he did promote Liszt, Liszt's Weimar, Berlioz during the 1850s and Wagner after 1860, Cornelius's literary activities never resulted from blind partisanship. He was sceptical of literary and musical institutions, which is why he remained on the margins of the New German movement and its organization the Allgemeiner Deutscher Musikverein. He also lacked the motivation to enter into long-term commitments as critic or editor, despite several such opportunities. He ultimately preferred to invest his efforts in musical creativity, which did leave a mark upon such composers as Wagner and Richard Strauss, and he has survived in the repertory through the *Barbier* and songs like the *Weihnachtslieder*. Stylistically, Cornelius may have been the composer from the Liszt circle who, after Liszt and Wagner themselves, most successfully realized the musical ideals of the New German School, albeit in a highly personal idiom.

WORKS

Edition: *P. Cornelius: Musikalische Werke*, ed. M. Hasse (Leipzig, 1905–6/*R*) [H]

for lost works, fragments, sketches, see G. Wagner (1986)

OPERAS

Der Barbier von Bagdad (komische Oper, 2, Cornelius, after *The Thousand and One Nights*), 1855–8, Weimar, Hof, 15 Dec 1858; ed. F. Mottl and H. Levi (Leipzig, 1886), orig. version H iii

Der Cid (lyrisches Drama, 3, Cornelius, after G. de Castro, P. Corneille and J.G. Herder), 1860–65, Weimar, Hof, 21 May 1865; ed. H. Levi (Munich, 1891), orig. version H iv

Gunlöd (opera, 3, Cornelius, after the *Edda*), 1866–74, inc.; completed by K. Hoffbauer (Frankfurt, 1879), Weimar, Hof, 6 May 1891; completed and orchd by W. von Bausznern H v, Cologne, 15 Dec 1906

MALE CHORUSES

for TTBB and in H ii unless otherwise stated

Ständchen (R. Reinick), *c*1842, *Wn*; 3 Lieder, *c*1842, *Wn*: 1 Dort wo die Kronen waldiger Höh', 2 Wandrers Morgenlied (G. Bechstein) [no. 3 for mixed chorus]; 4 Lieder (L. Uhland), 1842–3, *A-Wn*: 1 Frühlingsahnung, 2 Frühlingsglaube, 3 Frühlingsruhe, 4 Lob des Frühlings; 3 vierstimmige Männerchöre, 1844, *Wn*: 1 Reiterlied (G. Herwegh), 2 Es war einmal ein König (H. Heine), 3 Sonnenaufgang; Der Tod des Verräters (Cornelius), parodierendes Terzett, T, Bar, B, pf, 1850, rev. *c*1860

JAMES DEAVILLE

Cornelius, Peter (ii) [Petersen, Lauritz Peter Corneliys] (*b* Labjerggaard, Jutland, 4 Jan 1865; *d* Snekkersten, nr Copenhagen, 30 Dec 1934). Danish baritone, later tenor. He studied with Nyrop, and made his début in Copenhagen in 1892 as Escamillo, then continued to sing baritone roles including Kothner, Don Giovanni, Amonasro and Iago. After further study he made his tenor début in 1899 as the Steersman in *Der fliegende Holländer*. In 1902 he sang Siegmund and by 1914 he had added Siegfried, Lohengrin, Walther, Tannhäuser and Tristan to his repertory. He sang Siegfried at Bayreuth in 1906 and at Covent Garden in 1908–9 in Richter's famous *Ring* in English; at Covent Garden he also sang Renaud in a revival of the first British production of Gluck's *Armide*. He made guest appearances in Paris, Budapest, Karlsruhe, Stockholm and Oslo. He retired in 1922, but in 1927 sang Tannhäuser when the tenor engaged fell ill. He made many recordings, the best of them in the period 1907–12, which show his gift for keen, dramatic characterization.

HAROLD ROSENTHAL/R

Cornelys, Theresa [Imer, Teresa; Madame Trenti] (*b* Venice, 1723; *d* London, 19 Aug 1797). Italian singer. The daughter of Giuseppe Imer (*d* 1758), an actor and impresario, she made her début in Verona in 1741. Success followed; according to Casanova 'her good fortune had not depended entirely on her talent'. By 1744 she had married the dancer Angelo Pompeati (*c*1701–68), but they soon parted. She was in Vienna in 1744–5; and in 1746 appeared in London with her sister, Marianna Imer, in Gluck's new opera *Caduta de' giganti*. She then returned to Vienna, sang in Hamburg in 1748, and was with the Mingottis and Gluck in Copenhagen in 1749. Her wanderings continued, and about 1757 she was given the direction of all theatres in the Austrian Netherlands. This venture left her bankrupt and she fled to Holland where she sang as 'Mme Trenti'. With the financial support of Casanova and Jan Cornelis de Rigerboos, and the personal assistance of John Freeman or Fermor (a cello and bass player), she returned to London in 1759.

She spent the rest of her life in London, where she was known as 'Mrs Cornelys'. She organized a series of concerts in 1759 and then turned her attention to Carlisle House, Soho Square, which she rented and later purchased with the help of Elizabeth Chudleigh (maid to the Princess of Wales, exiled in 1776 for bigamy). Cornelys renovated Carlisle House, partly with the help of Thomas Chippendale, and began a series of Thursday evening entertainments for the upper classes on 27 November 1760. These evenings always included music, cards and dancing; but in 1764 she added a Wednesday evening concert series, directed by the composer Gioacchino Cocchi. From 1765 to 1767 these were directed by J.C. Bach and C.F. Abel; this was the beginning of the Bach-Abel concerts. When Bach and Abel moved away, her concerts were directed by Felice Giardini and Mattia Vento, on a less regular basis.

To this point Cornelys had been well supported by the nobility and even the king's brothers. But in 1771 she incurred the wrath of the law with her 'Harmonical Meetings', a poorly disguised effort to stage operas outside the opera house (directed by Giardini, composed by Vento, and with the castrato Gaetano Guadagni among the singers); she also lowered the reputation of her house with the introduction of masquerades that year. These were futile attempts to stave off the financial problems which had been threatening her since 1762, and she was declared bankrupt in November 1772. She lost ownership of the house, but continued as mistress of ceremonies in a haphazard fashion to 1774 and again in 1776–8. In the summer of 1773 she ran a hotel in Southampton, but that venture also failed. No more is heard of her until she opened a room in Knightsbridge about 1795 for the sale of asses' milk for public breakfasts. She died in the Fleet prison, leaving a son, and a daughter by Casanova.

MURRAY R. CHARTERS

Cornemuse (Fr.). *See* BAGPIPE. *See also* CORNAMUSA (i).

Corner, David Gregor (*b* Hirschberg, Silesia [now Jelenia Góra, Poland], 1585; *d* Vienna, 9 Jan 1648). German theologian, hymnologist, poet and composer. He probably studied at Breslau [now Wrocław], and then with the Jesuits in Prague and Graz. He became a doctor of theology at Vienna before 1625 and also a doctor of philosophy there. About 1618 he was a pastor at Retz, Lower Austria, and later at Mautern, near Krems. In 1625 he entered the Benedictine monastery of Göttweig as a novice; he very soon became prior and in 1631 its abbot. In 1637 he was also appointed imperial counsellor and in 1638 rector of the University of Vienna. During the reign of the Emperor Ferdinand II, at the time of the Thirty Years War, he was one of the leading figures in Austria in the Counter-Reformation.

Corner's comprehensive theological writings were crowned by his *Gross Catholisch Gesangbuch*, which appeared in various editions from 1625 onwards. Part of the first edition appeared under the imprint of the bishops of Bamberg and was printed at Fürth, just outside the gates of Nuremberg. This first edition was collected from 'all the Catholic hymnals that were available to him at the time'. Its 400 hymns (330 in German, 70 in Latin) were drawn from Catholic hymnals by Johannes Leisentrit (1567 and later editions of 1573 and 1584), and Kaspar Ulenberg (1582), the Speyer hymnal (1599) and the Graz hymnal of Nicolaus Beuttner (1602). By drawing heavily on Beuttner's hymnal (which, incidentally, he did not cite

as a source) he helped to overcome the lack of popular church hymns. In the second edition (Nuremberg, 1631) he named as new sources the Jesuit hymnals recently published at Cologne (1623, 1625), Mainz (1628), Würzburg (1628), Heidelberg (1629) and Amberg (1629), as well as the *Catechismus* of Georg Vogler (1625). He also drew on many Protestant writers, with no acknowledgment but the words 'Incerti Authoris'. This edition runs to 546 hymns and 276 melodies (including 76 in Latin). From the third edition, which Corner prepared just before his death, his hymnal was known as the *Geistliche Nachtigal der Catholischen Teutschen.* It appeared at Vienna and bears the dates 1648 (colophon) and 1649 (title-page); it reappeared in 1658, 1674 and 1676. It contains 363 hymns with 181 melodies (42 are in Latin). In this edition Corner marked his own hymns with the initials D.G.C. (none are thus identified in earlier editions). This indicates that he was active as a poet and probably as a composer too. Although it is shorter, this edition also contains new hymns, including some by Johannes Khuen and some from Albert Solinger's *Himmelsschlüssel*, produced for the Dominicans of Vienna in 1636. Brahms studied the *Gross Catholisch Gesangbuch* and used several of its melodies for his *Deutsche Volkslieder* (1864) and the *Geistliches Wiegenlied* op.91 no.2.

WALTHER LIPPHARDT/DOROTHEA SCHRÖDER

Corner, Philip [Gwan Pok] (*b* New York, 10 April 1933). American composer. He studied at City College, CUNY, Columbia University and the Paris Conservatoire. His teachers included Olivier Messiaen (composition, 1955–7) and Dorothy Taubman (piano, 1961–75). With James Tenney and Malcolm Goldstein, he co-founded the Tone Roads Chamber Ensemble, a group dedicated to the performance of new music. Active in the Experimental Intermedia Foundation, New York, he has collaborated with dancers, choreographers and theatre groups, serving as resident musician for the Judson Dance theatre. Corner's works frequently employ 'open forms' and indeterminate notation. A specialist in calligraphy, his indeterminate scores, such as *Ink Marks for Performance* (1961–2) have both a visual and musical appeal. Deeply inspired by non-Western cultures, Corner is also known by the Korean name Gwan Pok [Contemplating Waterfall] and often inscribes his scores with an insignia representing that name.

An early member of Fluxus, Corner was an important contributor to the world of performance art. His works in this genre include 'danger music', compositions that threaten either the performer or the audience. *An Anti-Personnel Bomb* (1969), for example, most likely a protest against the Vietnam War, instructs the performer to throw 'an anti-personnel-type CBU bomb into the audience'. Sounds Out of Silent Spaces, a composer/performer collective co-founded by Corner, focussed on improvisation and meditation. In *Metal Meditations* (1973) traditional instruments and instruments created by the composer are played very softly for an entire evening. *One Note Once*, in the spirit of La Monte Young's 'short forms' or 'word pieces', is one of Corner's extremely brief works. A founding member of the ensemble Son of Lion, a group dedicated to the performance of traditional Indonesian music, Corner began a series of compositions for gamelan in 1975. He has written over 400 works for this collection, many of which explore interrelationships between pitch and duration suggested by the numerical notation of Indonesian gamelan music.

WORKS
(*selective list*)

Dramatic: 2nd Finale, 1961; Carrot Chew Perf, 1963; Flares, mixed media, 1963; Solo With, 1965; Rationalize Outside Sounds, 1966; An Anti-Personnel Bomb, 1969; Pf Work, 1970; Play a Party (radio broadcast), 1971; Metal Meditations, 1973; Democracy in Action, 1979; Gong/Ear (Ear/Body), resonant metal, dancer, 1990

Orch: Pensive, prelude and fugue, str, 1953; Sonatas I and II, 1957; Evolving Extremities, 1958; This Is It ... This Time, 1959; Inner Ear, str, 1970; Gamelan Series, over 400 works, gamelan ens, 1975–

Chbr and solo inst: Stücke, fl, 1956; Passionate Expanse of the Law, indeterminate ens, 1958; Sang-teh [Situations], 1959; Air Effect, small wind ens, 1961; Certain Distilling Processes, any number of dancers/conductors, 1962; Composition With or Without Beverly, pf, perc, tape, 1962; Gong!, perc, 1962; Lovely Music, indeterminate ens, 1962; Big Trbn, trbn, tape, 1963; Friendly Low B♭, trbn, 1963; Round Sound, brass, 1964; Pond, 1968; OM Emerging, 1970; OM series, vv/insts, 1970–74; Elémentals, any forces, 1976; Earth Breath, alphorn, 1992; Just another 12-Tone Piece, indeterminate ens, 1995; Pulse, vn/inst, 1970–74

Kbd (pf, unless otherwise stated): Variations on Home on the Range, 2 pf, 1950; 7 Joyous Flashes, 1958; Ink Marks for Performance, 1961–2; Pf Activities, many pfmrs, 1961; C Major Chord, 1962; The Mozart Material, pf/hpd, 1969; Pictures of Pictures from Pictures of Pictures, 1980 [after M. Musorgsky]; The Flight of the System, 1981; Louis, D, 1996; Understand, 1996

Vocal: Vocalize, non-singing vv, 1961

El-ac: Oracle (cant.), 1961; Lucinda's Pastime, musique concrète, 1962; From Thais, collage, tape, 1963; Delicate Computations, cptr, 1986

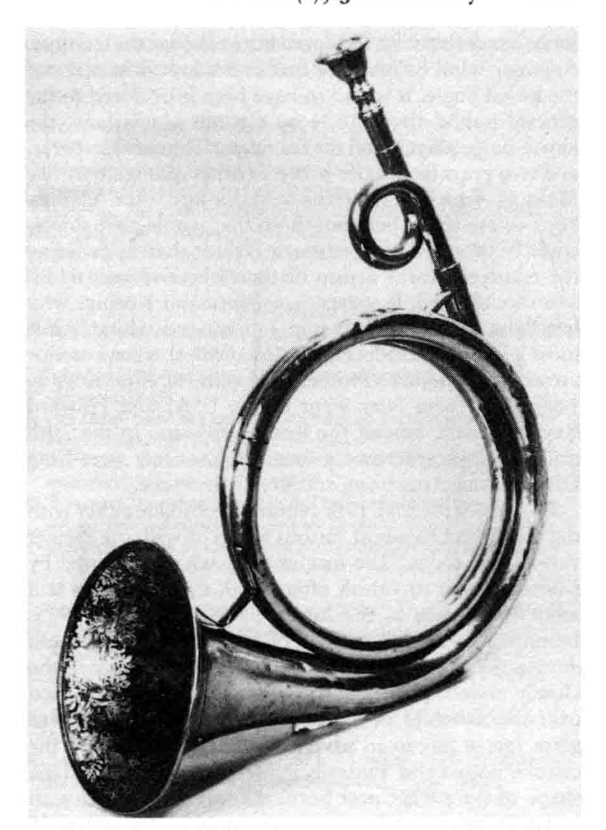
DAVID W. BERNSTEIN

Cornet (i) (Fr. *cornet à pistons*; Ger. *Kornett*; It. *cornetta*; Sp. *cornetín*). A valved brass wind instrument of contralto or soprano pitch developed in the late 1820s.

1. Structure and use. 2. History.

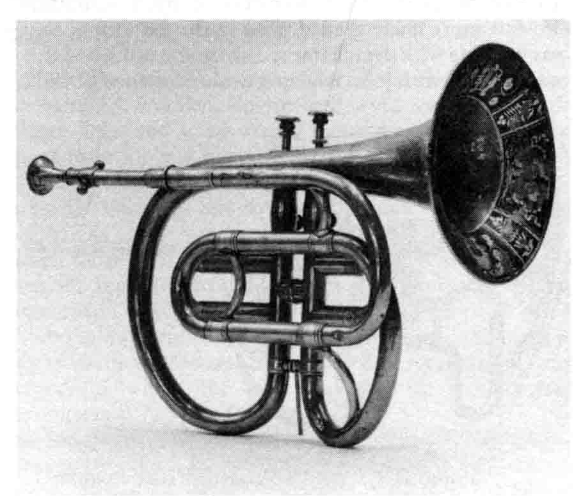


1. STRUCTURE AND USE. The three valves are in most models placed after the main tuning slide(s) about halfway along the sounding length of tubing, and there is a more pronounced taper between the mouthpiece receiver and the valves than with the modern trumpet. The cup of the modern cornet mouthpiece is not substantially different from that of a modern trumpet, but the backbore is

shorter and less tapered. The cornet pitched in B♭ in unison with the B♭ trumpet is the most common; the soprano cornet in E♭ is also regularly used. The cornet is normally a transposing instrument, parts for B♭ cornet being written two semitones higher than they sound. The written compass is from *f*♯ to *c‴*, though some players ascend an octave or more higher. The kinds of MUTE used with the trumpet can also be used with the cornet.

Parisian brass players of the 1830s regarded the *cornet à pistons* as a valved improvement of the post horn; and indeed, like continental cornet-pitched circular post horns, the cornet is gay and homely, and delivers neither the exciting ring of the trumpet nor the ominous sonority of the bugle. Its long success in bands and popular music is due, however, to a technical flexibility deriving from the mouthpipe taper and still more from the characteristic mouthpiece, because of which the cornet stood at great advantage at times when the trumpet was passing through a difficult period in its modern evolution. British military bands and brass bands rely upon the cornet, the latter to the extent of using four parts: 'solo cornet', 'repiano cornet' (from which the FLUGELHORN also reads), 'second' and 'third' cornet'. In addition, British brass bands include an E♭ soprano cornet, pitched a 4th higher. In French bands the cornets usually take second place to the *bugles* (flugelhorns) and the higher voice is the *petit bugle* in E♭. The same has held in Germany and Italy though latterly the cornets have been replaced by B♭ trumpets. German cornets have varied very much in design, some being practically trumpets save for a fatter bell profile; in Prussia the cornet could have a conical bell (without flare).

Employment of the cornet in the symphony orchestra falls into three categories: (*a*) 19th-century French composers from Berlioz onwards included the cornet for the sake of its valves. Valved trumpets were at first rarely used in Paris orchestras, and so only by adding a pair of cornets could the composer secure chromatic trebles to the brass. (*b*) In many orchestras of the second half of the 19th century, especially in Britain and the USA, all trumpet parts were played on cornets – a practice which deprived classical trumpet parts of their heraldic ring; this was largely responsible for the harsh terms in which the instrument is described in older books on orchestration. Some composers, such as Sullivan in his Savoy operas, recognized that cornets were normal in pit orchestras and wrote specifically for cornet. (*c*) Later orchestration, from Elgar and Stravinsky, has introduced the cornet now and then for the sake of its mundane associations.

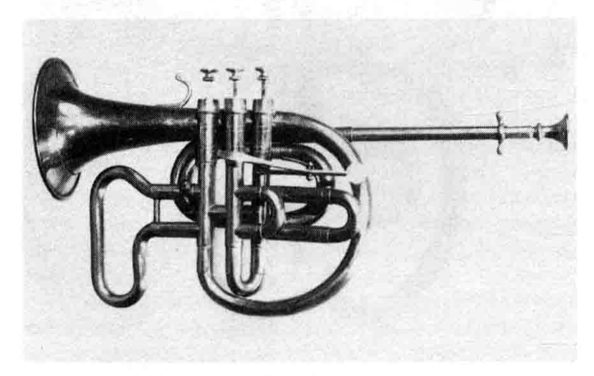


2. HISTORY. No patent was taken out on the invention of the cornet. The eminent horn player, L.F. Dauprat, stated in his preface to Joseph Forestier's *Méthode* (Paris, 1844) that it was the maker Jean-Louis Antoine (*see* HALARY) who conceived the idea of fitting valves to the 'post-horn des Allemands' (fig.1). The instrument certainly appeared first in Paris about 1825, with two Stölzel valves and crooks to put it into every key from low D♭ up to C (fig.2). It made its mark on the Paris public with astonishing speed, and already in 1830 Dufresne, a horn player, was playing cornet solos, principally in quadrilles, at light concerts and balls. A few years later he was doing the same in Musard's orchestra. Most of the early cornet soloists were also horn players; they included Frédéric Antoine Schlotmann, later first horn at the Opéra, and Forestier who, though originally a horn player, later played the trumpet at the Opéra. They used a deep conical

1. Cornet (simple) by Charles Kretzschmann, Strasbourg, 1827–50 (Horniman Museum, London)

mouthpiece which favoured production of the 'round, velvety tone' Forestier advocated in his tutor for the cornet. A fresh school of cornet playing was instituted by J. Jean-Baptiste Arban, a trumpet player, who taught pupils to make a bright, trumpet-like sound. This school eventually triumphed, bringing with it the shallower, more cupped mouthpiece now in general use.

The cornet soon arrived in Britain, where it was for some time known as the cornopean. Early British models often had a wider mouthpiece receiver, its mouthpiece



2. Cornet with two valves by Jean-Louis Antoine, Paris, c1835 (Royal Military School of Music, Kneller Hall)

interchangeable with the keyed bugle or even the trumpet. Amateur wind bands were quick to adopt it in place of the keyed bugle. It is said to have been introduced to the general public about 1834 by George Macfarlane, the keyed-bugle player, and the trumpeter Thomas Harper jr, and two years later Balfe wrote a cornet obbligato in *The Maid of Artois*. Macfarlane added a key – the 'clapper key' – close to the bell-mouth, so that whole-tone shakes could be executed in keyed-bugle fashion thereby avoiding the relatively heavy action of the earliest valves (fig.3). More celebrated, however, was Hermann Koenig, who left Paris for London to join Jullien, and whose solos, most of them introduced into quadrilles, were a major attraction at Jullien's Promenade Concerts. After Koenig, Jules Levy (who later went to the USA) and Howard Reynolds were among the leading soloists. In the 20th century, the best-known players of the cornet were King Oliver, Louis Armstrong and Bix Beiderbecke.

Cornets of the mid-19th century were made either with the old Stölzel valves in various forms or with the Périnet valves used today. The former type, which was used by Koenig, began to vanish after 1860, though it was still made in France, as the lowest-priced model, in 1915. Innumerable special designs of cornet which appeared during the second half of the 19th century include the closely coiled 'pocket cornet', which could 'be carried over the shoulder in a neat leather case like an opera glass' (according to an advertisement of about 1875); the circular cornet and 'butterfly model', which preserved the shape of the parent post horn; the 'cavalry cornet' with bell pointing upwards; and designs in which the bell could be made to point in different directions. The 'echo cornet' had an integral muting device with an extra valve so that the player could change rapidly from the normal bell to the echo bell.

Of the original set of crooks, Caussinus remarked in *Solfège-méthode ... du cornet-à-pistons* (Paris, *c*1850) that with crookings from low D♭ up to E the tone was 'médiocre et sourd'; from F to A♭ 'sonore et agréable'; from A to C 'dur et éclatant'. In England the favourite crookings, as revealed in Koenig's multitude of published arrangements for cornet solo, were B♭, A (both straight shanks), A♭ and G (both coiled crooks). After 1860 the last two of these were obsolescent. A fixed mouthpipe allows a more finely graded taper in the mouthpipe than was possible with detachable shanks and crooks, and this, commencing with John Bayley's 'acoustic cornet' of 1862,

3. Cornopean with three Stölzel valves and clapper key by J. Köhler, London, mid-19th century, shown with shank for A (Horniman Museum, London)

4. Modern cornet with three valves by Boosey & Hawkes, London

had by the end of the 20th century replaced the detachable shanks and crooks of earlier models. A 'quick-change' valve for A was not uncommonly used in theatre bands where parts were written (as with clarinets) either in B♭ or A.

Cornets in pitches other than B♭, C and E♭ soprano have existed, but are now obsolete. A piccolo cornet in B♭, an octave higher than the ordinary cornet, was made by Červený in 1862, but bandmasters did not adopt it. *Altkornette* in E♭ were made for many German and Austrian bands until recently, in the shape of the ordinary cornet. As in all German valved instruments, their valves are rotary.

ANTHONY C. BAINES/ARNOLD MYERS

Cornet, Peeter [Pierre, Pietro, Peter, Pieter] (*b* ?Brussels, 1570–80; *d* Brussels, 27 March 1633). Flemish composer and organist. He is the only known composer in a 16th- and 17th-century musical family in Brussels, which included a violinist, singers and organists; other Pierre Cornets are mentioned in archives; one was a singer at the court in Madrid (1571–99) and later in Brussels. Cornet was organist at St Nicolas, Brussels, from 1603 to 1606. He presumably became organist at the Brussels court of Archduke Albrecht and his consort Isabella at this time. In March 1611 he was made a canon at Soignies, but in April he married and relinquished his canonry. In the extant court account books (1612–18) he is listed among the chapel musicians; the other organists included Peter Philips and John Bull; Géry Ghersem and Matthijs Langhedul were also colleagues. In 1615 Cornet advised the church of St Rombouts, Mechelen, concerning its organ; in 1624 he signed a contract to build a choir division for the organ there. He presumably worked at the court chapel until his death. He was well appreciated during his lifetime both by Albrecht and Isabella and by his fellow-musicians. His music varies in style from the profound *Salve regina* to bright, animated courantes. The long fantasias demonstrate great imagination, and many passages indicate his familiarity with English, Dutch, Spanish and Italian compositions. Despite the small number of his extant works, Cornet must be considered,

particularly on the strength of his fantasias, one of the leading keyboard composers of the early 17th century.

WORKS

Edition: *Pieter Cornet: Collected Keyboard Works*, ed. W. Apel, CEKM, xxvi (1969) [A]

6 fantasias, 2 courantes, toccata, Salve regina, Tantum ergo, kbd, A
2 fantasias, kbd, *GB-Och* 89
1 fantasia, kbd, *Lbl* Add.23623, attrib. Bull, but on stylistic grounds perhaps by Cornet (see Dart)

MARY ARMSTRONG FERRARD

Cornet, Séverin (*b* Valenciennes, *c*1520; *d* Antwerp, April 1582). Flemish composer and choirmaster. His revised birthdate is based in part on a document dated 1581 which claims that he was already grey or white ('ja gris ou blanc'). According to a sonnet in his *Chansons françoyses* (Antwerp, 1581) Cornet travelled to Italy during his youth; in 1554 he was a *bascontratenor* at S Maria Maggiore in Rome. In 1559 he returned to Antwerp and married Jeanne Barbe, daughter of the *kapelmeester* of Antwerp Cathedral. In 1564 Cornet was appointed *kapelmeester* at St Rombouts Cathedral, Mechelen, and in 1572 he became *kapelmeester* at Antwerp Cathedral, a position he held until 1581 when the Catholic services were suppressed by the Calvinists. He sought unsuccessfully to enter the service of Archduke Ferdinand Karl of Austria and died shortly thereafter. In 1581 he published three volumes of music with the Plantin firm, assisted by generous subsidies from Antwerp statesmen and merchants. Cornet was active in literary and humanist circles surrounding the Plantin publishing house.

Cornet's first publication appeared in 1563 and was devoted to *canzoni napolitane*: 14 of the 40 *napolitane* are arrangements of pre-existing compositions in which the superius tune of the model becomes the new tenor; homophonic textures are reworked in points of imitation based on motifs from the tune. Most of the models can be traced in Gardane's *Villotte alla napolitana* published during the 1560s. Cornet's *Madrigali* of 1581 contains five *napolitane* for six voices, some of which are elaborate parodies of his earlier works.

The *Cantiones musicae* was his most successful publication and went through two reprints. His style is predominantly polyphonic with pervading imitation and plentiful motivic development. The majority of his motets are composed for five voices. The psalm motet *Memor est veribi tui* pays homage to Josquin's setting through the use of a related head-motif in both sections and coloration to pictorialize the text 'Memor fui nocte nominis tui Domine'. Cornet's secular motets include *Quantus opus veteres*, a tribute to the Antwerp statesman Cornelius Pruenen, and *Belgia tota sum* composed for Catarina Belgica, third daughter of William of Orange. His parody chansons owe much to Lassus's settings; the three-voice *Elle s'en va de moy la mieux* follows closely Lassus's model. Guicciardini (Antwerp, 1581) claimed that Cornet was one of the best musicians of his day.

DONNA G. CARDAMONE/KRISTINE FORNEY

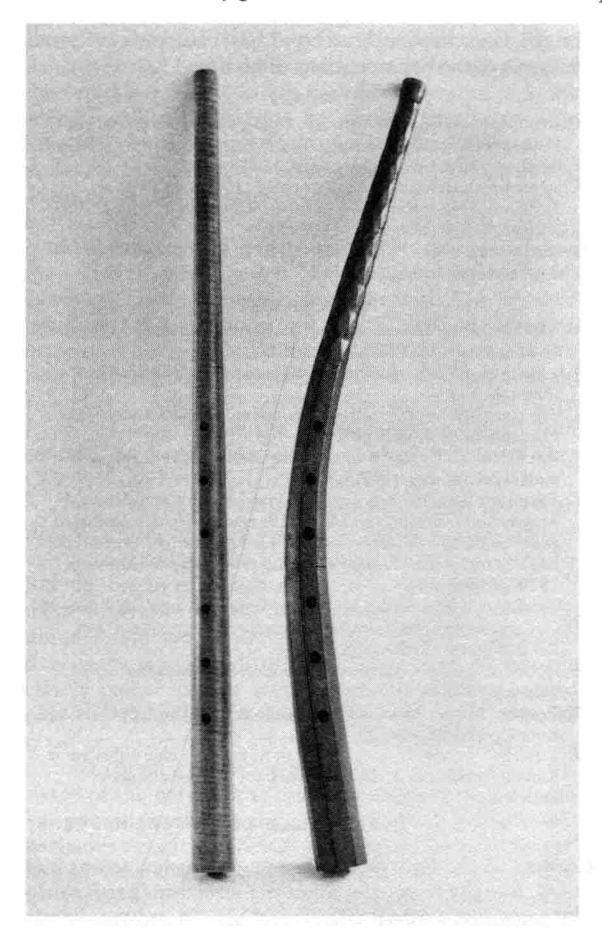
Corneta (i) (It., Sp.). *See* CORNETT. In Spanish towns it is used, like the *trompeta*, to attract attention, particularly by *pregoneros* (town criers), and also in military bands (*bandas de cornetas y tambores*). The highest-pitched *corneta* is called a *cornetín* or *clarín*.

Corneta (ii). A term for the Argentine form of the ERKE.

Corneta (iii). *See* ORGAN STOP (Cornet).

Cornet à pistons (Fr.). *See* CORNET (i).

Cornet de poste (Fr.). *See* POST HORN.



Cornetín (Sp.). *See* CORNET (i).

Cornett (Fr. *cornet-à-bouquin*; Ger. *Zink*; It. *cornetto*; Sp. *corneta*). A wooden, lip-vibrated wind instrument with finger-holes and a cup-shaped mouthpiece. It was mainly used from the end of the 15th century to the end of the 17th, but continued in use, mostly by town musicians, until the late 18th century and occasionally even into the 19th. The late 20th century saw an extensive revival. The English spelling was usually 'cornet', but the common variant 'cornett' has been widely adopted, following the suggestion of F.W. Galpin, to prevent confusion in print with the modern valved cornet. The cornett is known in three main sizes – treble, small treble (cornettino) and tenor, of which the treble has by far the greatest importance.

See also ORGAN STOP.

1. Construction and technique. 2. History. 3. Folk cornetts.

1. CONSTRUCTION AND TECHNIQUE. There are three types of treble cornett: curved, straight and 'mute'. The

1. Treble cornetts: (a) mute, Italian, 16th century; (b) curved, Italian, late 16th century, from Schloss Ambras (Sammlung alter Musikinstrumente, Kunsthistorisches Museum, Vienna)

curved (Ger. *krummer Zink, schwarzer Zink*; It. *cornetto curvo, cornetto alto* (i.e. 'loud'), *cornetto nero*) is the most common type, with over 140 extant examples. It is about 60 cm long and made of a single block of wood (plum, pear, maple etc.) cut into a curved shape and split lengthwise. A conical bore is carved out of each half and the pieces are then glued back together, the exterior planed to an octagonal profile, and the longitudinal joints secured by a series of bindings and a covering of black leather or parchment. The socket for the mouthpiece, which is slightly tapered, was sometimes strengthened by an external brass ferrule, and both the upper and lower ends of the instrument were occasionally adorned with silver mounts. There are six finger-holes and a thumb-hole (nearest to the mouthpiece). The instrument is often curved to the right, and the player's right hand is placed lowermost, but many specimens are 'left-handed', curving the opposite way. Mouthpieces are made of ebony, ivory, or horn, but it is difficult to ascertain which extant examples are original; many are known to be replacements. One of the specimens generally accepted as original is that of the late 16th-century curved cornett from Ambras (fig.1*b*). It is turned from horn, 14 mm wide, and is similar to a small trumpet mouthpiece in the deep curvature of the cup, but the rim is very sharp, resembling an acorn cup. Many pictures of cornett players show just such a small mouthpiece, and these depictions, together with instructions in several treatises, suggest that the small cup mouthpiece was usually placed in the corner of the mouth, the centre position being occasionally employed as an alternative.

The straight treble cornett (Ger. *gerader Zink*; It. *cornetto diritto*) is made of wood – usually yellow boxwood – with a conical bore as in the curved cornett, but turned on the outside to a circular cross-section, usually without ornamentation. Finger-holes and mouthpiece are as in the curved cornett. This was evidently the least common type, and comparatively few (about 13) have survived, although it seems to have been widely used before 1550, especially in Germany.

The mute cornett (Ger. *stiller Zink*; It. *cornetto muto*) is made like the straight cornett, but its mouthpiece is not detachable, being turned in the wood at the top end of the instrument instead (see fig.1*a*). The conical cup merges into the bore, usually without a sharp break, causing a softening and veiling of the tone quality. Many fine boxwood specimens are in the Brussels Conservatory museum; most of these are from late 16th-century Venice, where Vincenzo Galilei (*Dialogo*, 1581) said that the best cornetts of his day were made.

The compass of the curved treble cornett was from *g* to *a''* until the 17th century, when parts were taken up to *d'''* or even to *e'''*. But the lowest proper note is *a* (the thumb-hole and all six finger-holes covered), the *g* being obtained by slackening the lip. A few treble cornetts seem to have been pitched a whole tone lower, and there is evidence that mute cornetts were normally built so, at least around 1600 (see Weber). It has been widely speculated that such low treble cornetts may have been used as alto instruments. Although little direct confirmation of the theory exists, a Stuttgart inventory from 1589 mentions two cornetts pitched 'two tones lower than the treble cornett' (see Spielmann), and the civic ensemble of Bologna had positions for both *cornetto di soprano* and *cornetto di contralto* (see Gambassi).

Cornett fingering resembles that of other woodwind instruments of the period, although it becomes highly idiosyncratic in the upper octave. Only a few fingering charts survive, and most of them, such as that in Speer's *Grund-richtiger ... Unterricht der Musicalischen Kunst* (Ulm, 1687, enlarged 2/1697/*R*) are from the last century of the instrument's use (fig.2). Dalla Casa (1584) states that the cornett, like the voice, can be played *piano* or *forte* and in every key (*tuono*). Similarly Mersenne (1636–7) wrote that it can be sounded as softly as a recorder and can play a scale beginning on any note as *ut*: the point of these observations was that most other woodwind instruments of the period (shawms, flutes etc.) were, in varying degrees, deficient in those respects. The most sympathetic scales on the cornett are G, C and F major, as they introduce the best cross-fingerings.

In its heyday (*c*1550–1650) the treble cornett was used more than other wind instruments for virtuoso display, resulting in spectacular divisions (or diminutions) as extravagant as those produced on the violin or bass viol, or by the voice. Mersenne went so far as to say that the cornett should almost always be played in diminution. Dalla Casa gave numerous examples; the extract in ex.1 is from a diminution of the treble of Lassus's five-part *Susanne un jour* (from the second book of *Il vero modo*

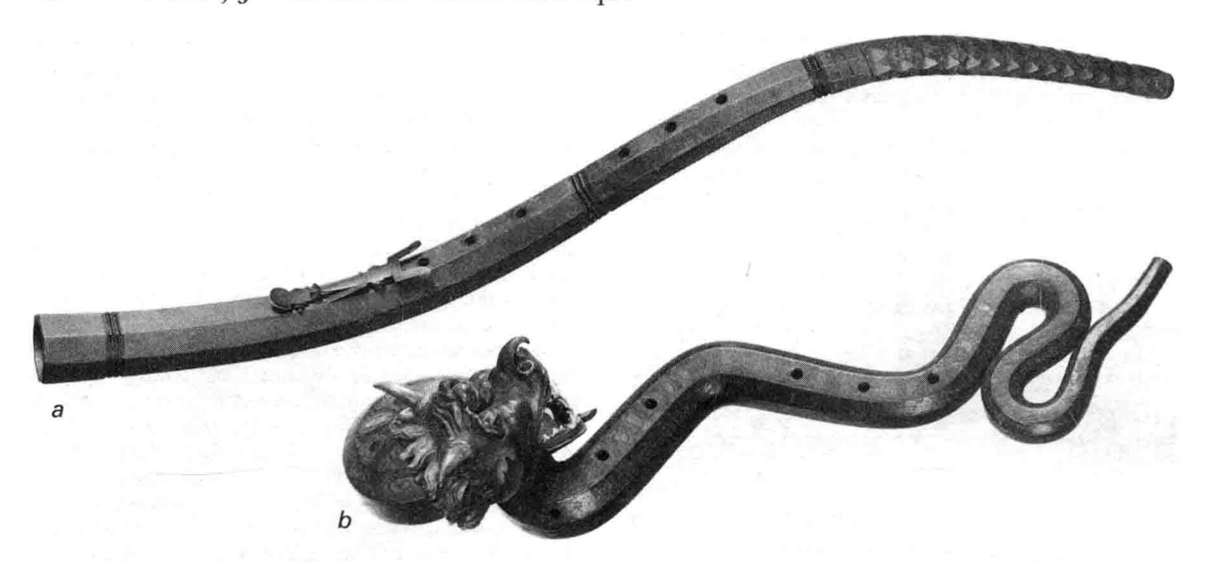
2. Fingering chart for the cornett from Daniel Speer's 'Grunde-richtiger ... Unterricht der musicalischen Kunst' (Ulm, 1697)

di diminuir; the original composition is printed in Lassus's *Sämtliche Werke*, xiv).



Similarly brilliant cornett passages occur in Giovanni Gabrieli's works, and sometimes in those of his followers (e.g. Praetorius's *Wachet auf!* in the *Polyhymnia*). For the execution of these divisions tonguing reached a high degree of complexity. Instructions were set down in a series of Italian tutors from Ganassi dal Fontego (1535) to Bismantova (1677). They embraced two considerations, force and speed, and with only minor differences, set forth a highly developed and remarkably consistent Italian 'school' of articulation. For the fastest divisions the liquid *lingua riversa*, usually expressed as *le-re-le-re*, *de-re-le-re* or *te-re-le-re*, was prescribed. Also recommended for moderately fast passages was the harsher dental *te-re-te-re*, which, it was said, is easier to hold back in semiquaver runs. *Te-che-te-che* (the ordinary modern 'double tonguing' on flutes and trumpets) was deemed 'crude and terrifying', in addition to being difficult to hold back. *Te-te-te-te* (ordinary single tonguing) was described as good up to quaver speed but too sluggish for anything faster. The model of articulation on the cornett was the human voice, especially the extravagant vocal ornaments known as *gorgie*, and thus the *lingua riversa* was sometimes known as the *lingua di gorgia*. Although the cornett can technically be played legato (i.e. without any lingual articulation), all notes were normally tongued, except in the execution of trills and some cadential ornaments (*see* TONGUING).

The cornett's tone quality was often described as being close to the human voice, particularly that of a boy soprano. Mersenne eloquently described it as 'like a ray of sunshine piercing the shadows, when heard with the choir voices in the cathedrals or chapels'. By modern standards the instrument is not loud, its *forte* being less strong than a clarinet's. The mute cornett has a uniquely soft and velvety quality. Roger North (1695) said 'Nothing comes so near or rather imitates so much an excellent voice as a cornett pipe; but the labour of the lips is too great and it is seldom well sounded' (see Wilson, 1959). The difficulty of producing and controlling the sound of the cornett undoubtedly became more evident once the instrument began to be pushed aside (in the late 17th century) in favour of the more fashionable stringed instruments. As the number of players decreased, standards began to slip; that they did so precipitously is confirmed by a mid-18th century Bolognese source which complained that the instrument's daily appearances in the town square had become 'a public scandal' (see Gambassi).

The 16th-century cornettino (Ger. *kleiner Zink, Cornettin*) was a 5th higher than the treble cornett; during the 17th century it was a 4th higher (and known as a *Quartzink*). It was most commonly made to the curved design of the treble instrument, but straight and mute cornettinos were also constructed. The cornettino gained considerable favour throughout 17th-century Germany and Austria and was often required by Schütz, notably in no.3 of the third part of the *Symphoniae sacrae* (1650), in which, above the words 'Wo der Herr nicht die Stadt behütet, so wachet der Wächter umsonst', the cornettino pipes out plaintive, cockcrow rhythms on single notes to the composer's instruction 'ad imitationem Cornu Vigilis'. Walther's *Lexicon* (1732) gives its range as *d′* to *d‴* or even up to *a‴*.

The tenor cornett (Fr. *taille des cornets*; Ger. *grosser Zink*; It. *corno torto, cornone*) was pitched a 5th lower than the treble cornett, and was usually provided with an additional finger-hole, covered by a key, for the little finger of the lower hand. Because of its length (75 to 105 cm) the instrument was generally made with a double curve (fig.3*a*), having the finger-holes on the inside facet of the lower bend; thus in playing position the bell points downwards to the front, not outwards to the side as in the treble. Its main period of use was, like the treble cornett, about 1550 to 1650, although it gained favour in England only after the beginning of the 17th century; in 1622 the celebrated Norwich Waits possessed at least two. Praetorius did not care for it, describing its sound as 'most unlovely and bullocky'. Nevertheless, it was widely used. Some 35 specimens survive in museum collections and many parts in alto and tenor clefs specifying 'cornetto'

3. Tenor cornetts: (a) with double curve and one key, by an unknown Italian maker, 17th century; (b) in serpentine form (terminating in a dragon's head), by an unknown Italian maker, 16th or 17th century (Musée de la Musique, Paris)

are only playable on the tenor-sized instrument. A tenor cornett in serpentine form is in the Paris Conservatoire collection (fig.3*b*). A straight tenor cornett, of ivory, ascribed to the late 17th century, is in the Germanisches Nationalmuseum, Nuremberg. The bass cornett (Fr. *basse des cornets*; Ger. *Basszink*) pitched a 4th or 5th below the tenor, is described only by Mersenne, but it was also known in Germany, where it is listed in many inventories from the last decades of the 16th century.

See also LYSARDEN.

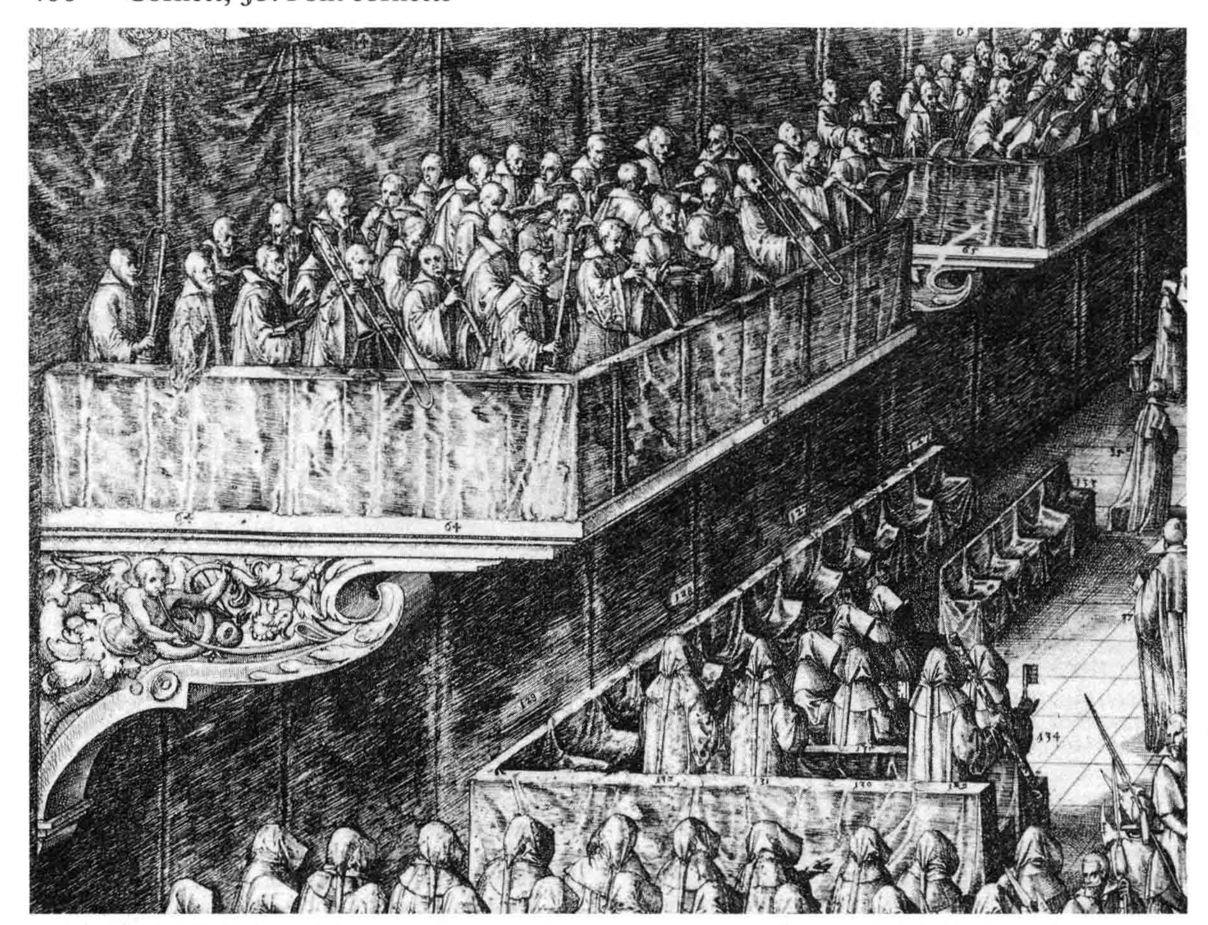
2. HISTORY. The word 'cornet', literally 'little horn', suggests an animal-horn ancestry for the instrument. Of the numerous cow-horn-shaped instruments in medieval pictures some are shown with finger-holes, resembling horns still used by Scandinavian herdsmen. In Sweden such instruments go back to at least the 10th century, according to the date determined for a 22 cm oxhorn with four holes, now in the Dalarnas Museum, Falun (no.7279). There are fairly clear 11th- and early 12th-century illustrations (mostly English) of such instruments (see Galpin); further examples were depicted in the next two centuries and contemporary French romances contain expressions such as 'cor à doigts', which presumably refer to them. The octagonal exterior form is seen in a carving from about 1260 in Lincoln Cathedral, showing an angel apparently playing two instruments at once (see Gardner). One of the Angers Tapestries (1373–82) shows a curved cornett with the lowest hole duplicated so that either hand could be placed uppermost (see Harrison and Rimmer). This feature, known on recorders from the earliest examples (although rare on subsequent cornetts), suggests that the cornett at that time was made by professional instrument makers. The classic curved model is seen from the mid-15th century, for instance in a Spanish breviary (*GB-Lbl* Add.18851; fig.4), and by the end of that century references to cornett players are fairly numerous in most European countries. The Germans, however, seem at first to have preferred the straight cornett. In a letter of 1541 the Nuremberg maker Georg Stengel 'genannt Neuschel' referred to 'welsche krumme Zincken' (see Eitner, 1877), as if the curved form were considered French or Italian in origin. Virdung's *Musica getutscht* (1511), the title-page of Arnold Schlick's *Spiegel der Orgelmacher und Organisten* (Speyer, 1511; fig.5) and *Maximilian's Triumphal Procession* by Burgkmair and others (begun 1516) all show the straight form, in the latter two instances accompanying choristers. Earlier evidence of straight cornetts may exist in a number of 11th- to 13th-century pictures showing small straight instruments (with finger-holes) that terminate in the carved head of a dog or wolf (fig.6). Most of the sources are German or Swiss; two less clear examples are French (see Hammerstein). Whether the medieval instruments in fact represent forms of cornett is impossible to prove, but

4. Curved cornetts, lute, fiddle and ?trumpet: miniature by the ?Master of the Dresden Prayerbook, from the Breviary of Isabella, Queen of Spain, Bruges, 1480s (GB-Lbl Add.18851, f.155v)

5. Straight treble cornett, with positive organ, accompanying choristers: woodcut from Arnolt Schlick's 'Spiegel der Orgelmacher und Organisten' (Speyer, 1511)

a number of extant 16th-century Italian curved cornetts which end in a beast's head might be considered supporting evidence (fig.3*b*). Mute and tenor cornetts were both known by 1550 in Italy and Flanders, and no doubt also in other countries.

The cornett appeared along with trombones and organ as support for choral music throughout its main period of use (fig.7). In England cornetts and trombones doubled



6. Straight cornett terminating in an animal head, with cymbalum and horn: miniature from the Worms Bible, German, c1148 (GB-Lbl Harl.2804, f.3v)

the voices of the choir in the Chapel Royal, in the cathedrals at such places as Canterbury, York and Durham, and in provincial and collegiate churches until at least the time of the Commonwealth. In Italy, Germany, France, Spain and Latin America the cornett was widely used to double voices in cathedrals until well into the 18th century. When the cornett did not double voices it either substituted for them or, especially after 1600, played instrumental lines, often together with or in place of the violin or with an ensemble of trombones. Giovanni Gabrieli was a pioneer and master of elaborate obbligato writing for the cornett, but his example was followed more in Germany than in Italy, where obbligato use of the instrumental after 1650 is rare. The cornett was given leading parts in Schütz's early works, and continued to hold an important position in German and Austrian sacred music through the end of the 17th century. At the Imperial Court in Vienna cornetts and cornettini were given obbligato parts, of sometimes awe-inspiring difficulty in their exploitation of the high register, by such composers as Bertali, Biber, Georg Muffat and Schmelzer. Cornetts and trombones also formed an independent ensemble of five to eight parts for ceremonial music: in France they were used thus up to Mersenne's time; in England for such music as John Adson's *Courtly Masquing Ayres* (1621), and Matthew Locke's music for 'His Majesty's Sagbutts and Cornetts' (1661); in Germany for *Turmmusik* by J.C. Pezel (e.g. *Fünff-stimmigte blasende Music*, 1685) and by Gottfried Reiche; and in Italy in most important cities until the mid-18th century, including Bologna, where the Concerto Palatino was active until 1779 and Rome, where the Concerto Capitolino survived until 1789. In Germany the cornett-trombone ensemble continued to play *Turmmusik* into the 19th century; and it is in this ancient and humble duty that it is last heard of (see Kastner). Examples of cornetts (and trombones) used by the American Moravians are in the Moravian Museum, Winston-Salem, North Carolina.

The decline of the cornett as an orchestral instrument can be followed in the published scores of the Leipzig Kantors from Schein to Bach. Although Bach wrote for the cornett he used it, except in the motet *O Jesu Christ, mein Lebens Licht*, BWV118, merely to reinforce the trebles of the choir. Handel's cornett parts in *Tamerlano* (1724) and Gluck's in *Orfeo* (1762) had eventually to be performed on other instruments. In the 1880s V.-C. Mahillon made the first attempt to restore the cornett for use in such music. For a performance of *Orfeo* in Brussels he constructed a straight cornett on modern lines, with flute keywork (now in the Brussels Conservatory museum).

The pioneering work in reviving the cornett was done in the 1950s, in Britain by Christopher Monk and in Germany by Otto Steinkopf, one of the first to perform publicly on a reconstructed instrument.

3. FOLK CORNETTS. Various wooden instruments that are sounded like cornetts are found in the Baltic countries and parts of Russia. They are bound in birch bark, have four or more finger-holes, and may generally be seen as variants of the cow-horn with finger-holes (see §2 above). The *rozhok* ('little horn') of the Vladimir and Tver (Kalinin) districts, however, may be a rural offshoot of the straight cornett; it has a separate mouthpiece (which some players place to the side of the lips) and is made in two or more sizes for playing music in parts. This playing tradition may go back only two centuries, to judge by

7. *Cornetts with trombones, bass shawms and strings, accompanying choral music during the obsequies of Charles III, Duke of Lorraine, in Nancy Cathedral, 1608: detail of engraving from Claude de La Ruelle's 'Decem insignes tabulae' (1611)*

estimates of the age of Russian improvised part-singing in rural areas.

Cornette, Victor (*b* Amiens, 27 Sept 1795; *d* Paris, 19 Feb 1868). French instrumentalist. He was the son of Louis-Hippolyte Cornette (1760–1832), organist and *maître de chapelle* at Amiens Cathedral, and composer of sacred music (which still survives in manuscript). Fétis mentions his admission as a pupil at the Paris Conservatoire in 1811, where he may have studied with Le Sueur (as a private pupil). However, the absence of his name in Constant Pierre's *Le Conservatoire national* is probably due to his enlistment from 1813 with the Imperial Guard. Cornette served in the Netherlands and Belgium until 1817, and fought at the Battle of Waterloo. From 1815 to 1817 he was employed as *chef de musique* of one of the King of Holland's regiments; he then became a teacher at the Jesuit college of Aint-Acheul, where he remained until 1824. On his return to France he was engaged at the Théâtre de l'Odéon (1825–7) and the Opéra-Comique (1827–37), where he was *chef de choeur* from 1831 until 1837. The following year he was engaged at the Théâtre de la Renaissance and the Gymnase de Musique Militaire. In 1842–3 he left Paris to become the first conductor of the Strasbourg opera. He returned to Paris during the years 1847–8, and was *chef des choeurs* at the Opéra-National after the February Revolution. He then occupied several posts at the Opéra-Comique, where he was still employed around 1856. Cornette was trombonist in various legions of the Garde Nationale and deputy organist at St Sulpice and St Louis-des-Invalides. His ability to play numerous instruments led several Parisian editors to ask him to develop some instrumental methods, particularly for the *cornet à pistons*, flute, trombone and even the harmonium and accordion. He left numerous arrangements of operas which also testify to his teaching qualities. (*FétisB*)

GERARD STRELETSKI

Cornetti, Paolo (*b* Rome; *fl* 1638). Italian composer. He was an Observant. The title-page of the one publication containing only Cornetti's works describes him as *maestro di cappella* of the Accademia dello Spirito Santo, Ferrara. This work is the *Motetti concertati . . . e nel fine le Letanie della BV* op.1 (Venice, 1638); the motets are for one to six voices, with one or two violins and various continuo instruments. There are 15 motets in anthologies (RISM 1642[4], 1646[4], 1647[3] and 1659[3]) and in the Murhard'sche Bibliothek der Stadt Kassel; ten of the latter appear in an Antwerp reprint (1647[3]) of pieces from his Venice collection together with motets by Gasparo Casati. In his motets Cornetti reveals a penchant for clearly defined key schemes, with sections in related keys. There is occasional use of a ground bass but no evidence of structural refrain forms. Much of the melodic writing is in the arioso style of the day. Perhaps the most interesting feature here is Cornetti's individual choice of scorings, in which a vocal solo, duet or trio is coloured by parts for violins, bassoon and plucked string continuo; the violins are also used to give added sonority, doubling a vocal part and adding counterpoints above it.

Cornetto (ii). *See under* ORGAN STOP.

Cornet-Ton (Ger.: 'cornett pitch'). Approximately *a'* = 465; in the 17th century the pitch of most instruments (*see* CAMMERTON), in the 18th the pitch of ancient or traditional German instruments such as trumpets, organs and *chorist-Fagotts* (dulcians). The name derives from the standard pitch of cornetts, the majority of which had been made at this approximate frequency for centuries. Cornetts were commonly used as a reference for pitch frequency in Italy, Germany and the Habsburg lands. Praetorius (ii, 1618), who called this pitch 'Cornettenthon', used it as a synonym for his reference standard, 'CammerThon'. While the pitch standards implied by the terms 'CammerThon' and 'ChorThon' traded places between the 17th and 18th centuries (*see* PITCH §I, 1 and 2(iii)–(v)), the 17th-century *Cornettenthon* and the 18th-century Cornet-Ton were at the same level, since in general cornetts did not change in pitch. By the 18th century, then, Cornet-Ton had become a specific kind of CHORTON. The 13 extant early German organs (1707–86) that were described as pitched in Cornet-Ton at the time they were built and whose pitch has survived, range in pitch from *a'* = 450 to 467 with an average of *a'* = 463. No doubt the terms Cornet-Ton and Chorton were sometimes confused during the period of their use. All the organs Bach regularly played were at Cornet-Ton.

Cornon. A bass brass instrument in F, invented by V.F. Červený in 1844. Built in tuba, oval or helicon form, with a funnel-shaped mouthpiece and three valves, it was intended as a substitute for the french horn in military bands. By 1872 a family of cornons, including E♭ alto, B♭ tenor and E♭ bass, had been developed. The name 'cornon'

Cornophone in C, with extended tuning-slide for playing in B♭ (mouthpiece missing) by Fontaine-Besson, Paris, late 19th century (Royal Military School of Music, Kneller Hall)

was also used in Fontaine-Besson's patent of 1890 for the cornophone. □

Corno naturale (It.). Hand HORN.

Cornopean (i). An early name for the cornet. *See* CORNET (i).

Cornopean (ii). *See under* ORGAN STOP.

Cornophone. A three-valved brass instrument. Cornophones were made as a group, ranging from soprano to contrabass, and pitched alternately in B♭ and E♭ or C and F. The instrument was devised by Fontaine-Besson of Paris some time after 1880, and patented in 1890 under the name 'cornon' (see illustration). With a bore rather wide in relation to its length the cornophone was somewhat similar to the SAXHORN, but the tapered part of its tubing was more consistently conical. It was hoped that this, allied with a deeply conical mouthpiece, would yield a tone quality approaching that of the horn, but this was not generally achieved. With the cornophone the natural notes most employed were the 2nd to the 6th, while corresponding notes on a horn at the same nominal pitch, and with double the length of narrower tubing, would call for the 4th to 12th natural notes. Higher natural notes on longer and deeper cornophones, where the tone quality might have been similar, were difficult to produce because of its relatively wide bore. The tubing of the cornophone was coiled in a vertical ellipsoid and the moderately flared bell was directed forward.

See also WAGNER TUBA.

PHILIP BATE

Cornor. Name used for the CORNOPHONE in Fontaine-Besson's patent of 1890.

Cornu. A Roman brass instrument second only to the tuba (*see* TUBA (ii)) in importance (it is classified as an AEROPHONE). It consisted of a long bronze tube, curved into a shape resembling the letter 'G', the lower extremity having a large detachable mouthpiece and the upper having a flared bell projecting forwards horizontally. It was held in a nearly vertical position while an ornamented wooden bar extended from top to bottom, serving both as a grip and as a strengthening member. To judge from pictorial representations, it had a circumference of about 3 metres (see illustration).

Like the LITUUS it appears to have been of Etruscan origin and, also like that instrument, is said to have been a later modification of the tuba, the straight trumpet. This hypothesis is quite plausible in view of the priority of the tuba; but it must be reconciled with another widely held view: that the cornu was originally an animal's horn like the BUCCINA. Perhaps the cornu developed from the tuba, inspired both by the curved shape of the buccina and by the desire for a lower-pitched instrument of manageable design. Sources occasionally confuse cornu and buccina because their shapes were roughly similar, but there can be no doubt of their separate identities. From its earliest appearance in Etruscan pictorial sources, the cornu was much larger than the buccina, was fashioned of brass and had its distinctive vertical brace.

In Etruscan and early Roman times it appeared together with the tuba and lituus in processions on state occasions,

Cornu players in procession: detail from relief on Trajan's Column, Rome, dedicated CE *113*

particularly at funerals of important personages. With the expansion of the republic and the empire, however, it became more and more a military instrument, taking second place only to the tuba in this respect. It also appeared with some frequency in the arena with the hydraulis and occasionally in the cult of Cybele with the more common tibia, tympanum and cymbala.

For further illustrations see TIBIA and TUBA (ii).

JAMES W. MCKINNON

Cornu, Andreas de. *See* VETTER, CONRAD.

Cornuel, Jean. *See* VERJUS (i).

Cornysh [Cornish, Cornyshe, Cornysshe]. Several English musicians with this surname were active in the late 15th century and the early 16th, and references to them by their surname alone makes identification difficult. Nevertheless three figures can be distinguished: (1) John Cornysh (2) William Cornysh (i) and (3) William Cornysh (ii).

(1) **John Cornysh** (*fl* 1500). Composer. He wrote a florid two-part setting of the Easter processional *Dicant nunc Judei* in the Ritson Manuscript (*GB-Lbl* Add.5665). He may have been the John Cornysh of Winchester who became a scholar at Winchester College in 1472 at the age of 11. He may also have been related to the John Cornysh who worked as a scribe at Magdalen College, Oxford, in 1488–9 and who carried out repairs to choirbooks at New College in 1509–10 (*HarrisonMMB*).

(2) **William Cornysh (i)** (*d c*1502). Church musician who may have been the brother of (1) John Cornysh. He was Informator choristarum at Westminster from 1479 to 1491. It is possible that he remained active as a musician after this date; he continued to live – at a reduced rent in view of his good service – within the Abbey premises until his death, and his wife Joanna remained there for at least five years thereafter. He was granted a pension by the Abbey in 1499. His death is recorded in the Fraternity of St Nicholas, of which he was a member, and he was buried in the churchyard of St Margaret's, Westminster.

It has been suggested, based on the evidence of music manuscripts, documentary records and on stylistic grounds, that he was the composer of the sacred works previously assumed to be by William Cornysh (ii) (Skinner, 1997; see below).

(3) **William Cornysh (ii)** (*d* 1523). Composer, poet, dramatist and actor, who may have been the son of William Cornysh (i). This relationship has not been proved, nor is there complete certainty of identity in some of the references to 'Cornysh' in the royal accounts and elsewhere. Only the compiler of the Fayrfax Manuscript (*GB-Lbl* Add.5465) took care to avoid confusion by ascribing three pieces there to 'William Cornyssh Junior'.

It was probably this Cornysh who received several payments for his part in court entertainments from 1493 onwards. The first was on 12 November 1493 'for a prophecy', followed by payment for playing the part of St George in the Twelfth Night revels of 1494. In 1501 a Cornysh devised pageants and 'disguysings' for the wedding festivities of Arthur, Prince of Wales, and Catherine of Aragon, and it was probably the same man who received payment 'for setting of a Carrall' on Christmas Day 1502.

In 1504 he was imprisoned in the Fleet, and while in prison he wrote a poem entitled *A Treatise bitwene Trouth and Enformacion* (*GB-Lbl* Roy.18.D.11; ed. E. Flügel, *Anglia*, xiv, 1892, 466–71) which is superscribed 'In the Fleete made by me William Cornysshe otherwyse called Nysshewhete, chapelman with the moost famost kyng Henry the vij[th]'. His alias is clearly made up of the last syllable of his name and 'whete' for 'corn'. The treatise, written in seven-line stanzas of rhyme royal, consists of four introductory verses which complain how a man may be convicted by false information, followed by *A Parable betwene Enformacion and Musike*, which argues that the author had been wrongfully accused. The poem makes elaborate use of musical terms. It is not known for what offence he was sent to the Fleet; the common assertion that it was for a satire against the unpopular Sir William Empson is based on a misreading of a passage in Stow's *Annales*.

As a Gentleman of the Chapel Royal Cornysh was present at the interment of Henry VII, the coronation of Henry VIII (both in 1509) and the burial of Prince Henry in 1511. On 29 September 1509 he became Master of the Children of the Chapel Royal in succession to William Newark, for whom he had deputized earlier; he held this post until his death. In this capacity he was responsible for the music performed in the chapel, and on two occasions in April 1515 he administered payments to visiting musicians who performed during the services there. He was also responsible for the education and general welfare of the choristers. Between 1509 and 1517 several royal choristers (including William Saunders and Robert Philips) boarded with Cornysh, and it appears from the monthly payments that from June 1517 all the choristers boarded with him. He is mentioned in an exchange of letters dating from 1518 between Richard Pace, the king's secretary, and Cardinal Wolsey concerning a chorister that the king had borrowed from the cardinal's chapel for his own; Cornysh was told that he must treat the boy well, 'otherwise than he doth his own' (Brewer, nos.4024–5, 4043–4, 4053–6). At the same time he maintained connections with Westminster Abbey, as William Cornysh (i) had done: from 1517 to 1520 he leased accommodation from the Abbey, and for the feast of St Edward in 1522 he instructed the choristers of the Lady Chapel.

From 1509 Cornysh was the leading light in the plays and entertainments that enlivened court life. It is unfortunate that none of his dramatic writings survives (the 'fantastic attributions' of Wallace were commented on by Chambers), but some of the plays in which he took part are known, among them *The Golden Arbour* (1511), *The Dangerous Fortress* (1514) and the *Triumph of Love and Beauty* (1514). Two of the main actors besides Cornysh were William Crane and John Kite, and these three are mentioned in a poem by Alexander Barclay (quoted by Stevens):

> All this may courtiers in court ofte times heare,
> And also songes oftimes swete and cleare.
> The birde of Cornwalle, the Crane and the Kite
> And mo other like to heare is great delite,
> Warbling their tunes at pleasour and at will,
> Though some be busy that therin have no skill.

Cornysh and Kite were also listed as visiting musicians at St Mary-at-Hill in 1510–11 (see Baillie, 1962).

In September 1513 Cornysh took the Chapel Royal to France in the retinue of Henry VIII, and their performances won great favour. In June 1520 he was again across the Channel, to supervise the Chapel Royal's ceremonies at the field of the Cloth of Gold: he was in charge of the pageants on the Sunday night, and received payment for the maintenance of ten choristers from 29 May to 22 July. In 1522 the Emperor Charles V visited England to cement an alliance with Henry VIII against the French, and on 15 June the court was entertained with a play by Cornysh which outlined in simple allegory the progress of the negotiations and the expected outcome. The play is described in a letter written on 21 June 1522 by Martin de Salinas, ambassador of the Archduke Ferdinand.

Various import and export licences that Cornysh was formerly thought to have received (see Pine) were in fact awarded to his successor William Crane. On 20 August 1523 Cornysh was granted the manor of Hylden in Kent. All that is known of his domestic life is that his wife's name was Jane and that he had a son called Henry. His will, made in January 1512, was executed on 14 October 1523. He was buried in the 'Roode' church of East Greenwich.

William Cornysh (ii) made a notable contribution to the repertory of the secular partsong, which flourished in the reign of Henry VIII. Many of these show the influence of the medieval carol, with its verses and burdens. *Woffully araid* has three verses with a burden that is given in full at the beginning and end but is shortened between the verses. *Yow and I and Amyas* is simple and chordal. *A robyn* is a three-part canon, and *My love sche morneth* is canonic in its two lower parts.

These two pieces, like some other partsongs in this repertory, seem to incorporate elements of pre-existing melodies. Of the instrumental pieces, *Fa la sol* is long and intricate, and the untitled piece seems to be a *catholicon*, that is, designed to be perfomed in different modes. Its bass part is constructed like a palindrome, pivoting at bars 15 and 25.

A number of impressive sacred works are ascribed in other sources to a composer named Cornysh. In addition, there are works now lost that are attributed to someone of this name: an antiphon *Altissimi potentia* (NOHM, iii, 1960, p.318, n.2); a *Magnificat*, a *Stabat mater* and a five-part antiphon *Ad te purissima virgo* (formerly in the Eton Choirbook, *GB-WRec* 178) and some masses listed in a 1529 inventory of King's College, Cambridge (*Harrison MMB*, appx iv).

The name 'Cornysh' was entered in small writing at the end of several works, including three masses, in the Lambeth Choirbook (*GB-Llp* 1), but the significance of this is not known. In the extant Eton Choirbook pieces the style ranges from the flamboyance of the surviving *Stabat mater* to the simple eloquence of the *Ave Maria mater Dei*. The surviving *Magnificat* is also extremely florid in places and encompasses an unusually wide range, from C to g″. It has been suggested that the sacred works are the work of William Cornysh (i) rather than the younger man (see Skinner, 1997). If indeed they are by William Cornysh (ii), however, then he was a composer of great emotional and technical range; whichever the case, the younger Cornysh's versatility as poet, dramatist, 'player' and composer reveals him to be a true man of the Renaissance.

DAVID GREER (with FIONA KISBY)

Corona, Agostino (*b* Treviso; *fl* 1579–95). Italian composer. In 1579 he was working as *maestro di cappella* at the abbey of S Maria della Carità near Venice, and in the same year he published a collection of vesper psalms for six voices. Dedicated to a fellow canon regular, Ascanio Martinengo, this contains 16 settings, the last of which, *Et exultavit spiritus meus*, expands to seven parts for its final, canonic peroration. A manuscript set of four-part *falsobordoni*, recorded in the literature (see *EitnerQ*), is not known to have survived. Corona is also known to have composed some madrigals, three of which appeared in print (two in RISM 1593[7], and one in Scaletta's *Amorosi pensieri*, RISM 1590[25]); he also contributed a five-part psalm, *Beate omnes*, to Giammateo Asola's *Psalmodia* (RISM 1592[3]).

DONALD FOUSE/IAIN FENLON

Corona, Giovanni (*b* Vicenza; *d* 1600). Italian composer. All that is known of his career places him in Treviso, where he was elected organist of the cathedral in 1575, a post which he held for 25 years. His published works suggest connections with the Accademia Filarmonica in Verona. His earliest piece appeared in the second book of five-voice madrigals (RISM 1569[26]) by Ippolito Chamaterò, a member of the Accademia, while Corona's *Primo libro de madrigali a cinque voci* (Venice, 1574) is dedicated to Count Mario Bevilacqua, the group's patron, and opens with an encomiastic piece in the bland style traditionally reserved for such compositions. Elsewhere in the book Corona handled a variety of more demanding techniques with competence; at the opening of *Lagrime dunque speme* he contrived some particularly telling 'pathetic' effects by skilfully managed suspensions and chromatic inflections. More typical of the book as a whole is *Pur mi dimostri*, with its fusion of the homophonic and contrapuntal styles, terse opening motifs, paired imitations and sections in triple time.

IAIN FENLON

Coronach (Gael.: *corranach*). A lament over the dead in Gaelic-speaking Scotland. *See* CAOINE and LAMENT, §1.

Coronado, Luis (*d* Mexico City, 31 March 1648). Mexican composer. He was a singer in Mexico City Cathedral in 1621, under Antonio Rodríguez Mata, and became principal organist in 1632. On Mata's death in 1643, he was appointed *maestro de capilla*, a position he held until his death in 1648, when he was succeeded by Fabián Pérez Ximeno. Coronado's works include a four-part *Magnificat*, a *Missa a 12 vozes de octavo tono* for three choirs, and four Passions in the choirbooks of Mexico City Cathedral. Like his predecessor, whose two Passions are also included in the choirbooks, Coronado wrote in a style that displays a sober Spanish tradition, but with a marked preference for melismas, as well as melodic and rhythmic sequences. The Passions of both Coronado and Mata set a precedent for four-part polyphonic compositions that was imitated and emulated during the following century in New Spain and as far as the distant outpost of Santa Barbara, California.

MARK BRILL

Coronaro. Italian family of composers and musicians.

(1) Antonio Coronaro (*b* Vicenza, 29 June 1851; *d* Vicenza, 24 March 1933). Composer and teacher. A pupil of Francesco Canneti in Vicenza, he was organist at the cathedral there from 1885 and also taught the piano, harmony, counterpoint and composition. Only the first two of his five operas were performed, and *Seila* (performed Vicenza, 1880), the first, was his only success. The plot is from the biblical story of Jephtha and is treated in the manner of a grand opera, with choruses shouting 'Vittoria', marching bands on stage, ballet etc. Critics considered Coronaro too influenced by Verdi and Gomes.

WORKS

Ops: Seila (melodramma tragico, 3, A. Boni), Vicenza, Eretenio, 18 Jan 1880, vs (Milan, n.d.); La maliarda (2), Vicenza, Eretenio, carn. 1884; Il falco di Calabria (3), Vicenza, Patronato Leone XIII, 15 Jan 1903; Edwart, unperf.; Olinta e Simone, unperf.

Other: Requiem (1871); Missa 'Justus ut palma' (Milan, n.d.); Te Deum (Milan, n.d.); other sacred works; pf pieces

(2) Gaetano Coronaro (*b* Vicenza, 18 Dec 1852; *d* Milan, 5 April 1908). Composer, conductor and teacher, brother of (1) Antonio Coronaro. Though he began his education as a classics scholar, he soon turned to music, studying the piano, harmony and counterpoint with Francesco Canneti in Vicenza. In 1871 he entered the Milan Conservatory, studying composition with Franco Faccio. For his graduation in 1873 he wrote an eclogue, *Un tramonto*, to a libretto by Boito, a friend and admirer of his work. This short work proved tremendously successful, being performed as far away as Moscow and Chicago and winning the Giovannina Lucca prize of 200 gold lire. This prize enabled Coronaro to pursue his studies by travelling abroad; a trip to Germany produced a passion for Wagner.

On his return to Milan in 1876, Coronaro began three successful careers – as teacher, conductor and composer. In 1879 he held the chair of harmony and counterpoint at the conservatory and in 1894 he succeeded Catalani in the chair of composition and held it until his death. He conducted at La Scala, in 1879 substituting for Faccio.

The success of *Un tramonto* suggested to Coronaro that he might also succeed as an opera composer, but only the first of the five he composed, *La creola*, had a very favourable reception (it was given 14 performances), while two operas were never performed: *La Signora di Challant*, on a libretto by Giacosa, and *Enoch Arden* (written 1905), on which Coronaro worked with his friend, the Vicenza-born writer Antonio Fogazzaro. *Un tramonto* is a simply structured pastorale, with a *Prologo sinfonico* depicting a hunters' chorus and a storm and four numbers in classic recitative-aria format. The fifth and final number is more ambitious, making use of an unaccompanied offstage chorus singing the Angelus and the return of earlier melodic ideas. *La creola*, a grand opera with *verismo* overtones in the plot, was considered a more original work, even though it clearly showed the influence of Wagner, Meyerbeer and Verdi. It presents a love triangle in which the contralto villainess, in a jealous rage, pushes the soprano heroine off a cliff at the end of Act 2. This premature gesture leaves little for the final act except the revenge of the murder during the heroine's funeral cortège. Critics have held Coronaro to be tied to a Verdian tradition, more an assimilator of styles than a creator in his own right.

WORKS

(3) Gellio Benevenuto Coronaro (*b* Vicenza, 30 Nov 1863; *d* Milan, 26 July 1916). Composer, pianist and conductor, brother of (1) Antonio Coronaro. He studied at the Liceo Filarmonico, Bologna, graduating in 1883. As with his brother, Gaetano, his graduation composition was a one-act idyll (*Jolanda*) that won tremendous acclaim and a prize. He had considerable success as a pianist and conductor. One opera, *Festa a marina*, triumphed, winning first prize in the third Sonzogno competition, but subsequent theatrical ventures failed. *Festa a marina* was considered a poor, if slavish, imitation of *Cavalleria rusticana*; its *verismo* plot, set in Calabria, presents the singular spectacle of the treacherous wife slain on stage, 'uttering gurgling sounds as she falls with cut throat'. The tunes are passable, however, and Coronaro punctuated the drama with effective offstage choruses; these were sung with ironic indifference to the foreground tragedy of the principals. Coronaro had three other operas performed, one of which, *Claudia*, was published by Sonzogno. He produced many arrangements as well as a treatise on counterpoint.

WORKS

Ops: Jolanda (1, G. Chiericato), Bologna, Liceo Musicale, 24 June 1883; La festa a marina (bozzetto lirico, 1, V. Corradi, Flamminio (*b* Fermo; *fl* 1615–44). Italian singer and composer. He was hired to sing in the chapel of S Marco, Venice, on 11 April 1615 and was there at least until 1620. From 1630 until at least 1644 he worked for the music patron Enzo Bentivoglio and his son, being responsible for the upkeep of military garrisons. He published *Le stravaganze d'amore*, for one to three voices and continuo (Venice, 1616, 2/1618), which comprises 15 pieces, all but three of them duets. The collection is notable for being the first Venetian songbook to be published with Spanish guitar tablature, and for its inclusion of chitarrone tablature. The simple songs are all strophic and generally diatonic and syllabic. Short passages of imitation occur frequently between voice parts and changes within songs between duple and triple metre are common. The opening duet, *Stravaganza d'amore*, is a parody of Marenzio's setting of the final intermedio of Cristoforo Castelletti's play, *Le stravaganze d'amore* (probably composed 1585). Fétis mentioned sets of madrigals for four and five voices respectively (Venice, 1622–7), but no copies survive.

Corradi, Giulio Cesare (*b* Parma; *d* ?Venice, 1701/2). Italian librettist. By the 1690s Coronelli had included him in a list of poetry instructors, along with Apostolo Zeno, Francesco Silvani and others. He wrote 22 librettos for Venetian theatres between 1675 and 1702. His career as an original librettist began with two large-scale works for the Teatro S Salvador, set by Giovanni Legrenzi. The first, *La divisione del mondo* (1675), pays homage to the Venetian nobility (to whom the libretto is dedicated), and its theme, the division of the universe, gave rise to magnificent spectacle. Surviving designs for Corradi's second work, *Germanico sul Reno* (1676, in *F-Po*), make clear the mechanisms behind such spectacle. Corradi had a long-standing association with theatres owned by the Grimani family; he provided librettos for SS Giovanni e Paolo between 1686 and 1693 and he wrote three works for the first four seasons (1678–81) of their new theatre, the S Giovanni Grisostomo.

Corradi played no role in the efforts made in the 1690s to elevate libretto style, even though he did introduce serious elements into three works about 1690: deaths take place on stage in *Il gran Tamerlano*, *L'amor di Curzio per la patria* and *Alboino in Italia*. His works emphasize lively character interaction; they have some historical basis, except for *La divisione del mondo* and two works that draw upon Tasso, *La Gierusalemme liberata* and *Gli avvenimenti d'Erminia e di Clorinda*. The last two were of contemporary relevance because of the ongoing struggle of Venice against the Turks.

HARRIS S. SAUNDERS

Corradini [Coradini, Coradigni], **Francesco** (*b* Venice, ?1690–92; *d* Madrid, 14 Oct 1769). Italian composer, active in Spain. He may have been born about 1690, since his wife Teresa Marnara was about 80 at the time of his death in 1769. According to his own declaration, he was a native of Venice, not of Naples as was previously assumed. However, his first known works – an oratorio and an *opera buffa*, *Lo 'ngiegno de le femmine*, in Neapolitan dialect – were written for Naples, and the opera was successfully performed there in 1724, followed by two more stage works and a serenata in 1725. Corradini then left Naples for Spain, finding employment as a *maestro de capilla* of the viceroy Prince of Campoflorido in Valencia. There he wrote the three-act comedy *Folla real*, performed on 25 October 1728 during festivities honouring the birthday of Queen Isabella Farnese. Corradini's name has thus become associated with another *Folla real*, the three-act pastoral melodrama *La Dorinda*, which according to its anonymous score (*E-Mn*) had also been mounted in Valencia, but for a celebration of the queen's nameday (19 November). This, however appears to be a pasticcio (it includes an aria from Feo's *Siface* of 1723).

In 1729 Corradini moved to Madrid, where from 1731 to 1741 he virtually dominated the public theatrical scene with his successful Spanish operas, zarzuelas, *comedias*, *sainetes* and *auto sacramentales* in the modern Italian style. His scores for the comedies *Eco y Narcisco* and *Las mascaras* are characterized by catchy tunes with regular phrase structure and simple harmonic vocabulary that reflect the public taste of the time. In 1741, seeking the stability and honour of a court position, he petitioned King Philip V for an appointment as a *maestro* of the royal chapel citing his public success and that he had contributed 'Villanzicos de Navidad' for royal services. However, his petition was denied in 1743, and he returned to composing Spanish operas. In 1747, under King Ferdinand VI, he joined G.B. Mele and the *primo maestro* of the *capilla real*, Francesco Corselli, as a director of the orchestra at the royal theatre in the palace of Buen Retiro managed by Farinelli, and collaborated with them in composing the music for a Spanish adaptation of Metastasio's *La clemenza di Tito*, and in the following year Rolli's *Polifemo*. Corradini did not die in 1749, as has been stated, but he withdrew from the operatic scene and dedicated himself completely to his duties as *maestro de musica de camera* of the queen dowager Isabella Farnese at S Ildefonso, a position he had gained on 15 August 1747. He also served as music teacher of the infanta Maria Antonia until her marriage to Victor Amadeo III of Savoy in 1750. When Queen Isabella died in 1766 he lost his position and retired with a substantial loss of income.

HANNS-BERTOLD DIETZ

Corradini [Coradini, Corradino], **Nicolò** (*b* ?Cremona; *d* Cremona, 7 Aug 1646). Italian composer and organist. He was a pupil of Omobono Morsolino, whom he succeeded before 1611 as organist of Cremona Cathedral; he also became organist of S Pietro, and, on 1 September 1611, of the Cappella delle Laudi at the cathedral. In 1635 he succeeded Tarquinio Merula as *maestro* of the Cappella delle Laudi. He also directed the music at the Accademia degli Animosi, Cremona. Of Corradini's vocal music, there survive only a few items in anthologies and a book of concertato motets of a type increasingly popular at the time in Italy. Of the 20 motets in the collection, five require obbligato instruments, but only two, *Proserpe lux venit* and *Deliciae meae esse cum Christo*, adopt the new, modern grouping of two violins. The others are written for an instrumental ensemble that is more 'archaic' (but which continued to have its own repertory at least until the middle of the 1630s), consisting of one high instrument (violin or cornett) and one low one (violone or trombone). He also wrote a fair amount of instrumental music in which traditional features mingle with more modern elements.

Corranach (Gael.). *See* Coronach.

Corrêa [Correia], **Henrique Carlos** (*b* Lisbon, 10 Feb 1680; *d* after 1752). Portuguese composer. A member of a rich family, he studied with Domingos Nunes Pereira (*d* Lisbon, 29 March 1729), *mestre de capela* of Lisbon Cathedral. After about a decade as director of music at Coimbra Cathedral, he took the military order of Santiago in the royal monastery of Palmela on 24 July 1716, also becoming *mestre de capela* of that monastery, a post he retained until at least 1752. His now lost compositions, as catalogued by Barbosa Machado, included 42 sacred works, some for as many as 18 voices. 18th-century copies of the parts for Holy Week Matins survive (responsories for SATB, cello and organ, in *P-La*).

ROBERT STEVENSON

Correa, Juan [Correa, Joan; Correya, João] (*b* early 17th century). Spanish (or possibly Portuguese) composer. A certain Juan Correa was hired as cornett player at S Salvador, Seville, on 18 March 1634 and continued there at least until 2 September 1644. His name suggests a relationship to Francisco Correa de Arauxo, who was then organist of S Salvador. It is unclear whether he was the composer of two fine variation tientos (called 'obras') ascribed to Joan Correa and João Correya respectively (in *P-Pm*): an edition of one has been published (Cincinnati, 1967), and both are transcribed in B. Hudson: *A Portuguese Source of Seventeenth-Century Iberian Organ Music: MS 1577, Loc.B, 5, Municipal Library, Oporto, Portugal* (diss., Indiana U., 1961).

BARTON HUDSON

Correa, Manuel [Manoel] (*d* Zaragoza, 31 July 1653). Portuguese composer. He seems to have spent most of his life in Spain. While quite young he became a Carmelite monk and served as choirmaster at Sigüenza Cathedral. On 5 August 1650 he was appointed to a similar position at the cathedral of La Seo, Zaragoza; because of his frail health he was granted a salary of 500 escudos, with provisions in proportion, instead of the 200 escudos offered him originally. In his own time he was specially regarded as a composer of charming villancicos and similar pieces for the royal chapel at Madrid and other churches. Several of his sacred as well as his secular works are of high quality and appear to have been performed widely not only in Spain but in Latin America too.

WORKS

Mass (8th tone), 8vv
4 motets, 4vv: Alleluia, Ave Maria; Alleluia, Virga Jesse; Gaude Maria; O Jesu dulcissime
Other sacred works, *E-Bc*, *Mn*, *V*

32 villancicos, 1v, 3vv
31 villancicos, 4vv, most in MS: tonos humanos, *Mn*, others *Bc*
Some pieces ed. in *Teatro lírico español anterior al siglo XIX*, ed. F. Pedrell, xiii (La Coruña, 1897); *Cancionero musical popular español*, ed. F. Pedrell, iv (Valls, 1922); MME, xxxii (1970); *Cancionero musical de Lope de Vega*, ed. M. Querol Gavaldá (Barcelona, 1986)

BARTON HUDSON

Correa de Arauxo [Arauxo de Azevedo, Arauxo de Açebedo], **Francisco** (*b* Seville, bap. 17 Sept 1584; *d* Segovia, between 16 Oct and 3 Nov 1654). Spanish

composer, organist and theorist. He seems to have had no theoretical training, and formed his style through studying the works of Diego del Castillo and Francisco de Peraza. On 1 September 1599 he was appointed organist of the collegiate church of S Salvador, Seville, but litigation stirred up by his rival Juan Picafort delayed the confirmation of his appointment until 24 September 1605. He held the post until 31 March 1636. Ordained priest, he became a member of the Confraternidad de S Salvador and was perhaps appointed chaplain to the Convento Real de la Encarnación in Madrid about 1630. Between 1608 and 1635 some signatures bear the additional surname de Açebedo. During that period he competed without success for cathedral posts in Seville (1613), Málaga (1613) and Toledo (1618). After being involved in a series of lawsuits with the chapter of the collegiate church of S Salvador from 1629–30 onwards, and spending some time in prison, he was nominated organist of Jaén Cathedral in 1636. He gave up that post on 16 April 1640; on 2 May 1640 he was elected a prebendary of Segovia Cathedral. Despite an invitation, late in the day, from the chapter of Seville Cathedral to return to his native town, he remained in Segovia until he died, in poverty. His nephew Juan Arias [Macias], his pupil in Seville in the 1630s, succeeded him as interim organist in Segovia. Correa's will makes no reference to his musical works.

Correa's surviving music is all in his *Libro de tientos y discursos de música practica, y theorica de organo intitulado Facultad organica* (Alcalá, 1626; ed. in MME, vi, 1948, and xii, 1952). This important volume, which shows him to have been one of the chief composers to establish the Baroque style in Spain, combines a repertory of organ music with a theoretical treatise and certain didactic features. The compositions are arranged in five stages in order of difficulty, the final ones posing formidable technical problems for the performer. They also serve to illustrate points made in the opening treatise; these include the rudiments of tablature (based on the Spanish keyboard tablature used by Cabezón) and various aspects of keyboard playing. Four possible key signatures ('genera') are described: no signature ('genero diatonico'), one flat ('genero semicromatico blando'), one sharp ('genero semicromatico duro') and three sharps ('genero semiarmonico duro'). These are then related to the 12-mode system of Zarlino. Rhythmic complexities, which abound in the later compositions, include not only triplets but also groupings of 3, 5, 7, 9, 11 and 18 notes. Another trait is the irregular grouping of equal notes, such as 4 + 3 + 2, 4 + 2 + 3 and 2 + 2 + 2 + 3, as shown in ex.1.

Ex.1

Correa treated dissonance boldly and made special mention of a new dissonance ('punto intenso contra remisso') involving the simultaneous sounding of a note and its chromatic alteration (ex.2). He also discussed ornaments, which should be supplied tastefully whether specifically indicated or not.

Of the 69 compositions in the *Facultad organica* 62 are tientos; the rest comprise two chanson intabulations, two

Ex.2

cantus firmus settings of sacred melodies and three sets of variations. The term 'discursos' used in the title refers to tientos of more advanced technique. Those near the beginning of the volume show little advance in technique and style on similar pieces by Cabezón, but later ones are more and more profusely laden with embellishments which take the place of contrapuntal thematic development. As many as 28 are monothematic, and nearly half of the remainder have only two themes; they are thus in marked contrast to the polythematic works of Rodrigues Coelho, which as a rule are also much longer. Correa normally wrote in an archaically modal language spiced at times with the sort of dissonance already referred to and enhanced by occasional affective melodic progressions such as augmented 4ths and diminished 4ths and 5ths. In the third and last group of 38 tientos developed for the divided keyboard in the 1560s, he abandoned modal writing in favour of a more modern approach, concerning himself with timbre, density (in the five-part works), rhythmic articulation and virtuosity.

Correa's cantus firmus compositions move contrapuntally with the unadorned borrowed melody in the soprano or tenor. The variations are similar, except that the melody is repeated several times, each time with different accompanying voices. Of the chanson intabulations the more successful is the one based on Crecquillon's *Ung gay bergier* with its imaginative and varied figuration patterns. Correa referred in the *Facultad organica* to others of his works, both practical and theoretical: *Recopilación de tercios*, *Libro de versos*, *Los casos morales de la música* and *De punto intenso contra punto remisso*; all are lost, but a document in his own hand on the qualities desirable in a precentor survives at Jaén Cathedral.

ROBERT STEVENSON

Correia, Henrique Carlos. *See* CORRÊA, HENRIQUE CARLOS.

Correia de Oliveira, Fernando. *See* OLIVEIRA, FERNANDO CORREIA DE.

Corrente (It.: 'flowing'). A fast triple-metre dance and instrumental form popular from the late 16th century until the mid-18th, often occurring as a movement in a suite. Usually considered an Italian version of the courante, it is typically written in 3/8 or 3/4, in binary form, and has a homophonic texture and a clear harmonic and rhythmic structure. *See* COURANTE, §2.

Corrette, Gaspard (*b* Rouen, 1670/71; *d* Paris, before 1730). French organist and composer. The son of a dancing-master in Rouen, he was 29 when he married Marguerite Vérard there in 1700, and they had eight children, including the famous Michel, the first male. In her will of 1733, Gaspard's widow (reported, apparently in error, to be Marguerite Jourdain) mentions only her eldest daughter, suggesting some sort of rift in the family. In 1703, Gaspard listed himself as organist of the cathedral of Saint Herblain although Boyvin (with whom he may have studied) remained titulaire for three more years. Failing to win the competition for that post, Corrette played at three other churches in Rouen: Saint Pierre le Portier (1708–11), Saint Denis (part of 1711) and Saint Jean (1711–20). He then moved to Paris, where, according to one document, he apprenticed himself (at the age of 49) to a dancing-master. In other documents he was styled as an organist, and it is possible that there were two Gaspard Correttes from Rouen. Also unexplained is his connection to Delft, suggested by Michel on a title-page of pieces 'by the late M. Gaspard Corrette of Delft'. These slight pieces are arrangements by Michel for two *musettes* or hurdy-gurdies based on unknown originals (Paris, 1728–30). His principal work is a *Messe du 8e ton pour l'orgue à l'usage des dames réligieuses* (Paris, 1703/*R*), a complete set of versets in the tradition of François Couperin's 'Convent' Mass, with the addition of two graduals and an extra elevation. Musically, it is in the shadow of Boyvin's works. Its preface is extremely informative on such issues as organ registration and ornamentation.

For bibliography *see* CORRETTE, MICHEL.

BRUCE GUSTAFSON

Corrette, Michel (*b* Rouen, 10 April 1707; *d* Paris, 21 Jan 1795). French organist, teacher, composer-arranger and author of methods on performing practice; son of Gaspard Corrette. Though little is known of his life, his works, which span nearly 75 years, provide an extraordinarily broad view of ordinary light music in France during the 18th century, and his methods are a rich source of information about performing practice and music of the period. He was married on 8 January 1733 to Marie-Catherine Morize. They had a daughter Marie-Anne (1734–*c*1822) and a son Pierre-Michel (1744–1801), who became an organist.

Corrette first established his reputation by becoming musical director of the Foire St Germain and the Foire St Laurent, where he arranged and composed vaudevilles and divertissements for the *opéras comiques* (1732–9). From 1737 until its closure in 1790 he was organist at Ste Marie within the temple of the *grand prieur* of France, thus serving the Chevalier d'Orléans, then the Prince de Conti (1749), and finally the Duke d'Angoulême (1776). About a year after beginning at the temple, he became organist at the Jesuit College in the rue St-Antoine, a position he retained until the Jesuits were expelled in 1762. In 1734 he was styled *Grand maître des Chevaliers du Pivois*, from 1750 *Chevalier de l'Ordre de Christ*. He was well known as a teacher, though his reputation was not always favourable. Unsympathetic people called his pupils 'anachorètes' (*ânes à Corrette*) and in 1779 the *Mercure* said of a new edition of *Les amusemens du Parnasse* (a harpsichord method) that it was good in its time but contemporary students would find little of value in it. Yet for historians his little treatises are full of value. An anecdote in his double bass method (1773) shows that he visited England:

I suppose it is unnecessary to warn those who wear glasses to have some for distance vision. I remember having been at a concert in a little town in England where I saw a trio of spectacles at the harpsichord. Each of the players was competing for the closest position to the music desk. After the heads had knocked against one another, the singer, who was a castrato newly arrived from Italy and who was having difficulty seeing in spite of three pairs of glasses on his nose, had the idea of sitting astride the harpsichordist's hump-back. This advantage didn't last long, because the archlute player at one side of the grotesque group had – unfortunately for him – a wooden leg; and as he was playing standing up and in spite of the telescope that he wore on his beet-nose saw no better than the others, he contrived through his contortions of beating time now on the castrato's back, now on the harpsichordist's hump, and of signalling the page-turn in Hebrew-fashion for the da capo, to let his wooden leg slip causing

them all to fall like Phaeton. A spectator who appreciated novelty called out, 'Bravo, bravo'.

The wording suggests that the trip took place well before 1773; perhaps the *contredanses angloises* for flute duo published in 1740 were gathered at first hand. In his flute method he spoke with authority of the correct performance of English tunes: 'The English compose many *vaudevilles* and country dances to this metre [6/4]. See *Bartholomew Fair, Hunt the Squirrel, Lilliburlero, Hoopt Pettycoat* among the English songs. These airs should be played nobly, marking the crochets well and dotting the quavers two by two'.

These two quotations illustrate one of the most valuable features of Corrette's works: the bits of historical information presented with a rare clarity and concreteness. In his violin method, *L'école d'Orphée*, there are 23 pages of pieces illustrating French and Italian styles, giving a valuable idea of what Frenchmen of the period meant by these designations, so important for the understanding of their explanations of performing practice. A large proportion of Corrette's music is based on popular tunes of all sorts and constitutes an important source for their study. Music from, or written for, *opéra comiques* is presented fully scored, sometimes with place and date of performance. The arrangements run from simple harmonizations to transformations of the tunes into concerto movements, as in the 25 *concertos comiques*. Corrette did well to rely heavily on borrowed material; his original music is conventional and thematically uninspired.

The author of *Pièces pour l'orgue dans un genre nouveau* is given wrongly by Fétis and others (including RISM) as 'Michel Corrette le fils' but the title and preface make it clear that the work is by the elder Michel.

Divertissements, hpd/pf, contenant Les échos de Boston et la Victoire d'un combat naval (1779)

METHODS

includes important prefaces to music collections

Premier livre d'orgue, op.16 (1737); registration, tempo, articulation, perf. of hpd pieces on the organ: ed. in RRMBE, xviii (1974)
L'école d'Orphée, méthode pour apprendre facilement à jouer du violon dans le goût françois et italien avec des principes de musique et beaucoup de leçons, 1–2 vn, op.18 (1738/*R*, enlarged †2/1779, ?†3/1790); separate exercises in Fr. and It. styles
Méthode théorique et pratique pour apprendre en peu de tems le violoncelle dans sa perfection. Ensemble de principes de musique avec des leçons, 1–2 vc, op.24 (1741/*R*, †2/1783)
Méthode pour apprendre aisément à jouer de la flûte traversière avec des principes de musique et les brunettes, 1–2 fl (1740/*R*, †2/1753, enlarged to include ob, cl, 3/1773/*R*; 4/1781/*R*); Eng. trans. in Farrar
Méthode pour apprendre facilement à jouer du par-dessus de viole à 5 et à 6 cordes avec des leçons, 1–2 descant viols (1748/*R*); Eng. trans. by J.-A. Koch (Boston, 1990)
Les amusemens du Parnasse, méthode courte et facile pour apprendre à toucher le clavecin, avec les plus jolis airs à la mode où les doits sont chiffrés pour les commençans ensemble des principes de musique. Livre Ier (1749, enlarged 2/1779/*R*); interesting mainly for fingering; see 'Harpsichord'
Le maître de clavecin pour l'accompagnement, méthode théorique et pratique … avec des leçons chantantes où les accords sont notés (1753/*R*, †2/1790)
Prototipes contenant des leçons d'accompagnement par demandes et réponses, pour servir d'addition au livre intitulé Le maître de clavecin … avec des sonates, vn, fl, descant viol, où les accords sont notés sur la basse (1754, enlarged with It. ariettes, 2/1775/*R*)
Le parfait maître à chanter, méthode pour apprendre facilement la musique vocale et instrumentale (1758, enlarged 2/1782)
Les dons d'Apollon, méthode pour apprendre facilement à jouer de la guitarre avec des jolis airs notés en partition, livre 1er (1762); see 'Secular vocal' for Deuxième livre
Les délices de la solitude, sonates, vc, viol, bn, bc, nouvelle édition augmentée des principes en abrégé pour le violoncelle (1766); see 'Chamber' for 1st edn
†60 pièces de canon lyrique … avec une méthode pour apprendre la musique sans transposer (1768); see 'Secular vocal'
Nouvelle méthode pour apprendre à jouer en très peu de temps la mandoline, où les principes sont démontrés si clairement que ceux qui jouent du violon peuvent apprendre eux-mêmes. Plus tablature du cistre en musique à 5, à 6, à 7 rangs de cordes (1772)
Méthode pour apprendre à jouer de la contre-basse à 3, à 4, et à 5 cordes, de la quinte ou alto et de la viole d'Orphée, nouvel instrument ajusté sur des sonates, 3 insts (1773, 2/1781/*R*)
†Nouvelle méthode pour apprendre de la harpe, avec et sans pédale (1775)
†La gamme du hautbois et du basson avec les plus belles marches militaires (1776, 2/1782)
†Méthode pour apprendre facilement à jouer de la quinte ou alto contenant des leçons, des sonates et des préludes (1781)
L'art de se perfectionner dans le violon où l'on donne à étudier des leçons sur toutes les positions … suite de l'école d'Orphée (1782/*R*); works by 35 composers, mostly It.
La belle vielleuse, méthode pour apprendre facilement à jouer du vielle, contenant des leçons où les doits sont marqués, pour les commençans, avec des jolis airs et ariettes en duo, deux suites avec la basse et des chansons (1785/*R*, 2/*c*1825)
†Le berger galant, méthode contenant les veritables principes pour apprendre facilement à jouer de la flûte à bec (1784)

DAVID FULLER/BRUCE GUSTAFSON

Correya, João. *See* CORREA, JUAN.

Corri. Italian family of musicians, active chiefly in Britain but also in Ireland and the USA.

(1) Domenico Corri (*b* Rome, 4 Oct 1746; *d* Hampstead, London, 22 May 1825). Composer, music publisher and teacher. His father was a confectioner employed in the palace of Cardinal Portocarero. By the age of ten, after early lessons in singing, violin and harpsichord, he was playing with the bands of the principal Roman theatres. He spent the years 1763–7 studying with Porpora in Naples. On Porpora's death he returned to Rome, where he conducted the concerts of the Roman and expatriate English nobility; for two years he lived with the exiled pretender, Charles Edward Stuart. His opera *La raminga fedele* was produced in 1770 and at about this time he married one of his singing pupils, the miniaturist and soprano Signorina Bacchelli. Burney met Corri in Rome and mentioned him favourably in the published accounts of his travels, which resulted in an invitation from the Musical Society of Edinburgh for Corri to come and conduct their concerts at St Cecilia's Hall, where his wife was also engaged to sing. The Corris arrived in Edinburgh in August 1771 on a three-year contract, but remained there about 18 years. He quickly

established business enterprises and became manager of the Vauxhall pleasure gardens (an imitation of London's Vauxhall Gardens) and the Theatre Royal in Edinburgh. Both enterprises failed, the latter in 1779, and Corri was in financial difficulties. About this time he started a music publishing business with his brother Natale in the name of his eldest son John (or Giovanni). James Sutherland became a partner about 1780, and the firm of Corri & Sutherland existed until Sutherland's death in 1790.

Corri moved to London about 1790 and established himself as a music publisher in Soho. The firm specialized in publication of single numbers from operas and solo songs, sometimes as full scores. Many of them were published serially under general titles, and were decorated with the Prince of Wales's feathers, which Corri seems to have used as a mark. The Corris had already established themselves in London musical life during an earlier trip, when Domenico's opera *Alessandro nell'Indie* had been produced at the King's Theatre (3 December 1774) with his friend Rauzzini in the title role. His wife had made several appearances at concerts, including the Bach-Abel oratorios which marked the opening of the Hanover Square Rooms in 1775. On their return to London, she had some success in Solomon's concerts in 1792, but seems to have retired from her singing career the following season; Doane, however, still lists her as a soprano in 1794. The Corri home became the venue for private musical soirées; as Ferrari recalled, he was able to meet there 'the most eminent professors of the metropolis'.

His daughter (3) Sophia Giustina Corri married the pianist and composer Jan Ladislav Dussek in 1792, and the latter went into partnership with his father-in-law in January 1794, printing music and acting as agents for Broadwood pianos in Scotland under the name of Corri, Dussek & Co. Later Lorenzo da Ponte was also associated with the firm, but about 1800 the business ran into financial trouble and Dussek fled to the Continent to avoid his creditors. Domenico Corri continued the business alone until his son Montague took it over in 1804. Domenico, now a widower, married an Englishwoman, Alice Henley, on 3 April 1803. She seems also to have been a musician: in the preface to *The Singer's Preceptor* (1810), which presented Corri's autobiography to that date, he advertised that 'Mrs Corri also instructs in vocal and instrumental music'. In 1806 his most successful opera, *The Travellers*, was produced, apparently after a considerable delay. Corri recalls that 'it was for a while thought too hazardous, and I was thus kept in suspense for some years', a consequence perhaps of the pseudo-Oriental music he indulged in when the action moved to China and Turkey: in his score, according to Parke, Corri 'professed to describe the styles of the four quarters of the world'. He appears to have continued as a composer and teacher for another decade. His health declined from about 1820 and he was subject to fits of insanity during the last six months of his life.

Corri's own music is competently written in the *galant* style, but his most interesting work is perhaps his new system for realizing figured basses exemplified in the four volumes of *A Select Collection of the most Admired Songs, Duetts*. Living at a time when the traditional practice of figured bass realization was dying out, Corri provided skeleton written-out accompaniments which clearly show the transition to the arpeggio figures which became the stock-in-trade of song accompaniment by the end of the century. Corri's *Select Collection* also offers insight into late 18th-century vocal and keyboard performance practices; he attempted to notate precisely the ornaments habitually adopted by notable singers in a range of arias. Some of Corri's later keyboard works were written with tambourine accompaniment, perhaps intended for performance on the grand pianos made by Corri, Dussek & Co., based on Joseph Smith's design of 1799 which featured an in-built tambourine and/or triangle played mechanically. Sophia Corri performed a 'military concerto' on this instrument at a Covent Garden oratorio on 21 March 1800.

WORKS

STAGE

La raminga fedele (ob), Rome, Pace, carn. 1770, music lost
Alessandro nell'Indie (os, P. Metastasio), London, King's, 3 Dec 1774, songs (London, 1774)
The Cabinet (comic op, T.J. Dibdin), London, CG, 9 Feb 1802, vs (London, 1802), collab. Braham, Davy, Moorehead and Reeve, 1 song by Corri
The Travellers, or Music's Fascination (op, A. Cherry), London, Drury Lane, 22 Jan 1806, vs (London, 1806)
In and Out of Tune (operatic farce, D. Lawler and Cherry), London, Drury Lane, 1 March 1808, vs (London, 1808)
Lilliput (play with music, D. Garrick with addns by F.G. Fisher), London, Drury Lane, 10 Dec 1817, songs (London, 1817)
Also addl music for several other theatrical productions

VOCAL

Six Canzones, 2vv, b/gui (Edinburgh, 1772)
A Select Collection of the most Admired Songs, Duetts, i–iii (Edinburgh, *c*1779/*R*); iv (London and Edinburgh, 1795/*R*) [various composers arr. and ed. Corri]
A New & Complete Collection of the most Favorite Scots Songs, i–ii (Edinburgh, 1788)
Miscellaneous songs and arrangements of Haydn's and Mozart's canzonettas and operatic numbers pubd singly and in 18th-century anthologies; a pubd collection of hymns and psalms lacking a title-page, but probably ed. Corri (*c*1820)

INSTRUMENTAL

The Beginning & Practice of Fingering the Harpsichord consisting of Airs, Minuets . . . arranged & adapted by sigr. D. Corri, i (Edinburgh, 1784)
A Select Collection of Choice Music, hpd/pf, i–ii (London and Edinburgh, *c*1790) [various composers arr. Corri]
Concerto, A, pf (London, 1800)
21 kbd sonatas (13 with ad lib acc.), pubd singly, incl. Nelson's Victory, a Characteristic Sonata with Tamburino Accompaniment (London, *c*1800), and A Characteristic Sonata . . . expressive of the Counter Revolution in France (London, 1814)
Marches, rondos, airs with variations and song arrs. pubd singly

WRITINGS

A Complete Musical Grammar (Edinburgh, 1787)
The Singer's Preceptor (London, 1810/*R*)
Musical Dictionary as a Desk (?London, 1798) [no copy known]

(2) Natale Corri (*b* Rome, 1765; *d* Wiesbaden, 24 July 1822). Singing master, guitarist, composer and music publisher, brother of (1) Domenico Corri. He followed his brother to Edinburgh in 1785, and took over the Corri publishing firm there when Domenico moved to London about 1790. The Scottish business, known as Corri & Co., maintained close connections with the London firm, and many publications bear their joint imprints. Natale composed songs, piano pieces and three violin sonatas, and, according to Kelly, established a reputation as 'the first singing master in Edinburgh'. He opened concert rooms in the city, promoting subscription concerts which featured, among others, his niece Sophia and the soprano Camilla Giolivetti, who often sang duets together. Natale married Giolivetti, a native of Strasbourg, on 19 February 1794, and she sang an aria at Sophia's benefit concert in

London the following year (29 May 1795). Natale's venture into concert promotion in Edinburgh proved financially disastrous and led to his bankruptcy at about the same time as his brother's London firm was in difficulties. Natale, however, soon re-established his activities and continued in Edinburgh until 1821, when he left for the Continent with his daughters, Frances, Rosalie and Angelina.

(3) **Sophia (Giustina) Corri** [Dussek; Moralt] (*b* Edinburgh, 1 May 1775; *d* London, 1847). Singer, pianist and harpist, daughter of (1) Domenico Corri. *See* DUSSEK family, (5).

(4) **P(hilip) Antony Corri** [Clifton, Arthur] (*b* Edinburgh, ?1784; *d* Baltimore, 19 Feb 1832). Composer, tenor, pianist and teacher, son of (1) Domenico Corri, and possibly twin brother of (5) Montague Philip Corri. As P. Antony Corri he was well established as a composer in London from about 1802 to 1816, when many of his piano pieces and songs were published. His *L'anima di musica* (1810) is the most extensive piano tutor of its period, and ran to several editions. He was a founder of the London Philharmonic Society and the Royal Academy of Music in 1813, and was director of the Professional Society in 1816. He was expelled from the Philharmonic in December 1816 (due to a scandal probably involving his wife) and emigrated to the USA, where he settled in Baltimore by autumn 1817. There he was christened Arthur Clifton on 31 December 1817 and remarried the following day. He served as organist of the First Presbyterian Church (1818–23) and the First Independent Church (1823–31), taught singing and piano, appeared in concerts as a pianist and was involved with the productions of two local theatres (1820–28). He continued to compose piano pieces and especially songs, which were published in Baltimore from 1820. His opera *The Enterprise* was more ambitious than the usual English ballad opera, but evidently lacked the recitatives typical of Italian opera.

(5) **Montague Philip Corri** (*b* Edinburgh, *c*1784; *d* London, 19 Sept 1849). Music publisher and composer, son of (1) Domenico Corri. After early interests in fencing and painting, and a period at sea, he decided on a musical career when he was about 18. He had some lessons in composition from his father, Winter and Steibelt, but was largely self-taught. In 1804 he took over his father's business in the Haymarket in London and traded as Montague P. Corri & Co. About 1805 it briefly became Montague P. Corri, M. Hall & Co., then Corri, Pearce & Co., until about 1806 when Corri's name disappeared and the firm continued as Pearce & Co. A new firm of Corri & Co., however, existed for a short time about 1807 in Little Newport Street. An accident, which resulted in the complete dislocation of one of the fingers of his right hand, prevented Montague Corri from pursuing an instrumental career, but he successfully turned to composing and arranging for theatres and military bands, including the Surrey, Astley's and the Cobourg theatres, writing the music for plays such as *The Mystic Coffer*, *The Hag of the Lake*, *The Devil's Bridge* (all 1812) and the pantomime *The Valley of Diamonds* (1814). He was chorus master at the English Opera House for the 1816–17 season. About 1817 Natale Corri engaged him as manager of the Pantheon in Edinburgh, but he did not remain there long, and later lived for some time in Manchester and Liverpool, employed in the theatres and giving fencing instruction. Brown and Stratton record that Corri was shipwrecked during a voyage from Shields to London, and lost everything. In addition to songs, sonatas and other piano pieces he published a *Treatise on the Art of Singing* (*c*1830) and *A New and Improved Pianoforte Tutor* (*c*1835).

(6) **Haydn Corri** (*b* Edinburgh, 1785; *d* Dublin, 19 Feb 1860). Pianist, organist and composer, son of (1) Domenico Corri. In 1811 and 1819–20 he travelled to Ireland as *maestro al cembalo* for a series of performances given by Italian opera singers from London, at Dublin's Crow Street Theatre. In 1821 he settled in Dublin, with his wife the soprano Ann Adams (Adami) whom he had married in London on 15 July 1814. She took up an engagement as second soprano at the new Dublin Theatre Royal in Hawkins Street that year. Quickly establishing himself as a teacher of the voice and piano, Haydn played a central role in the musical life of the city for many years. He was organist and choirmaster of St Mary's Pro-cathedral, Marlborough Street, 1827–48. He published a singing tutor and wrote a number of glees and songs.

(7) **Frances** [Fanny] **Corri** [Corri-Paltoni] (*b* Edinburgh, 1795/1801; *d* after 1833). Mezzo-soprano, daughter of (2) Natale Corri. She was first taught singing by her father, but was soon taken to London and sent for lessons first to Braham, then to Angelica Catalani, with whom she toured the Continent in 1815–16. She made a promising début as the Countess in Mozart's *Le nozze di Figaro* at the King's Theatre on 17 January 1818, singing regularly there and at Philharmonic Society concerts until 1821, when she left with her father and sisters Rosalie and Angelina for the Continent. She sang first in Munich, then in Italy, where she married the bass Giuseppe Paltoni and made her home. She sang at La Scala, Milan, in 1828–9 and undertook successful tours of Spain (1827) and Germany (1830). Her last recorded appearance was in a performance of Bellini's *Norma* at Alessandria in 1835. Critics praised her 'rich and powerful voice of considerable compass', perfect ear and 'a beautiful rounded even shake' (*Morning Chronicle*, 19 January 1818; *AMZ*, xxv, 1823, cols.468–9).

(8) **Rosalie Corrie** [Mrs Geeson] (*b* Edinburgh, 1803; *d c*1860). Soprano, daughter of (2) Natale Corri. Her singing tutor was Tommaso Rovedino, and she made her début (aged 15) at Drury Lane on 30 January 1818, in an oratorio conducted by Sir George Smart: the *New Monthly Magazine* wrote, 'her voice is melodious, full and flexible; her execution is very considerable, but she is perhaps too fond of exhibiting her uncommon powers in this particular'. With her sister Frances she sang at the King's Theatre in London in 1819–21, travelling from there to Dublin to perform in the first Irish productions of Mozart's *Don Giovanni* and *Le nozze di Figaro* in 1819 (directed by Haydn Corri). She played Polly to Madame Vestris's Macheath in *The Beggar's Opera* at the Haymarket theatre on 22 July 1820, and sang at the Teatro Re in Milan in 1823. Back in London Rosalie married William Geeson on 29 October 1825 at St Martin-in-the-Fields, continuing her career as Mrs Geeson. Little is known of the career of her sister, the soprano Angelina Corri.

Several later members of the family were musicians. Patrick Anthony Corri (1820–76), a singer, conductor and composer, and Henry Corri (1822–88), a bass and

conductor, were sons of (6) Haydn Corri; William Charles Cunningham Corri (1834/5–93), a song composer, was a son of (5) Montague Philip Corri. Haydn Woulds Corri (1845–76 [not 77]), son of Patrick Anthony Corri, was a baritone. William Charles Cunningham Corri had three musician sons: Charles Montague Corri (1861–1941), musical director and conductor of opera at the Old Vic Theatre, London, from about 1900 to 1930; Clarence Collingwood Corri (1863–1918), the composer of the operettas *The Dandy Fifth* (1898) and *In Gay Piccadilly* (1901) as well as dance music and songs; and William Corri (*c*1865–after 1905), song composer. Ghita Auber Corri (1869/70–1937), daughter of Henry Corri, sang in the Carl Rosa Opera Company, married the playwright Richard Neville Lynn in 1899 and composed songs.

Corrido (Sp. from *correr* 'to run'). A narrative ballad genre which arose in association with the Mexican Revolution of 1910. It also refers to a Mexican dance genre of the Huastec region. *See* GUATEMALA, §II, 1; MEXICO, §II, 2(iii); VENEZUELA, §II, 3(iv).

Corroboree. An Australian Aboriginal dance with music, generally performed publicly; the same word may denote an Aboriginal occasion on which public singing and dancing take place. Pronounced with the emphasis on the second syllable, the term probably originated (perhaps with different emphasis) in an Aboriginal language of New South Wales in the latter part of the 18th century, although it now has a wider currency among non-Aboriginal Australians than among Aborigines. The words 'boojery carib-berie' ('good dance') appear in John Hunter's *An Historical Journal of Events at Sydney and at Sea, 1787–1792* (ed. J. Bach, Sydney, 1968, p.145). Aboriginal words for public singing and dancing used by people of different language groups in other parts of Australia include *purlapa* (Warlpiri language), *inma* (Pitjantjatjara), *turlku* (Pintupi), *ltarta* (Alyawarra) in the central and western deserts; *dyunba* (Wunambal, Worora, Ungarinyin), *nurlu* (Nyigina, Yawuru, Dyugun, Ngumbarl, Dyabirr Dyabirr, Warrwa), *ilma* (Nyul Nyul, Bardi), *maru* (Garadyarri), *dyudyu* (Walmadyarri, Mangarla) in the Kimberleys, northern Western Australia; *wangga*, *lirrga* and *gunborrg* in north-western Northern Territory; *yoi* (Tiwi) on Bathurst and Melville islands, Northern Territory; *bunggurl* (Yolngu, Burarra, Rembarrnga, Djinang) in north-central and north-eastern Arnhem Land, Northern Territory; and *warma* in parts of Cape York, Queensland. Such names may apply to particular dances performed in regions other than those in which they originated. Similar corroborees performed by people belonging to different language groups have been recognized at places hundreds of miles apart. In some traditions public songs and dances can be traded.

Corroborees are intended for public display and may be attended by all members of the community. They are usually performed after sunset when large fires are lit for light as well as for warmth. They frequently have socio-religious connotations, but all who attend expect to be entertained. Successions of dances may last for several hours. Each finite dance item is related to a corresponding song item, the latter having a duration of one to two minutes or less. In some traditions, the same songs and dances may be used in closed rituals which are performed in private and always some distance from the public area.

Styles of singing and dancing are not uniform in all regions. In parts of the north there is more freedom of movement and greater opportunity for musical improvisation than in the central and western deserts. Regional variations have been noted in the size and organization of the singing and dancing groups; musical instruments used; the manner (strict or free) of commencement and termination; pitch, nature and frequency of calls made by dancers; and in body decorations and hand-held objects. Spontaneous contributions by individual dancers add an ephemeral quality to each performance.

The leading singer of a particular series of dance songs should be either its owner and 'finder' (composer) or its legitimate custodian. Corroborees are often 'found' in dreams: it is alleged that they are given to recipients by spirits of the dead or by spirit familiars.

Women participate with men in corroborees to a greater or lesser degree depending on the region. In Arnhem Land women dance while men sing. In the central and western deserts women sing as well as dance in corroborees.

Aboriginal children make their own corroborees in play; on occasions and in some places adults sing while children dance. In parts of Arnhem Land small boys have been seen literally following in the footsteps of their dancing fathers, imitating with remarkable accuracy and grace movements representative of birds and animals.

Corselli, Francisco. *See* COURCELLE, FRANCISCO.

Corsi [Cursi], **Bernardo** (*b* Cremona; *d* probably at Cremona, after 1619). Italian composer. In 1598 he was organist of the collegiate church of S Agata, Cremona. The dedications of three of his publications between 1607 and 1618 were written from Cremona, and he probably spent all his life there. A remark in the dedication of his op.5 indicates that he was either a priest or, more probably, a monk. In the same dedication he mentioned that for many years he had been in the service of Count Pietro Maria Rossi and that both he and his patron preferred sacred music. His output to some extent reflects the changes that were taking place in sacred music in the early 17th century. His 1613 book is in the tradition established by Viadana's *Cento concerti ecclesiastici*, but even in his later books his style remained conservative: for example, the five-part psalm *Laudate Dominum* (1617) is a *prima pratica* work with a *basso seguente* rather than a fully independent continuo line.

JOHN WHENHAM

Corsi [Corso], **Giuseppe** [Celano, Celani] (*b* Celano; *d* ?Modena, after 26 Dec 1690). Italian composer. He was often known as Celano (or Celani) after his birthplace. He was an outstanding pupil of Carissimi – according to Pitoni one of the best he ever had. The cantatas of the two men sometimes appear in the same manuscripts and some of their motets in the same publications. Pitoni reported that Corsi's life was dogged by misfortune, but he may have been not altogether blameless. He was *maestro di cappella* of four Roman churches, S Maria Maggiore from 1658 to 1659, S Giovanni in Laterano from at least 1663 to 1665, S Apollinare and S Maria in Vallicella. He held similar posts at Assisi, the Santa Casa, Loreto (about 1678), and elsewhere, and he was active in the musicians' guild, the Congregazione di S Cecilia from 1658. Pitoni stated that he was also employed by a prince at Naples. He also directed oratorios at the Oratorio of S Marcello, Rome, on 13 March 1676 and 9 April 1677. He was forced to leave Rome while at S Maria in Vallicella, and he found refuge as choirmaster at Narni. From 20 June 1681 to 17 October 1688 he worked at the court of the Duke of Parma; he left because he was denied an increase in his salary that would have made it double that of his predecessors. The last positive information about him is that on 26 December 1690 he received a letter about a commission from Prince Ferdinando de' Medici of Tuscany. Later in life he became a priest. According to Pitoni he died while in the service of the Duke of Modena. Among his pupils was G.A. Perti.

Pitoni told an amusing and plausible story of an occasion when Corsi was in Naples. At a gathering of composers he was unable to play a certain piece that was meant to put him to a test and to ridicule him. To avenge himself he composed a cantata full of different clefs, bizarre accidentals and changing time signatures. The other composers were now in turn unable to perform this eccentric piece, but Corsi sang and played it to general applause. This cantata, *Era la notte e lo stellato cielo* (in *I-Bc* and at least three other sources under the title *La stravaganza*), became well known and it circulated widely among musicians.

WORKS

8 motets, 1–3vv, bc, 1659^1, 1663^1, 1664^1, 1665^1 (facs. in SMSC, viii, 1988), 1667^1, 1668^1, 1672^1
4 masses, 8vv, *A-Wn*, *I-Bc*, *Rsm*
6 motets, 3–9vv, some with bc, *A-Wn*, *D-Bsb*, *Mbs*, *I-Bc*

GLORIA ROSE/STEPHEN MILLER

Corsi, Jacopo (*b* Florence, 17 July 1561; *d* Florence, 29 Dec 1602). Italian patron and composer. He was of aristocratic origins and may have been associated with the Camerata of Count Giovanni de' Bardi, which was at its most active between 1577 and 1582, though there was rivalry between Bardi and Corsi and among the musicians and patrons associated with each. After Bardi's departure for Rome in 1592 Corsi was the leader of the principal artistic group in Florence and, except for the Medici family, the most important patron of music there. While Bardi's Camerata was preoccupied with the philosophy and theory of music, Corsi's circle defined its interests more narrowly to take a practical interest in the relationship of music and dramatic poetry. Carlo Roberto Dati (see Solerti, 1904) recalled that Corsi's house 'was always open, as though a public academy, to all who took a lively interest in the liberal arts ... noblemen, literati and eminent poets and musicians', and named Tasso, Chiabrera, Marino, Monteverdi and Effrem as some of the guests there; but more important was the regular attendance of Florentines, especially Ottavio Rinuccini and Jacopo Peri, whose discussions and experiments led to what is now regarded as the birth of opera.

In winter 1594–5 Corsi and Rinuccini asked Peri to complete Corsi's musical setting, in *stile rappresentativo*, of Rinuccini's dramatic pastoral *Dafne*. Three years later, during the Carnival of 1598, it was presented at Corsi's palace, and Rinuccini later declared that 'it gave pleasure beyond belief to the few who heard it'. It was repeated, apparently in altered form, at least three times in Florence during the next two years: on 18 January 1599 at Corsi's house, three days later at the Pitti Palace, and twice in 1600, again at Corsi's house. Though never printed, it was still being performed in the first decade of the 17th century. No complete score of the Peri-Corsi *Dafne* has survived, but six brief portions extant in several manuscripts have been identified as belonging to the work. At least two of these, 'Non curi la mia pianta' and 'Bella ninfa fuggitiva' (in *B-Br* and *I-Fn*; transcr. in Porter), are by Corsi.

Corsi was responsible for the production on 6 October 1600 of Peri's setting of Rinuccini's *Euridice*, with some additional music by Caccini. As Corsi's wedding gift to Maria de' Medici and Henri IV of France it was performed before the bride and a select audience in the private apartment of Don Antonio de' Medici at the Pitti Palace on the day after the wedding. In the foreword to the published score (1601) Peri cited Corsi among the illustrious musicians playing behind the scenes at that performance; he played the harpsichord. The impact of the Peri-Corsi *Dafne* and Peri's *Euridice*, which Corsi sponsored, was extraordinary and far-reaching. *Euridice*, though in a tentative new style, easily eclipsed the 'official' wedding entertainment, Chiabrera's *Il rapimento di Cefalo*, with music mainly by Caccini. The success of the published score of *Euridice* (printed in 1601 and 1608) was rivalled in its time only by Monteverdi's *Orfeo* (printed in 1609 and 1615). Corsi's important role in the founding of the new genre was understood and appreciated by his contemporaries, and his patronage was long remembered. At the time of his death, an anonymous academic eulogist spoke of Corsi and his special commitment to music, recalling also his generosity to musicians and how 'he cleaved to [them] as though they were dear brothers, and as brothers he loved them, and as brothers they shared his things in common [with him]'. Marco da Gagliano's second book of madrigals (RISM 1604[17]) includes three madrigals in memory of Corsi – *Corso hai di questa vita* by Giovanni del Turco, *Portate aure del ciel* by Piero Strozzi and *Fuggi lo spirto* by Gagliano himself – that had been sung at obsequies for Corsi held in the Florentine Compagnia dell'Arcangelo Raffaello on 21 February 1603. Corsi was also remembered by the poet Chiabrera, who dedicated an epitaph to him and celebrated him as Dafni in seven funeral eclogues.

EDMOND STRAINCHAMPS

Corsica. The fourth largest island in the Mediterranean with a population of 250,400 (1990 census), Corsica has suffered successive domination by foreign powers. From the 11th to the 18th century it was governed in turn by Pisa and Genoa. Excluding a brief interlude as the Anglo-Corsican Kingdom (1794–96), the island has belonged to FRANCE since 1768. The indigenous language, Corsican, is still spoken but given little official recognition. While external influences might be assumed, the isolation and inaccessibility of the mountainous interior, whose inhabitants have traditionally pursued a pastoral lifestyle, has favoured the preservation of numerous archaisms in musical structure, style, vocal technique and psychosocial dynamics.

19th- and early 20th-century song collections focus almost exclusively on texts, predominantly laments. Extensive collections of field recordings were made by Félix Quilici in 1948, 1949 and 1960–63; Wolfgang

Laade in 1956, 1958 and 1973; and Markus Römer in 1974–5. These and other recordings are being reunited at the Phonothèque of the Musée de la Corse, Corte.

1. Instruments and dance. 2. Vocal genres: (i) Monodic song (ii) Polyphonic song (iii) Liturgical and paraliturgical song. 3. Recent developments.

1. Instruments and dance. Evidence relating to instrumental music or older indigenous dance is meagre. Traditional instruments include the *pifana* (made from an animal horn), the *cialambella* (wooden reed instrument), the *caramusa* (bagpipes), the *cetera* (a type of cittern) and jew's harp, most of which were gradually displaced by the accordion, fiddle, mandolin and guitar in the 18th and 19th centuries. A variety of idiophones are used during Holy Week. Two dances of relatively ancient origin are attested: the *caracollu*, a women's funeral dance, and the *moresca*, depicting the struggle between Moors and Christians. The *granitula*, a spiral procession, is still performed by the *confrèries* on Good Friday. The instrumental music collected by Quilici and Laade consists almost exclusively of waltzes, polkas, mazurkas, scottishes and occasional quadrilles.

2. Vocal genres.

(i) Monodic song. The oldest strata include: *voceri* (sing. *voceru*, laments for the dead extemporised by women); bandits' laments; laments for animals; lullabies; songs of departure; *tribbiere* (sing. *tribbiera*, threshing songs); mule-drivers' songs; *chjam' è rispondi* ('call and response', an improvised debate); the *currente* (song of circumstance, e.g. welcoming guests; this has a distinctive fiddle accompaniment) and the *cuntrastu* (an exchange between a young man and woman). More recent songs (serenades, satires, election songs with refrains and soldiers' songs) reveal Italian influence. The standard textual format for all indigenous genres is a stanza of three octosyllabic couplets with end rhymes. An exception is the bandit's lament, with eight lines of 5, 7, 5, 7, 8, 8, 8 and 8 syllables, respectively.

The oldest melodies are characterized by a narrow range, untempered intervals, a *parlando* style of delivery and, for men's songs, a tense voice producing a vibrant timbre suited to singing outdoors. The melody used for men's improvisations (*u versu currente*, ex.1) is declamatory in style with syllabic treatment of the text. A second melody type (which also forms the basis for the polyphonic *paghjella*) consists of a long drawn out line where sustained notes alternate with complex microtonal melismatic figures (*rivucate*). Both of these types are based on a pentachord and movement is largely by step with descending patterns predominating. A third type is bipartite, often using a conjunct pentachord and tetrachord, sometimes with contrasting timbres and tempos.

(ii) Polyphonic song. Part-singing, traditionally the domain of men and found mainly in the north, occurs in contexts of conviviality: gatherings of family and friends, the local bar, sheep-shearing parties (*tundera*) and the mountain fairs. Sung by three voices (*secunda*, *bassu* and *terza*), the most distinctive features of the *paghjella* (ex.2) include staggered entry of the voices, untempered intervals with the 3rd being particularly unstable, much use of melisma (which functions as an intrinsic component of the vocal line rather than a secondary ornamental feature) and a *tierce de Picardie* type ending.

Ex.1 *U versu currente*: stanza from Chjam'è rispondi, rec. & transc. C. Bithell, 1994

* grammatically should be 'rima' but sung 'rime'
** = 'chi mi ha imparatu'

Any textual couplet can be sung as *paghjella*, of which many villages have their own variant or *versu*. Within fixed structural parameters, allowance is also made for an element of individual improvisation: a *paghjella* is not 'sung' but 'made' ('*fà una paghjella*'). The disjunction between musical and textual line is striking, with breaths being taken in the middle of words and words even being split across the main musical caesura. Spontaneity, close communication and a sense of complicity between the members of an *équipe* are considered vital to a successful performance. Singers form a horseshoe formation (*a conca*), often resting on one another's shoulders and typically sing with one hand to the ear. The ethereal fourth voice, composed of harmonics, which sometimes appears provides confirmation for the singers that they have achieved both spiritual and musical 'harmony'.

Related types are the *terzetti* (whose textual format of 3 lines of nominally 11 syllables resembles that found in classical Tuscan poetry of the 14th century) and *madrigale*

Ex.2 *Versu di Rusin*, 1st couplet; rec. Laade, 1973, transc. C. Bithell, 1996sm

At points marked * the entry of the terza voice is slightly delayed.
The occurences of the mediant marked with a ↑ in the secunda voice are not all at the same pitch.

(usually love songs, but bearing no obvious relation to the Italian Renaissance madrigal).

(iii) Liturgical and paraliturgical song. Most villages traditionally had their own orally transmitted settings of the mass, sung by a fixed *équipe* of men often in three-part polyphony sharing many of the characteristics of the *paghjella* style. The best-known of those surviving intact are Sermanu and Rusiu: others have recently been revived or reconstructed and are sung for feast days and funerals. The canon also includes liturgical hymns, offices, processional songs and *lodi*, with a significant body of material relating to the Holy Week rituals of the *confrèries*. While the origins of this by no means homogeneous repertory remain uncertain, resonances can be found of the techniques of parallel organum and *falsobordone*.

3. Recent developments. The process of decline in the practice and status of traditional music during the 20th century was reversed in the 1970s (beginning of the *riacquistu*) with the advent of the nationalist movement and its 'cultural militants', who engaged in the collection of traditional material, re-dissemination via recordings and transmission via urban-based *scole di cantu*, as well as producing their own political *chansons* (*cantu indiatu*). The 1980s saw an increase in artistic activity and academic interest, leading in particular to an inflation in polyphonic production. The association E Voce di u Cumune (with the later collaboration of Annie Goffre) began work on the reconstruction and reinstatement of polyphonic masses in selected villages in the Balagne. Marcel Pérès has explored ways in which surviving polyphonic practices might assist in the interpretation of manuscript sources. While the old polyphonic songs continue to play a vital part in the statement of cultural identity for the many performing groups (predominantly male) now active, new musical idioms have evolved as singers have embraced the role of creative artists within the wider horizons of a world music context and the question of the relationship between tradition and creation has become a crucial one. While some have produced new *a cappella* pieces inspired by the traditional polyphonic language (e.g. A Filetta, Voce di Corsica, Mighele Raffaelli), others have experimented with cross-cultural fusions, most recently with electronic input (e.g. Les Nouvelles Polyphonies Corses).

CAROLINE BITHELL

Cor simple (Fr.). Hand Horn.

Corsini, Jacopo. *See* Corfini, Jacopo.

Corsini, Lorenzo (*b* Rome; *fl* 1632–1640). Italian composer. He is known mainly by his *Musiche ... libro quinto* (Rome, 1640). Described on the title-page as 'romano', he dedicated the book to Cardinal Antonio Barberini. It contains 15 pieces for solo voice, two for two voices and one for three, all with continuo. The previous four books and any other published works by him appear to be lost, but he is credited with some of the contents of two manuscript 'libri da canzone' (in *F-Pn*). These are the soprano and bass books of what appear to be 45 Italian madrigals for four to six voices. The collection is inscribed 'di Lorenzo Corsini e de sui amici accordandosevi lei', but there is no indication as to which pieces are by Corsini and which by his friends. He also composed the music to the *favola musicale Il giudicio di Paride* by Francesco Pona, performed at Verona in 1632.

COLIN TIMMS

Corteccia, (Pier) Francesco (*b* Florence, 27 July 1502; *d* Florence, 7 June 1571). Italian composer and organist. For several decades he dominated Florentine musical life as performer, composer, teacher and purveyor of music to his principal patron, the ruling duke Cosimo de' Medici, to whom all of his major works, published and unpublished, were dedicated. In 1515 he was a choirboy at the Florentine Baptistry of S Giovanni, an indication that he was concurrently enrolled in the cathedral school of chant and grammar. He himself said in an autobiographical note from 1559 that he studied composition with Bernardo Pisano, master of the school from 1511 and *maestro di cappella* of the cathedral from 1512 to 1520. His tutor in keyboard was perhaps the cathedral organist, composer and teacher Bartolomeo degli Organi, active in Florence throughout his formative years.

Corteccia's long and fruitful career began with a chaplaincy at the baptistry in 1527. He obtained a similar post in 1531 at the Medici church of S Lorenzo, where he was also briefly organist. Though his musical activities took him elsewhere, he lived at S Lorenzo for the rest of his life, rising through the chapter's hierarchy to supernumerary canon (1550) and canon (1563), while holding several administrative offices such as chapter secretary, archivist and chamberlain. At the baptistry he served first as organist, 1535–9, and from January 1540 as master of the new chapel established there and at the cathedral under the aegis of Duke Cosimo, who a year earlier had commissioned from him the lion's share of the music performed at festivities celebrating the duke's marriage to Eleanor of Toledo. Though court records show that Corteccia was not officially employed by the Medici, in his publications he styled himself the duke's *maestro di cappella*, a title also given to him in other records of the time. This was no doubt in reference both to his unofficial role in supplying the court with music for various occasions and to his official duties as master of the Florentine chapel, a post he held until his death in 1571.

Most, if not all, of Corteccia's secular music was published under his supervision in three major madrigal collections. Book 1 for four voices, brought out by Scotto in 1544, was reissued by Gardane in 1547 in conjunction with publication of book 2 for four voices and the first book for five and six voices. Corteccia said that this last contained 'all the rest of the pieces' he had composed 'in this genre' up to that time, by which he meant that he had brought together works never before published, others already published under his name (such as those performed as *intermedi* in Antonio Landi's comedy *Il commodo*, for the duke's wedding in 1539), and rejected yet others that had been wrongly attributed to him. Some idea of the extent of the misattributions is evident in the first four books of Arcadelt's four-voice madrigals (published 1539 and earlier), which contain seven works claimed by Corteccia. In the 1547 edition of book 1 for four voices, Corteccia corrected errors and omissions in the hastily assembled first edition, rearranged the order of contents, dropped one previously published piece and

added seven new ones composed as *intermedi* for Francesco D'Ambra's comedy *Il furto* of 1544. He continued to write secular music, now lost, until at least 1565, when he and Alessandro Striggio (i) each contributed three madrigals for performance as *intermedi* between the acts of D'Ambra's *La cofanaria*, on the occasion of another Medici wedding.

Much of his sacred music, too, was composed in the early years of his career. This is evident from his remarks in the 1544 dedication of the first book of madrigals, when he wrote to the duke of his intention to send his responsories, Lamentations, motets and hymns to the printer and promised he would soon be making a gift of all of this music to him. Apart from the lost Lamentations, however, definitive versions of the responsories (in two volumes) and the motets (also in two volumes) did not appear until 1570 and 1571, when they were published by Gardane at Venice. He cited the lack of music printing facilities in Florence as the reason for the long delay in publication in his preface to the responsories, though he also hinted at financial difficulties and the barbs of unnamed critics. At the time of his death a revised version of 32 of his hymns, in the hand of his former pupil and chief copyist Michele Federighi, was ready for printing. But this remained in manuscript in *I-Fl* Palat.7, as did a number of other pieces, among them a group of anonymous propers in *I-Fd* n.46, also copied by Federighi, that are probably his. In the autobiographical note of 1559 Corteccia spoke particularly of two works, a *St John Passion* written in the style of Pisano (for S Giovanni, 1527), and a *St Matthew Passion* (for S Lorenzo, 1531). Anonymous settings of these works in *I-Fd* n.45 are undoubtedly the ones referred to by Corteccia.

In the dedicatory letter of the motet volumes Corteccia noted that he had been working on them for more than 30 years. Differing versions of a number of his sacred works in Florentine manuscripts bear him out and reveal that he returned to them time and again over the course of his career. Revisions were made for both pragmatic and aesthetic reasons, and while many were slight, a few entailed significant rewriting. Simple changes, consisting of brief rhythmic substitutions or the addition of a few notes or chords, are evident in several responsories which required textual adjustments to conform to the post-Tridentine liturgy. But other modifications, whether necessitated by liturgical considerations or not, were made with an eye to refining and improving details of composition and of text placement and declamation that no longer met his own exacting standards. Simple changes are found in the hymns as well, although in several of these he also made major shifts that involved substituting newly composed stanzas for earlier ones. The hymns are all in *alternatim* style, in which polyphonic settings of even-numbered stanzas alternate with odd-numbered stanzas of the chant on which the polyphonic settings are based. Strict canon appears in several of these, though in general, as in his motets, Corteccia characteristically juxtaposes strict imitation and free counterpoint with occasional homophonic passages.

The madrigals, many composed at an early stage in the development of the form, show a firm grasp of the principles underlying the new genre and a sensitive approach to the nuances of text. At his best, as in the early *Fammi pur guerr'Amor*, set in a bright F mode, he composed music with attractive melodies unfolding within a slightly imitative texture and clearly directed harmonic progressions that aptly reflected the new sensibilities, and it is understandable why some of his works might have been mistaken for Arcadelt's. His frequent use of formulaic declamation and an apparent reliance on a cantus-bassus compositional framework betray his grounding in the earlier frottola style, as do, in particular, two settings of *ottava rima*, *S'io potessi voler* and *Io dico e dissi* (text from Ariosto's *Orlando furioso*), which feature repeated melodic reciting formulae in the top voice above ever-changing polyphony in the lower ones. Traditional compositional devices also appear, as, for example, canon in *Perch'io veggio et mi spiace*, and a melodic subject derived from vowels corresponding to solmization syllables in the top voice of *Se vostr'occhi lucenti*. In many other works he adopted the faster note values, nervous, choppy rhythms and abrupt textural changes typical of the style of black-note madrigals of the early 1540s. Black-note madrigals make up the bulk of his theatrical pieces for the *intermedi*. Though not without their complexities, like so many of his secular works, they are distinguished by frequent changes of pace and variety of texture, by motivic repetition within a given phrase, by strategically placed cadences that enhance the rhetoric of the text, and by a clearly articulated declamation essential to projecting words, especially on stage. As a rule, the theatre madrigals were conceived with instrumental accompaniment. A consort of viols is mentioned in connection with those of 1544, while, with one exception, those of 1539 call for various combinations of wind, string and keyboard instruments. Three of the latter, though composed for four or five parts, were sung by a solo voice with instrumental accompaniment in a kind of pseudo-monody, and in another, an instrumental rendition of the music preceded its performance by the full complement of voices with accompaniment. Corteccia's choice of accompanying instruments shows both a sensitive approach to colour and an attempt to evoke the mood and meaning of the text, as in *Vientene almo riposo*, the last piece of the 1539 set, sung by the personification of Night to the accompaniment of four trombones – an unusual choice but one that got across the idea of farewell and closure. Many pieces give no explicit indication of their origins as theatrical or entertainment music, but these, too, must have been composed for *intermedi*, like the more famous ones for 1539, 1544 and 1565. Besides Giovanbattista Strozzi the elder and Ugolino Martelli, who furnished texts for the *intermedi*, he set poetry by Michelangelo, Petrarch, A.F. Grazzini (Il Lasca), Lorenzo Strozzi and Lorenzo the Magnificent, among others.

Corteccia was neither an important innovator nor an enormously prolific composer. But his talents led him to write in every genre of the time, and his knowledge and experience as choir director and supplier of theatrical music enabled him to compose good music, some of it very impressive indeed, that was as effective on stage as it was useful in church.

FRANK A. D'ACCONE

Cortellini, Camillo ['Il Violino'] (*b* 24 Jan 1561; *d* Bologna, 12–13 Feb 1630). Italian composer and instrumentalist. He was called 'il Violino' probably because a celebrated violinist may have been among his family's earlier members; his father was his first instructor in music; subsequently he studied the trombone, singing and counterpoint with Alfonso Ganassi. Like his father he played in the celebrated Bolognese civic instrumental group called the *Concerto Palatino*; he was admitted as a 'secondo soprano di cornetto' in 1577. In his first publication, of 1583, he styled himself 'musico dell'Illustrissima Signoria di Bologna', and in 1613 he became director of the group. He was a member of the *cappella musicale* of S Petronio as a singer in 1582 and again from 1593 to 1599; in the years 1600–07 and 1610–29 he served there as a trombonist. From 1601 to 1603 he was employed as occasional singer in the cappella of S Francesco. In 1626 he was a member of the Accademia dei Filomusi, the Bolognese musical academy originally founded in 1615 under the name Accademia dei Floridi.

His printed works include three books of madrigals (the second of which was the first music to be printed in Bologna), two books of psalm settings, a set of eight *Magnificat* settings and three books of masses.

Cortellini's music reveals a strong musical personality, frequently innovative, always discerning in his choice of technical means. His madrigals are skilfully fashioned in elegant, clear melodic lines, sometimes in bold arabesques. The voices do not all enter with the same imitation but change timbre and colour continuously. Some works are strongly descriptive of the text, but especially in the third book he frequently eschews the muscial decoration of individual words in favour of a musical setting that adheres to the general meaning of the text but not all its details. He uses a limited amount of chromaticism and dissonance, often to colour a static musical situation rather than to highlight a particular word. His psalm settings are a mixture of homophony and polyphony, always sensitive to the rhythm of the words. The works for two choirs exhibit his continued interest in varying musical colours, a characteristic carried into his mass settings. In the collections of masses for eight voices (1617 and 1626), he used a unique notation to indicate the participation of instruments in two of the earliest examples of the concerted mass: in the Gloria of one mass in each collection (*Messa di S Carlo*, 1617; *Messa 'In Domine confido'*, 1626) he adopted large capital letters in the text to indicate passages where the soprano of the first choir sings 'concertato' with the accompaniment of three trombones in place of the lower three voices. In these lower parts he substituted a broken line for the text. Every other verse is played by trombones accompanying the soprano, a practice undoubtedly inspired by the custom of alternating verses with the organ. This is an important step in the development of the Bolognese concerted mass.

ANNE SCHNOEBELEN

Cortés, Ramiro (*b* Dallas, TX, 25 Nov 1938; *d* Salt Lake City, UT, 2 July 1984). American composer of Mexican parentage. He studied with Halsey Stevens and Dahl at the University of Southern California (BM 1955) and with Giannini at the Juilliard School (MM 1962); he was also a pupil of Cowell (Charles Ives Scholarship, summer 1952), Richard Donovan (at Yale University, 1953–4), Petrassi (in Rome, 1956–8) and Sessions (at Princeton University, 1958). As a student he received several prizes for composition and a Fulbright-Hays Rome fellowship. Following a period as a computer programmer, he taught at UCLA (1966–7) and at the University of Southern California (1967–72); in Los Angeles he was active as a pianist and as a conductor of new music. In 1972–3 he served as composer-in-residence at the University of Utah, and the following year he joined the faculty there, becoming chairman of the theory and composition department.

Until the late 1960s his music was serially organized, under the influence of late Stravinsky and Dallapiccola; thereafter it became more freely structured while remaining fully chromatic (e.g. the Wind Quintet). A consistent aspect of his musical style is the free contrapuntal juxtaposition of similar rhythmic and melodic ideas. His piano music is the subject of a dissertation by R.C. Pitt (U. of Texas, 1990).

H. WILEY HITCHCOCK/MICHAEL MECKNA

Cortese, Luigi [Louis] (*b* Genoa, 19 Nov 1899; *d* Genoa, 10 June 1976). Italian composer. His mother was French. He studied the piano and composition privately at Genoa, graduated in mathematics (1924) and then pursued his music studies in Paris under Gédalge and in Rome under Casella. From 1939 he held various posts in Genoa, starting as keeper of the Archivio Musicale Genovese and ending (1951–64) as director of the Liceo Musicale. He was also active as a lecturer, pianist, private teacher and critic, and he organized the Paganini violin competition from its foundation in 1954 until his death. Not at first a prolific composer, he took some time to find an individual style, after wavering between French influences (Ravel, Roussel, Milhaud, Honegger etc.) and Casella. Even *David*, his first major composition and one of his finest achievements, is still eclectic; yet it shows personality. The plaintive, wayward chromaticisms suggest parallels with Martin, and the dissonances are at times fierce; but beneath the chromatic surface there is a more conservative substratum, sometimes relatable to Pizzetti. Thereafter his basic style remained unchanged, gaining in consistency and refinement of detail, but sometimes at the expense of imaginative tension. *Prometeo*, for instance, is similar to *David* in idiom, but dramatically static and more impressive orchestrally than vocally (some of its best parts have been gathered into a powerful orchestral suite); while *La notte veneziana*, in keeping with its more sentimental subject matter, 'softens' the oratorio's style, introducing lyrical elements which at times recall Puccini.

Cortese's mature instrumental works, though often rather alike, add something worthwhile and distinctive to the literature, and certain smaller pieces in particular, deserve to be more widely known. For example, the horn repertory is not so large as to justify neglect of his sonata for that instrument: refinedly bitter-sweet in harmony, at times slightly stiff and square in rhythm, and with Hindemithian touches in the finale, the work epitomizes Cortese's virtues and limitations. The Cello Sonata, too, is a persuasively individual contribution to its genre, echoing the Horn Sonata's two-movement outline but giving plentiful scope for the cello's natural eloquence; and the composer's distinctive voice is audible even in unassuming little piano compositions such as the neo-classical *Suite française* op.29 (1951), which exhibits structural neatness and elegance of detail. His writings include studies of Casella (Genoa, 1936) and Chopin (Milan, 1949); he also translated writings by Chopin, Liszt and Debussy.

WORKS
(*selective list*)

Ops: Prometeo (3, L. Cortese, after Aeschylus) op.18, 1941–7, Bergamo, Novità, 22 Sept 1951; La notte veneziana (radio op, 2, G. Pacuvio, after A. de Musset) op.32, 1953–5, RAI, 20 Nov 1955, staged Genoa, Politeama Margherita, 6 May 1972; Le notti bianche (2, Cortese, after F.M. Dostoyevsky), op.51 1968–70, Milan, Piccola Scala, 30 April 1973

JOHN C.G. WATERHOUSE

Cortese, Paolo (*b* Rome, 1465; *d* San Gimignano, 1510). Italian humanist. He was the son of Antonio Cortese, a papal *abbreviator* (i.e. a writer of papal briefs) and the pupil of Giulio Pomponio Leto and Bartolomeo Platina, both *abbreviatores*. In 1481 he was appointed to the papal chancery to the place vacated on Platina's death. He was promoted to papal secretary in 1498, resigned in 1503 and spent the rest of his life in a family villa called Castel Cortesiano, near San Gimignano. There he was the host to such guests as Duke Ercole I of Ferrara, Duke Guidobaldo of Urbino and Cardinal Alessandro Farnese, later Pope Paul III. He must also have had a comfortable house in Rome in which in the early 1490s there were learned discussions, interspersed with *strambotti* sung by Serafino Aquilano. Cortese may have known Josquin, who was a papal singer at this time. He praised Josquin highly as a mass composer in his *De cardinalatu* (published posthumously in 1510); its section on music, dependent on Aristotelian ideas and terminology and written in a difficult, Ciceronian style (Cortese defended this style against the criticisms of Poliziano), is a curious testimony of ambivalent feelings towards polyphony. He also praised Obrecht and Isaac as motet composers, though with some reservations. Cortese had unbounded admiration for monodic singing to the lyre or the lute, and regarded Aquilano as its outstanding exponent. Cortese himself wrote a number of *strambotti*, certainly intended to be set to music.

NINO PIRROTTA

Cortez, Luis Jaime (*b* Morelia, Michoacán, 1963). Mexican composer and musicologist. He first took music lessons in Morelia with Muench; later he studied history at the University of Mexico and composition with Enríquez, Ibarra and Lavista. From 1987 to 1994 he directed the Centro Nacional de Investigación, Documentación e Información Musical (México) and from 1996 the Conservatorio de los Rosas in Morelia. Many of his pieces bear a symbolic relation to works of literature or to writers, for example *Canto por un equinoccio* and *Lluvias* to St John Perse, *Tala* to Thomas Bernhardt. His atonal musical language is characterized by austere textures and a rigorous, quasi-serialist technique offset by predeliction for the avant-garde effects of the 1960s and 70s. His most important works include *Lluvias* (Symphony no.1) and the opera *Las tentaciones de San Antonio*, both Mexican government commissions.

WORKS

Stage: Las tentaciones de San Antonio (chbr op, 1, G. Flaubert), 1996, unperf.

Corthol. *See* CURTAL.

Cortinas, César (*b* San José, 9 Aug 1890; *d* Córdoba, Argentina, 23 March 1918). Uruguayan composer and pianist. Having demonstrated his musical aptitude at an early age, he was brought to Camilo Giucci, an Italian pianist and pupil of Liszt. He had begun composing by the age of 14, and in 1907 produced the notable *Balada* op.4 for piano. A study scholarship from the Uruguayan government (1909) enabled him to attend the Hochschule für Musik in Berlin, where he was taught by Bruch, Donnay and Humperdinck. He was then obliged to enter a sanatorium in Davos, where he composed several songs, most of them with French texts. After a brief stay in Montevideo he returned to Europe in 1913 and continued his studies with Jongen and Woutters at the Brussels Conservatory. Forced to leave Europe at the outbreak of World War I, he returned to Montevideo, where he composed several works, including the one-act opera *La última gavota* (1916). As his health deteriorated he retired to the Sierras of Córdoba and there wrote the three-act lyric poem *La sulamita*; he appeared briefly in Montevideo to conduct its première in 1917. Though a contemporary of the early Uruguayan nationalist composers Broqua and Cluzeau Mortet, he eschewed the folk elements of their music in favour of a distinctive eclectic style.

WORKS
(*selective list*)

Balada, op.4, pf, 1907; Sonata, D, vn, pf, 1909; Artigas, triumphal march, op.30, pf, 1911; Idilio (lyric poem, 1), 1912; La última canción, vn, pf, 1913; Sonata, b, vc/vn, pf, 1916; La última gavota (op, 1), 1916; La sulamita (lyric poem, 3), 1917; Poema, qnt

JOHN M. SCHECHTER

Cortis [Corts], **Antonio** (*b* on board ship between Oran, Algeria, and Altea, 12 Aug 1891; *d* Valencia, 2 April 1952). Spanish tenor. He studied in Madrid, where he sang in the chorus at the Teatro Real. At first he sang minor roles, then began to assume leading roles (Cavaradossi, Don José and Turiddu) in Barcelona and Valencia.

In 1917 he sang in South America, where his roles included Beppe (*Pagliacci*). He was a regular guest at the Teatro Costanzi, Rome (1920–23); he also appeared in Milan, Naples and Turin, and in 1927 sang Radames at the Verona Arena. He sang in Chicago (1924–32) and San Francisco (1924–6). His roles in the USA included Edgardo, Manrico, Radames, Chénier, Canio, Cavaradossi, Des Grieux (*Manon Lescaut*), Enzo (*La Gioconda*) and Don José. His only Covent Garden season was in 1931 when he sang Calaf, and Hippolytus in Romani's *Fedra* opposite Ponselle. After 1935 he sang only in Spain, making his last stage appearance in 1951 at Zaragoza as Cavaradossi. Cortis's voice had a typically Spanish ring and power, demonstrated in his many recordings, most notably of Calaf's arias.

Cortolezis, Fritz (*b* Passau, 21 Feb 1878; *d* Bad Aibling, 13 March 1934). German conductor and composer. He studied the piano with Bussmeyer and theory with Thuille at the Munich Academy of Music (1899–1902). From 1903 to 1912 he held a number of positions, mainly as choirmaster, in various opera houses: Schwerin, the Nationaltheater in Berlin, Regensburg, Munich, and the Kurfürstenoper in Berlin. He became general music director at the Hoftheater in Karlsruhe in 1913, and from 1925 to 1928 he conducted opera in Breslau. Cortolezis was notably responsible for many early performances of Strauss's operas. The last six years of his life were spent as a freelance composer in Bad Aibling. His published works consist of vocal scores and selections from his three light operas.

WILLIAM D. GUDGER

Cortot, Alfred (Denis) (*b* Nyon, 26 Sept 1877; *d* Lausanne, 15 June 1962). French pianist and conductor. He studied the piano at the Paris Conservatoire with Emile Decombes, one of Chopin's disciples, and Louis Diémer, winning a *premier prix* in 1896. He made an impressive début in 1897 at the Concerts Colonne, playing Beethoven's Concerto in C minor, and he also appeared in concerts with Edouard Risler, playing two-piano arrangements of Wagner's music. In 1898 he was appointed first as a choral coach, and then as assistant conductor, at Bayreuth, where he worked until 1901 under Mottl and Richter. This experience enabled him to prepare and conduct the first Paris performance of *Götterdämmerung* (May 1902), and a notable *Tristan* (June 1902). His Société des Festivals Lyriques (1902) was followed by the formation of a concert society for which he conducted the first performances in France of *Parsifal* (in concert form), Beethoven's *Missa solemnis* and Brahms's *German Requiem*, as well as still unpublished works by Chausson, Magnard and Roussel. From 1904 to 1908 he conducted the orchestra of the Société Nationale de Musique.

This activity as a conductor, which made Cortot one of the leading figures in French musical life before he was 30, did not dampen his enthusiasm for the piano, although for a time it limited the number of his performances. In 1905 the Cortot-Thibaud-Casals trio was founded and immediately became, and for many years remained, the most admired ensemble of its kind. From 1907 to 1923 Cortot was a leading professor of the piano at the Paris Conservatoire, where his pupils included Clara Haskil, Yvonne Lefébure, Marcelle Meyer and Vlado Perlemuter. His activities as a soloist in Europe and the USA, however, made it impossible for him to devote regular, uninterrupted periods to academic teaching. For this reason he founded in 1919 the Ecole Normale de Musique, where he appointed a distinguished teaching staff, established a wide-ranging curriculum in music history and theory and, until 1961, gave courses in interpretation that were to become legendary. In 1943 he founded the Société de Musique de Chambre de la Société des Concerts du Conservatoire.

Cortot's repertory was immense, extending from Purcell to Stravinsky, but he was noted mainly for his intimate understanding of Romantic music. His recordings, which were more numerous than any pianist of his era except perhaps Artur Rubinstein, include outstanding interpretations of Schumann's *Etudes symphoniques* (1929) and *Kreisleriana* (1935), Chopin's Ballades (1929), Preludes (1926) and Sonata in B minor (1933), Franck's *Prélude, choral et fugue* (1929) and Saint-Saëns's Fourth Concerto (1935). In these, and in recordings with Thibaud and Casals, his playing continues to dazzle pianists by its lyrical delicacy, nobility and extraordinary tonal variety. He was an ardent champion of the new French piano music of his day, and devoted three volumes to its

Alfred Cortot

exposition. Cortot made editions (for Salabert) of most of Chopin's, Schumann's and Liszt's piano music; they are 'éditions de travail' that include technical exercises related to the music, and annotations. Cortot's more general observations on piano technique provided material for a book published in 1928. His knowledge and love of German culture predisposed him favourably towards the German occupiers of France in 1940–44, and he accepted influential positions in the Vichy government and opportunities to give concerts in Germany. These activities caused him to be considered persona non grata in France and elsewhere for some time after the war. He resumed his career in 1947 and performed throughout Europe and in Japan and South America before his retirement in 1958.

Cortot was an avid and systematic collector, and he cared for and catalogued his substantial library of musical autographs, literature, first and early editions, letters, portraits, coins and postage stamps. After his death the printed music, some of great rarity, was dispersed mainly to the British Museum, the Newberry Library in Chicago and the University of California, Berkeley. Important manuscripts were bought for the Lehmann Foundation in the Pierpont Morgan Library, New York.

Coryn, Roland (*b* Kortrijk, 21 Dec 1938). Belgian composer. He started his musical studies at the Harelbeke Academy of Music and finished them at the Ghent Conservatory, where he obtained first prizes in almost all disciplines, including the piano, the viola, counterpoint, harmony, fugue and composition. At the outset of his musical career he was active mainly as a performer of chamber music. He played the viola in the Belgian Chamber Orchestra (1964–77) and was a founder member of the Flemish Piano Quartet (1965–72), which promoted Belgian contemporary music.

From 1986 until his early retirement in 1996 he was conductor of the New Conservatory Ensemble, which also specialized in modern music. He was director of the Ostend Conservatory, then of the Harelbeke Academy of Music (1977–96). He taught chamber music, counterpoint, fugue and composition at the Ghent Conservatory (1973–96). Since his retirement he has devoted himself almost exclusively to composition. He has won several awards, including the Tenuto Prize (1973, for *Quattro movimenti*), the Jef Van Hoof Prize (1974, for *Triptiek*) and the Koopal Prize (1986, for his chamber music). In 1993 he became a member of the Belgian Royal Academy for Science, Letters and Fine Arts.

Coryn aims to use contemporary techniques in an accessible way. His early compositions combine serial technique with easily discernible melodic lines; later he made less strict use of serialism. He was a great admirer of Lutosławski, from whom he learnt how to attract and involve but not entirely satisfy the listener at the beginning of a piece, leaving this for the appearance of the main idea. His music is characterized by abstract rather than programmatic content, and by understated emotional expression.

DIANA VON VOLBORTH-DANYS

Cosaute [cosante] (Sp.). A song in vogue in Spanish courtly circles during the 15th century. It was probably performed by two choirs, the second choir repeating with progressive modifications each stanza sung by the first; the resulting parallelistic scheme has been seen as a relic of one of the oldest forms of European popular song. There is some slender evidence that the cosaute may have been danced and that it is a remote antecedent of the *sardana*, a circle dance of Catalonia in quick 6/8 metre. The earliest extant music apparently in the form of the cosaute is in the Cancionero Musical de Palacio (compiled *c*1505–20). 'Cosante' is now considered a mistranscription of the French 'cossaute'.

Cos Cob Press. American music publishing firm, based in New York. It was founded in 1929 by Alma M. Wertheim as a non-profit-making organization for aiding and disseminating the music of American composers. Its catalogue included works by Citkowitz, Copland, Gruenberg (including his opera *The Emperor Jones*), Roy Harris, Piston, Sessions, Thomson, Wagenaar and Whithorne. In 1938 the catalogue was leased to the newly founded Arrow Music Press, which in turn was acquired by Boosey & Hawkes in 1956.

Cosimi, Nicola [Nicolino] (*b* Rome, *c*1660; *d* Rome, March 1717). Italian violinist and composer. He studied with Carlo Mannelli and was accepted in the musicians' Accademia di S Cecilia by 1 February 1681. He is the 'Nicolino' listed in expense accounts for the Arciconfraternita di S Girolamo della Carità (1681–99), the church of S Luigi dei Francesi (12 occasions, 1685–1700), Cardinal Ottoboni (37 occasions, 1689–1700) and other venues. By 1700 he was employed by Livio Odescalchi, Duke of Bracciano and Prince of the Papal Throne.

In summer 1700 he was offered food and lodging in London, with £100 per annum by the 20-year-old Wriothesley Russell, who had been at Rome in 1698–9 and became Duke of Bedford in September 1700. On 21 October 1700 Cosimi left Rome together with 'his comrade', the cellist Nicola Haym. They arrived in London on 22 March 1701, and Cosimi stayed until the end of April 1705. Income and expenses for his London stay appear in his account ledgers, which survive together with his correspondence in the archive of the Congregazione dell' Oratorio, Rome. These ledgers indicate that in four years he made a handsome profit of £1061 from his salary and his musical endeavours, which included one publication, teaching, performances in noble homes and public theatres, and leadership of the musical assemblies of 1704–5 at the home of Charles Calvert, Baron Baltimore.

Cosimi had only two students before the publication on 9 November 1702 of his *Sonate da camera a violino e violone o cembalo* op.1, but had 20 after its publication. Details concerning its printing survive in the archive for the Bedford Settled Estates; a pirated edition was issued by Roger in Amsterdam in 1704. According to Cosimi's dedication to the Duke of Bedford, these works were composed in Rome, presumably at the same time that Corelli wrote his solo sonatas op.5 (Rome, 1700). The only other extant sonata by Cosimi (in *GB-Lcm*) was copied by a Roman scribe on Roman paper. Cosimi's sonatas typically include a through-composed *preludio* and three binary dance movements, which often include imitative texture and have a sombre character. Sir Henry Tichborne praised these sonatas by writing that, in England, they were 'perles jetté aux pourceaux'. Respect for Cosimi is further manifested in Sir Godfrey Kneller's fine portrait, which survives only in John Smith's mezzotint of 1706.

After his return to Rome, Cosimi sent violin strings and music to acquaintances in London, but no information is known about his activities in Rome during his final 12 years. His testament, opened on 31 March 1717, reveals that he had an important collection of paintings, and it names various heirs, including two half-brothers and three (?half-) sisters. One of his half-brothers, Angelo Antonini, was apparently a professional violinist.

LOWELL LINDGREN

Cosma, Octavian Lazăr (*b* Treznea, Sălaj district, 15 Feb 1933). Romanian musicologist. At the Cluj Academy (1951–4) he studied theory with Cornel Givulescu, harmony with Tudor Jarda and music history with Gheorghe Merişescu; at the Leningrad Conservatory (1954–9) he studied music history with M.S. Druskin, folklore with A. Rubtsov and musical form with A. Snitke. He took the doctorate in musicology at Cluj in 1972 with his study on Enescu's *Oedipe*. In 1959 he was appointed to teach the history of Romanian music at the Ciprian Porumbescu Conservatory, Bucharest; he has become a leading exponent of this subject. He became editor-in-chief of the journal *Muzica* in 1990 and vice-president of the Romanian Union of Composers and Musicologists in 1993; in 1997 he was made president of Radio-Difuziumea Română. His most important early work was on Romanian opera; his study of Enescu's *Oedipe* is exhaustive. His 9-volume *Hronicul muzicii româneşti* was completed in 1991.

VIOREL COSMA

Cosma, Viorel (*b* Timişoara, 30 March 1923). Romanian musicologist. He studied at the Timişoara Municipal Conservatory (1929–32) and the Bucharest Conservatory (1945–50), where his teachers included I. Dumitrescu (theory), M. Jora (harmony, counterpoint and form), D.D. Botez (choral training), C. Silvestri (conducting) and Z. Vancea (music history). He then became professor at the Alberto della Pergolla Conservatory, Bucharest (1945–7), and conducted several amateur choirs and orchestras in the city. He subsequently became head of the music department of the library of the Romanian Academy (1951–2) and taught at various Bucharest music schools (1951–63). He was successively appointed assistant lecturer (1951–2), lecturer (1964–71) and reader (since 1972) in the history of music at Bucharest Conservatory. From 1950 to 1985 he was a professor in the musical lexicography department of the Academy of Music, Bucharest, and associate professor since 1995.

Cosma is an active and prolific musicologist; he has written over 2000 articles and lectured throughout Europe. His main interests are the relation between the Romanian and European musical cultures, Romanian music from the earliest periods to the Baroque (Ioan Căianu, Daniel Speer, Dimitrie Cantemir) and contemporary music. As a historian he has discovered several important documents in Romanian archives: these include Rossini and Meyerbeer manuscripts, and letters from Beethoven and Bartók (the latter's Romanian folk studies occupying a special place in Cosma's research). Also an indefatigable lexicographer, Cosma has produced the first dictionaries of Romanian musicians (for which he was awarded the Romanian Academy's prize in 1974) and performers.

TIBERIU ALEXANDRU/R

Cosma, Vladimir (*b* Bucharest, 13 April 1940). Romanian composer, active in France. From an accomplished musical family, he studied the violin and composition at the Bucharest Academy (1958–62) before taking lessons with Boulanger at the Conservatoire in Paris, where he settled in 1963. As well as a thorough grounding in serious art music, Cosma gained an enthusiasm for jazz and popular music. Between 1964 and 1967 he toured the world as a concert violinist and began a long-standing creative partnership with Michel Legrand. In 1968 he wrote his first film score, on the suggestion of Yves Robert, and he has subsequently worked exclusively as a composer, producing over 200 scores for film and TV. Cosma's film scores show a great melodic sensitivity and a technique that draws on many contemporary idioms and traditional musics. He achieves successful characterization through his spontaneity and theatrical instinct, enriching his scores with subtle and unusual instrumentation.

WORKS
(*selective list*)

Film scores: Alexandre le bienheureux (dir. Y. Robert), 1968; Le grand blond avec chaussures noires (dir. Robert), 1972; Les aventures de Rabbi Jacob (dir. G. Oury), 1973; Un éléphant ça trompe énormément (dir. Robert), 1976; La dérobade (dir. D. Duval), 1979; La boum (dir. F. Veber), 1980; Diva (dir. J.-J. Beineix), 1980; La chèvre (dir. OCTAVIAN COSMA

Cosme, Luiz (*b* Pôrto Alegre, 9 March 1908; *d* Rio de Janeiro, 17 July 1965). Brazilian composer and writer. Born into a family of musicians he was taught the violin at home. At the Pôrto Alegre Conservatory he studied harmony with Assuero Garritano and in 1927 he went to the USA where he obtained a fellowship from the Cincinnati Conservatory. There he studied for two years under Robert Perutz (violin) and Wladimir Bakaleinikoff (composition). Before returning to Brazil he spent several months in Paris familiarizing himself with French Impressionism and its counter-current represented by Satie and Les Six. He lived in Pôrto Alegre until 1932 and then moved to Rio de Janeiro. During the 1940s and 50s he worked at the National Library as a consultant in music librarianship, and wrote regular music programmes for the radio station of the Ministry of Education. The Academia Brasileira de Música elected him a member on its foundation in 1945.

Cosme's few works were all written during the period 1930–50. His early pieces were piano miniatures, solo songs and chamber works. His first important work, the String Quartet no.1 (1933), is devoid of national influences, but clearly impressionistic in its timbral effects. Yet indigenous tendencies are skilfully combined with contemporary techniques in his most significant orchestral work, the ballet *Salamanca do Jaráu* (1935) which is based on a legend of Spanish origin. The local colour is enhanced by the use of a motif from the most popular song of the state of Rio Grande do Sul, *Boi barroso*. The work elaborates such popular melodic elements within a modern harmonic structure. Its rhythmic vitality is often reminiscent of Stravinsky's early ballets, and several passages still show Cosme's kinship with French Impressionism, whether in long harmonic pedals, parallel chords or pentatonicism. Nevertheless, its national character remains quite clear.

During the 1940s Cosme studied the works of Schoenberg, Berg and Webern. He attempted to evade tonality in such works as *Três manchas* and *Madrugada no campo*, and he freely used the 12-note method, without concealing his interest in national subjects, in the ballet *O lambe-lambe*. His last work was *Novena à Senhora da Graça*, based on a poem in nine sections by Teodomiro Tostes. The unorthodox use of dodecaphonic techniques here appears free of nationalist influences. In this work Cosme tried to 'unite the contents of the poem to music, word, and gesture', but chose a simple rhythmic narration of the poem rather than setting it in Sprechgesang, as he had first intended. Cosme turned his attention to the aesthetics and history of music during the last 15 years of his life, writing several books, monographs and a music dictionary.

GERARD BÉHAGUE

Cosmerovius [Cosmerov, Kosmerovius], **(Stanislaus) Matthäus** (*b* Wawrzeńczyce, 1606; *d* Vienna, 21 May 1674). Viennese printer of Polish birth. He studied in Kraków, where he also learnt printing and managed a small press. In 1640 he married the widow of the printer Matthäus Formica (*fl* 1615–39) and assumed management of his shop on the Kölnerhof; later he became a printer for the university and court book printer. In 1649 he bought the remainder of the Formica shop, including the music type of Leonard Formica (*fl* 1590–1615), and in 1655 he moved to a larger building on Unteren Bächerstrasse; known as the Cosmeroviushaus, it had five presses, more than 150 sets of type and a foundry. At his death his printing properties were transferred to his son Johann Christoph (1656–85) and thence, as the 'Cosmerovische Erben', to Johann's widow Theresia (until 1686), Matthäus's widow Susanna Christina (until 1698) and their heirs (until 1715).

Matthäus's publications include the polyphonic collection *Cultus harmonicus* (1649, 1650, 1659) by Alberik Mazák and several song collections, such as P. Sebastian a S Vincentio's *Himmels Schlüssel* (1636) and *Melodeyen des Weynächtlichen Seeln Jubel* (1657). The family also

printed over 300 oratorio and opera librettos, some multilingual; several, for important court occasions, were lavish souvenir objects, with large engravings of scenes (often by Ludovico Burnacini). Cosmerovius issued the only known edition of printed Viennese ballet music of the period, J.H. Schmelzer's *Arie per il balletto a cavallo*. The most famous of the firm's librettos is for Cesti's *Il pomo d'oro* (printed 1667, performed 1668), in folio format with 25 large engravings of Burnacini's staging and settings.

THOMAS D. WALKER

Cosmovici, George (*b* Sasca Mare, Suceava district, 4 May 1859; *d* Paris, Feb 1927). Romanian composer. A civil engineer by profession, he was drawn from a career in railways to one in music. As a student at the Dresden Conservatory (1880–84) Cosmovici attended the opera religiously, becoming especially enamoured of Wagner's works, and developed an uninhibited pianistic style. He composed lieder and operas, promulgating a Romanian style as much through his subject matter as through his music. Cosmovici's first opera *Marioara* (1902), based on a popular legend dramatized by Carmen Sylva, is given its distinctive character by a combination of dramatic intensity, richly chromatic harmony and a judicious use of Romanian folk elements.

WORKS
(*selective list*)

Marioara [Maria] (op, 3, Carmen Sylva [Queen Elizabeth of Romania], after folk legend), 1902
Fântâna Blanduziei [Blanduzia's Well] (op, 3, after V. Alecsandri), 1909, Bucharest, National, 30 April 1910

OCTAVIAN COSMA

Cossa, Basilio (*b* Perugia, 28 Jan 1590; *d* Perugia, 1 April 1667). Italian composer. Baptized Costanzo, he assumed the name Basilio when he took holy orders. From December 1624 to June 1625 he was imprisoned by order of the Holy Office; for many years prior to his death he was curate of S Costanzo, Perugia. As a composer he is known only by his *Madrigaletti a tre voci, libro primo* (Venice, 1617), which he dedicated to Angelo Moriga, procurator general of the Benedictine congregation and abbot of the monastery of S Pietro at Perugia. Its contents, which are for two sopranos, bass and optional continuo, are essentially polyphonic madrigals stripped of their inner parts and furnished with *passaggi* at appropriate points in an effort to bring them up to date in style. The result is not unattractive.

COLIN TIMMS/BIANCAMARIA BRUMANA

Cossa, Vincenzo (*b* Perugia, *c*1534–39; *d* ?Perugia, 1624). Italian composer. His birth date is uncertain: two death notices, both from 1624, give his age variously as 80 and around 90. Another source, from 1617, claims he was 78 in that year. His parents were G.B. Cossa and Agnese de Palla. Vincenzo married twice and had eight children by his first wife, Dianora di Marsilio Petrozzi, whom he married in 1579. He was active in the musical life of Perugia, serving as *maestro di cappella* of Perugia Cathedral from 1591 until 1620. In 1595 he was among those who refounded the Accademia degli Unisoni, and he also belonged to the Compagnia della Morte. His canzonettas were edited by Christoforo Lauro of Perugia, who in his preface stated that he had been studying music with Cossa for several years. The 29 four-part madrigals illustrate the fashionable trend of the 1560s and 1570s towards the setting of entire canzoni and sestinas; the later books, however, each containing 21 pieces, are dominated by the amorous lyrics of pastoral poetry. Basilio Cossa, the composer of *Madrigaletti a tre voci con il basso da sonare* (Venice, 1617), is probably Vincenzo's son.

WORKS

Il primo libro de madrigali ... con 2 canzoni, 4vv (Venice, 1569)
Il primo libro de madrigali, 5vv (Venice, 1587)
Il primo libro delle canzonette, 3vv (Venice, 1587)

PATRICIA ANN MYERS/R

Cossandi, Antonio (*fl* 1640–54). Italian composer. He was a minorite. In 1640 he was *maestro di cappella* of S Francesco, Crema, and in 1654 of S Francesco, Bologna; between these appointments he worked at Assisi. He is known by a book of motets for two to four voices and continuo, op.1 (Milan, 1640).

□

Cosset [Cossette, Cozette], **François** (*b* Picardy, *c*1610; *d* after 1664). French composer. Biographical information about him is contradictory. According to Fétis he was born, probably at Saint-Quentin, about 1620. This is invalidated, however, by a document cited by Leflon (*F-RS* I.777), which states that 'Cozette' was appointed assistant music master to the choirboys of Reims Cathedral in 1628 at a salary of 60 'sols tournois' a week; this would suggest a birthdate no later than 1610. But he was certainly educated at the choir school at Saint-Quentin and seems to have been assistant music master at Laon Cathedral before occupying the equivalent position at Reims. According to Fétis he held the latter post for 40 years. However, notarial records at Reims describe him in 1637 and 1650 as 'chaplain of St Calixte and director of music at the [cathedral] of Notre Dame'; in records of 1656 he is not so described, and indeed his successor was appointed on 4 March 1652. Even so, on the title-pages of his publications, which date from 1649 on, he is always called 'insignis metropolitanae Ecclesiae Remensis Simphoneta simphoniarca'. Nor had he remained continuously at Reims, for on 4 May 1643 he succeeded Jean Veillot as music master to the choirboys at Notre Dame, Paris. He had to resign on 18 July 1646 following criticism by the queen, Anne of Austria, of two badly performed settings of the *Te Deum* and, according to documents of 1650 mentioned above, must have returned by then to his post at Reims. He is apparently to be identified with the 'Francois Cozette, priest' who on 20 December 1658

became director of music at Amiens Cathedral, in succession to Jean Cathala; he was also put in charge of the *chapelle vicariale* at Saint-Quentin as his predecessor had been. He resigned on 24 November 1664.

Cosset composed eight polyphonic masses, five of which survive. They rank with the best masses from that period in France. His style, much more severe than that of Jean de Bournonville, closely resembles that of Henri Frémart. The word-setting is syllabic, and the melodic lines avoid repetitions and in general any features reminiscent of chansons. Two of the masses, *Eructavit cor meum* and *Gaudeamus*, also exist in manuscript versions by Sébastien de Brossard (*F-Pn*) with added parts for strings, oboes, bassoons and serpent which provide valuable evidence of the practice current about 1700 of converting *a cappella* works into concerted works.

WORKS

Missa 'Gaudeamus', 5vv (Paris, 1649)

DENISE LAUNAY/JAMES R. ANTHONY

Cossetto, Emil (*b* Trieste, 12 Oct 1918). Croatian conductor and composer of Italian birth. Having settled in Yugoslavia in 1922, he studied literature at Zagreb University (1938–41), conducting at the Zagreb Academy under Mladen Pozajić (1941–5) and composition privately with Šulek (1960–62). In 1945 he was made director of the Joža Vlahović Chorus (renamed the Emil Cossetto Chorus in 1991), with which he has gained an international reputation, particularly in performances of his own compositions and arrangements of folksongs. In 1952 he took over the Moša Pijade Chorus. He frequently conducts other choirs, vocal ensembles and orchestras, mostly in Zagreb. In 1968 he was made president of the Association of Croatian Composers.

Choral music, for which Cossetto has a special affection, forms a large part of his output. The texts of his works are often nationalistic and heroic, set in a Romantic, tonal style, with dramatic contrasts suggested by the words. Three of his cantatas are particularly noteworthy: the *Borbena kantata* ('Militant Cantata'), built around four wartime partisan songs, the symphonically conceived *Kantata Zagrebu* and *Konjanik* ('The Horseman'), which, despite some simple pictorial programmatic effects, is boldly and vividly written. His orchestral music and songs also reflect his interest in folksong, and his chamber music, though a lesser achievement, is elegant and craftsmanlike.

NIALL O'LOUGHLIN

Cossmann, Bernhard (*b* Dessau, 17 May 1822; *d* Frankfurt, 7 May 1910). German cellist. He first studied with the Dessau court cellist L. Espenhahm; successive teachers included Theodor Müller in Brunswick, Karl Drechsler in Dessau and F.A. Kummer in Dresden. In Paris he became friends with Félicien David and Liszt, and worked with the Théâtre Italien from 1840 to 1846. He accepted Mendelssohn's invitation to be solo cellist for the 1847–8 Leipzig Gewandhaus concerts; in Leipzig he also played quartets with Ferdinand David, Joachim and Gade and studied composition with Moritz Hauptmann. Before leaving Leipzig for Paris with Joachim in December 1849, he visited Baden-Baden and England. He accepted Liszt's invitation to join the Weimar orchestra in 1850 as solo cellist, although an annual income of only 350 to 400 thalers made continued concert tours a necessity. In 1866, at the instigation of the violinist Ferdinand Laub and the pianist Nikolay Rubinstein, he moved to Moscow to become professor of cello at the conservatory. Returning to Germany in 1870, he remained at Baden-Baden until 1878, when he was appointed professor of cello at the Hoch Conservatory, Frankfurt.

Cossmann was known throughout Europe as a virtuoso cellist who excelled at both solo and ensemble playing. Contemporary reviewers considered his style to be emotionally conservative, his use of vibrato and rubato being restrained by period standards. However, his singing, expansive sound, technical and rhythmic accuracy, refined phrasing and conscientiousness elicited high praise. His compositions, limited to works for cello, include salon pieces, fantasias on opera themes, concerto cadenzas and a *Concertstück* op.10. His studies and exercises, which perpetuate the traditions of the Romberg school of Dotzauer and Kummer, are still used in the modern teaching repertory. His son, Paul Nikolaus Cossman, was a friend and biographer of Pfitzner.

GAYNOR G. JONES/VALERIE WALDEN

Cossoni [Consoni, Cossogna, Cossonio], **Carlo Donato** (*b* Gravedona, Lake Como, 10 Nov 1623; *d* Gravedona, 8 Feb 1700). Italian composer and organist. He probably studied at the Collegio Gallio, Como, where he was first active as a professional musician, and where, in 1646, he was ordained a priest. In March of that year he was listed as a singer at SS Annunziata there, and from February 1650 to 1657 he was organist of S Fedele. From 1662 to 1670 he was first organist of S Petronio, Bologna. In 1666 he was one of the founder members of the Bolognese Accademia Filarmonica, styling himself 'Accademico faticoso'. On the title-page of his op.11 (1671) he still described himself as first organist of S Petronio, but in the dedication he referred to the success that some of his music had enjoyed in Milan, where he had been 'making music' at the ducal church of S Maria della Scala. By late 1671 he had moved to Milan and is next heard of there in 1675 as choirmaster to Prince Trivulzio. On 5 December 1684 he became choirmaster of Milan Cathedral, a post that he occupied until 1692. Before 1684 he was made a canon of the collegiate church of S Vincenzo at Gravedona, where he seems to have spent part of each year and to which he retired after leaving Milan. The greater part of the music that he is known to have composed during his years at Bologna found its way into print. Much of his later music, however, survives in a collection of autograph manuscripts (many with place and date of composition) that he bequeathed to the Benedictine Monastery at Einsiedeln, Switzerland; the latest work in the collection is dated August 1699. His sacred music, which forms the majority of his output, embraces a wide range of stylistic and technical resources ranging from cantus firmus settings and canonic masses and psalms through polychoral works to motets for solo voice and small ensemble with continuo. A letter he wrote to Lorenzo Perti, dated 10 July 1680, is in G. Zanetti's *Consideratione sopra una questione* (Milan, 1680).

WORKS

Printed works except anthologies published in Bologna, unless otherwise stated

ORATORIOS

L'Adamo, dramatica musicale, music lost, lib pubd 1663

JOHN WHENHAM

Cossotto, Fiorenza (*b* Crescentino, Vercelli, 22 April 1935). Italian mezzo-soprano. A pupil of Ettore Campogalliani, she made her début in 1957 at La Scala (as Sister Mathilde in the première of *Dialogues des Carmélites*), returning there almost continuously up to the 1972–3 season and appearing in *La favorite*, *Les Huguenots*, *Il trovatore*, *Aida*, *Don Carlos*, *Barbiere*, *Cavalleria rusticana* (Santuzza), *Norma* and other operas. She began her international career in 1958, singing Jane Seymour in Donizetti's *Anna Bolena* at the Wexford Festival. In 1959 she first appeared at Covent Garden (Neris in Cherubini's *Médée* with Callas) and caused a sensation as Cherubino at the Royal Festival Hall, London, with Giulini. She then sang in Barcelona, Vienna, Paris, Chicago (1964) and New York (Amneris at the Metropolitan, 1968), as well as in all the leading Italian theatres. She was still singing major roles into the 1990s. Cossotto had a full, resonant voice, particularly clear and easily produced in the top register. Notable among her many recordings are her vocally opulent, dramatically exciting Amneris, Lady Macbeth, Leonora (*La favorite*) and Adalgisa (where her coloratura singing is outstanding). Her Amneris is preserved on a video made at the Verona Arena. (*GV*: G. Gualerzi; R. Celletti)

RODOLFO CELLETTI/ALAN BLYTH

Cossoul, Guilherme António (*b* Lisbon, 22 April 1828; *d* Lisbon, 26 Nov 1880). Portuguese composer, cellist, conductor and administrator of French descent. He had training in the piano, harp and cello from his parents and studied harmony with Santos Pinto. In 1843 he was elected to the Brotherhood of S Cecilia, became a cellist of the S Carlos theatre orchestra and made the first of several successful concert tours to Paris and London. In 1849 he was made a court chamber musician. He went to Paris in 1853 and played for two years in the Opéra orchestra. After his return to Lisbon he organized an important series of popular concerts in the Lisbon casino. In 1861 he became professor of the cello and double bass at the Lisbon Conservatory and was appointed its director two years later. Having published his first compositions when he was 20, he continued to compose, even though later in life he became increasingly involved with the theatre, sharing with Campos Valdez and Guilherme Lima the direction of the Teatro de S Carlos from 1864 to 1872.

WORKS

Comic ops, 1 act: A cisterna do diabo, 1848; O arrieiro, 1851; O visionario do Alemtejo, unperf.

Vocal: 2 masses, 4vv, orch, 1855, 1858; Cant., 1856; TeD, 4vv, orch, 1858; Libera me, T, B, str, 1861; Tantum ergo, T, harp, str qt, 1868; Ave Maria, 3vv (London, ?1870); 3 songs, 1v, pf; chorus for celebration of anniversary of popular concerts

Orch: 6 ovs., incl. 1 grand ov., 1848, 2 burlesque ovs.; Homenagem a Camões, march, 1860 (Lisbon, n.d.), arr. pf (Lisbon, 1880); Waltz, arr. pf (1882)

Inst: Pf Trio, 1848; Souvenir de Londres, rêverie, vc, 1863; Rêverie, pf; fantasies, mostly operatic: 3 for harp, 3 for vc, 1 for pf, 1 for xyl

GUY BOURLIGUEUX

Cossuino, Antonius. *See* GOSSWIN, ANTONIUS.

Cossutta, Carlo (*b* Trieste, 8 May 1932; *d* Udine, 22 Jan 2000). Italian tenor. He studied in Buenos Aires, making his début at the Teatro Colón in 1958 as Cassio and in 1964 creating the title role of Ginastera's *Don Rodrigo*. In 1964 he made his European début at Covent Garden as the Duke in *Rigoletto*. He returned as Don Carlos, Gabriele Adorno, Manrico and Turiddu and, in 1974, for his first Otello; in these roles his generous volume, ringing tone and sturdy manner won praise. He made his American début in 1963 at Chicago as Abdallo (*Nabucco*) and his Metropolitan début in 1973 as Pollione (*Norma*). He sang widely in the USA and Europe and in 1974 sang Radames with La Scala in Moscow. His recordings of *La vida breve*, Otello (under Solti) and Samson demonstrate his dark, dramatic voice and eloquence.

HAROLD ROSENTHAL/ALAN BLYTH

Costa (i). Much confusion has been created in musical scholarship, and in reference works, by the fact that there have been many musicians of the name Costa. The Italians of that name are dealt with under COSTA (ii), ANNA FRANCESCA COSTA and MARGHERITA COSTA. Other musicians of the name, all Portuguese and evidently unrelated, are listed in the present entry; *see also* DALMIRO COSTA, MICHAEL COSTA and SEQUEIRA COSTA.

(1) **Afonso** [Alfonso] **Vaz da Costa** [de Acosta] (*b* Lisbon; *d* Avila, between 5 Jan and 7 April 1660). Composer and organist. According to Barbosa Machado's *Bibliotheca lusitana*, he studied in Rome. On 19 May 1626 he was appointed *maestro de capilla* in Badajoz Cathedral after presenting an original motet and villancico. His annual salary was 47,150 maravedís and two *cahizes* of wheat. Although woodwind instruments (cornetts, sackbuts and bassoons) continued to be the main accompanying instruments throughout his time at Badajoz, by 1635 Vaz da Costa was using the harp to accompany Christmas *chanzonetas*. On 24 June 1636 the chapter paid Vaz da Costa an extra 400 reales for his eight months' service as organist, after the resignation of the ailing Juan de Alvelos. In 1640 the Badajoz authorities began to tire of so many Portuguese musicians, and on 2 August 1641 allowed Vaz da Costa indefinite leave to apply for the post of *maestro de capilla* at Avila Cathedral. He gained the post and in 1642 governed a *capilla* of 4 *tiples*, 3 contraltos, 3 tenors and 4 instrumentalists, all adults, augmented by an organist, Gaspar de Liceras, who eventually succeeded him, and an unspecified number of boys, trained by Alonso García. Costa himself took the boys in 1650 but by October 1652 had so failed to teach them that they were taken from him. From December 1655 he suffered from a recurring series of illnesses, which culminated in his death five years later. He was buried beside his sister (*d* August 1643) in the S Ildefonso chapel of Avila Cathedral; nonetheless his extant works, nearly all polychoral, are chiefly at the Escorial, not at Avila.

The library of King João IV, destroyed in the 1755 earthquake, included his *No es bueno Gil, que en la*

cierra, a sacrament piece for accompanied vocal solo and vocal quintet. His abundant surviving polychoral Latin repertory at El Escorial includes 6 Masses, 4 Magnificat settings, 13 psalms, and Vespers for 12 voices divided in 4 choirs.

WORKS

Ave regina coelorum, 4vv, copied in 1737 (2 copies) *E-Ac*
Missa pro defunctis, 5vv, *Asa*
Missa Sancti Amen, 8vv, *E*
2 Missae secundi toni, 7–8vv, *E*
Missa septimi toni, 2 choirs, 8, 10vv, *E*
Missa octavi toni, 12vv in 4 choirs, *E*
14 Vespers pss (1 for 4 choirs, 12vv; 9 for 8vv; 3 for 6vv; 1 for 5vv), *E*
4 Mag, 8vv, *E*

(2) **Francisco da Costa** (*d* Lisbon, 1667). Singer and composer. According to Barbosa Machado he left two manuscript volumes of sacred works, but only two Passion settings for four voices in chordal style survive (*P-Ln*).

(3) **André da Costa (i)** (*b* Lisbon; *d* Lisbon, 6 July 1685). Composer and harpist. He became a Trinitarian friar on 3 August 1650 and was a musician in the royal chapels of Afonso VI and Pedro II. His works included a collection of polychoral masses; settings of *Confiteor tibi* for eight and twelve voices; a Litany for eight voices; settings for four voices of *Beati omnes* and *Laudate pueri Dominum*; responsories for Wednesday, Thursday and Friday of Holy Week for eight voices; services for four voices for Palm Sunday and Good Friday; and villancicos for Christmas and Epiphany for four, six, eight and twelve voices. Manuscripts of these works were in João IV's library which was destroyed in 1755.

(4) **Sebastião da Costa** (*b* Azeitão; *d* Lisbon, 9 Aug 1696). Composer and contralto singer. He was chamber musician to King João IV, *mestre de capela* during the reigns of Afonso VI and Pedro II, and a Knight of the Order of Christ. His works included several psalm settings and masses for eight voices, motets for four voices and villancicos, all of which were in João IV's library which was destroyed in 1755.

(5) **Luiz Calixto da Costa e Faria** (*b* Guarda, 14 Oct 1679; *d* after 1759). Poet and librettist. He was an abbot in various towns in northern Portugal. His publications included librettos for a pastoral opera, *Fabula de Alfeo e Aretusa*, produced in Lisbon in 1712, and a zarzuela, *El poder de la Harmonia*, produced in Lisbon in 1713. He also published texts for villancicos sung in Lisbon Cathedral between 1719 and 1723.

(6) **André da Costa (ii)** (*fl* early 18th century). Composer. His name is registered in a S Cecilia brotherhood document dated 11 October 1701. The Pombal Collection (in *P-Ln*) includes a small manuscript volume with three cantatas by him, one in honour of the marriage of Princess Maria Anna of Austria to King João V on 27 October 1708. He also wrote villancicos for Matins in honour of St Cecilia (1721) and St Vincent (1722).

(7) **Francisco da Costa e Silva** (*d* 11 May 1727). Composer. He was *mestre de capela* at Lisbon Cathedral from about 1715 to 1727. His compositions include a mass for four voices and orchestra, a *Miserere* for 11 voices and instruments, motets, villancicos, and settings of the Passions according to St Luke and St Mark, both for four voices. He also wrote responsories for eight voices and orchestra for the memorial service to Louis XIV of France in Lisbon in September 1715.

(8) **Vitorino José da Costa** (*b* Lisbon; *d* ?*c*1750). Writer on music. He became a Benedictine monk, and studied music with the Benedictine Placido de Sousa. He was the author of a beginners' manual of Gregorian chant singing, mentioned by Barbosa Machado.

(9) **Felix José da Costa** (*b* Lisbon, 20 Nov 1701; *d* after 1760). Writer and musician. He graduated in civil law at Coimbra University in 1727; his only surviving musical work, known to Barbosa Machado in 1760, was a manuscript anthology, *Musica revelada de contraponto e composição que comprehende varias sonatas de cravo, rebeca e varios minuetes e cantatas*.

(10) **António Pereira da Costa** (*b* Funchal, ?1697; *d* Funchal, 1770). Composer. He was *mestre de capela* at Funchal Cathedral from about 1740. The title of his 12 *Concertos grossos* (London, 1741) exactly imitates that of Corelli's famous collection. This publication, which was probably financed by the dedicatee, José de Vasconcellos Bettencourt, bears a portrait of the composer with the indication: '. . . *AETATE XXXXIIII*'. The *Gazeta de Lisboa* of 2 June 1750 mentions the performance of cantatas and sonatas by him during the festivities of the Senhora do Monte in Funchal. He also published 12 *Serenatas for the Guitar* (London, *c*1755).

(11) **Antonio da Costa** (*b* Oporto, *c*1714; *d* Vienna, *c*1780). Composer, violinist and guitar player. He left Portugal for Spain and Italy in 1749, and stayed in Rome until 1754. He then travelled to Venice (1761), Paris and Vienna where, through the offices of the Portuguese diplomat João de Bragança, Duke of Lafoens, he met Gluck, Wagenseil, Hasse, Dittersdorf, Metastasio and Burney, who referred to Costa in *The Present State of Music in Germany* (London, 1773). He died blind and impoverished. A collection of his letters from Rome, Venice and Vienna, written to friends in Oporto, has been published (ed. J. de Vasconcellos, 1878, and F. Lopes Graça, 1946). (He should not be confused with António Correia da Costa, a mathematician and musician of an earlier period, who travelled in Italy and the Low Countries and returned to Portugal in 1617.)

(12) **Rodrigo Ferreira da Costa** (*b* Setúbal, 13 May 1776; *d* 1 Nov 1825). Composer. He graduated in law and mathematics at Coimbra University in 1804. After service in the Peninsular Wars he was appointed professor of mathematics at the Royal Naval Academy. His music tutor was published in two volumes in Lisbon (1820–24). Its subjects include acoustics and composition, and it ends with a discussion of the sonata, symphony and concerto.

(13) **João Alberto Rodrigues da Costa** (*b* Lisbon, 1798; *d* Lisbon, 24 April 1870). Double bass player and horn player. A member of the Lisbon court orchestra, he

was influential in organizing several court orchestras in Lisbon. In 1834 he helped to establish the Montepio Philharmonica, a social welfare organization for musicians, and in 1846 was co-founder of the Academia Melpomenense that for 15 years sponsored many fine concerts in Lisbon.

(14) João Evangelista Pereira da Costa (*b* Proença a Nova, Beira Baixa, *c*1798; *d* Calais, 1832). Composer, organist and pianist. He studied at the Seminário da Patriarcal, Lisbon, and with Carlo Coccia, joining the brotherhood of S Cecilia on 29 March 1820. The first of his several theatrical works, *O merito exaltado*, a scenic cantata, was staged at the Teatro de S Carlos on 23 February 1824. The next year he went to Paris. On returning to Lisbon he orchestrated the hymn of the 19th-century Portuguese liberation movement, *Hino da Carta*, sent by King Pedro IV from Brazil, and sung for the first time in Lisbon at the Teatro de S Carlos on 6 January 1827. His other works include a cantata, *Tributo à virtude* (1827), and the opera *Egilda di Provenza* (1827), both performed at S Carlos where he was assistant conductor to Mercadante. As well as stage works he wrote piano variations (1828), 12 *modhinas*, arias and five sacred works, including a *Te Deum* for eight voices and orchestra into which he introduced a verse from the *Hino da Carta*. He died a political exile in France.

(15) Francisco Eduardo da Costa (*b* Lamego, 26 March 1819; *d* Oporto, 27 Aug 1855). Composer and pianist. He made his début at the age of ten in Oporto, playing Jacob Cramer's Sixth Concerto, and became a teacher at the Lisbon Conservatory at the age of 16. In 1840 he returned to Oporto to take up the conductorship of the orchestra of the Teatro de S João, and also became organist and *mestre de capela* at Oporto Cathedral. He wrote five masses, four *Tantum ergo*, two *Te Deum*, and a *Stabat mater* for three sopranos and organ (*P-Ln*), all in the prevailing Italian style.

(16) José da Costa e Silva (*b* Coimbra, 29 Sept 1826; *d* Oporto, 18 July 1881). Amateur musician. He promoted the construction of a theatre in Portalegre, Portugal. He composed an oratorio, *Santa Iria*, and a mass for four voices and orchestra. His harmony manual *Principios gerais de harmonia ao alcance de todos* was published in Lisbon in 1868.

(17) Francisco Pereira da Costa (*b* Oporto, 30 Jan 1847; *d* Rio de Janeiro, 24 June 1890). Violinist. He studied with Nicolau Ribas and made his début at the age of ten. In 1858 he went first to Lisbon, then to Paris to study with Jules Garcin and with Alard at the Paris Conservatoire. When he returned to Portugal in 1863 he was appointed court musician by King Luis and from 1869 to 1871 he was leader of the S Carlos opera orchestra. He toured Portugal, and later Brazil, where he settled in 1871.

(18) Luis (António Ferreira da) Costa (*b* São Pedro, 25 Sept 1879; *d* Oporto, 7 Jan 1960). Pianist, teacher and composer. After early studies with B.V. Moreira de Sá in Oporto, he went to Germany to study with Vianna da Motta, Stavenhagen, Ansorge and Busoni. In addition to his career as a solo pianist, he participated in concerts with the cellists Casals, Hekking and Guilhermina Suggia, the pianists Cortot and Friedman, the violinists Enesco, Arányi, Senatra and Fachiri, and the Rosé, Zimmer and Chaumont quartets. He was appointed director of the Oporto Conservatory, and also of the concert society Orpheon Portuense, in which capacity he introduced many well-known musicians, including Ravel in 1928. He married the pianist Leonilde Moreira de Sá (*b* Oporto, 10 Sept 1882), a pupil of her father (B.V. Moreira de Sá) and Vianna da Motta. Two of their daughters became musicians: Helena (*b* Oporto, 26 May 1913) was a pupil of her father, Vianna da Motta and Edwin Fischer, and Madalena (*b* Oporto, 20 Nov 1915), a cellist, studied under Suggia, Grümmer, Casals and Cassadó before becoming a soloist and a member of the Quarteto Portugalia.

Costa (ii). A number of Italian musicians of this name were active in Italy between the late 16th century and the early 18th. It is impossible to say how many were related; some may not have been related at all. They included a prominent harpist, Lelio Costa, and those discussed separately below.

(1) Gasparo Costa (*b* Bologna; *fl* 1580–90). Composer and organist. He was organist at the church of S Maria presso S Celso, Milan, from 1577 to 1584 and of Milan Cathedral from late November 1584 to 1590. He is known primarily as a composer of canzonettas, some of which were sufficiently popular to be published in anthologies in Germany and the Netherlands.

(3) Giovanni Maria Costa (*b* Genoa, *c*1598; *d* ?1655–62). Composer, organist and lutenist, brother of (2) Giovanni Paolo Costa. He was the dominant figure in the musical life of Genoa in the mid-17th century. He is described as 'genovese' on the title-page of his *Primo libro de madrigali* for two to four voices, and his date of birth is suggested by a letter of 15 February 1653 in which he claimed to be 54 years of age. His first post appears to have been at the convent of S Brigida, where his sister, Angela Maria, was a nun. On 22 September 1622 he was appointed organist of Savona Cathedral for three years; his duties included teaching two boys to sing and to play the organ and other instruments. Two years later (5 August 1624) he was banned from playing that organ except in divine office; nevertheless, his appointment was renewed for three more years, after which he became *maestro di cappella*.

He was back in Genoa by 1636: on 28 June he and Andrea Falconieri were denounced by the mother superior of S Brigida for distracting the nuns with their songs, and by 15 June 1640, according to the dedication of his *Primo libro*, he was 'maestro' to Filippo Maria and Agostino Spinelli. His letter of 1653 arose from an incident in another nunnery. Having twice repaired the organ of the convent of S Andrea before the patronal festival in 1652, and being recalled for the same purpose, Costa stayed in the convent all day to be on hand in case of further difficulty; he passed the time by playing the lute and accompanying, on the organ, a nun who sang a motet. His action provoked an anonymous denunciation and led to a trial, as a result of which he was prohibited from teaching or making music in women's monasteries. In February 1653 he petitioned the diocesan vicar to lift the ban, which was having a serious effect on his income and family; since the organ had in fact broken down in the middle of Vespers, the vicar granted his request.

From at least 1650 Costa was *maestro di cappella* to the Republic of Genoa at the ducal palace. In his mid-fifties he composed what appears to have been his first opera, *Ariodante* (libretto by Giovanni Aleandro Pisani [Giovanni Andrea Spinola], after Ariosto; copies in *I-Nc*, *Rc*). He may also have composed the intermezzo *Gli incanti d'Ismeno* (Spinola), which was performed with *Ariodante* at the Teatro del Falcone in 1655. Giazotto says that Costa also set Spinola's *Aspasia* in 1656 and/or 1660; the drama was performed at Genoa in 1695, but the music may have been by Geronimo Maria Costa. A motet by Costa, *Anima Christe, sanctifica me* for three voices (two sopranos and bass) and organ, survives in manuscript (in *S-Uu*; ed. in Moretti), but there is no trace of the published motets and litanies mentioned by Gerber. Costa presumably had died by 1662, when Giovanni Stefano Scotto was *maestro di cappella* at the ducal palace.

(4) Francesco Antonio Costa (*b* Voghera; *fl* 1615–26). Composer and organist. He was a Franciscan friar. On the title-page of his 1615 publication he is described as *maestro di cappella* and organist of S Francesco, Genoa, but no appointment is recorded on that of his volume of 1626, by which time he may have retired to a monastery of his order. A miscellaneous collection of church music by him, *Messa, con sei salmi et un Magnificat … motetti … libro primo* for two to four voices and continuo (Genoa, 1615), comprises music for small forces in the increasingly popular concertato style suitable for churches such as the one at which he worked. His other surviving publication is *Pianto d'Ariana: madrigali, e scherzi* op.3, for solo voice and continuo (Venice, 1626/*R*1986 in ISS, iv). His setting of Rinuccini's lament of Arianna, which comes first, follows in the wake of Monteverdi's celebrated setting of 1608, the solo version of which had been published in 1623. Costa responded assiduously to Monteverdi's influential lament, even to the extent of borrowing its music on occasion; but with its generally rather bland expressiveness, Costa's version falls well short of Monteverdi's masterpiece. Costa handled recitative and arioso more expressively and less stiffly in some of the solo madrigals in his volume. The first of them, *Come fissa nel ciel lucente*, is set in triple time as though it were an aria, and the arias (*scherzi*) include madrigalian writing: this blurring of the distinction between the two forms was not uncommon in Italy in the 1620s and 30s, when the madrigal was in decline and the aria in the ascendant. Costa's arias lack the melodic charm of many by his contemporaries.

(5) (Maria) Margherita Costa [Margarita] (*b* Rome; *fl* 1629–57). Italian singer and poet, sister of (6) Anna Francesca Costa. Her career as a talented courtesan led her from Rome through Florence (1629), Rome (1644), Turin (1645) and Paris (1647) before returning again to her native city; her patrons included the Medici (in particular, Grand Duke Ferdinando II), the Barberini and Cardinal Mazarin. Her rivalry with another Roman soprano, Cecca del Padule, was reputed to have inspired Domenico Mazzocchi's *La catena d'Adone* (1626), although she did not take part in the performance. Costa's numerous publications include poetry, letters, a comedy (*Li buffoni*, Florence, 1641), a libretto for a *Festa reale per balletto a cavallo* (Paris, 1647, with a dedication to Mazarin: it had been offered to Grand Duke Ferdinando II in 1640), and two opera librettos, *La Flora feconda* (Florence, 1640) and *Gli amori della luna* (Venice, 1654). One of her poems (dated 1650; pubd in Bergalli) is closely modelled on Ottavio Rinuccini's *Lamento d'Arianna*.

(6) **Anna Francesca Costa** [Checca] (*fl* 1640–54). Italian soprano, sister of (5) Margherita Costa. She was in the service of Gian Carlo de' Medici in Florence but in October 1644 left for Paris, where she was warmly welcomed by Cardinal Mazarin and the queen. During Carnival 1645 she sang in an opera performed privately in the Palais Royal and in Carnival 1646 she appeared in Cavalli's *Egisto*. In Paris she also sang in Sacrati's *La finta pazza* (1645) and in Luigi Rossi's *Orfeo* as Euridice (1647). Returning to Italy, she was in Rome until 1650, and then in Florence in the service of Leopoldo and Cardinal Gian Carlo de' Medici. In Bologna in 1652 she signed the dedication of the opera *Ergirodo* (composer unknown) and in 1654 she sang in Florence in Cesti's *Alessandro vincitor di se stesso*. Letters of recommendation dated 1654 indicate that she went again to Paris. She was the mistress of the Prince of Wales (later Charles II) during his Parisian exile.

(7) **Rochio Costa** (*b* ?Venice; *fl* 1681). Theorist. According to Fétis (see *FétisB*) he was an ecclesiastic in Venice and published there in 1681 a 26-page manual on plainchant, *Breve ristretto di due introduttioni, overo Instruttioni della cose più essentiali spettanti alla facile cognitione del canto fermo, cavato d'alcuni classici autori di questa materia*.

(8) **Giovanni Antonio Costa** (*fl* 1694–1715). Composer and singer. According to the title-pages of the librettos of oratorios by him dated 1694 and 1701, he was a priest in papal service in Rome, a singer and a member of the Accademia Filarmonica, Bologna; on the title-page of the 1694 oratorio he was also stated to be a member of the Congregazione del Oratorio del Crocifisso, Rome. Eitner (see *EitnerQ*) stated that in 1708 he was a bass singer at S Marco, Venice. Of the two oratorios mentioned above no music survives; they are *Poenitentia in Davide gloriosa* (text by Filippo Capistrelli) and *Annus ultionis Domini*. The music of a third oratorio, *L'empietà delusa* for six voices and instruments (1715), survives in manuscript (in *A-Wn*). A serenata for three voices by a Giovanni Antonio Costa of Pavia was printed in 1701. A recitative and aria, *Che interi mai*, for two voices and continuo (in *D-Dl*) may be by him.

Costa, Dalmiro (*b* Montevideo, 7 May 1836; *d* Buenos Aires, 9 Aug 1901). Uruguayan pianist and composer. He was the foremost figure of the first generation of learned Uruguayan composers, which flourished in the last quarter of the 19th century. Although he is known to have studied the piano with the Argentine émigrés Remigo Navarro (before 1839) and Roque Rivero (before 1843), as a pianist he was mostly self-taught. His first recorded public appearance was when he was four years old, and he later played for Thalberg while the latter was touring South America. Most of Costa's compositions were written after 1856 and published in the 1870s; dance rhythms, including the polka, mazurka, waltz and habanera, are prominent in many works. The Dalmiro Costa Collection at the Uruguayan Musoe Histórico Nacional also includes theatre music and orchestral parts for the piano waltz *Nubes que pasan*.

LEONARDO MANZINO

Costa, Geronimo Maria (*b* Geroa, 1655). Italian composer, to whom some of the operas of Giovanni Maria Costa have been attributed. *See* COSTA (ii), (3).

Costa, Helena Sá e. Portuguese pianist, daughter of Luis Costa. *See* COSTA (i), (18).

Costa, Lelio. Italian harpist. *See* COSTA (ii), introduction.

Costa, Leonilde Moreira Sá e. Portuguese pianist, wife of Luis Costa. *See* COSTA (i), (18).

Costa, Madalena Sá e. Portuguese cellist, daughter of Luis Costa; *see* COSTA (i), (18).

Costa, Sir **Michael (Andrew Agnus)** [Michele Andrea Agniello] (*b* Naples, 4 Feb 1808; *d* Hove, 29 April 1884). British conductor and composer of Italian birth. His teachers included Niccolò Zingarelli and the castrato Girolamo Crescentino. While he was still a student four of his operas and a cantata were performed in Naples. In autumn 1829 Zingarelli sent Costa to Birmingham to direct his cantata on *Isaiah* xii, but in the event Costa only sang in it.

Costa made England his home for the following half-century, and rapidly became the director of London's leading musical organizations through a combination of technical skill, a dominant personality and favourable circumstances. In 1830, as *maestro al cembalo* at the King's Theatre, he encountered the customary divided leadership, the orchestra being 'presided over' by a pianist and 'led' by a violinist. His grand ballet *Kenilworth* was produced at the theatre in 1831 and in the following year he became director of music. At this time he probably introduced authoritative conducting with a baton and by 1833 he was both director and conductor of the Italian opera at the King's Theatre. The press almost immediately praised the discipline and ensemble of his baton-conducted band and hailed the improved standard of the orchestral playing (deplored a few years previously by Spohr, Fétis and Meyerbeer). Chorley wrote in 1840, 'Since the day when Signor Costa took up the baton its orchestra steadily improved under his discipline, intelligence, and resolution to be content with nothing short of the best'. Costa continued to compose, but despite Chorley's critical praise, his compositions found no widespread favour with the public. Rossini's judgment in 1856 speaks for itself: 'Good old Costa has sent me an oratorio score and a Stilton cheese; the cheese was very fine'. *Malek Adel*, his most successful opera, contains no innovatory music whatsoever. The score is vigorous and noisy, but exhibits a lack of melodic inspiration (an unusual defect in an Italian composer). The one number touched by genuine

emotion is Mathilde's preghiera 'Tu mi creasti l'anima', which could pass for Donizetti.

When he resigned from the theatre (now Her Majesty's) in 1846, Costa took 53 of its 80-member orchestra with him and founded the Royal Italian Opera in the following year at the newly renovated Covent Garden Theatre. In 1846 he also accepted the conductorship of the Philharmonic Society, stipulating absolute control over the orchestra. Critical praise was high; in 1848 Davison wrote, 'In speaking of the orchestra of the Royal Italian Opera, we take off our critical hat, and make low obeisance ... it is almost unnecessary to add that it will be the finest orchestra in the world, without making any exception whatever'. By the end of his career, however, his tastes had become obsolete; Shaw put it neatly: 'Costa ... allowed the opera to die in his grasp whilst it was renewing its youth and strength all over Germany'.

Yet for London, Costa's discipline was unprecedented, particularly when exerted over the larger choral and orchestral forces and over details of theatrical production. He would not tolerate the system of orchestral deputies, his personal manner was precise and punctual, and contemporary accounts frequently refer to him as a disciplinarian and even as 'despotic'. He was generally respected by his players, however. His technique was thoughtful and level-headed (see illustration), without either the technical ineptness of his contemporaries Bishop, Smart, Balfe and Benedict, or the extrovert flamboyance of the showman-conductor Louis Jullien.

Michael Costa: cartoon by 'Spy' from 'Vanity Fair' (6 July 1872)

His tempos were often said to be fast in symphonic music, and his rhythms were perhaps somewhat metronomic, too calculated and without the necessary sense of improvisation. Though many of the subtleties of the highest kind of music were beyond his reach, he never failed to realize the general effect of the compositions he directed, and Meyerbeer, whose music for the 1862 exhibition he conducted, called him 'the greatest *chef d'orchestre* in the world'.

Costa continued to conduct the Philharmonic Society until 1854, when he was succeeded for one uneasy season by Wagner. He remained at Covent Garden until a dispute with the manager Frederick Gye in 1868. He then returned to his old theatre, Her Majesty's in the Haymarket, and, from 1871 until its amalgamation with the Covent Garden company ten years later, was its musical director, working with the impresario Henry Mapleson. Costa also made a nationwide reputation as a conductor of oratorio. As conductor of the Sacred Harmonic Society from 1848 until its dissolution in 1882, he directed the first years of the mammoth triennial Handel Festivals at the Crystal Palace from 1847 to 1880, including the centenary festival. He also conducted other provincial choral festivals; Bradford (1853), Leeds (1874) and the Birmingham Festival from 1849 to 1882. For them he wrote his most widely performed works, the oratorios *Eli* and *Naaman*. He received many awards in England and abroad, and was knighted in 1869.

Costa, Sequeira (*b* Luanda, Angola, 28 July 1929). Portuguese pianist. He showed exceptional talent in early childhood and at the age of eight moved to Lisbon for study with Joseph Vianna da Motta, a pupil of Liszt and Bülow. After Vianna da Motta's death in 1948, Sequeira worked with Liszt's pupil Mark Hambourg in London, Jacques Février and Marguerite Long in Paris and Edwin Fischer in Switzerland. His international career was launched when he took the grand prix at the Marguerite Long-Jacques Thibaud Competition in Paris. He subsequently moved to the USA where he became a professor at the University of Kansas. Sequeira has made a number of recordings, including the complete concertos of Rachmaninoff, and tours regularly, returning annually to Portugal, where he founded the Vianna da Motta International Piano Competition in 1957. His pupils include his stepson Artur Pizarro.

Costallat. French firm of music publishers. It began in Paris in 1880 when Costallat (*d* 1901) went into partnership with William Enoch. Enoch Frères & Costallat were the sole agents in France for the German music publishers Litolff. In 1895 Costallat set up on his own in the rue de la Chaussée-d'Antin, and in 1898 he acquired the publishing house of Richault. When Costallat died his son-in-law Lucien de Lacour (*d* 1950) took over the business. It published many of the works of Berlioz and Alkan, and became the sole agent in France for Breitkopf & Härtel. Music is still published under the Costallat imprint, including the series Collection Archives de la Musique Instrumentale and some important wind music, but the main catalogue has been taken over by the firm of Billaudot. The Costallat firm founded the Erato record company, which later became independent.

ALAN POPE

Costantini, Alessandro (*b* Staffolo, nr Ancona, in or before 1581; *d* Rome, 21 Oct 1657). Italian organist and composer, brother of Fabio Costantini, uncle of Vincenzo Albrici. He studied with G.B. Nanino in Rome and remained there for many years: after a brief period as organist at S Maria in Trastevere (from January to September 1602), he substituted for Pasquini at S Pietro in 1608, and at the same period was responsible for festal music at S Giacomo degli Sciavoni. He became *maestro di cappella* of S Giovanni dei Fiorentini (1604–16), the Collegio Germanico (1620–21) and the Seminario Romano (1622–7); he was paid as organist at S Luigi dei Francesi in March 1621. He was described as 'Cavalier' in his brother's anthology of 1622. Between 1621 and 1628 he was organist at S Maria Maggiore, though he was granted leave of absence, probably to serve the Este household, in 1622. In 1629 he was organist and from 1630 to 1632 *maestro di cappella* of the Santa Casa, Loreto. He was assistant organist to Frescobaldi at S Pietro, Rome, from 1634 to 1637 and succeeded him as principal organist in 1643, the year in which he finally left the service of S Maria Maggiore, having been there for a second term since March 1635; he held this post until his death. In 1651 he was elected 'guardiano' of the organists in the Congregazione dei Musici di Roma. His compositions are mainly in the concertato style and show a distinct preference for duets and dialogues. His motets of 1616 demonstrate a competent handling of the few-voice style which flourished in Rome from the turn of the century.

WORKS

SACRED

Motecta ... liber primus, 1–3vv, bc (Rome, 1616); 1 ed. in Musica divina, i/2 (Regensburg, 1855)
13 motets, 1614^{3}, 1615^{1}, 1616^{1}, 1618^{3}, 1620^{1}, 1621^{1}, 1621^{3}, 1639^{2}; 1 ed. in Canticum vetus, xi (Mainz, 1936); 1 ed. in Musica divina, i/2 (Regensburg, 1855)
3 pieces each in F. Costantini: Salmi, Magnificat et motetti, op.6 (Orvieto, 1621), and Salmi, himni et Magnificat, op.11 (Venice, 1630)

SECULAR

Componimenti musicali ... op.3 (Rome, 1626)
14 works, 1621^{14} (1 ed. in AMI, v (n.d.)), 1621^{15}, 1622^{10}, 1622^{11}

COLIN TIMMS/GRAHAM DIXON

Costantini, Fabio (*b* Staffolo, nr Ancona, *c*1570–75; *d* ?Tivoli, in or after June 1644). Italian music editor, composer and singer, brother of Alessandro Costantini and uncle of Vincenzo Albrici. He served the Bishop of Aquila as a musician from boyhood and sang treble under Palestrina at S Pietro, Rome, where he remained as a tenor until 31 July 1610, having served as a singer at S Luigi dei Francesi in the middle of the decade. In 1610 and 1616 he directed festal music at S Giacomo degli Incurabili. He was *maestro di cappella* of Orvieto Cathedral from 1610 to 1614 and may have been in Naples when his op.2 was published there in 1615. By then he was in the service of Cardinal Aldobrandini, on whose recommendation he was made *maestro di cappella* of S Maria in Trastevere, a post he held from October 1615 to some time before May 1618. He seems briefly to have held a similar post at S Maria Maggiore, Tivoli, in 1616. From 1618 to 1622 he was again *maestro di cappella* at Orvieto, where he published his books of secular music; he dedicated the second to Cardinal Crescentio, Bishop of Orvieto, in whose rooms he had already performed some of the pieces. Between 1622 and 1625 he again appears to have been at Tivoli, and during

the period 1625–6 he was *maestro di cappella* of the Santa Casa, Loreto. His letter of 26 September 1629 to Carlo Barberini shows that he became *maestro* of Ferrara Cathedral in 1628; according to his op.11 title-page he held a similar post at the Compagnia del SS Rosario, Ancona, in 1630. The dedication of op.12 reveals that he had been at Ancona before (?1626–8) and that by 1634 he was serving Cardinal Pallotta at Ferrara. After a two-month return to S Maria in Trastevere (February and March), he was elected *maestro* of Rieti Cathedral in March 1635, but served for only four months, if at all. In his op.13 (1639) he is described as a citizen of Orvieto and as a 'conservatore' of the town; he had held the post of *maestro* at the cathedral once again from 1636. He was *maestro di cappella* at Tivoli from November 1642 to June 1644, but provided music at Rieti for the feast of the Assumption in 1643.

Costantini's anthologies were an important medium for the dissemination of early 17th-century Roman music. The sacred books were of two main types: polyphonic (and some concertato) psalms and related vespers music (six books, 1614–39), and concertato motets (four books, 1616–34, one lost); all are provided with continuo. As a composer he preferred the concertato style: he wrote nearly all of the pieces in his op.13 and at least 13 secular pieces for one to four voices. His secular music includes a number of strophic variations (a typically Roman form by this time), and his motets are also typically Roman, combining a *prima pratica* sense of line with bold ornamentation in the individual voices. The index of his 1621 anthology describes Palestrina as 'Padre della Musica', acknowledging Costantini's own stylistic roots.

EDITIONS

works in brackets are by Costantini

Selectae cantiones, 8vv, bc (Rome, 1614[3]) [2 motets]; rev. as Sacrae cantiones (Antwerp, 1621[1])
Raccolta de' salmi, 8vv, op.2 (Naples, 1615[1]) [1 ps]
Selectae cantiones ... liber primus, 2–4vv, op.3 (Rome, 1616[1]) [2 motets]; 1 ed. in Musica divina, i/2 (Regensburg, 1855)
Scelta di motetti ... libro secondo, 2–5vv, op.4 (Rome, 1618[3]) [4 motets]; 1 ed. in Musica divina, I/2 (Regensburg, 1855)
Scelta de salmi, Magnificat, Antifone ... et Litaniae della Madonna, 8vv, bc, op.2 [*recte* op.5] (Orvieto, 1620[1]) [1 antiphon and 1 psalm]
Salmi, Magnificat et motetti, 6vv [bc], op.6 (Orvieto, 1621) [1 psalm and 1 motet]; see Wessely-Kropik
Ghirlandetta amorosa, arie, madrigali, e sonetti ... libro primo, 1–4vv, op.7 (Orvieto, 1621[14]) [8 works]; probably identical with *Le condotte amorose* (Orvieto, 1621), cited in Fétis
L'aurata Cintia armonica, arie madrigali, dialogi, e villanelle ... libro secondo, 1–4vv, op.8 (Orvieto, 1622[10]) [5 works]
Motetti . . . libro terzo, ?op.9/10, lost
Salmi, hinni et Magnificat concertati, 8vv, bc, op.11 (Venice, 1630) [5 psalms, 1 hymn and 1 Magnificat]; see Münster
Motetti ... libro quarto, 1–5vv, op.12 (Venice, 1634[1]) [23 motets]
Salmi, Magnificat e motetti ... libro sesto de salmi, 8vv, bc, op.13 (Orvieto, 1639[2]) [2 psalms and 2 motets]

WORKS

Litany, 8vv, 1626[3]

COLIN TIMMS/GRAHAM DIXON

Costanzi, Giovanni Battista [Giovannino del Violoncello, Giovannino da Roma] (*b* Rome, 3 Sept 1704; *d* Rome, 5 March 1778). Italian composer and cellist. He was probably a pupil of G.L. Lulier. He entered the employ of Cardinal Pietro Ottoboni in Rome in 1721, serving first as *aiuto da camera* and then in 1737 as *capo d'istromenti* in succession to Corelli. After the brilliant success of his opera *Carlo Magno* in 1729, he was appointed, through Cardinal Ottoboni's patronage, to a number of the most important posts of *maestro di cappella* in Rome: at S Luigi dei Francesi in 1729, at S Lorenzo in Damaso (the cardinal's titular church) in 1731, at S Marco and S Maria in Vallicella (in succession to G.O. Pitoni) in 1743, and at S Pietro (Cappella Giulia) in 1755. His growing reputation as an instrumentalist and composer brought him a succession of honours, among them the presidency of the Congregazione di S Cecilia in Rome in 1740, 1754 and 1769. Boccherini reportedly studied under him in 1757.

Costanzi was among the most prolific composers of the 18th century but only a part of his output has survived. To judge from what remains, secular dramatic works predominated until about 1740, but later he concentrated on religious music. His historical significance, however, lies in his instrumental compositions. In form, his works for cello closely follow the succession of movements found in the *sonata da chiesa*, but they also occasionally borrow certain types of movement from the *sonata da camera*. Passages in his compositions requiring brilliant execution suggest that he was a virtuoso cellist. According to Grétry he was one of the best-loved church composers in Rome.

WORKS

ORATORIOS AND SACRED CANATAS

Per la festività del S Natale (P. Metastasio), Rome, 1727
S Pietro vescovo d'Alessandria, Rome, Chiesa Nuovo, 3 April 1746, *D-Bsb* (as S Pietro Alessandrino)

HANS JOACHIM MARX

Costanzo, Fabrizio (*b* probably Naples; *fl* 1627). Italian composer and ?guitarist. His only known work *Fior novello: libro primo di concerti di diverse sonate, cinfonie, e correnti* (Bologna, 1627; 6 ed. in Hudson), was the first of several guitar tablatures printed in Bologna. The book contains pieces in the *battute* style for four guitars of three different sizes: a bass guitar, two medium guitars tuned a major 2nd and a major 3rd above the bass, and a small guitar tuned a perfect 5th above the bass. The pieces are transposed accordingly so that the four guitars can play in ensemble.

GARY R. BOYE

Costa Rica, Republic of (Sp. República de Costa Rica). Country in central America. It is bordered by Nicaragua to the north, by Panama to the south-east, by the Caribbean Sea to the east and by the Pacific Ocean to the south and west.

I. Art Music. II. Traditional Music.

I. Art music

'Costa Rican music is a white man's music, and of all Latin American countries is the least influenced by either the Indian or the Negro culture' (Slonimsky, 1945). The recorded history of music in Costa Rica begins in 1845, when the Dirección General de Bandas was organized by the Guatemalan musician José Martínez; Martínez was succeeded on his death in 1852 by Manuel María Gutiérrez (1829–87), composer of the national anthem (1852), who was succeeded by Rafael Chávez Torres (1839–1907). These last two composers wrote marches, mazurkas, waltzes and similar pieces for band. Chávez Torres was followed by the Belgian Jean Loots (1872–1929), who organized the first, short-lived symphony orchestra (1926–7). In 1965 German Alvarado (*b* 1928), a later Director General de Bandas, founded a symphony orchestra in Heredia. Bands, one in each province, traditionally give weekly concerts in parks, and also participate in some church and government functions.

Music in public schools was reorganized in 1888 by the Spaniard José Campabadal (1849–1905). Musical education at higher levels was available at the Escuela Nacional de Música (1890–94) and the Escuela de Música S Cecilia (1894–1956). The Conservatorio Nacional de Música was founded in 1942 under the direction of Guillermo Aguilar Machado (1905–65), a Brussels-trained pianist; in 1944 it became part of the Universidad de Costa Rica, in 1972 it was renamed Escuela de Artes Musicales, and in 1976 a new building was opened for it on the university campus. The Conservatorio Castella, founded in 1953 by Arnoldo Herrera (*b* 1916), provides education for artistically talented children, and has given a start to many professional musicians. Other centres of musical training include the Universidad Nacional de Heredia, the private Universidada Autónoma de Centroamérica and the Costa Rica National SO, which has had a youth programme and youth orchestra since 1971.

The Orquesta Sinfónica Nacional (Costa Rica National SO) was founded in 1940, with state support, by Hugo Mariani (1899–1965), an Italian violinist and conductor. Before then Costa Rican composers wrote for the bands; subsequently there was the opportunity to write symphonies, concertos etc. The operatic tradition is of longer standing. The Teatro Mora in San José, built in 1850, housed visiting companies, who sometimes used local singers and musicians, thus laying the ground for the Teatro Nacional (1897), one of the oldest in Latin America, financed by coffee growers through a voluntary tax.

Outside the band world, the first important composers were Alejandro Monestel and Julio Fonseca (1885–1950), the two founder teachers of composition at the Conservatorio Nacional, both of whom, like Aguilar Machado, had trained at the Brussels Conservatory. Monestel was active as an organist and composer in New York for many years between his stints at the Escuela de S Cecilia and the Conservatorio Nacional. He wrote in a somewhat Wagnerian style, his works including 14 masses, a cycle of five cantatas on the life of Christ, orchestral, chamber, organ and piano music. Fonseca covered the same genres (five masses, two cantatas) but showed rather some impressionist influence. He also wrote two of the earliest important stage works in Costa Rica: the operetta *Money is Not All* and *Caperucita encarnada* (1916), a children's play with music.

In the next generation, Julio Mata (1899–1969) had a diverse career as Director General de Bandas, teacher and composer of concert music, school songs and theatre pieces (the operetta *Rosas de Norgaria*, 1937; the zarzuela *Toyupán*, 1938). The works of his contemporary Alcides Prado (1900–80) include the zarzuela *Milagro de Amor* (1955) and the opera *María* (1976). Among the following generation are Ricardo Ulloa (*b* 1928), Rocío Sanz (1933–93), Bernal Flores (*b* 1937) and Benjamín Gutiérrez

(*b* 1937). Rocío Sanz studied in the USA, Mexico (where she later settled) and the USSR. Gutiérrez's works, in a contemporary neo-Romantic style, include three operas (*Marianela*, 1957; *El regalo de los reyes*, 1961; *El pájaro del crepúsculo*, 1982) and several concertos. Flores, who composes in an atonal style based on the Hanson system of harmonic analysis, has written one opera (*The Land of Heart's Desire*, 1964, after Yeats) as well as orchestral music. The compositions of Jorge Luis Acevedo (*b* 1943), an ethnomusicologist, are based on his research in Costa Rica. Younger composers, wielding a range of contemporary techniques, include Mario Alfagüell (*b* 1948), Luis Diego Herra (*b* 1952) and William Porras (*b* 1956).

II. Traditional music

Costa Rican traditional music consists mainly of Hispanic-derived traditions, though Afro-Caribbean and indigenous traditions are also present. Only 2% of Costa Rica's current population of approximately four million are of African descent, and less than 1% are Amerindian. African influence can be traced in both the rhythmic structures of many genres and in the rise of particular instruments. However, Iberian polyphony in parallel 3rds, Hispanic melodies and Western harmony predominate in most Costa Rican traditional music. The influence of indigenous music has rarely extended to other national groups or to art music composers.

1. Amerindian peoples: (i) Talamancan Indians (Bribri and Cabécar) (ii) Guatuso Indians (iii) Guaimí Indians (iv) Boruca and Térraba Indians. 2. Criollo and mestizo music. 3. Afro-Caribbean music. 4. Popular and urban music.

1. AMERINDIAN PEOPLES. Although Costa Rica was occupied by Mesoamerican and lower Central American cultures, only six groups remain belonging to the Chibchan language stock: the Bribri, the Cabécar, the Guatuso, the Guaimí, the Boruca and the Térraba. These groups display diverse levels of acculturation, but it is possible to study certain aspects of their traditional culture and music. Estimates of the current indigenous population vary from 20,000 to approximately 34,000 representing about 1% or less of the total Costa Rican population.

(i) Talamancan Indians (Bribri and Cabécar). There are approximately 9000 Cabécar and 12,000 Bribri living in the south-east. Because of their cultural similarities and since their territories are spread at both sides of the Talamanca mountains, both groups are often referred to as the Talamancan Indians. They exhibit a striking similarity in musical repertories and styles, although names and song texts may be in the group's own languages. Bribri terminology is used here.

Contemporary Talamancan music is strictly vocal, consisting of monophonic, hemitonic and syllabic singing, with oscillating and arc-shaped melodies. A distinction between *si̱ wa̱' a̱* ('in the air') and *ajkö̀ ki̱* ('on the mouth') genres can be made. All *si̱ wa̱' a̱* chants use ritual speech, differing greatly from everyday language, and are performed only by shamans. Three types of chant are known: those performed by the *awápa* (medicine shamans) for healing, hunting, witchcraft and house inaugurations, chants for funerary rites performed by the *stsökölpa* (funerary shamans) and the chants performed by the *úsêkölpa* (priests) for dealing with collective problems such as wars and natural disasters. All are syllabic, strophic and monophonic; only the funerary chants are accompanied with rattles. Most are tritonic and tetratonic, some pentatonic, usually with oscillating melodies. The tempo of the chants is generally very slow; in funerary dances it can be accelerated. Currently, only the *awápa* chants are practised.

There is a strong gender division for the performance of the *ajkë̀ ki̱* song genres. Women's songs are in Bribri or Cabécar; vernacular language in music may only be used by women. These songs include several types of *kanè̱ stse* (work songs) and *alála ajkö́nó̱ ie* (songs for children); in addition, women may occasionally compose new songs on free themes, generally romantic anecdotes. All are monophonic and without accompaniment. The melodies of women's songs are the richest of Talamancan music: scales are pentatonic, tetratonic and occasionally larger, while the pitch ranges are the widest found in Talamancan music. Although women have more access to music than men, they always sing for daily activities which are not intended as public occasions and are listened to only by children, other women working together, or casual and closely related listeners.

Men's songs include *dulë̀* songs for entertainment, and songs for *bùl* dances which correspond to two choreographic structures: one in a circle and the other in a row. Both men and women dance together singing nonsensical refrains in a responsorial style with a male leader. The *dulë̀* songs and the *bùl* dance songs, which are performed in broken Téribe, require some formal training and currently only a few men can sing them. The mostly tritonic melodies are very simple. Only the *dulë̀* songs, which have practically disappeared, had drum accompaniment. Men also used to sing work songs, from which derives the practice of shouting patterns of two high and low tones during heavy-duty collective work.

(ii) Guatuso Indians. There are approximately 1000 Guatuso in the north. According to A. Constenla Umaña (1993) they group the chanted and recited genres together as *mauláca maráma* which include *porá maráma* (curing and sorcery formulas), *majuáqui urújecá maráma* (spiritual strengthening formulas) and *poréteca maráma* (songs). The curing and sorcery formulas are chanted in a recitative-like style. The spiritual strengthening formulas

are mostly recited with the exception of a single chant; the ritual speech used in them is almost impossible to translate. The *poréteca maráma* comprise the most melodically diverse songs with ranges of three or four to six notes. Within these, *turrúcu lh'írreca maráma* (lovers' songs) are the most common and are used for dancing. These songs are the sole property of the individual composers; no one else can sing them without permission. They can be accompanied by a single-headed drum (up to 70cm tall) which is usually played by the singer to the beat of the dance steps. The interior of the traditional drums is hourglass-shaped; they are made by burning the interior of a cedar trunk from both sides. The wood type and the shape give these drums a very rich timbre. The choreography consists of a row of mixed female and male dancers holding hands and stepping forwards and backwards. A single dancer with or without a drum can also perform his or her song. The topics of these songs are anecdotal in nature, relating amorous adventures and misfortunes, often with explicit sexual content.

Only two exclusively instrumental practices are known among the Guatuso. A free aerophone consisting of a small board attached to a string was used in the past by mostly female diviners as an oracle to consult the goddess Lhafára. Several types of reed whistle are built and used on the occasion of a death, and played by children to inform the dead that they have died; the whistles are then discarded.

(iii) Guaimí Indians. Approximately 5000 Guaimí live in the south of the country. Their musical repertory includes entertainment songs, traditional dances, the *balsería* ritual game and, since the 1960s, songs of the *Mamachí* cult, which is based on Catholic tradition. Entertainment songs (usually pentatonic, with arc-shaped and descending melodic lines) are mostly performed by women. The song texts of traditional dances, in broken Bocotá, are sung with wide vibrato, a practice exclusive to this genre. Most of the melodies are based on only two notes and can be accompanied with rattles.

The *balsería* has been described as a game, but in its more general social function it is actually a ritual contest between dominant social groups. Important rich men challenge each other, each gathering a team; the whole community prepares for a big festivity in which a game consisting of throwing balsa poles to the feet of the opponent is played. Most music performances occur while people are on their way to the contest and during the activities preceding the game. Besides solo songs and duets performed mostly by males, several instruments are played: gourd ocarinas, flutes, whistles, cow horn, rattles and turtle-shells (Velásquez and Brandt, 1979, pp.36–7). The musical structure is very free and sometimes the instruments follow independent melodies. *Balsería* music is not a genre but rather combines several musical genres. It is practically extinct among the Costa Rican Guaimí and is a dying tradition among the Panamanian Guaimí.

The *Mamachí* ('Little Mother') cult was founded in Panama by María Adelia Atencio, who received a message from God and the Virgin Mary to save the Guaimí. There are solo performances by the religious leader and chants in a responsorial style between leader and chorus which recall the Catholic litanies. Some Guaimí songs also have responsorial texture between two voices. The *Mamachí* cult is a strong practice both in Costa Rica and Panama which requires more in-depth study.

(iv) Boruca and Térraba Indians. The Boruca and the Térraba are located in contiguous territories in the south. There are approximately 5000 Boruca and 1200 Térraba. Their languages are fast becoming extinct. The Boruca practise two important annual festivities involving music: the *fiesta de los diablitos* and the *fiesta de los negritos*. Little survives of other musical activities. Only six Boruca songs (mostly cradle songs) and 12 Térraba songs (composed on personal anecdotes and other subjects) are known. Texts of several of these songs, as well as other indigenous song texts, are compiled and analysed in A. Constenla Umaña (1996).

The *fiesta de los diablitos* is usually from 28 December to 2 January but can last longer. As a dramatic representation, ritual game or festival, it recalls the battles between Indians (the devils) and Spaniards (symbolized by a bull) in which the Indians win. Although the whole community participate, only men play as *diablitos*. The *diablitos* run through the town for several days, 'stealing' ready-prepared food and corn beer from the houses. They constantly play reed whistles or plastic recorders and small double-head drums in a random manner. A bull horn or a conch-shell is played only by the *diablo mayor* (major devil). The festivity ends with the symbolic killing of the bull, a person inside a wooden frame covered with cloth and wearing a bull mask.

The *fiesta de los negritos* is performed from 6 to 8 December, coinciding with the Catholic feast of *La Virgen de la Purísma Concepción*. Some men dress in the skins of animals and dance around a man holding a wooden mule head, painting their faces with soot or black shoe polish. Plastic recorders (which have replaced traditional reed whistles in both festivals) are played at random. In both feasts there are performances with non-indigenous instruments such as accordions, guitars and violins accompanying popular dances. The Térraba also had a festivity involving music called the *fiesta de la vaquita* (Cow Feast) performed on 4 October for their patron saint, St Francis, which disappeared during the 1960s.

2. Criollo and mestizo music. Hispanic-derived oral traditions in Costa Rica are based mainly on *romances* (Spanish ballads; ex.1), *coplas* (quatrains), both recited and sung, and *retaílas* (long and fast recited narrations). *Coplas*, *décimas* (ten-line stanzas) and *sestillas* (six-line stanzas) are best preserved in children's songs, in songs from the province of Guanacaste and the Valle Central region and in religious music related to Catholic festivals. The practice of these Hispanic-derived traditions in daily life is fast disappearing, with the exceptions of religious music and children's songs. Some of the *romance* texts for children's songs maintain clear similarities with the Spanish originals, many dating from the Middle Ages. The melodies are strophic, rhythmically simple and diatonic. Some of these children's songs are round dances and choreographed plays. The music group Cantares has a long history of collecting and performing arrangements of Costa Rican *romances* and other musical traditions, collected mainly in the Valle Central area by themselves and by the well-known folklorist Emilia Prieto (1902–86). The composer and performer Lencho Salazar also deserves mention for his long-term commitment to the promotion of folk music from the Valle Central and other areas.

The Spanish guitar is found all over the country in several types of ensembles. The *mandolina* was traditionally used mostly in the south but is still used in *rondalla*

Ex.1 *Romance*, transcription by H. Betancourt and C. Fernández.
Trs: H. Betancourt (1986)

(*tuna*) ensembles and occasionally with guitar ensembles. Keyboard and button accordions are also used to accompany folksongs of Hispanic influence related to daily life, in *rondalla* ensembles and in Catholic religious songs.

The two best-known traditional music styles are the *parrandera* and the *pasillo*. Both show the hemiola rhythmic ambivalence, a Hispanic-African trait found throughout Latin America. Spaniards brought African slaves, but Afro-Caribbean musical influence in Costa Rica has also come from Cuba via Mexico, from countries such as Colombia and Venezuela and from Jamaican immigrants who went to the province of Limón in the 19th century.

Parrandera means music for *parrandas* (parties); it has sometimes been called *punto* and *son*, but is very different from the Cuban forms. The *parrandera* is very fast and joyful, and can be purely instrumental or a dance-song. The musical ensemble varies from marimba (xylophone with resonators), guitars and sometimes a bass drum with cymbals, to small brass wind bands called *cimarronas*. Apart from the fast hemiola rhythm, a *parrandera* can include a slow *danza*-style tempo in 2/4. This combination of *parrandera* with *danza* is sometimes called *contradanza* by trained musicians, but traditional musicians classify this mixture as a *parrandera*.

The *pasillo* is a waltz form, similar to the Colombian genre of the same name. In the central regions a slow, vocal and instrumental interpretation of *pasillo* is the most popular, and akin to the taste of the middle and upper classes, whereas a fast and usually strictly instrumental interpretation of *pasillo* is popular in Guanacaste. In general, folksongs from the central areas have a slow tempo and are mostly in 3/4 metre, accompanied by guitars alone. The *tambito* rhythm, in 6/8 and also with hemiola characteristics, is popular in guitar music from the Valle Central region.

The marimba is particularly associated with Guanacaste. There are both chromatic and diatonic marimbas in Costa Rica; formerly there were also *marimbas de arco* (marimba with a bowed wooden arc). The chromatic *marimba grande* (large marimba), from Guanacaste, with a total of 78 keys, has become a national symbol although diatonic marimbas are the most traditional. The *marimba en escuadra* is an ensemble consisting of one *marimba grande* and one *marimba tenor* with 57 keys. Other marimba ensembles often include guitars, brass wind instruments such as trumpets and saxophones, snare and bass drums and cymbals. The *quijongo*, a musical bow with gourd resonator of African origin, used to accompany dances, is another instrument from Guanacaste; it is no longer played in daily life but is being revived through folkloric promotion.

It is common in music from Guanacaste to recite old or improvised *coplas* (quatrains) in the middle of a song or dance after interjecting '¡bomba!' ('bomb') to ask for a musical break for the recitation; these quatrains are called *bombas*. After the recitation, dancers and spectators shout '¡uyuyui bajura!' The traditional music from Guanacaste and the well-known national hymns and songs derived from it are considered Costa Rica's folk music *par excellence* in both official and popular discourses.

Costa Rican folk dances are clearly inspired by criollo adaptations of Spanish and European rhythms, dances and costumes, some of them including shoe-tapping and choreographic steps similar to those of the fandango, jota of Aragon, *paso doble*, polka, mazurka, minuet and waltz. Other Hispanic-derived rhythms found throughout Costa Rica are the habanera, other types of tango rhythms and boleros. Mexican *mariachi* and guitar trio ensembles playing bolero music with romantic lyrics are a significant presence in Costa Rica's musical scene.

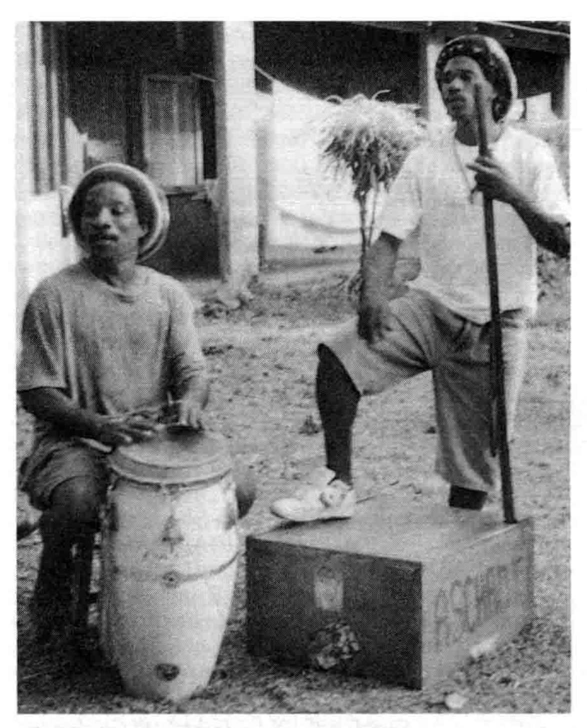
The *turno* (fair) is an important tradition which is still practised throughout the country and provides a context for performances of traditional music. A *turno* is a street fair to raise money for local schools, church or other community development associations. These fairs are held during one or several weekends and are highlighted by funfair-style activities, traditional clown parades called *mascaradas*, horse shows and competitions, fireworks and consumption of traditional food. *Cimarronas* (small wind bands with percussion) always perform on these occasions. *Cimarronas* are traditional music ensembles found throughout the country, usually consisting of trumpets, trombones, saxophones, clarinets, snare and bass drums and cymbals. Sometimes transverse flutes, oboes, violins and accordions are added, depending on availability. This band music is associated with working-class social events; however, people from all classes recognize and enjoy *cimarrona* music as traditional music. The strictly instrumental repertory includes polkas, mazurkas, Spanish jotas and *paso dobles*, marches, valses and the traditional *parrandera* from Guanacaste.

There are also brass bands with percussion sponsored by local government. These usually perform weekly *retretas* (evening concerts) and *recreos* (Sunday morning concerts). Their repertory includes traditional music similar to that of the *cimarronas* but with more military and symphonic music, national hymns, and even music from *zarzuelas* (Spanish operettas).

Popular religious music is fairly widespread with patron saint celebrations involving music throughout the year in almost every town. The Nativity cycle is the most important religious celebration since it brings together several strong Costa Rican traditions in which music performances have a central role. *Posadas* (visits to houses simulating the trip of Mary and Joseph) before Christmas Day and the Nativity prayers after Christmas until February 2 (Purification Day) are practised with deep devotion. The music ensemble consists primarily of voices with guitar accompaniment, sometimes with violins, accordions, tambourines, drums and cymbals. The singing can be monophonic or based on parallel 3rds, with chorus and responsorial textures. *Romances* can also be found in songs of the Nativity cycle. Protestant religious music has been gaining importance since the 1970s.

3. AFRO-CARIBBEAN MUSIC. African slaves were brought to Costa Rica in colonial times, but the current Costa

Rican black population, concentrated in the south-eastern province of Limón, is descended mostly from Jamaican immigrants who came in the 1870s to build the railway from the Valle Central area to the Caribbean Sea. This population is the largest Costa Rican minority group but accounts for only about 2% of the total population. The Limón population also includes criollo and Amerindian peoples, Chinese, South Asians and Italians, making Limón the most culturally diverse province of Costa Rica. With the Afro-Caribbean population came three particular cultural characteristics: African-derived folklore, Protestant religious practices and a creole language based on Jamaican English called Mecatelio, currently in decline. Jamaican English is also spoken.



Protestant church hymns have always been important in the music of Limón, although Catholic church music is also strong. The Baha'i religion, which incorporates English and indigenous languages in its hymns, has also gained some importance. A syncretic religion combining African and Protestant beliefs, known as *pocomía*, was practised at the beginning of the 20th century and involved spirit possession through music.

The *cuadrilla*, a square dance of rural English origin, was formerly danced by Limón middle and upper classes, as well as minuets, waltzes and polkas. Recently the *cuadrilla* has been danced by folklore revival groups.

Carnival music and calypso remain the only traditions with some vitality, with both incorporating modern practices in order to survive. Formerly, calypso served as a means of improvised verbal competition between two singers. The lyrics can have humorous or sexual content, involve insults, political criticism, narrations of everyday life in the coast, and celebration of the Caribbean landscape. Traditionally, the singers accompanied themselves with a banjo which has mostly been replaced by the guitar. A different verbal and musical style of calypso for dancing is still practised. Because of the international diffusion of reggae music and the Rastafarian movement, the Limón calypso has regained importance and several young groups performing calypso have appeared not only in Limón but also in the capital and other parts of the country. For many years, the San José group Cantoamérica has promoted arrangements of calypsos from Limón with lyrics by traditional musicians.

The calypso ensemble can consist of banjo, guitar, güiro or maracas, bongos and conga-type drums as well as the typical one-string box bass from Limón called *quijongo limonense*, *bajo de caja* and *bajo limonense*, which is used not only for calypso but also for other music styles. It consists of a simple wooden box, open at the bottom or at one side. One end of a thick nylon string is attached to the centre of the upper side of the box and the other end to a long stick, which is placed by the player in a corner of the box (see illustration). It is easily portable and its strong, low sound competes well with electronic instruments. This instrument has been incorporated into other types of ensemble in other regions.

Carnival, known in the entire country as *carnaval de Limón*, is celebrated on 12 October. The celebration of carnival started in 1949, inspired by *carnaval de Colón* in Panama. The major event is a parade and competition of *comparsas*, groups of parading dancers and percussion ensembles. These ensembles consist of drums such as the *bombo* (bass drum), snare drums of several sizes, timbales and conga-type drums as well as idiophones such as the

Aschanti calypso band, Cahuita, Limón Province: Alfonso Eoulbourne (conga) and Enrique Kirkland (one-string box bass)

cowbell, güiro, cymbals, rattles, claves and *sheki-sheki* (two joined cans with beads inside). Brass instruments, banjo and guitars are sometimes added. Afro-Caribbean polyrhythmic and syncopated structures are present but are not systematic. Some *comparsas* include children as dancers called (*mascotas*: 'pets'); there are also *comparsas* exclusively of children. Several *turnos* are held throughout the province and the carnival can last from three to five days. Big street concerts are organized and dance clubs are open almost all day long for the numerous visiting Costa Ricans and tourists. Some *comparsas* from Limón also participate in the San José carnival, mostly a parade of floats held during the last days of the year.

4. Popular and urban music. During the first two-thirds of the 20th century, the Costa Rican popular music scene was influenced by bolero, tango, big band music and several Mexican genres as well as visits from Caribbean and South American bands. National bands and composers followed these trends. Current processes of acculturation are reflected in the musical consumption of international rock, rap, jazz and Caribbean genres such as salsa, *merengue*, *cumbia*, reggae, calypso, soca and *punta*. Romantic bolero music is now enjoyed by young people because of its internationally successful revival. Many local bands imitate and create variations based on all these music styles; there are also small ensembles of electroacoustic instrumental music that merge jazz with other rhythms, such as salsa, calypso and tango. Mexican *rancheras*, *corridos*, *norteñas*, *mariachi* music, Colombian *vallenatos* and *cumbias* are highly valued by mostly working-class people. *Mariachi* music is however appreciated by all for special parties and serenades. Spanish *paso dobles* are always included in the dance music of middle- and upper-class parties.

Several popular dance academies have appeared since 1990 and have proved very successful among the middle class; forms such as the cha cha cha, mambo and tango have reappeared in dance clubs. In addition, the middle class have begun to follow the working-class manner of dancing *cumbia* and *bolero pirateado*, the former very fast, with many turns and hops. The *bolero pirateado* is a combination of bolero and cha cha cha steps that is characterized by a very fast tempo and dancers turning quickly on their heels. The studying, teaching and performance of dance is promoted by the members of Centro de Enseñanza e Investigación del Baile Popular: Merecumbé which has schools of popular dance in several provinces. Folk music and dance revival groups of criollo and mestizo music have also appeared since the 1980s, and bands mix arrangements of folk music and song texts with popular dance rhythms such as *cumbia*, salsa and bolero.

The recording of local commercial bands increased substantially in the late 1980s, undertaken by many private studios and major transnational companies. National soundtrack production has also developed, for both local and international documentaries, films and commercials.

Live music performances by local and foreign bands occur on a regular basis in many dance clubs. Large street concerts with well-known international artists are held frequently, as Costa Rica is now recognized as an effective marketing place in Central America. Working-class people attend fairly large dance clubs called *salones de baile* where they dance mostly popular rhythms such as salsa, *cumbia*, *merengue* and *bolero pirateado*, although, because of the influence of popular dance academies, middle-class people also now attend. Young middle-class people prefer small dance clubs called *discotecas* at weekends where electronic music, mostly rock and techno, is played.

There are also local music bands of urban protest music inspired by the South American *nueva canción* and Caribbean *nueva trova* movements and bands of several types of jazz and other popular musics; but these genres are consumed only by young or educated people in selected locales.

BERNAL FLORES ZELLER (I), LAURA CERVANTES GAMBOA(II)

Coste, Gabriel (*fl* 1538–43). French composer. According to Fétis, the 'G. Coste' who composed 16 chansons and two motets for the anthologies of Jacques Moderne was a Gaspard Coste, chorister at Avignon Cathedral in 1530; however, no record of the name has since been traced at Avignon and Fétis was evidently confusing this composer with Gasparo Costa, an organist active in Italy at the end of the century. Furthermore, the index of *Musicque de joye* (Lyons, 1550) lists a ricercare by 'Gabriel Costa' although the usual designation 'G. Coste' figures above the music. The name Coste was fairly common in 16th-century Lyons. His Lyonese connections are also suggested by the fact that he set two heterometric stanzas from Bonaventure des Périers' *Voyage à Notre-Dame de l'Isle*

(*Oeuvres*; Lyons, 1544, p.51) – a challenging task for a composer accustomed to the more regular metre of Clément Marot and his followers. Most of Coste's chansons follow the four-voice courtly model of Claudin de Sermisy; a majority of homophonic phrases alternate with occasional imitative entries. All but two begin with a variant of the 'narrative' rhythmic formula (ex.1).

Ex.1

FRANK DOBBINS

Coste, (Claude Antoine Jean George) Napoléon (*b* Amondans (Doubs), 27 June 1805; *d* Paris, 17 Feb 1883). French guitarist and composer. The son of an officer in the imperial army, Coste, according to tradition, at an early age learnt to play the guitar from his mother. In 1830 he moved to Paris, where his first guitar compositions were published that year. He became a pupil and friend of Fernando Sor – with whom he also appeared in concert – and seems to have been involved in the early-music revival instigated by Fétis. Coste suffered from the general decline in guitar interest in the 1830s and 40s, and although winning second prize in 1856 in a Brussels competition for guitar compositions organized by the Russian nobleman Nikolai Makaroff, for many years he maintained his work as a civil servant. He nevertheless persevered with teaching and composing throughout his life.

Coste composed primarily for guitar. He reissued several of Sor's compositions, including a revised edition (*c*1851) of his guitar method. Coste was also the first to make transcriptions for 'modern' guitar of music for baroque guitar written in tablature: several compositions by Robert de Visée (1686) are included both in the *c*1851 *Méthode* and in his later *Le livre d'or du guitariste* op.52. Coste's writing for guitar was influenced by Sor, but his style shows more Romantic characteristics both harmonically and in formal structure and in the use of descriptive titles and programmatic features. Coste wrote primarily for a guitar with an added seventh string, and is one of the most important guitar composers of the Romantic era.

ERIK STENSTADVOLD

Costeley [Cotelay, Cautelay], **Guillaume** (*b* Fontanges-en-Auvergne, *c*1530; *d* Evreux, 28 Jan 1606). French composer. He was the chief composer of Parisian chansons of his generation, a charter member of Baïf's *académie* and, as composer to the court of Charles IX, a leader of his profession. Besides writing over 100 chansons he experimented with microtonal composition and participated in the development of *musique mesurée*. He was the first composer to attach the term *'air'* to a specific type of work: a strophic chanson in a comparatively homorhythmic texture. He is one of the few identified composers of 16th-century French keyboard music. Between 1554 and 1569 two dozen of his chansons appeared in ten anthologies issued by Du Chemin and Le Roy & Ballard. In 1570 the latter firm collected 100 of his chansons and three motets (all his known works except for three of the earlier chansons and his keyboard fantasy) into an unusually voluminous print: *Musique de Guillaume Costeley, organiste ordinaire et vallet de chambre du treschrestian et tresinvincible Roy de France. Charles IX.*

1. Life. The year of Costeley's birth is usually given as 1531 on the basis of the inscription 'in his 39th year' framing his portrait in the *Musique* of 1570 (see illustration); but since his prefatory letter bears the date 1 January 1570 it seems likely that he was born in 1530. The obviously phonetic spellings 'Cotelay' and 'Cautelay' appearing in some contemporary sources indicate the correct pronunciation of his name. Flimsy theories that his ancestry was Scottish (Choron and Fayolle, 1810) or Irish (Flood, 1921) were demolished by Cauchie, whose own theory, however – that Costeley was born at Pont-Audemer, Normandy – is no more firmly grounded. Cauchie refused to accept the coincidence that Costeley and another prominent composer, Anthoine de Bertrand, could have come from the same village; however, there is no compelling reason to set aside the unambiguous contemporary report (La Croix du Maine, 1584) describing him as a native of Fontanges-en-Auvergne.

Costeley had probably arrived in Paris by 1554, when two of his chansons, *Flambeau du ciel* and *Le clerc d'un advocat*, first appeared in print. Two of the poems he set hint at a possible connection with Arcadelt: *L'an et le mois*, a *response* to Arcadelt's *O le grand bien*; and *Nous voyons que les hommes*, previously set by Arcadelt. Costeley may also have been connected with Jean Maillard: both composed motets on the extremely rare non-liturgical text *Domine salvum fac regem desiderium cordis ejus*, and a comparison of their settings reveals structural parallels too strong to be dismissed as mere coincidence (the text may have served as a test subject for entry into royal service). Towards the end of 1557 Sandrin, *maestro di cappella* to Cardinal Ippolito d'Este,

Guillaume Costeley: engraving from 'Musique de Guillaume Costeley' (Paris, 1570)

stayed briefly in Paris. It seems to have been through him that Paris became aware of the microtonal theories of Nicola Vicentino (who was also in the cardinal's employ). Since this is precisely the time at which, according to Costeley himself, he wrote his only known microtonal composition *Seigneur Dieu ta pitié*, it may be assumed that he was in contact with Sandrin.

The microtonal piece may well have contributed to Costeley's later success in the king's service. The Italianate court, dominated by the Queen Mother, Catherine de' Medici, would have been receptive to the current fashions of Italian humanistic speculation. Adrian Le Roy, musician and publisher, catered for their tastes. By 1559 Le Roy & Ballard had printed *Venez dancer* by Costeley in one of their anthologies, and it must have been Le Roy, a professed hereditary retainer of the family of Catherine de Clermont, later the Countess de Retz, who introduced Costeley to the latter's brilliant intellectual circle and set him on the path towards the royal appointment that he held by 1560.

Costeley's duties evidently included, besides the composition of chansons for the singers of the royal chamber, the musical education of his ten-year-old sovereign; after a decade of service he issued his *Musique* with every sign of royal approval. His prefatory letter reveals him as a man of spirit with a keen interest in microtonal experiment. While his four prefatory sonnets are bread-and-butter verses at best, those contributed by Rémy Belleau, Antoine de Baïf and Jacques Gohory praise him as a fellow poet. (For the prefatory poems and the letter, as well as portraits, see MMRF, iii, xviii and xix, and SSC, viii, trans. in Godt, 34–40.)

Members of the Pléiade were familiar figures at the Countess de Retz's salons. Here Costeley must have met Ronsard, Belleau and Baïf, and become an adherent of the latter's literary doctrines. Baïf's two congratulatory sonnets in the *Musique* hail him as a musician, poet and philosopher cast in the mould of antiquity, raise the banner of the fledgling Académie de Poésie et de Musique and claim him as a charter member:

> May your songs, Costeley, serve as the graceful test
> Of those antique metres which, with you, I am encouraged
> To restore to use for the betterment of our age –
> If I am not forbidden by the power of heaven,
> If Thibaud [de] Courville of delightsome song,
> Who received the great lyre from Apollo, will take part,
> If the learned Claudin [Le Jeune], the glory of our age,
> And other like minds do not begrudge me their aid.

The Académie, to which the king probably belonged, received its royal charter in November 1570. By then Costeley's life had changed markedly. By June he had married Jehanne Blacquetot and settled as a man of substance in the Norman city of Evreux, where he bought a house by the mill-stream. The court now required his attendance only from January to March. He must have been fairly wealthy, because within a year of his arrival he gave a house as a wedding gift to one Phillippe Le Bel and his bride Marguerite Lhermite. The groom's name raises speculation about Costeley's musical connections, since one of Palestrina's teachers at S Maria Maggiore was the composer Firmin Lebel, a native of Noyon, approximately 100 km from Evreux. By 1581 Costeley had acquired the post of 'esleu' (tax assessor) for Evreux; sometime between 1577 and 1588 he retired from service at court. Following the death of his wife sometime before 1592, he married Françoise Dehais, widow of Jehan Le

Mareschal. In 1597 the title *Conseiller du Roy* appears after his name, and he also acquired the title of *sergeant de boys en la garde de Neufville, forest d'Orléans*.

Although he remained active in musical affairs in this semi-retirement, there is no trace of any music by him after the publication of the *Musique* in 1570. In the autumn of that year he played a leading part in the formation of a society sponsoring masses to be sung annually in honour of St Cecilia at Evreux; he became the society's first president and a prominent patron. In 1575, emulating medieval examples, the society instituted a music competition (*puy*) in the saint's honour. From 1575 to at least 1614 silver medallions were awarded for the best motets and chansons (it was stipulated that the chansons must not include any scandalous passages). Prizewinners included Lassus, Du Caurroy, Mauduit and La Hèle.

2. WORKS. Costeley's surviving works (with the possible exception of his keyboard fantasy) date only from the years 1554–69. In the first edition of the *Musique*, which he presumably supervised, he specified the accidentals he wanted with such care that more than 800 of them were deemed unnecessary in the reissue of 1579: they would have been sung anyway by performers observing the rules of *musica ficta*. Consequently his works present few melodic or harmonic ambiguities, and his predilection for unusual harmonic and melodic intervals is clearly expressed in his notation. His contrapuntal style is not 'learned'; rhythmic and tonal imitation are more common than strict imitation, offering clear evidence that he thought harmonically rather than contrapuntally. He often adapted the customary forms of the Parisian chanson with graceful originality. His word-painting can be startlingly vivid (as in the scatological chanson *Grosse garce noire et tendre* and *Pourquoy amour n'a il plus de flambeau*), but he employed it infrequently. His two large battle-pieces in several sections (*Hardis françoys* and *Approche toy*) are really paeans of victory and bear only superficial resemblence to the vivid programmatic techniques of Janequin's *La bataille*.

The opening chanson of the *Musique*, his *Allez mes premieres amours*, judging by the important position assigned to it in such a prestigious publication, may be a setting of Costeley's own poem, perhaps a compliment to his intended bride; it first appeared in 1567, which may have been the year of his first marriage. Costeley's beautiful setting of *Mignonne, allon voir si la roze* evades the poem's strophic regularity, investing the three six-line stanzas with the interlocking structure *ABC ABC DEF DEG ABC HHG-HHG*. *Grosse garce* uses strange harmonies and also demonstrates Costeley's taste for uncommon melodic and harmonic intervals, with its use of the diminished third (E♭–C♯) in a point of imitation. In other pieces Costeley occasionally employed augmented 2nds, 5ths and 6ths, and quite frequently the diminished 4th, which in *Un usurier enterra son avoir*, for example, appears in the opening imitative subject. The microtonal chanson (*Seigneur Dieu ta pitié*), the noëls (*Allon, gay, gay, gay bergeres* and *Sus, debout, gentilz pasteurs*), and the ambitious dialogues (*Arreste un peu* and *O Jupiter*) mingle with more conventional chansons like *La terre les eaux va buvant* – a fine piece, but no match for Lassus's setting. The works in the *Musique*, sub-titled 'Meslange de chansons en façon d'airs', presumably reflect the influence of Baïf's theories; however, only two *airs* (*Il n'est trespas plus glorieux* and *Heureux qui d'un soc laboureur*) hint at the metrical doctrine that ultimately characterized *musique mesurée*.

The only known keyboard work of this 'organiste ordinaire', a 12-bar *Fantasie sus orgue ou espinette* (possibly a fragment), would scarcely deserve notice were it not for the fact that almost no French keyboard music survives from Costeley's lifetime – and most of that is arranged from vocal originals. Yet tentative reconstructions of the fantasy, which is preserved in an incredibly garbled manuscript apparently written by a non-musician, reveal none of the idiosyncrasies of Costeley's style and shed little light on the missing repertory of the many French keyboard players of the period.

WORKS

Editions: *Guillaume Costeley: Musique*, ed. H. Expert, MMRF, iii, xviii, xix (Paris, 1896–1904/*R*) [E1]
La fleur des musiciens de Pierre de Ronsard, ed. H. Expert (Paris, 1923/*R*) [E2]
Quinze chansons françaises du XVIe siècle, ed. M. Cauchie (Paris, 1926) [C]
Anthologie de la chanson parisienne au XVIe siècle, ed. F. Lesure and others (Monaco, 1952) [F]
Guillaume Costeley: Selected Chansons, ed. J. Bernstein, SCC, viii (1989) [B]

All works except *Flambeau du ciel*, *Helas ma soeur m'amye*, *Frere Blaise avec sa bezace* and the organ fantasy were published in *Musique de Guillaume Costeley* (Paris, 1570).

CHANSONS

for 4 voices unless otherwise stated

A ce joly matinet, B; Allez mes premieres amours (?Costeley), E1, iii, 1; Allon, gay, gay, gay bergeres, E1, iii, 65; Allons au vert bocage, E1, xviii, 19; Amour, tu fais de nos coeurs, E1, iii, 71; Approche toy, jeune roy (Prise du Havre), E1, xix, 50; Arreste un peu, mon coeur (P. Desportes), 5vv, ed. in FCVR, iv (1928/*R*); Bien, bien, je vous pardonne, E1, xix, 8; Bouche qui n'as point de semblable, E1, xviii, 23

Catin veut espouser Martin (C. Marot), 5vv, B; Ce beau temps me fait resjouir, E1, iii, 112; Chassons ennuy et toute desplaisance, E1, iii, 27; De quoy me sert mignarde, B; Dessoubz le may pres la fleur esglantine, ed. in FCVR, iv (1928/*R*); Dieu Cupido, ce grand villain, E1, xviii, 37; D'ou vient que ce beau tems, E1, iii, 106; Du clair soleil vient la lumiere au monde, B

Elle craint l'esperon, E1, iii, 127; En ce beau mois, 5vv, F78; Esprit doux de bonne nature, E1, xviii, 13; Flambeau du ciel, ed. in Godt; Frere Blaise avec sa bezace (A and B missing), ed. in Godt; Fy du plaisir qui mille ennuis attire, E1, iii, 23; Grosse garce noire et tendre, B; Guillot, un jour estant deliberé, E1, iii, 46; Hardis françoys (Prise de Calais), E1, xix, 12; Helas ma soeur m'amye (A and B missing), ed. in Godt; Herbes et fleurs qu'on voit renaistre, E1, xviii, 27

J'aime mon Dieu et sa saincte parolle, E1, xix, 1; J'ayme trop mieux souffrir, E1, xviii, 31; Je n'ay plaisir sinon en ta presence, E1, xviii, 58; Je ne veux plus penser (Desportes), B; Je ne veux point à l'amour consentir, E1, xviii, 61; Je plains le tems de ma jeunesse folle, E1, iii, 62; Je sens sur mon ame plouvoir, E1, xviii, 41; Je t'ayme, ma belle, ta danse me plait, E1, xviii, 54; Je veux aymer ardantement (P. de Ronsard), E1, iii, 21; Je voy des glissantes eaux les ruisseaux, E1, xviii, 56

L'an et le mois le jour l'heure, E1, xviii, 34; Las! faut il qu'on m'estime legere, E1, iii, 40; Las! je n'eusse jamais pensé (Ronsard), E1, iii, 38; Las! je n'yray plus, je n'yray pas jouer, E1, xviii, 1; Las! las, las, helas, il n'est homme vivant, B; La terre les eaux va buvant (Ronsard), E1, iii, 23; L'autr'ier priay de danser, E1, xviii, 9; Le clerc d'un advocat trouva, B; Le jeu, le riz, le passetemps, E1, xix, 71; L'ennuy, le dueil, la peine et le martyre, E1, iii, 82; Le plus grand bien qu'on sache, E1, xviii, 48

Mais qui sert la richesse à l'homme, E1, iii, 4; Mercy n'aura qui ne prend à mercy, E1, xviii, 69; Mignonne, allon voir si la roze (Ronsard), E1, iii, 75; Muses, chantez le loz de la princesse, E1, iii, 55; Noblesse gist au coeur du vertueux, E1, iii, 116; O belle Galathée, E1, xix, 23; O combien est heureux, E1, xix, 47; O Jupiter, la paix, la guerre, 5vv, B; O mignonnes de Jupiter, E1, xix, 40

Par ton saint nom (J. Doublet), 5vv, B; Perrette, disoit Jehan, E1, iii, 42; Plus est servy et plus se plaincte (Fr. trans. of Cato's poem), 5vv, B; Pourquoy amour n'a il plus de flambeau, 6vv, B; Prise de Calais, see Hardis françoys; Prise du Havre, see Approche toy, jeune roy; Puis que ce beau mois, E1, iii, 85; Puis que la loy trespure et sainct, E1, xviii, 15; Quand le berger veid la bergere, E1, xviii, 43; Quand l'ennuy facheux vous prend, E1, xix, 45; Quand ma maitresse rid, E1, xviii, 52; Que de passions et douleurs, E1, iii, 124; Que vaut, Catin, ceste fuitte frivolle (Doublet), 5vv, C 48; Qui n'en riroit, E1, xix, 33; Qui voit alors que les ventz du printemps, E1, xviii, 64

Seigneur Dieu ta pitié, ed. in Levy; Si quelque ennuy sur moy s'assemble, E1, iii, 53; S'on pouvoit acquerir ta grace, E1, xix, 38; Sus, debout, gentilz pasteurs, E1, iii, 97; Sy c'est un grief tourment, E1, iii, 90; Sy de beauté vous estiez moins parfaitte, E1, iii, 10

Toutes les nuitz, je ne pense qu'en celle (Marot), E1, xix, 67; Un usurier enterra son avoir, E1, iii, 15; Un usurier surpris de maladie; Venez dancer au son de ma musette, B; Venus est par cent mille noms (Ronsard), E1, xviii, 66; Voyla Colin qui sa mignonne accolle, B

CHANSONS EN FAÇON D'AIRS

all for 4 voices

Adieu, monde, puis qu'en toy, B; Celuy qui dit les astres nous conduire, B; Chantons de Dieu les merveilles, B; Combien roullent ilz d'accidens, B; Comment l'Eternel obscurcy par son ire, B; D'un gosier machelaurier (Ronsard), E2, 38; Helas, que de mal j'endure, F 76; Heureux qui d'un soc laboureur

Il n'est trespas plus glorieux, B; Je ne puis croyre qu'on meure, B; Le celeste flambeau, B; Le souhait du juste, B; Le viaire serain de mon Roy, B; Ma douce fleur, ma Marguerite, B; Nous voyons que les hommes, B; O que je suis troublé!, B; Oyez, oyez, hommes françoys, B; Que de baisers de sa bouche, B; Qu'est-il plus gay, ou plus heureux, B; Voyci la saison plaisante, ed. in FCVR, iv (1928/*R*)

MOTETS

Audite coeli quae loquor, 5vv, ed. in Godt

Domine salvum fac regem desiderium cordis ejus, 4vv, ed. in Godt

Eructavit cor meum verbum bonum, 5vv, ed. in Godt

ORGAN

Fantasie sus orgue ou espinette, *F-Pn* fr.9152 (facs. in *MGG1*), ed. in Godt

IRVING GODT

Costello, Elvis [MacManus, Declan] (*b* Paddington, London, 25 Aug 1954). English singer-songwriter. The son of a singer and bandleader, he grew up in Liverpool and signed to Stiff Records in 1977. Costello's initial association with punk rock made sense as far as his early songs emphasized formal concision and a return to basic rock band instrumentation in sharp contrast to the grandiose presentation and artistic conceits of late 1970s stadium rock. Nevertheless, close inspection of the songs from his first two albums, *My Aim is True* (1977) and *This Year's Model* (1978), which was recorded with his band, the Attractions, reveals a clear basis in the rock and soul music of the mid-1960s and early 70s. After *Armed Forces* (1979; including the hit single 'Oliver's Army') expanded his sound with a greater variety of texture and became his most successful album to date, Costello embarked on the stylistic eclecticism that has characterized his music up to the present time. Although albums such as *Imperial Bedroom* (F-Beat, 1982) and *King of America* (F-Beat, 1986) won critical kudos for increased complexity and increased simplicity respectively, and he had his biggest pop success with the rhythm and blues-styled hit, *Everyday I Write the Book* (F-Beat, 1983), public acceptance of his work has varied enormously. The most surprising turn yet occurred with the release of *The Juliet Letters* (WB, 1993), the result of a collaboration between Costello and the Brodsky Quartet: the five musicians shared the writing of lyrics and music for songs that took the form of (mostly love) letters, with music ranging from pop and rock to Shostakovich-inspired modernism. He has subsequently recorded in both rock, on *Brutal Youth* (WB, 1994), and classical idioms as the vocalist on the recording of John Harle's *Terror and Magnificence* (Argo, 1996).

One of the most eclectic and productive songwriters to emerge in the new wave idiom of the late 1970s, he has remained largely a cult figure despite flirtations with mass popularity. He has embraced styles as diverse as country, soul music, rhythm and blues, jazz ballads, Irish folk music, funk and modern classical music. Despite these fluctuations, a recognizable voice still emerges: lyrics with dense wordplay, inventive, frequently long-breathed melodies and a harmonic vocabulary distilled from 1960s rock are performed with a vocal delivery that is rhythmically precise and conveys an improvisatory spontaneity.

DAVID BRACKETT

Costinescu, Gheorghe (*b* Bucharest, 12 Dec 1934). Romanian composer and conductor, active in the USA. After early piano lessons he studied composition with Jora at the Bucharest Academy (1954–61) then in Paris at the Ecole Normale de Musique, where he studied orchestration with Dutilleux. After working as a pianist at the Union of Romanian Composers (1960–68), Costinescu attended classes in Darmstadt in 1968 and studied with Stockhausen and Pousseur at the Rheinische Musikschule in Cologne. At Juilliard he studied with Berio (1969–71) then taught (1971–2); at Columbia University, New York, he pursued doctoral studies with Chou Wen-Chung (1971–6). Costinescu studied conducting with D.R. Davies (1969–71), Celibidache (1981) and Peress (1988–90); he directed the Bronx SO (1994–5). He became professor of music at Lehman College at CUNY in 1982.

Costinescu's style is a synthesis of modalism in the Romanian tradition with elements of post-serialism. His best-known work is the music theatre piece *The Musical*

Seminar (1971), winner of the ISCM National Composers Competition in 1986. In his *Treatise on Musical Phonology* (1968) he establishes a hierarchy of vocal sounds according to phonetic criteria, which he has applied in his compositions in his use of extended vocal techniques. Further information on Costinescu is given in V. Cosma: *Muzicieni români* (Bucharest, 1970).

OCTAVIAN COSMA

Cosway [née Hadfield], **Maria (Louisa Caterina Cecilia)** (*b* Florence, 1759/60; *d* Lodi, 5 Jan 1838). English musician and painter, mainly active in Italy. Her parents managed several inns in Florence for the English on the Grand Tour. She was elected to the Florentine Accademia del Disegno at the age of 18. In 1779 she moved to London where in 1781 she married the painter Richard Cosway (1742–1821). In the 1780s she hosted fashionable 'Great Concerts' at her London home, where the performers included the Linleys, Rubinelli, Tenducci, Marchesi, Francesco Bartolozzi, Johann Baptist Dantzi and Julie Krumpholtz. Cosway sang and played the harp and harpsichord; Peter Pindar wrote that 'in music her compositions are tender, elegant, and persuasive'. In 1790 Cosway returned to Italy where she founded the Collegio delle Dame Inglesi in Lodi. In 1834 she was made a baroness by Franz I, Emperor of Austria.

Her known works consist of *Songs and Duets* (London, *c*1786) and *Deux sonates pour le clavecin, avec un violin* (London, *c*1787). The songs, two for soprano solo and two soprano duets with harp and continuo, are set to Italian texts written by Cosway herself. The Fondazione Cosway, Lodi, holds many of Cosway's writings including music manuscripts believed to be autograph but which are unattributable.

NANCY JOYCE COOPER, JAN WALTERS

Cosyn [Cosens, Cousins, Cowsins], **Benjamin** (*b c*1580; bur. London, 14 Sept 1653). English organist and composer. He was organist of St Laurence, Ludlow, from 1621 to 1622, of Dulwich College from 1622 to 1624, and of Charterhouse from 1626 to 1643. He was discharged from this last post in 1643, 'the organs being prohibited', but was awarded an annual pension on 15 August 1644. Cosyn's marriage to Margett Rowley is recorded on 16 December 1603 at St Julian, Shrewsbury, suggesting possible origins in Shropshire. From at least 1641 he lived in Aldersgate and was buried in St Botolph Aldersgate.

Cosyn's reputation rests primarily on his role as a collector and scribe of contemporary keyboard music in two important manuscripts. The earlier source, now referred to as the 'Cosyn Virginal Book' (*GB-Lbl* R.M.23.L.4) has an autograph index dated 1620. Here, Cosyn compiled not only the majority of his own works (preserved here uniquely) but also music by Tallis, Byrd, Bull and Orlando Gibbons, the latter represented by the greatest number of keyboard works contained in any one source. A separate collection of vocal music 'for the kings Royall chappell' is appended to the end of the manuscript and contains four-part services by Bevin, Byrd, Gibbons and Weelkes in addition to a *Venite* by Cosyn. The later source (*F-Pc* Rés.1185) has an autograph index dated 1652. In this manuscript, Cosyn inserted an early print of *Parthenia* before a manuscript collection of keyboard music mostly by Bull (which might be in Bull's hand), adding 35 pieces by contemporary composers and 15 of his own. In addition to these two sources, Cosyn's hand can also be found in manuscripts that belonged to the London musician and collector Thomas Myriell.

Cosyn's 1620 collection contains preludes, plainchant settings, grounds, pavans and galliards, and variations on popular tunes. Here the main influence is that of Bull although Cosyn also adapted what is probably ensemble music by Simon Ives, Thomas Lupo and Orlando Gibbons. Nearly all the strains of dances and songs include decorated repeats although Cosyn's figuration tends to lack imagination. At its best, his music for virginals, such as *What you will* and *My self*, succeeds in gracing the charm of the original tune with brilliant and challenging passage-work. Cosyn uses ornamentation prolifically but often without discrimination. In copying the works of others he freely adds single, double and triple strokes, providing valuable clues to contemporary performing practice, even if the precise interpretation of these marks remains unclear. His music in the 1652 source embraces the new fashions in dance music and provides striking evidence of a keyboard 'suite' of movements in the same key composed well before the restoration.

Seven pieces, apparently voluntaries for organ, which are signed 'B.C.' in *GB-Och* 113, can be ascribed to Cosyn although there are no other examples of pieces by him in this genre. The style of the strict contrapuntal writing is grave; well-wrought points of imitation sometimes give way to brief sequences of figuration reminiscent of Cosyn's style.

JOHN CALDWELL/ORHAN MEMED

Cosyn [Cosen, Cosens, Cosin], **John** (bur. Camberwell, 5 Feb 1608/9). English composer and musician, probably father of Benjamin Cosyn. Thomas Whythorne included him in his list of famous musicians of his time, and he also appears in Anthony Wood's notes on composers (*GB-Ob* Wood D 19[4]). In 1569 he was living in St Martin Vintry in the City of London (see Usher). He was probably the musician referred to as 'one Cosen' in the household accounts of Sir Thomas Kytson of Hengrave Hall, Suffolk, between April and June 1575 as a teacher of the virginals. He can also probably be identified with the John Cosens, a musician of Peckham, Kent (now in London), mentioned on 12 June 1605 in the court minutes of Christ's Hospital (*GB-Lgc* 12,806, f.83*v*). He published *Musike of Six, and Five Partes: Made upon the Common Tunes used in Singing of the Psalmes* (London, 1585), dedicating it to Sir Francis Walsingham, principal secretary to Queen Elizabeth I; in the preface he explained how he had been encouraged by friends to publish these psalm settings 'for the private use and comfort of the godly'. The partbooks, which are incomplete in all their sources, include decorative initials and borders (the latter depicting musical scenes) and other printer's devices. The volume consists of 57 settings (not 60 as is usually stated) and is divided into two sections, each with its own title-page and table of contents. The first consists of 43 six-part homophonic settings, with all voices underlaid, the second of 14 five-part contrapuntal settings, in a style closely akin to that of the Scottish metrical psalm 'with reports' (points of imitation), with words provided only for the highest voice. They were easily the most extended settings of their kind so far published. A galliard in the Cosyn Virginal Book (f.7*v*ff) is attributed to 'Joh. Cosyn', but Benjamin Cosyn's name appears at the end of the piece. In view of the many wrongly attributed pieces in the book, John Cosyn's authorship is doubtful.

SUSI JEANS/R

Cosyn Virginal Book [Ben Cosyn's Virginal Book] (*GB-Lbl* R.M.23.L.4). *See* SOURCES OF KEYBOARD MUSIC TO 1660, §2(vi).

Cotapos (Baeza), Acario (*b* Valdivia, 30 April 1889; *d* Santiago, 22 Nov 1969). Chilean composer. Self-taught in composition, he lived for a while in Buenos Aires and then settled in New York (1916–25), where he was an associate of Varèse, Alfredo Casella and Carl Engel. He was among the founders of the International Composers' Guild, under whose auspices his *Philippe l'arabe* was introduced in 1922. Thereafter he lived in France (1925–34) and Spain (1934–8), working on the ambitious *Voces de gesta*, a lyric tragedy based on Valle Inclán's poems. There is no evidence that the piece was completed, though parts were performed in Paris (1932) and Madrid (1935) and scenes performed in Chile in 1942 and 1944. Cotapos returned to Chile in 1938, and there he concentrated on finishing the opera *El pájaro burlón*. He made short trips to Buenos Aires and to Europe (1947–8, 1957–8), where he attended performances of his works in Paris, Strasbourg and Copenhagen. In 1960 he received the Chilean National Arts Prize. His music is highly coloured and imaginative, as dramatic and intense as it is formless and complex, and usually very dense in harmony and orchestration.

WORKS

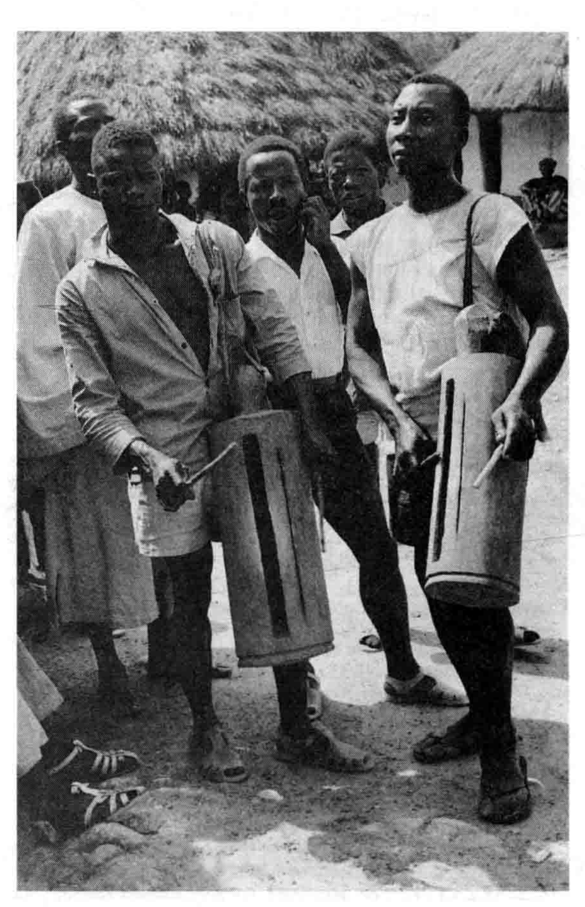
JUAN A. ORREGO-SALAS

Côte d'Ivoire, République de la [Republic of the Ivory Coast]. Country in West Africa. The modern state, covering an area of 320,783 km² and with a population of 15·14 million (2000 estimate), comprises about 60 different peoples whose diversity of culture and language is reflected in their music. The music of the peoples belonging to the four large linguistic groups recognized in Côte d'Ivoire is discussed here: the Dan of the Mande group, the Wè (Guere or Gere) of the Kru group, the Baoulé (Baule) of the Akan group and the Sénoufo (Senufo) of the Volta group (fig.1). The Dan inhabit the edge of the savanna and the forest in the west of Côte d'Ivoire and in the hinterland of Liberia; in the north-west they border on Guinea. The Wè, who live entirely in the forest, are also established partly in Côte d'Ivoire and partly in Liberia. The Baoulé live in the V-shaped wedge of savanna that cuts into the centre of Côte d'Ivoire, but originally came from forest areas in present-day Ghana. The Sénoufo live in the savanna in the north of Côte d'Ivoire, and in Burkina Faso and Mali.

1. Map of Côte d'Ivoire showing the distribution of four major peoples

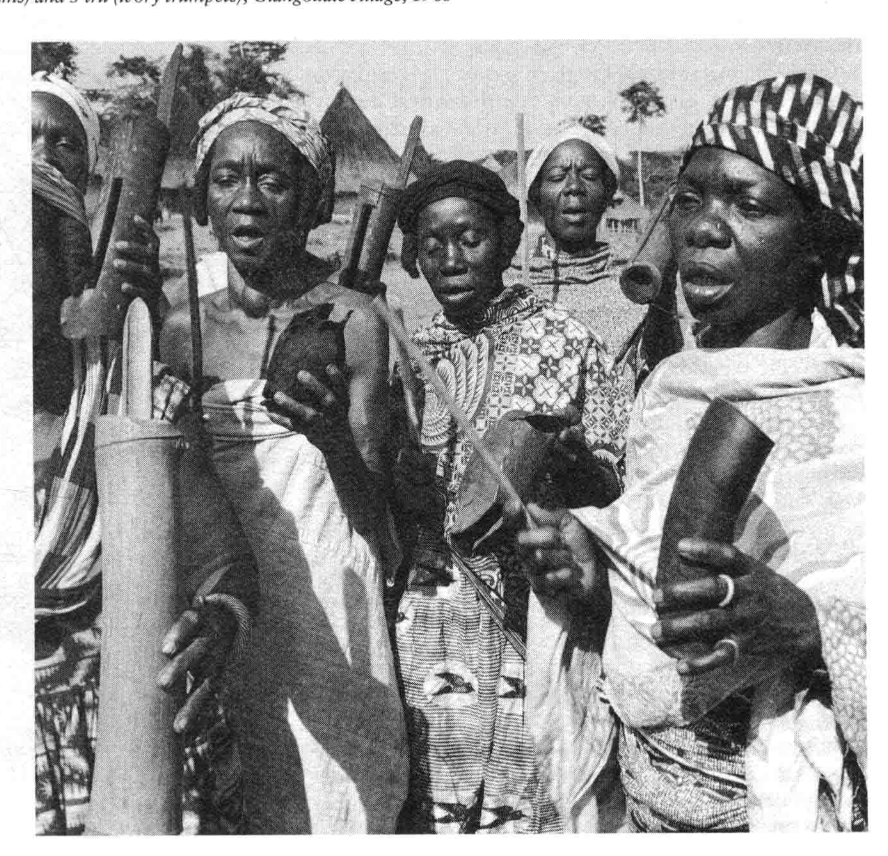
1. The Dan. 2. The Wè. 3. The Baoulé. 4. The Sénoufo.



1. The Dan. The Dan do not have a single term for music in the Western sense, but have terms for three genres: *tã* (*tan*) designates dance-song, instrumental music and dance itself; *zlöö* refers to praise-song; and *gbo* ('weeping') designates funeral laments. These three genres are of varying importance. The *tã* shows the greatest variety of song types and instruments and is played most frequently, being used for many occasions, while the *gbo* genre is limited to a single type of song and to a single occasion.

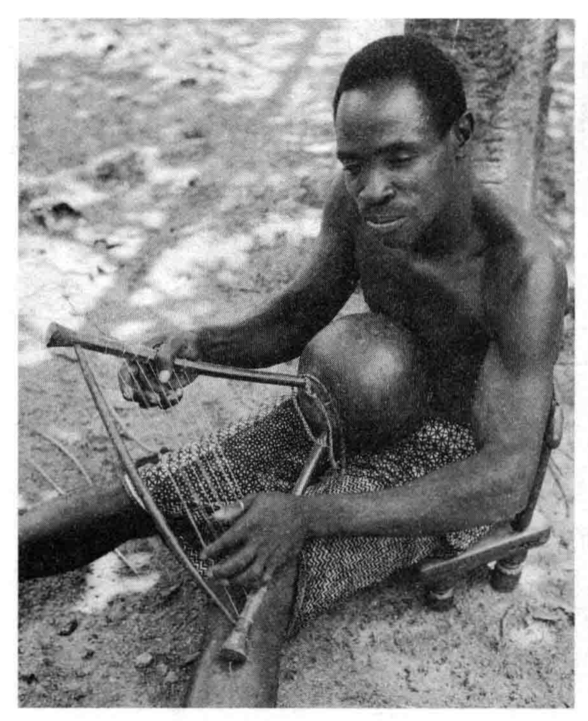
For the Dan, music is not only a human concern: myths attribute the origins of musical instruments to animals or to bush spirits. The Dan believe that spirits are particularly fond of music and that they help musicians to play with vigour. Hunters believe that music gives them power over the guardian spirits of animals, and thus use music to assure themselves of good hunting. Masks, which are personifications of bush spirits, are often expressed through music. They are known as 'dressed' if a man wears a face mask and costume and sings in an unnatural voice, either very high-pitched or guttural. Masks known as 'naked' exist only through their voice: a man, though not in disguise, becomes a 'mask', with all the supernatural power that this implies, by borrowing the characteristic voice of a mask or playing the instrument that is dedicated to it. Music, apart from being a source of pleasure, can give strength, especially for tiring or dangerous activities such as work in the fields, the building of a house, wrestling, hunting or warfare.

Most musicians are attached to a person or to an association. A chief has an ensemble of drums and trumpets (fig.3), which plays at his public appearances and accompanies him on his travels. Other instrumentalists and singers may be attached to his court, and these may include professional musicians foreign to Dan culture such as Malinké musicians. Singers encouraged the warriors before their departure to war, and during the fighting itself, and glorified them on their return after a victory. In the south of the Dan region, singers are attached to great hunters and perform before and after a chase and on the death of the hunter. In the north, the hunters themselves are musicians and sing while accompanying themselves on the harp-lute (or bridge harp; *see* Kora, §2), which they borrowed from their northern neighbours, the Malinké (*see* Guinea). Singers and drummers for work associations give the workers the strength to fell trees, to clear a new field of bush, to till and to harvest rice.



Secret societies have their own musicians who perform for the initiation of a new member or during certain public meetings of the society (fig.4). The musicians of recreational associations that bring together young men and girls perform at their dances. The wrestlers in the west of the Dan region have singers who urge them on before a fight.

While most of the Dan know how to sing in chorus, solo singing and instrumental playing are specialized activities. The musician is greatly admired, and his fame may be far-reaching. There used to be a number of professional musicians who were either attached to a person or association, or who travelled from village to village, but now there is only a limited number of professional drummers who are young members of a work association. Professional and non-professional



2. Gone (slit-drums) of the Dan, played for mask races, 1965

3. Dan chief's ensemble of 4 baa (drums) and 5 tru (ivory trumpets), Glangoualé village, 1965

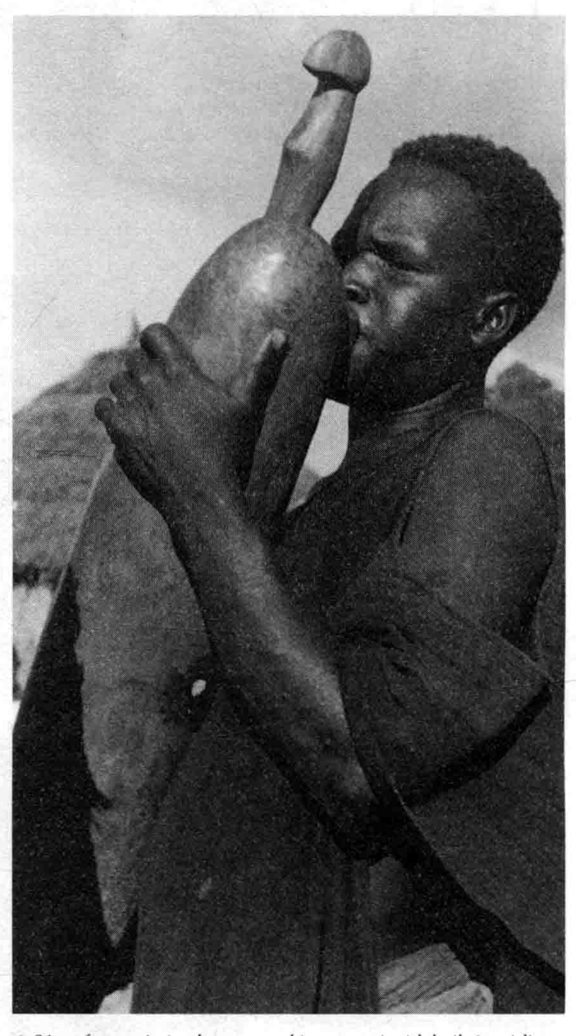
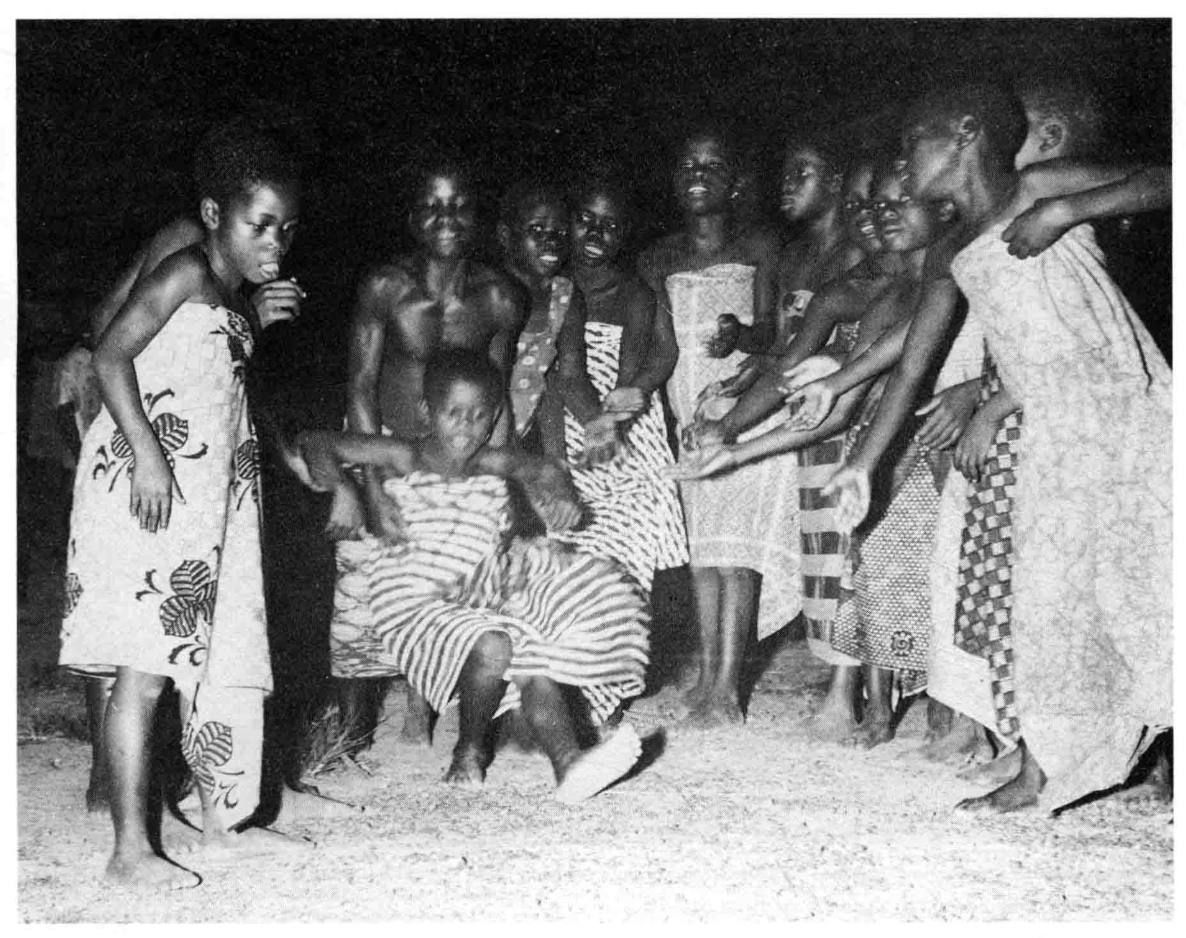
5. Do (forked harp) of the Wè played by Gaston Goulia, Kpandy village, 1965



musicians are paid for their activities. Anyone, apart from chiefs, may become a musician, but it is most frequently the children of musicians who choose to become musicians themselves.

Of the important stages in the life-cycle, it is initiation at puberty that, above all, gives rise to musical display. At the end of a period of reclusion in the sacred forest, which in the past lasted for several months, circumcised boys and girls dance separately in the villages. The period in the forest is the occasion for education, including musical training.



Apprenticeship in a musical instrument generally begins before the age of puberty. Deaths are not marked by great musical display, except at funerals of chiefs or musicians. With the exception of women's funeral laments, there is no specific repertory of funeral music, so music usually performed at other social occasions is played instead.

The Dan are familiar with about 30 musical instruments. The most frequently used idiophone is the gourd-rattle with external rattling objects. The Dan use only bells with an internal clapper. Of the two types of slit-drum used, the first has a single broad slit through which the instrument is hollowed and one or two narrow slits (see fig.2 above) and is always played in pairs. The second, hollowed through a hole at either end, has several slits, and is played solo. The skin drum generally played for dances is in the shape of a mortar and has a laced skin; virtuoso performers play sets of these drums of different sizes, striking them with their hands. Large cylindrical drums up to 2 metres high and with a skin fixed by means of pegs are used in the west of the Dan country. In order to strike the skin with two sticks, the drummer either stands on a platform or props the instrument at an angle on two stakes. Three chordophones are associated with hunting: the musical bow, the harp-lute (with gourd-resonator) and the ground-bow, the soundbox of which consists of a hole dug in the ground and covered with banana leaves. The most important aerophone is the side-blown trumpet made of ivory and played in hocket in sets of five to seven instruments accompanied by drums. Other instruments that are not classed by the Dan as musical instruments but as masks, since they express the voices of masks, are the mirliton, the bullroarer, the stone whistle, the whirling whistle, which imitates the twittering of birds, and the friction ground-drum the sound of which resembles the roaring of the panther.

Dan music is mainly pentatonic, although heptatonic songs do exist, especially among the solo *zlöö* (praise-songs). Most of the *tã* songs are polyphonic: the solo singer is usually partnered by a second voice a 4th lower, and a chorus often joins the two soloists in a responsorial form. In larger vocal groups two pairs of soloists, each pair singing in parallel 4ths, alternate with the chorus. The ideal of the dance-song is to maintain a continuous

6. Sénoufo tuma'a (anthropomorphic trumpet) with built-in mirliton, Fodonnitionkaha village, 1965

7. Baoulé girls' singing game, in which one girl after another rhythmically lets herself fall into the arms of her companions, Kanoukro village, 1965

flow of sound, so the chorus begins its response before the soloists have finished their phrase, and individuals often fill in the song further with meaningless syllables. The songs in this genre are sung in a restrained voice, unlike praise-songs, which the singer has to shout. The texts and melodies of dance-songs are relatively fixed, while in praise-songs the singer improvises the words and matches them to a melody, since there is a distinct correlation between the tones of the language and the melody of the song. In those songs in which improvisation plays an important part, the second singer follows a little behind the first, generally finding the text and the melodic formula at the end of the line.

2. The Wè. The Wè are the southern neighbours of the Dan; their language belongs to a different linguistic group, although the two societies are culturally very close. The functions of their music are similar and the instruments are of the same type. The Wè, however, use an instrument unknown to the Dan, the *do* or forked harp (fig.5), and they have an elaborate drum language, which is used, for instance, to summon people or to give out the praise-names of chiefs and great warriors. The greatest musical difference between these two peoples probably concerns tonal systems. In addition to the pentatonic scale, the Wè use chromatic intervals in both vocal and instrumental music. Intervals played on some Wè xylophones and a forked harp measure between 75 and 160 cents. Certain songs are purely pentatonic, others are characterized by a systematic use of chromaticism, and still others consist of pentatonic passages alternating with chromatic passages. 4ths and 3rds do occur in two-part polyphony, but Wè people seem to have a marked preference for an interval that is often close to a 2nd (200 cents) and often somewhat larger (230–60 cents), giving the polyphony its special colour.

3. The Baoulé. Unlike the Dan and the Wè, the Baoulé are politically organized in a single system with village chiefs, provincial chiefs and a supreme head, the king or queen. All the important chiefs have court musicians, especially drum ensembles. The drums to which the greatest prestige is attached are the paired ones known as *atungblan* (called *atumpan* by other Akan peoples). The *atungblan* are the principal talking drums played by the chief's master drummer. On certain days fixed by the chief, the drummer calls to the ancestors by means of rhythmic formulae and asks them to protect the community. The *atungblan*, like other less important talking drums, are also used to summon people to meetings. On the occasion of public appearances by the chief, they are used to drum proverbs. These proverbs may additionally be beaten with sticks on iron bells of different sizes.

8. Sénoufo ensemble of xylophone, drum and harp-lute accompanying work in the fields, Kolia village, 1965

Besides various drums and bells, the Baoulé use a large number of other instruments. In the Béoumi region in the north-west of the Baoulé country, about 50 types of instrument have been listed, and the inventory is probably not complete. The melodic instruments, such as the lamellophone, the xylophone (with keys laid over the stems of two banana plants), the forked harp and the harp-lute, are generally tuned to a heptatonic scale. The musicians, whether playing purely instrumental music or accompanying singing, usually play in parallel 3rds. This is one of the most prominent characteristics of instrumental and vocal polyphony among the Baoulé and is also prominent in the music of other Akan peoples, as well as those who speak languages belonging to the Lagoon group. As soon as two people sing together, whether men, women or children (fig.7), they sing in two parts in 3rds. In larger vocal ensembles, two soloists generally alternate with the chorus.

4. THE SÉNOUFO. The Sénoufo people include several subgroups that are distinguishable culturally and linguistically. These subgroups have many musical instruments in common, but distinguish themselves by particular social functions and instrumentaria used in ensemble performance. For instance, while the collective playing of three two-string bow harps has been recorded among the Kassembele subgroup, an ensemble of one harp, one xylophone and one drum encourages collective hoeing in the fields among the Tiembara subgroup of the Kouto area, and up to 20 single-string harps still accompany singing for different circumstances, including funerals among the Fodonon subgroup. Like other peoples of the Sudanese savanna, the Sénoufo recognize castes of craftsmen, among them blacksmiths, brassfounders, leather workers and wood-carvers. But unlike many other peoples of this region, and especially their western neighbours the Malinké, the Sénoufo do not have a caste of musicians.

The initiation society, the Poro, is of the greatest importance to Sénoufo musical life. All Sénoufo men must belong to the Poro, and in certain Sénoufo tribes the women have their own secret society. The various activities of the Poro are accompanied by music, in particular the coming-out of a group of initiates and the funeral of a member of the society. The musical instruments of the women's initiation society are, depending on the region, the handstruck four-footed drum, or the water-drum, formed from a half-calabash filled with water in which an upturned calabash floats, which is struck with a spoon-shaped half-gourd. The principal instruments of the men's Poro are double-headed barrel drums, single-headed long and narrow cylindrical drums, large anthropomorphic trumpets with built-in mirlitons (fig.6) and small mirlitons held in front of the mouth.

At funerals, male musicians equipped with these sacred instruments, and accompanied by other men playing iron scrapers and gourd-rattles with external rattling objects, move round the body wrapped in many shrouds. Other instrumental groups, such as ensembles of trumpets or

whistles belonging to chiefs, may play at funerals but must be silent when the instruments of the Poro are sounded. Ensembles composed of three or four xylophones with gourd-resonators and of three kettledrums play during the interment of the corpse. During the funeral of an important person, several ensembles may play simultaneously, but each independently of the others.

Other activities are accompanied by music, for example collective work in the fields. Once more, it is often the young initiates of the Poro who work together at hoeing, although the musical instruments used – drums, harp, trumpet or xylophone – are not among the sacred instruments of the Poro (fig.8).

Sénoufo music is characterized by the use of the pentatonic scale, complex instrumental polyphony (particularly in the music of the xylophone ensembles) and by monodic vocal music. The singing voice is frequently high-pitched and tense.

Cotelay, Guillaume. *See* COSTELEY, GUILLAUME.

Cotes, Ambrosio (*b* Villena, *c*1550; *d* Seville, 8/9 Sept 1603). Spanish composer. He studied music in Villena; by 1573 he was cleric at the church of Santiago there and *maestro de capilla* from 1576 at the latest. In 1581 he became *maestro de capilla* of the Capilla Real in Granada Cathedral. In 1596 he moved to the equivalent post at Valencia Cathedral and in 1600 he made his final move to Seville Cathedral. While at Valencia, Cotes expressed a wish to retire on grounds of chronic ill-health, offering part of his salary towards the cost of a replacement. At Seville he did manage to retire, on 25 February 1603, and his salary was reduced by half. In his *Auto del Hijo Pródigo*, the poet Lope de Vega named Cotes, along with Riscos and Lobo, as the three greatest composers in Spain.

WORKS

Edition: J.M. Soler García: *El polifonista villenense Ambrosio Cotes (1550–1603)* (Alicante, 1979) [incl. all works and bibliography]

Masses: Misa de plagis, *E-VAc*; Misa para las dominicas de adviento y cuaresma

Motets: Beatus Laurentius orabat dicens; Benedico te, pater; Domine Iesu Christe; Ibant apostoli gaudentes; Maria, mater gratiae; Mortuus est Philippus rex; Non in solo pane vivit homo; O lux, beata trinitas; Popule meus; Prudentes virgines; Sacerdos et pontifex; Semen cecidit in terram bonam; Senex puerum portabat; Si in digito Dei ejicio daemonia; Tulerunt lapides iudei; Veni, sponsa Christi; Vidi angelum; Visionem quam vidistis

Hymn: O lux et decus Hispaniae

Other works: Lamentations (Aleph: quomodo sedet sola; Heth: cogitavit Dominus); Parce mihi, Domine

Doubtful works: Angelis suis Deus mandavit de te; Ecce nunc tempus acceptabile; Filiae Ierusalem; O mulier, magna est fides tua; Recordare, Domine; Transeunte Domino; 4 inst pieces

JOSÉ LÓPEZ-CALO

Cöthen [Köthen]. Town in Saxony-Anhalt, Germany. In the 10th century it was a Slav settlement known as Kothene, and in the 12th century it was granted a town charter and became an important trading centre. The moated castle built at that time (rebuilt after 1598) included a park, an orangery and a chapel, and was occupied by the princes until the line died out in the 19th century. The Gothic Jakobikirche, Lateinschule and humanist Gymnasium were the main centres of the town's culture, and there is evidence of house musicians, tower musicians and Stadtpfeifer at an early date. In 1602 the organist Balthasar Sturm was described as Konzertmeister, and in the 17th century performances were given by outstanding guest musicians. Mattheson (*Grundlage einer Ehren-Pforte*, 1740) recorded that a Valentin Haussmann (one of several musicians of that name) appeared before Friedrich III, Elector of Brandenburg, in 1688, and 'was heard in duets on the harpsichord; whereby he attained such fame that the Prince of Anhalt-Cöthen engaged him as director of music, and took his son . . . as court musician'. He also said that Haussmann alternated with his father on 'days of princely celebration or mourning [in Harzgerode, Bernburg etc.] now singing, now playing the harpsichord, now playing on another instrument'. Although the house of Anhalt-Cöthen was Calvinist it nevertheless encouraged both secular and sacred music, and was in close contact with contemporary musical developments.

In the 18th century theatrical performances were given, in the orangery when necessary, with the help of town and school musicians, while a permanent Hofkapelle also developed under Prince Leopold of Anhalt-Cöthen (1694–1729), who was a competent singer and instrumentalist and a composition pupil of J.D. Heinichen. In 1714 Leopold appointed A.R. Stricker as Kapellmeister. By 1716 he had 18 musicians in his service, and in 1717 appointed Bach to succeed Stricker, who had resigned. Bach remained until 1723, and was apparently held in high esteem by the prince, his salary being double his predecessor's; during this time he composed mainly chamber music and keyboard music, including the Brandenburg Concertos and the first part of *Das wohltemperirte Clavier*. The high standard of the Hofkapelle is indicated by the distinguished performers connected with it: C.F. Abel (for whom Bach probably wrote his viola da gamba sonatas), E.G. Baron, Gottfried Kirchhoff, J.H. Rolle and the soprano Anna Magdalena Wülken, whom Bach married in 1721. Instrument makers included Carl Schmidt, Zuberbier and Johann Müller, while Bach constructed his 'Lautenklavier' in Cöthen, probably in collaboration with Baron. Bach's works were apparently still performed after his departure for Leipzig; he returned to Cöthen to conduct his *Klagt, Kinder, klagt es aller Welt* (BWV244a) for Leopold's funeral in 1729. The Hofkapelle declined and was disbanded in 1754.

In the 19th century Cöthen was active in the establishment of the Bachverein movement and in the performance of Handel's oratorios. The Bach tradition is maintained by the Bach festival and the Bach competition for young pianists, both biennial. In the castle, where there is a monument and a museum to Bach, music of the period is performed in the Mirror Room and the restored chapel, where there is a small organ of 1754. In 1994 a Leopold-Fest celebrated the 300th anniversary of the prince's birth. The *Cöthener Bach-Hefte* reports on Bach research in the region. In the town are the evangelical Bach-Chor Cöthen, the Musikschule Johann Sebastian Bach and the Cantores chamber choir. In the Jacobikirche, where choral concerts are given, there is a fine organ of 1872 built by Friedrich Ladegast.

Cotillion [cotillon; Fr.: 'under-petticoat']. Social dance of 18th-century French origin, popular in Europe and America throughout the 19th century. Its name was derived from the words of one of the earliest tunes to which it was danced ('Ma commère, quand je danse/Mon cotillon va-t-il bien?'); the anglicized name of the dance later became the most common form. It was danced in squares, like the quadrille and country dances, involving geometric patterns and figures, and the tempo was similar to that of the QUADRILLE, a dance often described as a 'cotillion' in the mid-19th century. It was structured in the two alternating parts of the 'change' (the same for all cotillions) and the 'figure' (unique to a particular cotillion). The cotillion of the mid-19th century, which often closed a ball, was more of a novelty item, in which the steps were determined by the leading couple and followed by others. The music was generally arranged from existing tunes in 2/4 or 6/8, drawing on jigs and reels in the 18th and early 19th centuries then, from around 1820 onwards, on opera tunes like those from Auber's *Fra Diavolo* and Bellini's *La sonnambula*.

PAULINE NORTON

Cotomaccio, Carlo. *See* COTUMACCI, CARLO.

Cotrubas, Ileana (*b* Galaţi, 9 June 1939). Romanian soprano. She studied in Bucharest and made her début there in 1964 as Yniold. After further study in Vienna, she sang with the Frankfurt Opera (1968–71). She first sang at Salzburg in 1967 as the Second Boy (*Die Zauberflöte*), returning for Bastienne, Konstanze and Pamina. She made her Glyndebourne début in 1969 as Mélisande, later singing Calisto, Susanna and Titania. In Vienna she sang Zerlina, Sophie and Nedda. At Covent Garden, where she first appeared in 1971, her roles included Tatyana, Violetta, Adina, Norina, Amina and Antonia, and she sang Manon at the Paris Opéra in 1974. She sang Mimì at La Scala in 1975 as well as for her 1977

'The Cotillion Dance': engraving by James Caldwell after John Collet, 1771

début at the Metropolitan, where she subsequently sang Gilda, Micaëla and Ilia. Taking on heavier roles, she sang Elisabeth de Valois at Florence, Marguerite at Hamburg (1985), Amelia (*Simon Boccanegra*) at Naples, Magda (*La rondine*) in Chicago (1986), Alice Ford at Monte Carlo (1987) and Desdemona at Barcelona (1988). She retired in 1989. Her sweet-toned, agile voice and gentle personality conveyed vulnerability and pathos to great dramatic effect, as can be heard in her recordings of Mozart and Violetta with Carlos Kleiber and Gilda with Giulini.

ALAN BLYTH

Cottage organ. A term applied to various types of REED ORGAN, especially those of the late 18th century intended for domestic use. They were often decorated with such ornamental accessories as lampstands and mirrors.

Cottage piano. A generic term for a small upright piano. *See* PIANINO.

Cotter, Hans. *See* KOTTER, HANS.

Cotterell [?Robert] (*b* ? *c*1465; *d* ? before 1537). English composer. A fragmentary bass part of his Mass *O quam glorifica* survives in *GB-Cu* H*5.39; a fragmentary bass part of his motet *O rex gloriose* is in *GB-Ob* Ashmole 1527. He may be identifiable with the Robert Cotterell who left Eton in 1483 and was then a scholar at King's College, Cambridge, until 1490. In 1503 he sang for Margaret Beaufort, mother of Henry VII, and by 1505 he was *Informator choristarum* at Fotheringhay, where he remained until the 1530s.

Cotto [Cottonius], **Johannes** [Cotton, John]. *See* JOHANNES COTTO.

Cotton, Billy [William] (*b* London, 6 May 1899; *d* Wembley, 25 March 1969). English bandleader, drummer and entrepreneur. His father was a bandmaster and he was a chorister at St Margaret's, Westminster, before joining the 2nd Battalion, City of London Regiment as a drummer boy. Cotton was later commissioned into the Royal Flying Corps. From 1922 he worked in dance bands in London and Brighton and co-led the San Prado Band at the 1924 Wembley British Empire Exhibition. He made his first broadcast the same year. He formed his own London Savannah band, playing first in Brighton and later in Southport (from 1925), and by acquiring music for US dances from liners docking in Liverpool, he helped introduce such music to Britain, including the *Black Bottom*. The band with which he played at the Astoria Hotel, London (1927), contained a nucleus of

musicians (most notably the pianist Clem Bernard) who stayed with him for many of his subsequent performances, at Ciro's club in London and Paris (1930), the Alhambra Club, Leicester Square (1931, when he adopted *Somebody stole my gal* as a signature tune), on tour (from the late 1930s) and for radio and television.

In 1928 he became musical director for dance halls of the General Theatre Corporation, and in 1931 forsook the drums to concentrate on conducting and directing. During the 1930s he pioneered Blue Star Flying Visits, in which his band appeared across Britain in Mecca dance halls, and in World War II he took charge of Air Training Corps Entertainment. In 1946 he began his Sunday morning radio 'Band Show', with his trademark opening cry of 'Wakey! Wakey!'. The broadcasts led to religious controversy in the press ('the choice between Billy Cotton and the Almighty'). The radio show ran consecutively for seven years, and later transferred first to Independent Television and later the BBC. He also appeared on Radio Luxembourg in the 'Kraft Show', an early example of a British band benefiting from commercial advertising sponsorship. Latterly Cotton was known chiefly as a showman and entertainer and continued to direct the 'Billy Cotton Band Show' on television until his death. His son Billy Cotton Jr produced his father's show in the early 1960s, and later became a BBC network controller.

Although Cotton's band was predominantly a dance and show band, he pioneered the introduction of Duke Ellington's music to Britain, recording versions of *Mood Indigo*, *Black and Tan Fantasy* (both 1933), and *Doin' the New Lowdown* (1936).

ALYN SHIPTON

Cottone, Giovanni Pietro (*b* Brescia, 1540–50; *d* Turin, 23 July 1593). Italian composer and organist. He spent his working life in Turin. In 1572, when he published his first book of five-part madrigals, he was organist at the cathedral. By the time the second book appeared in 1581 he was a musician in the service of the Duke of Savoy. He also played the trombone in the town band. Like other composers he wrote some occasional madrigals, with texts naming specific personages and alluding to special occasions; he also strongly favoured pastoral texts. He used with skill and taste the madrigalian devices common in his day, especially rhythmic flexibility employed for symbolic and pictorial effect.

LILIAN P. PRUETT

Cottrau, Teodoro (*b* Naples, 7 Dec 1827; *d* Naples, 30 March 1879). Italian music publisher, lawyer, poet, writer and politician. He studied the piano with F. Festa, composition with Salvatore Pappalardo and also learnt some music from his father, Guglielmo Cottrau (*b* Paris, 9 Aug 1797; *d* Naples, 31 Oct 1847), a gifted amateur double bass player and director of the GIRARD firm. In 1846 Teodoro succeeded his father at Girard's and in 1848 became joint owner, carrying on independently from 1855. He republished with greater success his father's edition of Neapolitan songs, *Passatempi musicali*. Besides the anthology Cottrau's much admired publications include *L'ape musicale pianistica*, collections of romanze, neopolitan songs, piano pieces particularly by Neopolitan composers and vocal scores of operas including Verdi's *Simon Boccanegra* and Herold's *Le pré aux clercs*, for which he provided a translation and promoted the Italian première at the Teatro Filarmonico, Naples (1872). Between 1852 and 1868 the company published the *Gazzetta musicale di Napoli*, which Cottrau himself edited from 1856 to 1860.

Among Cottrau's compositions are a large number of Neapolitan songs, some appearing in the collection *Eco del Vesuvio*, and six miscellaneous pieces for the piano; his most successful songs include *Santa Lucia*, *Addio mia bella Napoli*, *Palummella zompa e vola* and *Sorrentina*. He was not always honest in his treatment of other Italian publishers; in April 1873 lawyers representing Ricordi and the Municipality of Rome brought a successful action against him in connection with the copyright of *La vestale* and *Lucia*.

STEFANO AJANI/R

Cotumacci [Cotomaccio], **Carlo** (*b* Villa Santa Maria, Chieti, ?1709; *d* Naples, 29 July 1785). Italian composer and teacher. He was the brother of Michaele Cotumacci (*b* c1682), composer of a cantata for four voices and violins, *Progressi vittoriosi della Fede Cattolica ottenuti della predicazione di S Francesco di Sales* (*I-Nf*); Carlo's son, Matteo Cotumacci (1739–1804), was also a musician. Carlo Cotumacci, according to Burney, who visited him in 1770, was a pupil of Alessandro Scarlatti 'in the year 1719'. He began his career as an organist serving various Neapolitan churches, for which he also composed. His earliest known dated work is a *Missa di Requiem* for two voices and organ (20 October 1727). In 1737 he became a member of the Neapolitan Congregazione dei Musici and in 1749 organist of the Casa dell'Annunziata. On 1 December 1755, after the death of Francesco Durante, he and Joseph Doll joined Girolamo Abos as *maestri* of the conservatory S Onofrio a Capuana. According to the institution's *Libro maggiore* for 1755–7, the three teachers were treated as equals in rank and salary. It was not until 1774, when Giacomo Insanguine succeeded Doll with the rank of *secondo maestro* that Cotumacci was named *primo maestro*. He remained with the conservatory for the rest of his life. In his teaching he continued the tradition of Durante and wrote several sets of *partimenti* and other didactic keyboard pieces. His pupils included Giovanni Paisiello, Giuseppe Gazzaniga and Giovanni Furno. Like Durante, Cotumacci never

composed an opera; he concentrated on church music, but his works are undistinguished.

Couac (Fr.: 'quack'). A sudden horrible noise to which any clarinet is liable when the reed is out of order and the wind not quite under control. Also called 'the goose' or 'canarder'. (See Spohr, *Selbstbiographie*, i (1860–61; Eng. trans., 1865, 2/1878), 167.)

GEORGE GROVE/R

Couchet. Flemish family of virginal and harpsichord makers, descendants of the RUCKERS family. The most important member was Joannes Couchet (*b* Antwerp, 2 Feb 1615; *d* Antwerp, 30 March 1655), a grandson of Hans Ruckers. In 1626 he apprenticed himself to his uncle Joannes Ruckers and worked with him until his death in 1642, when Couchet himself became a master harpsichord builder. He had seven children, of whom three became harpsichord makers: Petrus Joannes Couchet joined the Guild of St Luke as a master harpsichord builder in 1655 or 1656, and Joseph Joannes Couchet and Maria Abraham Couchet both became members of the guild in 1666 or 1667. (Joseph Joannes Couchet signed his instruments in this form, though his name appears in archival sources as Joannes Joseph).

The instruments Joannes Couchet built are essentially identical in construction, decoration and sound to those of the other members of the Ruckers family; there is, in fact, strong evidence that many of the later instruments signed by Joannes Ruckers were actually built and decorated by Joannes Couchet during his apprenticeship in Ruckers's workshop. Except for the initials, the rosettes used by Joannes Couchet resemble those used by Joannes Ruckers. In spite of these similarities, Joannes Couchet and his sons did broaden the tradition established by the Ruckers. Joannes Couchet built at least one double-manual harpsichord with an unusual extended upper-manual compass, and another with the unusual registration of two unisons instead of the normal one unison plus its octave. In a letter of 1648 Gaspard Duarte mentioned large single-manual harpsichords built by Couchet with two unisons and an octave, and a compass of *F′* to *d‴*, as well as small harpsichords (presumably *C/E* to *c‴*) with two unison strings. Joannes Couchet himself, in a letter to Constantijn Huygens, described a harpsichord he built for Huygens with a compass down to *F′* and two sets of strings at unison pitch. In the same letter he admitted to a personal preference for the sound of a single unison with an octave, and mentioned that he also made harpsichords a tone above normal pitch (corresponding to the Ruckers *5-voet* virginals). Instruments conforming to these types survive (see list below). A single-manual harpsichord by Joseph Joannes Couchet has a chromatic compass of C to *c‴* and three rows of jacks. Such inventions and innovations represent an important transition between the traditions established by the Ruckers and the practice of makers in the late 17th century and the 18th.

Only five instruments by Joannes Couchet are known to exist. A single-manual harpsichord in the Russell Collection, University of Edinburgh, originally of compass *C/E–c‴* but now *C–c‴* chromatic, is dated 1645. A double-manual harpsichord (1646) in the Brussels Instrument Museum originally had an extended upper-manual keyboard compass of *G′/B′–c‴* (instead of the traditional *C/E–c‴*), with a lower-manual compass of *C/E–f‴*; the keyboards have been aligned, and the instrument widened to give the present compass of *G′/B′–f‴*. The Vleeshuis Museum, Antwerp, has a large muselar virginal with its original compass of *C/E–c‴* and a fine contemporary painting of Antwerp inside the lid; it is dated 1650. A double-manual harpsichord in south-eastern France is dated 1652 and now has a compass of *G′/B′–e‴* with a split *B′/E♭* key; it was originally a single-manual instrument, unusual in having two unison choirs of strings with no octave. The Metropolitan Museum, New York, has an undated double-manual harpsichord (originally single) with a compass of *F′–c‴* (originally *F′G′A′–c‴*, pitched a tone higher than normal, like the Ruckers *5-voet* virginals). The Gemeentemuseum at The Hague has a double-manual harpsichord (1669) signed Petrus Joannes Couchet, but its construction differs from that of the Ruckers and Couchet tradition, and its authenticity is doubtful. A harpsichord in private possession in France, now a double which was given a *ravalement* by Taskin in 1778, was made from a single harpsichord either by Petrus Joannes or by Joseph Joannes (probably the latter) in 1671. A single-manual harpsichord (1679) of original compass *C–c‴* chromatic, on loan to the Smithsonian Institution, Washington, is signed by Joseph Joannes Couchet. Besides the unusual original compass, it has three rows of jacks (instead of the usual two), with two sets plucking the same set of 8′ strings. A double-manual harpsichord, now in the Boston Museum of Fine Arts, is dated 1680 and was 'mis a grand ravalement' by Taskin in 1781, giving it a compass of *F′–f‴*. Its original compass was probably *F′G′A′–d‴* and it may have had a disposition with two unisons and an octave, though the more usual single unison and octave are not to be excluded. A large instrument in the Nydahl Collection, Stockholm (unsigned and undated), is also probably a late work of Joseph Joannes Couchet. It was *ravalé* by Taskin and given two manuals and a compass of *F′–f‴*, but it was originally a single with the compass *F′–d‴e‴* with the usual octave and unison disposition, but pitched a tone above normal.

G. GRANT O'BRIEN

Couesnon. French firm, mainly devoted to making brass instruments. In 1827 the pioneering factory of Auguste Guichard (*fl* 1827–45) was founded in Paris; it was merged with that of his brother-in-law, Pierre Louis Gautrot (*d* 1882), under the latter's name in 1845. From 1846 Gautrot was the chief organizer of a campaign against Adolphe SAX. In 1857 the firm acquired the flute-making business of J.-L. Tulou and built a second factory at Château-Thierry. Their name was changed to Gautrot aîné & Cie. in 1869 and to Gautrot aîné-Durand & Cie. in 1877. In 1881 they absorbed Triébert, the woodwind makers. In 1882 direction of the firm was taken over by Gautrot's son-in-law, Amédée Auguste Couesnon (*fl* 1882–1950), and the company was named Couesnon, Gautrot & Cie.; in 1888 this was shortened to Couesnon & Cie., and in 1931 to Couesnon S.A. Other companies absorbed during this period were: Lecomte; Massin & Thibouville; I. Lot; Feuillet; L. François, Maître & Cie. (Association Générale des Ouvriers); Léon Bernadel; and Gourier & Bernez.

The company was from 1911 to 1925 the largest of its kind in the world, its 1000 workers producing 60,000 woodwind, string and brass instruments annually in eight different factories; they were even pioneers in the making of records for Columbia (1930–36). From 1927 the firm declined, the low point being reached in 1967. The company was reorganized in 1968: the three remaining factories were combined into one at Château-Thierry, with 150 employees producing about 20,000 brass and percussion instruments annually. The firm, which ceased to exist *c*1995, was perhaps best known for the *barillet* or quick-change rotary valve, developed in the 1840s by Gautrot, and the 'saxie', a simplified soprano saxophone in D (1924). (For further information see *Waterhouse-LangwillI*, London, 1993.)

EDWARD H. TARR

Coulé (i) (Fr.). *See* SLIDE (1).

Coulé (ii) [coulament]. LEGATO. Though strictly a performance instruction it appears in tempo and mood designations in music by François Couperin and his contemporaries.

Coulé (iii). A type of appoggiatura. *See* ORNAMENTS, §7(ii) (b and c).

Coulement (Fr.). Term used by Hotteterre for an appoggiatura. *See* ORNAMENTS, §7.

Coulisse (Fr.). The slide of a trombone or slide trumpet. Also the tuning slide (*see* TUNING-SLIDE (i)) of any brass instrument (sometimes 'pompe'). Thus in the late 18th and early 19th centuries: 'cor à coulisse' (horn with tuning slide); also 'tons à coulisse' (slide crooks of an *Inventionshorn*), as opposed to 'tons à l'embouchure' (mouthpipe crooks). □

Coulthard, Jean (*b* Vancouver, 10 Feb 1908; *d* Vancouver, 9 March 2000). Canadian composer. Her earliest composition lessons were with her mother, an outstanding pianist and teacher, who enabled her to absorb the music of Debussy and Ravel at an early age. From 1928 to 1930 she studied in London at the RCM where her teachers included Vaughan Williams. She embarked on further studies during the 1930s and 40s with Copland, Milhaud, Schoenberg, Bartók and Bernard Wagenaar. In 1965 she returned to London to study orchestral scoring with Gordon Jacob. These diverse influences developed into a personal style characterized by the assertion of tonality through strong key centres, the use of colouristic harmonies, robust rhythms and cyclic formal structures. From 1947 to 1973 she taught composition at the University of British Columbia. Coulthard's works feature a wide variety of compositional materials and techniques, including bitonal and quartal harmonies, modal and octatonic scales, serialism, tone clusters and other extended sound devices. The String Quartet no.2 (1954, rev. 1969) and the octet *Twelve Essays on a Cantabile Theme* (1972) reveal her mastery of contrapuntal writing. *Music to St. Cecilia* (1968), *Autumn Symphony* (1984), *Introduction and Three Folksongs* (1986, nominated for a Juno award in 1991) and *Symphonic Image: Of the North* (1989) are the most frequently performed of her works. Her extensive output incorporates both a lyricism expressed within a contemporary musical language and a brooding introspection often associated with the geography of Western Canada, a region from which she is considered the first widely-recognized composer. In addition to recordings released in Radio Canada International's *Anthology of Canadian Music* (1982) her works have been recorded by the CBC, Canadian Music Centre and Société nouvelle d'enregistrement.

Counter-exposition. In FUGUE, a term for a second EXPOSITION following the one with which the fugue opens. A counter-exposition is an important, though not mandatory, part of the FUGUE D'ÉCOLE, where it is prescribed to be two additional entries of the subject, one each in SUBJECT and ANSWER form and each by a voice that stated the opposite form in the exposition. Fugue in the 17th century, before the advent of tonal harmony, most often proceeds as a series of 'expositions' similar in nature to the opening one; the Germans still use the term *Durchführung* to describe each group of thematic entries in a fugue, although no comparable word exists in English. Many writers during the century recommended for the sake of variety and interest that in later groups of entries after the first the voice parts either exchange starting notes or enter in a different order, but the writers made no distinction between the second such group of entries and any later ones, and they coined no term to label the phenomenon. The expression 'counter-exposition' arose later under the influence of tonal harmony and seems designed to account for further entries of the subject in tonic and dominant before the first modulation to a related key occurs. In only a small number of fugues does the term prove useful. One to which it might be applied is Bach's 'Dorian' Fugue BWV538, where the four entries of alto (bar 43), soprano (57), tenor (71) and bass or pedal (81) can be said, by virtue of their entering in the same order as in the exposition but with exchanged starting notes, to constitute a counter-exposition; this section is then followed by the first modulating episode, which takes the piece to the relative major for the next thematic entry, on F, in the soprano (bar 101).

PAUL WALKER

Counter-fugue. A fugue in which the first answer in the exposition is the inversion of the subject. It commonly follows from this that the inverted subject features prominently in the fugue as a whole. Examples can be found throughout the history of fugal composition. During the Baroque era the Latin expression *fuga contraria* was often used in this context, as was *fuga per arsin et thesin*, an expression coined by Zarlino through misapplication of the Greek words for upbeat and downbeat. Johann Mattheson introduced the German equivalent of 'counter-fugue', namely *Gegenfuge*, in *Der vollkommene Capellmeister* (1739).

PAUL WALKER

Counterpoint (from Lat. *contrapunctus*, from *contra punctum*: 'against note'; Fr. *contrepoint*; Ger. *Kontrapunkt*; It. *contrappunto*). A term, first used in the 14th century, to describe the combination of simultaneously sounding musical lines according to a system of rules. It has also been used to designate a voice or even an entire composition (e.g. Vincenzo Galilei's *Contrapunti a due voci*, 1584, or the *contrapuncti* of J.S. Bach's *Art of Fugue*) devised according to the principles of counterpoint. (*See also* POLYPHONY, §I.)

1. DISCANT OF THE 13TH AND 14TH CENTURIES. The theory of counterpoint, which existed by about 1330, developed from the older theory of discant, but differs from it in ways that a comparison of the two makes clear. The technique of discant occurs in two distinct forms. Works dealing with 'interval succession theory' ('Klangschritt-Lehre') merely list possible single progressions of an added voice for all usual successive intervals of the cantus, considering only the consonances of unison, octave, 5th (and occasionally 4th); for example: 'If the cantus ascends by a 2nd and the opposed part begins at the octave, then the opposed part descends by a 3rd and forms [with the cantus] a 5th, or descends by a 7th and coincides with the cantus' (*CoussemakerS*, ii, 191). General guidelines on compositional technique are found only in the work of Franco and his followers, apart from

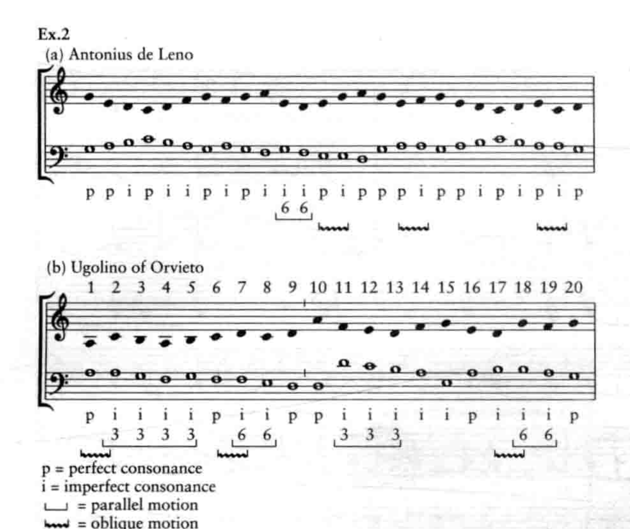
traditional instructions on contrary motion (see Eggebrecht and Zaminer, 1970; *CoussemakerS*, ii, 494; *AnnM*, v, 1957, 35). Franco was clearly concerned to emphasize the consonant or dissonant quality of sounds in the formulation of general statements on compositional technique, but did not go beyond individual aspects (CSM, xviii, 69–73):

Every discant is ordered by consonances ... Every imperfect dissonance [major 2nd, major 6th, minor 7th] sounds well immediately before a consonance ... The discant begins at the unison, octave, 5th, 4th, or major or minor 3rd [i.e. on any of the 'consonances'], then proceeds in consonances and occasionally mixes them at suitable points with dissonances, so that when the tenor is ascending, the discant is descending and vice versa. It should be noted that tenor and discant occasionally ascend or descend simultaneously for the sake of the beauty of the piece ... and also that consonances are always used in all [rhythmic] modes at the beginning of the perfectio [mensural unit].

Anonymus 2 tried (*c*1300) to analyse the role of imperfect consonances in composition technique: 'Imperfect [consonances] are the major and minor 3rd, which are good in the progression from a 5th to a 5th or from a 5th to a unison and vice versa; and the major 6th, which is good before an octave' (*CoussemakerS*, i, 311).

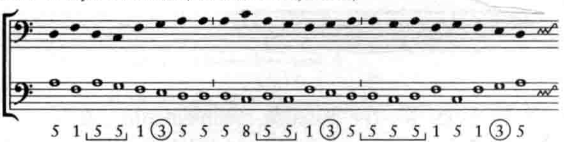
2. Early note-against-note writing. Early counterpoint diverges clearly from the theories of Franco and Anonymus 2 by taking only two-part note-against-note composition into consideration, thus ignoring dissonances and, at first, note values; by changing the classification of the sounds, apparently little, but radically, by reclassifying the 4th (which was a 'medium' consonance and becomes a dissonance); and by making the difference in quality between perfect and imperfect consonances the basis of a regular system. Textbooks, typically, list consonances, perfect and imperfect, and they provide rules for their succession.

The subdivision of consonances always leads to the contrast between the unison, 5th and octave as 'perfect' and the 3rd and 6th as 'imperfect'. It is immaterial whether the consonances are given Greek names, as happened particularly in the early stages, or Latin names (in other words, whether 3rds, for example, were described separately as *semiditonus* and *ditonus* or jointly as *tertia*); it is also immaterial whether and to what extent intervals greater than the octave are mentioned and classified, and whether the perfect consonances were called *consonantiae* and the imperfect *dissonantiae* (as occasionally happened). But terminology and the number of named consonances do give information about the traditions and phases of theory.



The difference in quality between the two groups of consonances is particularly shown in the directions referring to important sections in the composition or to parallel part-writing: the beginning and end should be perfect consonances and the penultimate note an imperfect consonance; parallel successions of identical intervals are strictly forbidden with perfect consonances but emphatically recommended with imperfect ones. This differentiation is based on the fact, remarked on by Anonymus 2, that three consonance sequences (3rd–unison, 3rd–5th and 6th–octave) have particular advantages: close melodic connections through conjunct motion, independent part-writing through contrary motion, and change in sound through the transition from imperfect to perfect consonance (which 14th-century writers called 'striving': *requirere*, *tendere*). According to the theory of Marchetto da Padova (*c*1318) – repeatedly taken up in the 15th and 16th centuries though without becoming the norm in theory or practice – one of the two parts was also supposed to move by a semitone, as in ex.1. This also determined

the basis of counterpoint even in contexts where 'ideal' sequences occur only occasionally. This happens when the theory offers, as recommendations (*mandata arbitraria*), progression to nearby notes, contrary motion, and alternation between imperfect and perfect consonances. For combinations that respect only one *mandatum arbitrarium*, the strict prohibition (*mandatum necessarium*) of parallel similar perfect consonances on the one hand, and the permitted succession of similar imperfect, dissimilar imperfect and dissimilar perfect consonances on the other, are both valid. The repetition of a note, causing oblique motion, is sometimes permitted only in the cantus, but may be used in either part (or even in both simultaneously, as a repeated note); it is not however the recommended 'next step'. On the basis of these directions, a given cantus yields a note-against-note composition, in which 15th-century theorists required two essential qualities: first, difference between the two parts, in the interests of which parallel progression in similar perfect consonances, usual in polyphony of the 9th century to the 13th, was now forbidden ('If one person sings the same as the other ... that does not fulfil the aim of contrapunctus; for its aim [*intentio*] is that what the one sings be different [*diversum*] from what the other sings' – Prosdocimus de Beldemandis, 1412; *CoussemakerS*, iii, 197); and second, indeterminate structure, ensured by the fact that there were always several permitted consonances to choose from, and thus many possible resolutions for the part added to a cantus ('Contrapunctus is the indeterminate setting [*positio*] of a single note in high or low position against a single note in any cantus. ... Contrapunctus is related simply [*simpliciter*] and without predetermination [*indeterminate*] to all settings [*positiones*] of high and low notes in the musical system' – Ugolino of Orvieto, *c*1430; CSM, vii/2, p.4).



Music examples from counterpoint treatises may illustrate different features of the method of composition. In ex.2*a* contrary motion is dominant; parallel imperfect consonances are used sparingly; when one part moves by leap the other moves by step or has a repetition; (the added part, according to some treatises, should be restricted to the range of a hexachord). In ex.2*b*, parallels of up to four similar imperfect consonances are relatively frequent; they usually lead to the adjacent perfect consonance (as in intervals 6, 9 and 20) but can also lead to one or more imperfect consonances of another kind (14–15); simultaneous skips are not excluded (10–11, 15–16), but involve contrary motion and change of interval type.

By way of contrast in pre-contrapuntal note-against-note compositions, combinations of unison, 5th and octave, where parallels of similar intervals are not impossible, predominate over 3rds, which usually only serve as a bridge between unison and 5th (ex.3); the still

consonant 4th also sometimes appears, while the 6th is rare (see the examples in Sachs, 1974, pp.121–2).

Ex.3 *Alleluya. Altissimus* (*I-Fn* Palat. 472, f.15vb)

3. Treatises of the 14th and 15th centuries. From the time of the earliest surviving textbooks on counterpoint, the number of treatises on composition technique increased markedly and the term 'contrapunctus' quickly came into use. This was surely a matter of cause and effect; the explanation is probably to be found in the novelty of the technique designed for note-against-note composition. There are isolated references to a *contraponchamens* or *contrapointamens* in the brief discussion of musical genres and polyphonic practices in Peire de Corbiac's Provençal *Tesaur* (*c*1250), but there is no mention of the word 'contrapunctus' in music theoretical writings until its appearance in the new theory of composition about 1330, since all known authors from Johannes de Garlandia (*c*1240) to Jacques de Liège (*c*1260–after 1330) used the general term 'discantus' when discussing composition technique.

Among the earliest didactic contrapuntal works are probably the brief piece attributed to Johannes de Muris, *Quilibet affectans* (*CoussemakerS*, iii, 59–60*a*), which was widely read, and the compilation of Petrus frater dictus Palma ociosa, written *c*1336 (Wolf, 1913–14). Philippe de Vitry, too, seems to have taught counterpoint even if no versions of the treatises attributed to him (e.g. *CoussemakerS*, iii, 23–7) can be regarded as authentically his in their surviving form.

Most of the works on counterpoint up to the 15th century are anonymous, and it is not usually possible to fix their dates or places of origin accurately. Treatises that help establish a chronology for the development of the theory include Goscalch (1375; excerpt in Sachs, 1974), Antonius de Leno (*c*1400; *CoussemakerS*, iii, 307–28), Prosdocimus de Beldemandis (1412; *CoussemakerS*, iii, 193–9), Ugolino of Orvieto (*c*1430; CSM vii/2), Johannes Legrense (*c*1460; *CoussemakerS*, iv, 383–96), Johannes Tinctoris (1477; *CoussemakerS*, iv, 76–153), Guilielmus Monachus (*c*1480; CSM, xi) and Florentius de Faxolis (between 1484 and 1492; excerpt in Seay, 1963, p.85). The reliability of the sources increased with the appearance of printed works on counterpoint, by Ramos de Pareia (*Musica practica*, 1482), Nicolaus Burtius (*Musices opusculum*, 1487), Franchinus Gaffurius (*Practica musicae*, 1496) and others.

4. Contrapunctus diminutus. The treatise *Cum notum sit* (probably mid-14th century) contains a definition of counterpoint as 'nothing but a setting of note against note' ('non ... nisi punctum contra punctum ponere vel notam contra notam ponere vel facere') and the 'basis of discant' ('fundamentum discantus'; *CoussemakerS*, iii, 60). Discant, the 'newer' form in this case, denotes the manner of composition whose basis is contrapuntal note-against-note composition. The second part of the treatise ('De diminutione contrapuncti') elucidates the relation between the two types of composition: since the contrapunctus – the part added to the tenor, in breves of equal length – 'can be divided' into smaller notes in various ways, the work lists rhythmical possibilities of this kind and illustrates them with musical examples. The examples (22, according to the most reliable sources) all have the same tenor, and each follows a rhythmic formula; they are all based on the same note-against-note composition, whose degree of diminution increases systematically from example to example for each of the four basic mensurations, as in ex.4 (the beginning of the examples for *tempus perfectum cum prolatione maiori*; cited in Sachs, 1974, p.146). The work illustrates the technique, known from other treatises, of creating a diminished version of an added part, by 'filling out' the breve units or by the 'interpolation' of notes, but does not mention the dissonances (2nds, 4ths and 7ths) that thus occur. The lack of such comment probably does not mean that dissonance could be used freely but that its application still lay outside the contrapuntal system. References to the use of dissonance, however, occasionally occur in 14th- and early 15th-century counterpoint treatises.

Petrus frater dictus Palma ociosa said that dissonances could appear briefly, by step in ascent or descent to a consonance. According to Antonius de Leno, who allowed note against note, two notes against one and three notes against one, the middle of three short notes of equal length could be dissonant. Another work allows a third of a semibreve to be dissonant (*CoussemakerS*, iii, 27) in the so-called 'cantus fractibilis'. Goscalch, who apparently knew *Cum notum sit*, went further, and proposed to 'divide notes into parts, i.e. to sing several notes in the cantus instead of one'. At the same time he demanded observance of the rules of counterpoint and confirmed the prohibition of parallel perfect consonances for both immediately consecutive shorter note values, and for the contrapuntal framework. He considered that having only consonances was 'impossible or very difficult and irksome', and thus assumed the use of dissonance. He allowed dissonance even at the beginning and end of a figural unit, if it took up less than half the value of the figure (or, in the case of syncopation, even as much as half).

In spite of the evident closeness in material and method of note-against-note and figured composition, the two

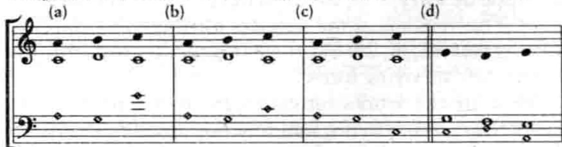
Ex.4 *Cum notum sit*

TENOR

forms were largely separate in theory and terminology until Tinctoris's work published in 1477 (see §6 below): most of the treatises do not mention diminution or dissonance, and there was criticism of the extension of the meaning of the word 'contrapunctus' which already occasionally meant the setting of 'several notes against one' (see *CoussemakerS*, iii, 194; CSM, vii/2, 4).

5. THREE-PART COMPOSITION IN THE 15TH CENTURY. The first works on counterpoint that allow three-part composition were probably written not earlier than the 15th century; they are not genuine extensions of the theory (as was the case with *contrapunctus diminutus*) but simply explanations of how the rules of two-part note-against-note composition should be applied to an increased number of voices. Since the intervals between various pairs of parts have to be considered and coordinated in three-part composition, the theories deal with problems liable to occur when the norms of two-part composition are applied. Most importantly, the basic rule of allowing only consonances in note-against-note writing must be observed, but with two precautions.

First, since two added parts can be mutually dissonant although each must be consonant with the tenor, thus corresponding to the norms of two-part composition, the books warn against the 2nd created between two added parts respectively a 5th and a 6th above the tenor (*CoussemakerS*, iii, 93), the 9th resulting from 5ths simultaneously above and below a tenor, and similar combinations (see Sachs, 1974, p.127). Second, because two added parts, each consonant with the tenor, often form a 4th, which in two-part note-against-note composition has to be avoided as a dissonance, treatises indicate the possibility of using the 4th in three-part note-against-note composition as long as it remains hidden (Gaffurius, iii, 6) by not involving the bottom part (CSM, xxii/2, p.27).



Some texts list the possible complementary notes for the contratenor as well as all the usual consonances of tenor and discant (*CoussemakerS*, iii, 93–5, 465–6). This clumsy method, which in the 16th century even stretched to a fourth voice, shows that general principles of composition had hardly been formulated. Warnings against unison and octave as 'equal' or 'equivalent' consonances between the added parts are rare (*CoussemakerS*, iii, 92), but show that even then there was a preference for 'complete' sounds.

Ex.5 Pierre de LaRue: *Missa de beata virgine*

The rules for the sequence of consonances in two-part composition remained valid for an increased number of parts. Theory was, however, not consistent about the prohibition of parallel 5ths. The permitting of 4ths was based on their incidental creation (between added voices)

Ex.6 Johannes Cochlaeus: *Tetrachordum musices* (Nuremberg, 1511, f. F)

● = Discantus
o = Tenor
⬥ = Contratenor

and this covered parallel 4ths as well (although these are seldom mentioned, and only in the technique of

FAUXBOURDON; CSM, xxii/2, p.27; CSM, xi, 39; Gaffurius, iii, 5). From there it would have been a small step to concede the analogous parallel 5ths, which could be explained as caused by the inversion of added parts. Occasionally they were indeed permitted (*CoussemakerS*, iii, 466; CSM, xi, 42–3), and that may justify phrases such as the one in ex.5. But other texts forbid parallel 5ths (CSM, xxii/2, pp.147–8; Sachs, 1974, p.131); this latter position gained acceptance probably because a difference between 'primary' and 'secondary' composition, although theoretically useful for chord construction, was subordinate to the general compositional viewpoint where rules of progression were concerned.

Standards for the melodic structure of the individual parts varied in their strictness: discant and tenor should avoid leaps of 6ths and 7ths while the contratenor was allowed not only these but even sometimes a leap of a 9th. The special character of the contratenor is based on the concept of the successive composition of parts customary in the 15th century, for which Burtius (ii, 5) gave two possibilities: first cantus (*supranus*), then tenor, and lastly contratenor; first tenor (usually as a given cantus planus), then superius, and lastly contratenor.

The contratenor, which is thus added to a discant and tenor framework, was in the first instance a 'filler' ('pro replecione sonorum seu vocum'; Sachs, 1974, p.131). The added character of the contratenor is also to be seen in the typical endings (clausulas, conclusiones) that theorists had fixed for the parts since about 1500. The formulae for discant and tenor reach the final note (*ultima*) ascending or descending by step to produce the 6th–octave progression (ex.6*a–c*). The contratenor, on the other hand, normally a 5th below the tenor on the penultimate note, moves to one of the possible perfectly consonant final notes, forming an octave leap (ex.6*a*), 4th leap (ex.6*b*), or falling 5th (ex.6*c*) cadence. Only when the

Ex.8 Johannes Tinctoris: *Salve martyr virgoque*

tenor cadences by descending a semitone to *mi* does the contratenor, in order to avoid a diminished 5th, take the 3rd below the tenor on the penultimate interval and close on the 5th below (ex.6*d*). The antepenultimate interval, which contemporary examples also include, varies within certain limits.

A particular 15th-century three-part technique is found in those compositions where two parts constantly run in similar imperfect consonances between the first and last note, while a third, usually the contratenor, has complementary notes or also takes part in the parallel progression. Guilielmus Monachus described and provided examples of such patterns (see Sachs, 1974, pp.132ff): with parallel 3rds (ex.7*a*, *b*) and 6ths (ex.7*c*, *d*), where the contratenor either alternates between the unison and 5th (ex.7*a*, *c*), or between the lower 5th and lower 3rd (ex.7*b*, *d*); with parallel 10ths, between which there is a middle voice, either written in parallel 6ths or 5ths (ex.7*e*), or which progresses like a cantus firmus in fairly long note values (ex.7*f*); or with simultaneous parallel 3rds and 6ths (ex.7*g*). These patterns, which considerably simplify the construction of three-part texture, have advantages for textbook purposes and for practice in improvisation, but have little value for composition.

6. TINCTORIS. The most tightly knit, comprehensive and important 14th- or 15th-century treatise on counterpoint is Tinctoris's *Liber de arte contrapuncti* (1477). Counterpoint is here described as 'restrained and thought-out polyphonic composition created by setting one sound against another' ('moderatus ac rationabilis concentus per positionem unius vocis contra aliam effectus'; CSM, xxii, 2, p.14). It divides into *contrapunctus simplex* (note against note) and *diminutus* (several notes, of either equal or varying length, against one), and can be extemporized (*mente*) or written down (*scripto*). But Tinctoris called the improvised form 'straightforward' (*absolute*) counterpoint (or *super librum cantare*), and the written form *res facta* or *cantus compositus* (CSM, xxii/2, pp.105ff).

This terminology – unknown before Tinctoris and used afterwards only with reference to him – should not be taken to imply that the aim of the theory of counterpoint was improvisation. Tinctoris seems to have wanted to emphasize something else: that, particularly in composition for more than two voices, the result of an improvisation relating several parts contrapuntally to a given tenor (CSM, xxii/2, p.110) differs from carefully planned composition; the inevitable lack of strictness in improvisation is a concession, not the aim of counterpoint.

In the first part of his treatise Tinctoris gave a basic description of the consonances and their relations in *contrapunctus simplex*. The tenor and the added part both progress either by step, or in leaps of a 3rd, a perfect 4th and a perfect 5th. The second part is a survey of the dissonances and their systematic application in *contrapunctus diminutus*.

According to Tinctoris, the correct use of a dissonance depends on its rhythmic and melodic position. The yardstick for the rhythmic position of a dissonance is the note value determining the basic movement of a musical piece, which Tinctoris called *mensurae directio* (or 'nota, secundum quam ... cantus mensuratur'; CSM, xxii/2, pp.124–38); Adam of Fulda called this value, acting as a pulse or beat, *tactus* (1490; *GerbertS*, iii, 362), and 16th-century Italian theory called it *battuta*. In *prolatio maior* (ex.8, bars 1–7) it is the minim (transcribed as a crotchet), in *prolatio minor* (bars 9–11) the semibreve (transcribed as a minim), and in proportions the equivalent of those values. Tinctoris used the fact that both values are divisible by two in the respective mensurations to formulate three basic rules for the rhythmic values of dissonances (ex.9).

First, if the first part of a *mensurae directio* (α) or the beginning of the first and second parts (β) is consonant, a dissonance of equal and smaller value can follow. This rule covers unstressed dissonances, whose maximum length corresponds to the consonant part of a *mensurae directio*. Unstressed dissonances can occur anywhere in the composition, but stressed dissonances (i.e. those falling on the beginning of a *mensurae directio*, which appear only as prepared suspensions resolved by stepwise descent) are for Tinctoris always designed to prepare for an immediately following final sound (*perfectio* or *conclusio*). This is usually restricted to perfect consonances, unless it concludes an internal section and simultaneously opens a continuation (as in ex.8 where *F* appears in parentheses). Because syncopated dissonances are thus dependent on a cadence, Tinctoris's other rules are both related to properties of the penultimate note in a phrase of the tenor.

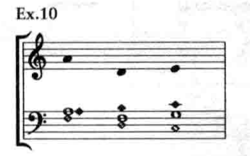
Second, where there is a penultimate note equal in value to two *mensurae directio*, consisting either (α) of a single note or (β) of two notes identical in pitch and length, the first part of the first *mensura* nearly always has a dissonance set against it. Third, if the penultimate is equal in value to one *mensurae directio*, then the first part (α) can be dissonant, or, when preceded by stepwise descending notes of equal value (β), the first part of each note can be dissonant (ex.9). Since Tinctoris formulated rules of dissonance according to the greatest permissible value in each case, it is not surprising to find that the rhythmically short formulae of *prolatio maior* also occur in *prolatio minor* (in parentheses in ex.8).

As regards melodic position, Tinctoris confirmed that each dissonance is preceded by an 'adjacent' (stepwise) consonance, and the following note will be a 2nd or 'very rarely' a 3rd away (ex.8, bar 4). When a dissonance is introduced and left by step, one should not return to the starting note unless the dissonance is 'so short that one can hardly hear it' (CSM, xxii/2, p.141); thus, in Tinctoris's examples the 'nota cambiata' usually appears as the *fusa*, while the passing notes are also minims and semiminims.

The leap of a 3rd from a dissonance is less rare in Tinctoris's examples, and in 15th-century music in general, than his book suggests, and it also occurs descending from a syncopated dissonance. Occasionally the leap of a 4th also occurs after a dissonance, but

Ex.9 Tinctoris's fundamental rules for dissonances

		in major prolation	in minor prolation
1	α	c d	c d
	ß	c d c d	c d c d
2	α		
	ß	d c c F	d c c F
3	α		
	ß	d c d c F	d c d c F



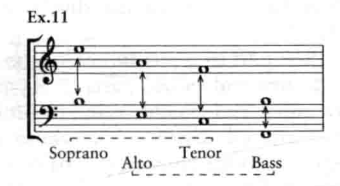
c = consonance, d = dissonance, F = final

usually it is a substitute for a cambiata (ex.8, bar 1: leap to the 3rd above instead of a return to the pitch of the preceding note, which appears in another part). The eight general rules of the third part of Tinctoris's treatise offer both traditional norms (but often modified for composition in more than two parts) and more general recommendations about the wider context of composition (its structure and *varietas*); they are neither as concrete nor as important as the dissonance rules, however, which for the first time make possible an understanding of the period's compositional techniques.

7. COMPOSITION IN FOUR OR MORE PARTS. The acceptance into theory of four-part note-against-note composition was another extension of contrapuntal apportionment: intervals between discant and tenor were filled out by the addition of two parts. The bottom part takes precedence, since it must avoid the formation of 4ths (while making them possible between other parts by supplying a 3rd or a 5th), and it is sometimes more precisely determined (e.g. the penultimate note is usually a 5th below the tenor). The lists and tables customary since Aaron (1523), who enumerated possible four-part note formations, usually follow the order discant–tenor, bass, alto; but they illustrate only the process of contrapuntal disposition of the individual chord. The old method of working out the parts in succession fell into disuse during the 16th century; as Aaron confirmed, the *moderni* considered 'all the voices simultaneously', thus improving consonance formation and part-writing, and avoiding unsatisfactory unisons, rests or leaps. The catalogue of chords strictly avoids secondary dissonances and 4ths in the bottom part, of course, and favours complete formations (in the sense of full triads).

As early as Cochlaeus (1479–1552) there are examples showing the typical concluding formulae of the parts (see ex.6), including the *quarta vox* (altus); they show the interchangeability of the formulae between the parts (ex.10). In general, four was the maximum number of

Ex.10



◆ = Discant clausula in the altus
o = Altus clausula in the tenor
◇ = Tenor clausula in the contratenor bassus

voices in 16th-century contrapuntal theory and four-part writing was the highest form of compositional technique illustrated by examples of figural music. Gaffurius mentioned the creation of a fifth part 'according to the rules of counterpoint' (iii, 11), and Tinctoris used it in an example (CSM, xxii/2, pp.107ff). Florentius de Faxolis contrasted the two-part counterpoint of the *veteres* with the composition of the *moderni* for three to six or more parts, which he described as 'composition, i.e. the contrapuntal method, extended to several voices' (Seay, 1963, p.87). Even though writers discussed instances of going beyond four-part composition, they did not deduce from them any new aspects of theory.

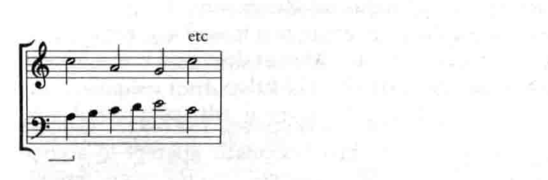
8. 16TH-CENTURY COUNTERPOINT. The development of contrapuntal theory in the 16th century consisted, first, of a drawing together of *contrapunctus simplex*, *contrapunctus diminutus* and composition for more than two voices, often still separate in the 15th century; second, an expansion of matters treated to include, particularly, the modes, techniques of imitation and inversion, and the relation between text and music; and third, improved, more precise rules for the use of dissonance. This development reached its peak in the third book and part of the fourth of Zarlino's *Le istitutioni harmoniche* (1558), the most comprehensive and influential 16th-century work on counterpoint. It contains the best and most refined analysis of the composition technique used in sacred music, particularly at the time of Willaert, Zarlino's teacher; and it surpasses Willaert's other pupil Nicola Vicentino's ingenious, somewhat earlier but in many respects very similar *L'antica musica ridotta alla moderna prattica* (1555), both in clarity and in detail. Almost all the many, usually printed, 16th-century works on counterpoint relate to the *prima prattica* style. The first two attempts to incorporate innovations from secular vocal music into the theory were thus all the more pioneering: Vicentino used chromatic madrigals as examples and recognized liberties (in progression, harmony and mode) justified by text meaning or the affect of the words; and Galilei discussed and defended freer uses of dissonance.

9. ZARLINO AND ASPECTS OF DISSONANCE TREATMENT. The 'arte del contrapunto' as the theory of polyphonic composition was for Zarlino the centre of *musica pratica* and at the same time the most comprehensive amalgam of themes in all music theory. Zarlino not only considered in detail all traditional aspects of counterpoint but also tried to define additional requirements and conditions of polyphonic composition. The *soggetto*, or thematic subject, is composition's point of departure, 'without which one can create nothing' (iii, 26), and which can consist of a given or newly created cantus firmus, cantus figuratus or even several imitative parts. The *soggetto* influences the choice of church mode, and that in turn affects the coordination of parts. The mode of the tenor, which determines the tonality of the composition, is usually shared by the soprano in four-part composition, while the bass and alto take it over with changed compass ('plagal' instead of 'authentic', or vice versa); and this corresponds to a difference of almost an octave between the ranges of the two pairs of parts (illustrated in ex.11 on the basis of

Ex.11

the combination of soprano, alto, tenor and bass clefs frequent in Zarlino).

The restrictions on mode and compass affect imitative technique, harmonic structure and cadence formation. Zarlino divided up the possibilities for imitation according to whether the 'leading' (*guida*) and 'following' (*conseguente*) parts have equal or differing interval patterns. The former he called *fuga* (whose entries could be at the octave, 5th, 4th and unison), the latter *imitatione*. Both *fuga* and *imitatione* could follow the canon 'strictly' (as *legata*) or move 'freely' (as *sciolta*) in its continuation, and take up either some or all of the parts (iii, 54–5).

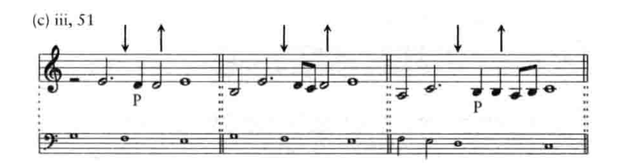


The principle of harmony was to create consonances by combining 3rd and 5th (or 6th), or their equivalents in other octaves, to make a *harmonia perfetta*, or, in modern terms, a triad. Zarlino considered the triad with a major 3rd more perfect than that with a minor 3rd, and declared that, while successions of 'many' triads with major 3rds were harmless, those with minor 3rds had a 'very melancholy' effect (iii, 31).

Each mode had its own final notes for the normal cadences (iv, 18ff). The breaking up of a composition by cadences which, like the 'full stops in a sentence', created resting-points and marked off the sense, was an important part of the layout (iii, 51). The cadences, which normally used syncopated dissonances, separated sections of the text from one another and made possible musical variety and change in the successive parts of a composition; they could, however, also be deliberately avoided ('fuggir le cadenze') in favour of a larger context if one part avoided by a leap or a rest the expected (perfect) consonance (as indicated in ex.12*a*).

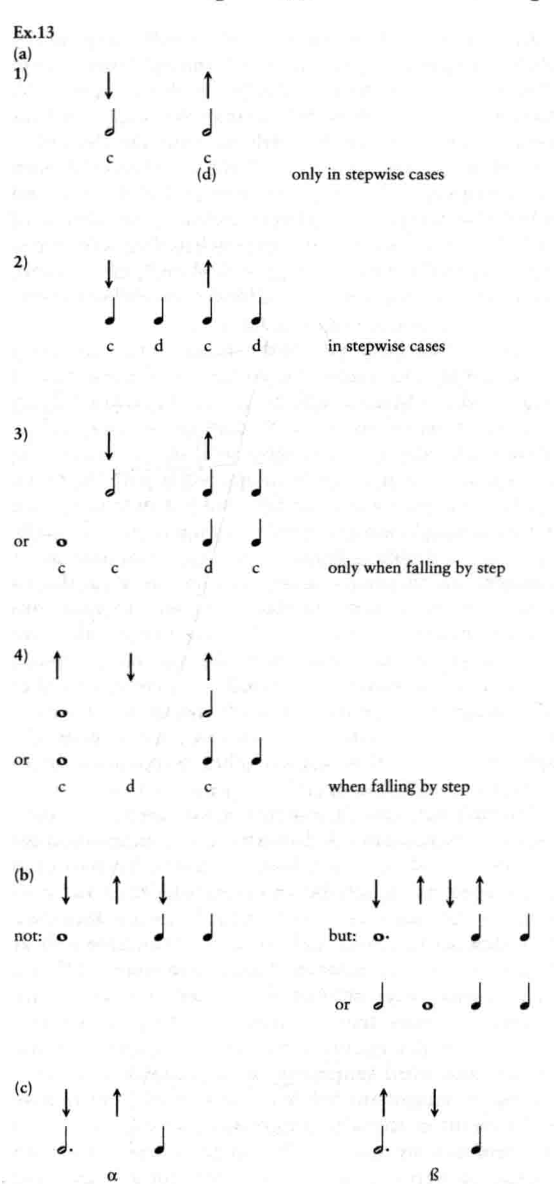
Ex.12 Gioseffo Zarlino: *Le istitutioni harmoniche*

(a) iii, 52



(b) iii, 42

(c) iii, 51



Zarlino's teaching was aimed at four-part composition, which contained 'all perfection of harmony'. This concept of perfection explains why Zarlino tried to describe the characters of the parts by comparison with the four elements: the bass, as the earth, was the deepest voice, often slow-moving, and 'carried' the harmony; the tenor was the equivalent of water (it 'surrounded' the bass and 'ruled' the composition as regards the combination of modes); the alto was the air, and mediated between tenor and soprano (fire), in whose glow it 'shone'; the soprano, as the highest, most stirring and most powerful voice, was like the life-giving fire of the sun (iii, 58).

Zarlino required that the music should suit the character of the words, and related this problem to the ordering of modes and to particular affects (iv, 32). For text underlay he made a set of rules which may be summarized as follows. The length of a syllable shall be reflected in the corresponding note value or values. Notes with their own syllable include, always, the first and last note of a piece or a section and the first note of every ligature, and usually every non-tied note of greater value than a semiminim or crotchet (exceptionally a semiminim, after a dotted minim), but never notes of smaller value than a semiminim, or the dot after a note. A change of syllable can normally occur only after notes of value larger than a semiminim, except that it may follow a semiminim after a dotted minim. Repetition of words is permitted in cantus figuratus (but not in cantus firmus), as long as the repetitions consist of meaningful phrases, not just individual words or syllables (iv, 33).

Zarlino's rules for dissonance mostly use the simplest 'forms' of exercise, in which two minims, four semiminims or a minim and two semiminims in the added part each sound against one semibreve of the *soggetto*, and also consider the suspension (see ex.13). First, since two minims occur on the downbeat (*battere*) and the upbeat (*levare*) of the semibreve *tactus* (*battuta*), and are correspondingly prominent, both shall be consonant; 'unstressed' notes may be dissonant only in stepwise ascending or descending sequences of minims. Second, the first and third semiminim in a group of four must likewise be consonant, while the second and fourth may be dissonant in stepwise progression. Third, the first of two semiminims may be dissonant where they both descend by step after a stressed minim (or a syncopated semibreve); Zarlino's example (ex.12*b*) indicates that this licence is based on the elementary character of the three-note melodic formula, which, depending on the following note, either fills a descending 4th (*x*) or embellishes a 2nd (*y*), for both consonant (*C*) and syncopated dissonant (*S*) uses are normal. Fourth, for normal suspensions, Zarlino required consonant preparation and stepwise descending resolution, which he illustrated by decorative figures with note repetition (which Jeppesen called 'Portament'; see ex.12*c* at *P*) and paired *fuse* (quavers). He also discussed special cases; in particular he permitted preparation by a 4th above the lower part (iii, 61; Jeppesen, 'quarta consonans') and under some circumstances the irregular resolutions of 2nd into unison and of 4th into the diminished 5th (iii, 42).

Zarlino's directions on the rhythmic structure of the composition and of individual parts are also instructive. The beginning must always be on the downbeat. If a part entered later, it should be after at least a minim pause (often with a syncopated semibreve). The rhythmic

Ex.13

movement should not be too fast at first so that it could gradually speed up; it was best for the acceleration to be achieved by transition to the next smaller note value. The introduction of semiminims after a semibreve should coincide with the *levare*, not the *battere* (iii, 45; ex.13*b*). In two-part composition with a *soggetto* in semibreves Zarlino made a strict distinction between two positions of the dotted minim and semiminim group: he used the 'stressed' position only at the beginning (ex.13*c*, *α*), while the 'unstressed' position is used both in the middle of the piece and, after a rest, at the beginning (*β*).

The many details on composition technique mentioned by Zarlino are essential for the examination of *prima pratica* works; but they are not quite complete. Two figures should be mentioned, each of which contains a characteristic freedom in the treatment of dissonance, which in modern terminology is with confusing ambiguity called 'cambiata'.

The first of these is a five-note group consisting of four semiminims descending by step, the second and third of which are dissonant, followed by a step upwards. This formula is usually part of a cadence and goes with the preparation for a suspension. What is probably the oldest description of this usage, by G.M. Artusi (*L'arte del contraponto*, i, 1586; see ex.14*a*), stresses its 'very good effect'. It is unlikely that Stephano Vanneo was referring to this when he prescribed the consonance of the first and last of four semiminims as the norm (*Recanetum de musica aurea*, 1533). Berardi called the irregularly dissonant third note a 'cambiata' (*Miscellanea musicale*, 1689), and Jeppesen termed it a 'relatively stressed passing dissonance'.

The second consists, mostly, of four notes: an unstressed semiminim dissonance leaping down to the lower 3rd; the upper 2nd precedes it and usually follows the leap in order to balance it out. It appeared in various textbook examples (often in Tinctoris; ex.14*b* is from Pontio, *Ragionamento di musica*, 1588), but there is no known description of the usage in 16th-century treatises. Popularity and freedom in dissonance treatment seem to be based on the good style of its melodic outline, as in the formula shown in ex.14*b*: the ascending form is rare, but the descending form occurs in both dissonant (the progression is usually 8–7–5) and consonant (6–5–3; ex.14*c*) contexts, and can even appear, rhythmically extended and metrically displaced, in a part that continues with the resolution of a suspension (ex.14*b*, at broken bracket). Fux (*Gradus ad Parnassum*, 1725), Jeppesen and others called the semiminim irregularly leaping from a dissonance 'cambiata'; Merritt described it as a 'changing note group'. (See also §13 below.)

10. Galilei and his innovations, 1587–91. Galilei's treatises contain the first systematic attempt to accommodate the theory of counterpoint to the recent innovations in composition technique, attributed particularly to Cipriano de Rore and proclaimed by Monteverdi in 1605 as the hallmarks of *seconda pratica*. These innovations are in effect liberties in dissonance treatment and are based on the view that dissonances are not only passing formations, dependent on consonance, but themselves carry musical expression. Galilei particularly enriched composition theory by allowing the following means of

Ex.14

(a) G. M. Artusi (i, 56)

(b) Pietro Pontio (75)

(c) Gioseffo Zarlino (iii, 42)

making dissonances more urgent, sharper and more surprising (see Palisca, 1956, and Rempp, 1980).

First, in a conjunct sequence of four semiminims, two (apart from the forms in exx.13*a* and ex.14*a*) can be dissonant in any position, and occasionally three can be consecutively dissonant (ex.15*a*, *b*). Second, suspensions, apart from the forms in exx.9 and ex.13*a*, can be resolved by leap to a consonance (ex.15*c*), by progression to a new dissonance (ex.15*d*), by ascent to a consonance (ex.15*e*) and, apart from the form in ex.14*b*, simultaneously with a chromatically progressing added part (ex.15*f*); they can occur several at once (ex.15*g*). Third, dissonances can also sometimes occur in the stressed position without syncopated preparation if a regular resolution follows (ex.15*h*, *i*).

11. 16TH-CENTURY DOUBLE COUNTERPOINT. Within the context of their imitative and canonic techniques, Vicentino and Zarlino also discussed the systematic transposition of parts in composition to other keys, which they called *contrapunto doppio* (Vicentino also used the term *compositione doppia*, iv, 34). They thus gave out for the first time a method (considerably older, no doubt) of producing especially 'artificial forms of counterpoint' (Zarlino, iii, 56). This technique requires an understanding of the harmonies and progressions that can occur in various forms of composition. The knowledge of the respective complementary intervals is fundamental: for harmonic intervals of the same kind in the basic (Zarlino: *principale*) and in the inverted version (*replica*) always complement each other to make the 'inversion interval'. In its simplest form, an octave exchange of the upper and the lower part, the intervals 3rd and 6th (imperfect consonances), 2nd and 7th (dissonances) and the unison and octave (both perfect) are paired complementary intervals. This kind of counterpoint is thus much the most productive and needs no special theory. The possibilities

Ex.15 Vincenzo Galilei

of transposition at the 12th and 10th are more limited but can also well be used; Zarlino especially used them, even within the same piece (see ex.16). The complementary intervals for double counterpoint at the 12th and 10th are easily derived by ensuring that the pairs of figures add up respectively to 13 and 11 (thus a 3rd and a 10th, for example, will form double counterpoint at the 12th).

It is thus possible to deduce the contrapuntal conditions for ex.16*a*, which may be inverted in either way: the consonances of unison, 3rd, 5th, octave and 10th (and 12th) remain consonant; in order to avoid unacceptable parallels the piece must progress in contrary motion or leap consonantly in oblique motion; passing dissonances are possible, but not suspensions. As a further form the authors also taught the transposition of both parts in inversion (ex.16*d*). In this case all the changes in interval of the *principale* remain intact in the *replica*. The restriction on composition technique consists in the fact that melodic formulae that are persuasive only in one direction (ascending or descending) are to be avoided.

12. THE TERM 'COUNTERPOINT' AFTER 1600. 'Counterpoint' has been used to convey different meanings in literature on music and music theory from the 17th century to the 20th. The enumeration of these meanings is essential if confusion is to be avoided. First, the concept of counterpoint has been equated with the 'art of strict composition' (J.P. Kirnberger, 1771–9), thus being used to describe regulated part-writing regardless of whether the style is polyphonic or homophonic ('counterpoint' is a technical category, 'polyphony' a stylistic concept). Second, more narrowly, counterpoint has been taken to refer to the technique of polyphonic, as distinct from homophonic, writing. Third, still more narrowly, the concept of counterpoint has been confined to the technique of vocal polyphony before 1600 (and in addition Bach's instrumental polyphony). Fourth, a number of 20th-century theorists have proposed a distinction between polyphony, the combining of equal voices, and counterpoint, a type of writing in which the voices are brought into relief against each other functionally and by virtue of their relative importance. Generally, however, 'polyphony' has been used to refer to matters of style or aesthetics, and 'counterpoint' to refer to matters of technique: polyphony is an end, counterpoint a means.

The assumption that the theory of counterpoint deals with the horizontal and that of harmony with the vertical dimension of music is as trivial as it is misleading. In the study of harmony, it is not just the structure of chords but also their progressions that must be dealt with; and similarly, in the theory of counterpoint it is a question not only of melodic part-writing but also of the chords formed by the parts. Second, the stylistic aims of counterpoint – which are directed to the simultaneous deployment of characteristic melodic parts – should be distinguished from the technical problems a composer must solve in order to realize these aims, above all in the regulation of simultaneities (joining consonances together, manipulating dissonances). It is the technical rules rather than the stylistic maxims that primarily constitute the subject for study. (A guide to contrapuntal or polyphonic style, such as that of Kurth, 1917, is not to be confused with a work of technical instruction.)

The historians' idea that an epoch of counterpoint can be identified as distinct from an epoch of harmony, with the year 1600 representing the dividing line between the

two, came about through lack of conceptual clarity. If harmony is understood as referring to a regulated joining together of simultaneities – and there is nothing to justify the restriction of the concept of harmony simply to tonal, chordal harmony – then music before 1600 also bears a harmonic imprint, even if of a different kind from that of later music. Kurth's assertion that early counterpoint was based on mere 'intervallic compatibility', and hence that the technique of joining together simultaneities fulfilled only the negative aim of avoiding perturbations in the linear exposition and thus of avoiding obtrusive sequences of consonances or conspicuous dissonances, is mistaken: it is contradicted by the fact that the progressions (in contrary motion) from the major 6th to the octave, from the major 3rd to the 5th, and from the minor 3rd to the unison, were reckoned to be especially clear and compelling, and were thus understood (comparably with the progression from the chord of the dominant 7th to the tonic triad in tonal harmony) as harmonic phenomena. Harmony before 1600 differs fundamentally from that of later times: earlier harmony proceeded from two-note intervals and not from three-and four-note chords (a three-note simultaneity was considered a secondary combination of intervals rather than a primary entity in itself); and tonality was shown less by chordal sequences than by melodic formulae.

Kurth's hypothesis that the linear polyphonic deployment of melodic parts was inhibited by tonal harmony is not wholly erroneous, but a distortion of the truth. Aesthetically it may be correct, in the case of narrowly restricted musical perception, to say that attention is directed either to the phenomenon of harmony and sonority or to that of melody and polyphony; and no doubt many composers have drawn the conclusion that in order for music to remain in the realm of the comprehensible either harmony or counterpoint must come to the fore. But strictly speaking the contrary is true: the fact that chord progressions constitute musical continuity and comprehensibility frees the part-writing from the necessity to take account of aspects that would be indispensable in composition consisting of interval sequences. Thus the harmonic and tonal basis of free style is not technically an impediment to linearity but a prerequisite for the unrestricted deployment of the melodic in music. Bach too – contrary to Kurth's interpretation of his simultaneities as mere resultants – conceived harmonic tonality as a support for melodic linearity.

13. Theory after 1700. Counterpoint theory, which until the 17th century was the only kind of instruction in composition, has had to share its dominant position with harmony theory since the 18th century; and the relation between the two disciplines has become increasingly complicated. Free composition appears in the work of many theorists as 'practical harmony' and in the work of others, by contrast, as 'licentious' counterpoint; it is possible on the one hand to conceive of the (theoretical) study of harmony – the awareness of the harmonic significance of notes – as a prerequisite for strict writing, and on the other to conceive of strict writing – the foundation on which free composition as a set of permitted departures is built – as a prerequisite for the (practical) study of harmony.

As a didactic discipline, counterpoint has been justified both speculatively and pragmatically. Fux and Padre Martini were convinced that the norms of strict counterpoint were founded in the very nature of music, which, though it might be transformed by changing styles and

fashions, was not to be destroyed (free style was understood as a permitted departure from strict style rather than as a suspension of it). In contrast, since the later 18th century the rules of counterpoint have been seen as historically specific, hence alterable, norms (and the nature of music has been sought in the rudiments of harmony); they were taken over either in order to avoid a break in the continuity of the development of the style of sacred music (Albrechtsberger) or in a revivalist spirit (Bellermann). Since the break with tradition that occurred around 1910, the custom of continuing to teach counterpoint in the Fuxian manner is generally justified by arguing that it is pedagogically necessary to discipline musical thought by means of exercises in 'dead material'. (No other style can be codified to the same extent as can the technique of Palestrina.)

The distinction between strict and free style, which contrapuntal theory since the 17th century has taken as its starting-point, can be explained by constructing (in Max Weber's sense) antithetic 'ideal types': complexes of characteristics which cohere closely and clearly, but also contrast with the characteristics of the other type. Strict style is the older type, passed down from the 16th century, and typical for church music (in Catholic regions); it is based on cantus firmus, is modal in character, and proceeds from two-part writing; the cohesion of its sounds comes from interval progressions; parallel perfect consonances are stringently prohibited and rigorous rules are formulated to govern dissonances and false relations; the didactic method is the system of five 'species'. Free style is the later type, originating in the 17th century and constantly evolving, and typical for chamber or theatre music; it is based on 'superposed two-part writing' (Hindemith, 1937) between melody and bass, is tonal and harmonic in character and proceeds from four-part writing, from the chord as the primary datum; the cohesion of its sounds comes from chord progressions; there are looser regulations forbidding parallel perfect consonances and governing dissonances and false relations; didactically, rhythmically differentiated counterpoint is developed from note-against-note writing by means of figuration.

Although the ideal types of strict and free style are scarcely encountered in their actual form in the history of music theory – most theorists have tried to find some compromise because, while respecting the tradition of strict writing, they have not wanted to neglect the apparent requirements of the day – the antithetical presentation is necessary: it serves as a point of reference among the confusion of doctrinal opinions, and even constitutes a criterion for the assessment of contrapuntal theories, since logical flaws almost always result from deviations from ideal types. When, for instance, Albrechtsberger postulated that one should conduct a harmonic and tonal analysis of a cantus firmus before building a counterpoint on it, it is, strictly speaking, not understandable why he should have started out from two-part writing, hence from an incomplete and therefore technically more difficult presentation of the harmony, instead of beginning with four-part writing as did J.S. Bach and Kirnberger. And when Dehn held that in strict three-part writing a dissonant suspension was a relationship not to another note, but to a chord (2/1883), he was led by the bias of 18th- and 19th-century listening habits to ignore fundamental principles of intervallic writing, and his mistake has technical consequences.

Strict style – *contrappunto osservato* – was codified by Fux in a form whose didactic merits sufficed to make his *Gradus ad Parnassum* (1725) a classic textbook for at least two centuries. If Fux consequently appears as the founder of a pedagogic tradition, the content of his book represents the inheritance of a tradition reaching back to Zarlino. The prohibition of hidden parallels, most simply formulated in the tenet that a perfect consonance must be reached by contrary motions, has been expressed in the form of four rules (contrary motion from one perfect consonance to another; unrestricted motion from a perfect consonance to an imperfect consonance; unrestricted motion from one imperfect consonance to another; and contrary motion from an imperfect consonance to a perfect consonance) since the time of Diruta (1609). However, the prohibition held good only for the outer parts, although theorists often laid down stricter regulations. The classification of the rhythmic relations between cantus firmus and counterpoint into five 'species' (note against note; two notes against one; four notes against one; syncopation in the second voice; *contrapunctus floridus*) can be found as early as 1610 in Banchieri's *Cartella musicale* (1610). This scheme, often criticized and ridiculed as pedantic, has been perpetuated with a pedagogically motivated tenacity; it is hardly reconcilable with the historical reality of Palestrina's style, which provides less an example of cantus firmus composition than a way of writing based on pervasive imitation between textually characterized, rhythmically differentiated parts. The relatively stressed passing dissonance lasting a semiminim (crotchet), permissible in certain cadential formulae in Palestrina's style, was referred to by Berardi (1689) as 'nota cambiata', since the consonance and dissonance change their usual places on the stressed and the unstressed beats (ex.17*a*). Fux, on the other hand,

used the concept of 'cambiata' ('Fux's appoggiatura') to refer to a dissonance that leaps down a 3rd, whose orthodox resolution, as Jeppesen has it (1925), is immediately retrieved with a rising 2nd (ex.17*b*).

The Fux tradition so much predominated in the teaching of strict style during the 18th and 19th centuries (it constituted the rudiments of the study of composition for Haydn, Mozart and Beethoven) that other systems can claim any raison d'être only by virtue of their departure from his system in certain essential features: at first with compromises between strict writing and free, then later (from the middle of the 19th century) with the tendency to historicize. Albrechtsberger (1790) emphasized that harmonic and tonal examination of the cantus firmus should be undertaken before counterpoint is written; Cherubini (1835) renounced the church modes; Sechter (1854) regarded writing for two or three parts as reductions of four-part writing, which was his starting-point.

If, in consequence, strict counterpoint moved nearer to free style in the late 18th century and the early 19th – through attempts to assimilate it into the changing practice of the ecclesiastical style, whose theory was moulded by

it – the exact opposite happened during the 19th century when the combination of historical awareness in contrapuntal theory (Bellermann, 1862) with revivalist endeavours in compositional practice (Haller, 1891) led to a tendency to see the rules of counterpoint in a narrower, stricter light. It was desired to re-establish, both in theory and in practice, the technique of Palestrina, the 'classical ecclesiastical style', exactly (to quote Ranke's historiographical dogma) 'as it actually had been'. Traditionalism, with its unconscious traffic between past and present, yielded to a historicism motivated partly by philology and partly by aesthetics. In the 20th century, after the decline of the Cecilian movement, strict style became petrified into musical mental exercises in a dead language – the Latin of musical instruction. The apparently indispensable didactic considerations cannot always be wholly reconciled with historical endeavours to give a precise description of Palestrina's style: even Jeppesen's textbook (1930), a paragon of pedagogic exposition by a historian, results from an (unacknowledged) compromise.

14. FREE STYLE: 'LICENTIOUS' AND 'HARMONIC' COUNTERPOINT. In spite of secondary changes, the theory of strict style is essentially that of a narrowly confined technique of composition, historically speaking, the style of Palestrina; however one interprets the system of rules – as a norm grounded in the very nature of music, as a body of dogma attaching to a historical style, or as rules of the game for didactic exercises – it is unequivocally certain to which fragment of musical reality it relates. The concept of free style, on the other hand, is a catchment area for extreme varieties of style that have primarily in common a negative characteristic, their departure from the norms of strict style. The usual procedure (in appendixes to textbooks on counterpoint or in the instructions for part-writing in practical textbooks on harmony) of describing free style solely in terms of its permitted deviation from strict style, instead of apprehending it from within, in the form of an 'ideal type', according to its own postulates, has arisen for a number of reasons; such description seems a deficiency, albeit an excusable one. It results, first, from the practice of isolating harmonic theory from the theory of counterpoint, from the splitting up of the rudiments of modern compositional technique into two disciplines; second, from the difficulty of extracting from a conglomerate of styles a single internally (and not simply in a negative sense) coherent system of rules; third, from the fact that even individual styles (such as Bach's counterpoint) cannot be so exhaustively, precisely and synoptically codified as can the technique of Palestrina; and finally, from the observation that the laws governing the evolution of counterpoint from the 17th century to the 20th have consisted in counterpoint's progressive emancipation from the norms of *prima pratica*. (Compare this with the 15th and 16th centuries, when the course of development was precisely the opposite: from a less rigorous to a stricter regulation of composition.)

The *stile moderno* of the 17th century, which included the monodic, the concertante and the madrigal styles (as did Monteverdi's term *seconda pratica*), was founded, on the one hand, as 'licentious' counterpoint, on the transgression of the norms of strict style – a transgression grounded in the tendency to emotional expression and pictorial or allegorical word-painting. On the other hand, as 'harmonic' counterpoint, it was distinguished from the *prima pratica* of the 16th century and from the ecclesiastical style that preserved that tradition by being rooted in tonal harmony. However, licentious counterpoint ought not to be equated simply with harmonic counterpoint: not every deviation from *contrappunto osservato* is motivated by tonal harmony. The best-known such deviations – the irregularities in Monteverdi's madrigals, abominated by Artusi, and seen by Fétis as the earliest document of modern tonality – arise from other causes. The downward leap of a dissonant suspension from a 7th to a 3rd (as in ex.18) is in Monteverdi an expressive figure

Ex.18

that owes its pathos to its striking departure from the rules of strict writing, but this licence cannot be interpreted in terms of tonal harmony (one cannot speak of 'movement within the chord'). Bernhard (*c*1657) explained this figure, which he considered among the tools of musical rhetoric, as a 'heterolepsis' (a 'recourse to another melodic part'): the upper voice changes its usual resolution, the 6th, for the 3rd, which really belongs to the middle voice.

After its uncertain beginnings in Monteverdi, the use of tonal harmony as a basis for counterpoint gradually increased from the late 17th century, though it did not become universal; theoretical signposts in this development include the writings of Masson (1694) and, particularly, Rameau (1722). The development was never complete: the belief that in harmonically tonal music every detail was determined by means of tonal harmony is an exaggeration resulting from over-systematic thinking. In harmonically tonal writing (and also in contrapuntal writing) harmonies, namely triads and chords of the 7th, constitute the primary, directly available entities from which the composer started out. From this basis in harmony there results the distinction between chordal dissonances, which belong to the harmony (the 7th in the chord of the 7th), and notes foreign to the harmony, which constitute an external adjunct to it. A chordal dissonance must be resolved, but need not be prepared; and for its own part, as a component of the harmony, it can function as the resolution of a note foreign to it. (In bar 4 of Mozart's 'Jupiter' Symphony even the octave is a note foreign to the harmony, a suspension leading to the 7th.) Naturally a 7th does not always count as a chordal dissonance, but only when its resolution coincides with a change of root (as in ex.19*a*) and thus when the dissonance

Ex.19

is a determining factor in the harmonic development as represented by the root progression (*see* BASSE FONDAMENTALE). Conversely, if the note to which a dissonance relates remains unmoved (as in ex.19*b*), then the 7th is to be understood as a note foreign to the harmony, i.e. a suspension.

Since the later 17th century, composers' use of free counterpoint has been characterized by the fact that dissonant figures taken from licentious counterpoint – accented passing notes or downward-leaping suspensions – have been conceived in terms of the requirements of

harmonic counterpoint, and hence related to triads and chords of the 7th instead of to individual notes. It is true that contrapuntal theory admitted harmonically founded phenomena only hesitantly. In Bernhard's attempt to sketch out a contrapuntal theory of *seconda pratica* (thus, to codify what is not really susceptible of codification), the dissonant figures of licentious counterpoint, the *stylus luxurians*, are described without regard to their harmonic preconditions or implications. Phenomena such as the accented passing note (*transitus inversus*), the upward- or downward-leaping appoggiatura (*superjectio* or *sub-sumptio*) and the resolution of a suspension by leap (*syncopatio catachrestica*) or by a step upwards (*mora*) are scarcely problematic; and their nature as exceptions to strict counterpoint, which is clear from the fact that they are referred back to the norm from which they deviate, is not open to dispute. However, in a quotation from a recitative (ex.20*a*), which Bernhard reduced to a bare skeleton (ex.20*b*) in order to elucidate its free style as a paraphrase of a piece of strict counterpoint, thus explaining it as an agglomeration of licences – an *ellipsis* (*e′* instead of *f′–e′*), a *quaesitio notae* (*c′♯–d′* instead of *d′*) and an *anticipatio* (*e′*) – there may be doubt as to whether it is not simply a matter of a broken diminished 7th chord. Hence one may question whether Bernhard was describing what he heard or whether his musical perception has been misrepresented in his theory for want of other than contrapuntal terminology.

In their descriptions of free style, Heinichen (1728) and Mattheson (1739), too, started out from the categories of licentious counterpoint: in clear contradiction of the listening habits of their time, and even their own perceptions, they explained as an *anticipatio transitus* the unprepared use of the 7th in the dominant 7th chord on a strong beat. The 7th, which in strict writing should appear only on a weak beat as a passing note, is interpreted as being anticipated on the strong beat. Kirnberger (1771–9), who took over the basic propositions of Rameau's theory of harmony, outlined a theory of 'free composition' sustained by an awareness of tonal harmonic implications. He adopted as his starting-point four-part writing rather than two-part; dissonances are classified either as 'essential' (dissonant chords) or 'fortuitous' (notes foreign to the harmony); and 'embellished or variegated' counterpoint proceeds from the figuration of a harmonic framework.

From a chorale with continuo accompaniment (ex.21*a*) – the seemingly two-part writing implies four-part writing by the continuo – Kirnberger evolved a motivic counterpoint (ex.21*b*). The upper part decorates dissonant chords melodically (chords of the 2nd, a 6-5 and a 7th) and

Ex.20

Ex.21

is to be understood not as an intervallic progression (as which it would be absurd) but as free movement within the chord, with anticipatory dissonances, hence notes foreign to the harmony, on every fourth quaver. The part-writing is justified by the chords that constitute the implicit or (in the continuo) explicit background to the composition.

15. Bach. Alongside the style of Palestrina, the instrumental polyphony of J.S. Bach constitutes one of the models that have determined contrapuntal theory. Whereas Palestrina's style allows barely any doubt over its rules, or at least its basic rules, the technique of Bach's counterpoint has not yet been adequately described and there is some controversy about the principles on which it is founded.

The habit of defining polyphony as a combination of equal melodic parts, the prestige of the fugue as a consummate expression of instrumental counterpoint, and a one-sided concentration on organ and keyboard music (as in Spitta's thesis of the primacy of organ style in Bach's output) all contributed to neglect of the fact that another type of polyphony, borne along by a continuo bass and with the melodic parts not of equal importance but graded, is not less characteristic of Bach's music than is the fugal type. To distort the title of a book by Halm (1913), it is possible to speak of 'two cultures of counterpoint' in Bach.

'Continuo polyphony' – or 'concertante counterpoint' – is founded on the principle of a functional differentiation between the parts: the counterpoint is hierarchical. In Bach's arias, where the writing is undeniably contrapuntal, the vocal part, the concertante instrument and the underpinning of the continuo make up a kind of three-part writing, differing from fugal writing principally in that the parts fulfil different functions throughout rather than fulfilling the same functions (e.g. subject, counter-subject or characteristic counterpoint, complementary counterpoint) in alternating groupings.

In continuo polyphony of the late Baroque period there is a coalescence of heterogeneous traditions, and it is precisely because of this variety that it displays an unsurpassed abundance of contrapuntal possibilities. These traditions included the idea of polyphonic writing originating with the *prima pratica*: a polyphony 'eloquent' in every one of its melodic parts; monodic style as the realization of a declamatory or cantabile, expressive or allegorical type of vocal melodic writing; the principle of concertante writing, with which the growth of idiomatic instrumental motif was closely associated; and, finally, the continuo as bearer of chord progressions, through

whose harmonic tonal definition a 'linear' deployment of the melodic parts was not impeded or restricted but rather, on the contrary, sustained (as already mentioned).

The idea of deducing a theory of Bachian counterpoint less from his fugal technique than from his typical concertante continuo polyphony ought not to appear too strange. For insofar as the period between 1600 and 1730, when technical developments culminated in Bach's compositional technique, has properly been described as the 'continuo period' (Riemann) and as the 'age of the concertante style' (Handschin), a historian will find it natural to affirm that concertante continuo polyphony represents the essential paradigm (resulting from the particular circumstances of the time) for Bach's counterpoint.

Since Kurth (1917) coined the term 'linear counterpoint' – a term whose subsequent use as a watchword he regarded as a misunderstanding – the controversy over whether Bach's counterpoint was primarily linearly or harmonically determined has continued to rage. In order to avoid an excessively obdurate opposition between conflicting dogmas, the technical aspect of the problem may be distinguished from the aesthetic. Technically (or 'logically') speaking, Bach's counterpoint is virtually always grounded in tonal harmony, and where the thematic aspect of his music comes into conflict with the harmonic, it is the thematic rather than the harmonic that is adjusted.

The dissonance sequence in bar 28 of the Invention in D minor (ex.22*a*) would be absurd if it were not heard as

Ex.22

an embellishment of the chord of A minor: notes belonging to the chord in the bass coincide with accented passing notes in the upper part, and notes belonging to the chord in the upper part with unaccented passing notes in the bass. The converse is rare: the fact that in bars 11 and 12 of the same piece (ex.22*b*) a passage of counterpoint is in itself comprehensible as a progression of intervals while the chordal significance of bar 11 as a whole remains uncertain (oscillating between G minor with added 7th and B♭ major with a lower 3rd) represents an exceptional case. Consequently, Kurth's theory that the harmony is always a resultant rather than a starting-point or precondition – a theory intended as a suggestive hypothesis, and hence unable to bear interpretation as a dogma – becomes questionable or even erroneous as an assertion about Bach's contrapuntal technique. It can still remain reasonable as an aesthetic postulate, or as a requirement to be met by musical perception. It will then mean that listeners are expected to give their attention primarily to the 'movement feature' of the individual parts and understand simultaneities as means to support the music's 'linear dynamics'.

The fact that – technically, or logically, seen – many such movement features result from the necessity to resolve dissonances, and thus that the 'energetic' impetus originates in the music's harmony rather than in its linearity, need not however prevent one from perceiving aesthetically the dissonances as means of reinforcing movement features. These will thus be accorded aesthetic priority even though, in technical respects, they represent a resultant: what is logically primary will appear as aesthetically secondary, and vice versa. (The attempt totally to psychologize the theory of counterpoint, as an encroachment of a manner of aesthetic perception into the description of technical rudiments, would undermine the theory.)

If, then, Bach's counterpoint is grounded in tonal harmony, it is also motivically characterized. Neither 'lines' in Kurth's sense of the word (which are to be found in Ockeghem rather than in Bach) nor melodic designs that imitate the rhythms and pitches of speech, but rather motifs and figurations of instrumental origin represent the prime substance found in Bach's polyphony. (Fugue subjects and counter-subjects are complexes of motifs and figurations.)

In bars 9 and 10 of the bourrée from French Suite no.6 (ex.23), the simple root progression in 5ths and the

Ex.23

formulaic melodic figures overshadow the irregular dissonances: the contrapuntal details remain aesthetically unobtrusive, since logically, in the structure of the writing, they are subsidiary. The interval sequences that in the style of Palestrina were the very essence of counterpoint have now become merely a by-product of the tonal–harmonic and motivic characterization of the polyphony.

Contrapuntal phenomena that cannot be explained by reference to the usual categories may often result from the superimposition of melodic parts that move according to different rhythmic levels. In the second movement of the trio sonata from Bach's *Musical Offering*, bars 49–51, the outer voices form a chromatic chain of 6ths and 7ths in a crotchet rhythm (the bass being thematic). But the progression can be reduced to a diatonic model in minims (ex.24), a contrapuntal procedure that dates back to the 15th century. It is to this diatonic, reduced version that one must relate the inner part if the harmonies, which deviate from the norms of tonal harmony, are to become comprehensible: the notes *g′* in bar 50 and *f′* in bar 51, which appear to be dominant 7ths left unresolved, are in fact 5ths. The apparent chords of the dominant 7th are an incidental result of the rhythmic and chromatic modification of an original contrapuntal model.

Ex.24

The fact that defining Bach's counterpoint becomes a complicated business, since one has to speak both of concertante continuo polyphony and of hierarchically organized counterpoint, ought not be thought a deficiency. It is precisely to the multiplicity of historical conditions on which it is based that Bach's polyphony owes, first, its abundance of figural material (and that has always been a cause for admiration) and, second, its numerous determining factors, which could only fail to be appreciated when it was sought to deduce the counterpoint from a single principle, that of 'linearity'.

16. THE CLASSICAL AND ROMANTIC ERAS. The period between the later years of the 18th century and the beginning of the 20th is accounted one in which counterpoint sank to being a mere academic exercise, leaving barely recognizable traces in the practice of composers of piano and operatic music. Yet an immense landscape of musical works bearing a primarily homophonic imprint is relieved by isolated polyphonic works or groups of works which, in both spirit and technique, recall older styles. Archaistic counterpoint, looking back to the models of Palestrina or Bach, was by no means the only one; types can be cited that distinguish this period from earlier centuries (provided one does not cut off access to the phenomena that constitute the typical counterpoint of the 19th century by the use of a definition restricting the concept of genuine counterpoint to the older style).

The revival of Palestrina's style, a throwback for which the spirit of the Romantic movement was responsible, was sustained by the enthusiastic belief that only 16th-century vocal polyphony could be 'true church music': a maxim shared by Protestant writers (such as E.T.A. Hoffmann and Thibaut) and Catholic alike. Since it remained restricted to sacred music, this reverence for Palestrina could even be totally reconciled with the championing of musical 'progress' which the New German school believed it stood for: Liszt sympathized with the aims of the Cecilian movement, and that left its mark on his compositions. In the 19th century, of course, the most important aspect of Palestrina's style used to inculcate a devotional frame of mind was not so much the strict technique of composition as rather the 'seraphic tone' of a music whose tempo was dilated so that it could be made to convey the notion of hallowed strains felt to be emanating from some Great Beyond. Although Bellermann's work in laying down precise rules for composition in this style (1862) came about in connection with the church music revival, it also indicates that the objective task of historical reconstruction became divorced from Romantic enthusiasm.

While the revival of Palestrina's style appears primarily to have been a matter of resuscitation and performance of existing music, and only secondarily intruding into the realm of composition, the influence of Bach's counterpoint was of concern to composers: it was a matter of their professional equipment. The influence exerted by Bach on Chopin and Mendelssohn, Schumann and Brahms should not be sought solely in fugues and fughettas: it can also, and indeed particularly, be felt in their character-pieces. The problem that Romantic composers sought to solve by referring back to Bach consisted in the difficulty of writing in a 'strict style' – hence without falling into the technical heedlessness of the general run of operatic and keyboard music – while producing works that were poetic rather than prosaic (under which heading Schumann categorized not just light music but also the merely technical work of art). What they saw realized in exemplary fashion in the music of Bach was the idea of music at once contrapuntal and full of character, at once strict and eloquent: music in which the characteristic and the eloquent features of a contrapuntally differentiated texture were not forced on it from outside but were actually generated by it.

In the instrumental music of the Classical and Romantic eras the fugue represents a kind of counterpoint thought of as 'strict', although actually it was a special case of 'free style'. However, sonata and fugue – or rather, sonata form and fugal technique – were closely related: there was a tendency for the 'two cultures of music' to coalesce into a third. On the one hand, as demonstrated by Haydn's evolution from op.20 to op.33, fugue and fugato were prerequisites of thematic working out in the technique of Classical and Romantic development sections. On the other, as the tendency grew for thematic development to spread over entire movements, it became logical to characterize the development section by an intensification of motivic work to the point of fugal technique and thus mark it out as distinct from the exposition and the recapitulation. In Beethoven's late quartets, in Brahms and even in Liszt, fugal technique was in effect displayed as a consequence of thematic working.

The continuation of the second subject in the first movement of Schubert's String Quintet in C, a melody in canon, provides a perfect example of the realization of an idea that constantly recurs in the 19th century, in operatic ensembles as well as in subsidiary themes of Bruckner symphonies: the idea of a cantabile counterpoint, or of a contrapuntal cantabile style. The fact that to aestheticians this must have seemed a hybrid, since it flouted the convention whereby cantabile was associated with homophonic style and polyphony with an unbending thematic style, was seen by composers less as an inhibiting factor than as a challenge to transform this contradiction into an aesthetic proposition and thus a benefit. Indeed, it was characteristic of the 19th century that it tended to bring together apparently mutually exclusive opposites.

The thematic combinations in the prelude to Wagner's *Die Meistersinger* and in the final duet of *Siegfried* – the simultaneous, not wholly unforced, presentation of leitmotifs that had been independently coined – were felt by Schenker to be a betrayal of the concept of counterpoint; Richard Strauss on the contrary praised them as the only adequate form of counterpoint in an age of 'expressive' music (and took the idea to technical and aesthetic extremes in *Salome* and *Elektra*, as 'psychological counterpoint'). Here it is undoubtedly a matter of counterpoint as an expression of literary ideas: the motifs are not related as melodic lines but associated aesthetically as symbols of ideas and emotions, while being technically pieced together as encrustations around one and the same chord (not without fissures and flaws). The procedure may be thought technically questionable; but during a period typified by music drama and symphonic poems – genres bearing a strong literary stamp – it should not seem surprising if these literary tendencies infiltrated contrapuntal technique. Or, to put it another way, if one is going to condemn literary counterpoint, one's judgment must also include literary music as a whole.

Polyphony written around chords, and there less for its own sake than for the fact that it imparts a richer and more variegated effect to the orchestral sound, has come into disrepute as 'pseudo-polyphony'. This term, either explicitly or tacitly, contains the aesthetico–moral reproach that counterpoint, which ought to be an end, has here been relegated to the role of a means, a factor subservient to the quality of sound: instead of being rendered clear by means of instrumentation, the exact opposite happens and it is made to serve as a vehicle of sonority. (Instruments whose parts are characterized by expressivity make a better sonorous impact, even though the details of what they have to say are quite inaudible.) In this judgment is concealed a prejudice that the parameters of music fall into an unalterable hierarchical order: according to this, contrapuntal structure would as a matter of course be the primary factor and instrumentation merely secondary. In the evolution of composition during the mid-20th century this prejudice has been overthrown, so that in retrospect even a historical phenomenon such as the 'degradation' of counterpoint to a means towards richness of sonority appears in a very different aesthetic light.

Textbooks, which for didactic reasons are inclined to simplify matters by setting up clear antitheses, suggest that counterpoint functions as an 'opposite' to harmony, thus promoting the view that an evolution of harmony embracing varied chordal structures and methods of linking chords must necessarily entail a suppression of polyphony. But in the music of Brahms and Wagner the opposite is patently the case. The harmonic richness characteristic of Brahms forms a corollary to a kind of melodically conceived bass writing (instead of being confined to a small number of supporting notes); and the relationship of such a bass to the melodic line becomes a contrapuntal framework for the compositional technique. In Wagner's harmony it is the individual characterization of chords by means of dissonances and chromatic variants that creates consequences in the contrapuntal writing: on the one hand the dissonant, complicated chords impel their own part-writing; on the other, since the root progression in the bass is often weak and not capable of sustaining its load, chords must be linked by motivic part-writing. Hence the part-writing must tend towards polyphony if the juxtaposition of chords is to have the effect of a compelling progression.

17. 20TH CENTURY. The emphasis on counterpoint in music after 1910 can be seen as a corollary of the diminishing importance of tonal harmony. Chordal coherence lost its fundamental importance, and did so regardless of whether tonality was dissolved (Schoenberg, Berg, Webern) or metamorphosed (Stravinsky, Bartók, Hindemith). The various types of expanded tonality (whose principal feature is not, however, expansion) appear as hierarchically ordered systems analogous to traditional tonality; but it is less chords than individual notes round which they spin a web of relationships, so that it is more natural for the tonal structures to be characterized by melodic and polyphonic than by homophonic style.

Among the techniques that dissolved tonal harmony, bi- or polytonality is notable for its tendency to promote a contrapuntal style. Although it appears to proceed from the superimposition of chords of different keys (as in Strauss's *Elektra*), it is possible to consider the contrapuntal manifestation (as in Milhaud) as the truly representative one. Polytonal (or polymodal) counterpoint is a paradox of compositional technique in that the tonal atomization of the style as a whole requires a particularly clear tonal characterization of the individual parts; otherwise polytonality – whose aesthetic import consists in the pointedness of its effect – will turn into the grey on grey of tonal indistinguishability.

The problems of 12-note counterpoint inevitably raise the problems of 12-note technique as a whole; here it is necessary to restrict the discussion to comments on some misunderstandings or details that have been taken out of context. First, the 'emancipation of the dissonance', the liberation of dissonances from the necessity of resolution, merely means that the specific difference between consonances and dissonances, which gave rise to the dependence of dissonances on consonances, has been abolished, and not that chords no longer possess varying degrees of consonance and dissonance with which the composer can work (Krenek, 1940). In 12-note counterpoint, too, there is a 'harmonic gradient' (Hindemith, 1937). Second, Schoenberg's procedure of formulating a 12-note row in such a way that the first half of the original form together with the first half of the inversion transposed down a 5th form a 12-note complex (what Babbitt called 'combinatoriality') represents a way out of the dilemma: for the principle of dodecaphony, the non-repetition of notes before a row has been stated in its entirety, is contravened as soon as incidental note repetitions are produced by the simultaneous use of different forms of the row. Where the row itself is a primarily melodic principle, combinatoriality presents itself as a sustaining principle of a kind of 'strict writing' in 12-note counterpoint. Third, dodecaphonic counterpoint in Schoenberg (though not in Webern) is to be understood as thematic or motivic counterpoint. Schoenberg did not construct 12-note rows in an abstract way, but as thematic shapes (though naturally they would be modified for constructional purposes); and the assertion that by virtue of dodecaphonic technique – as distinct from free atonality, which tended either towards dependence on a text or towards an aphoristic style – it would once more be possible to compose large-scale forms in instrumental music simply means that dodecaphonic technique permitted the formulation of themes capable of sustaining a large-scale musical structure.

The term 'linear counterpoint' (Kurth, 1917) should not be mistaken as a synonym for a heedless sort of polyphony paying no attention to vertical simultaneities. Its distinctive feature is rather the concept of melody, which served as the starting-point for the adherents of the 'new objectivity' when they set up linear counterpoint as an anti-type to the Romantic harmony they despised: the notion of a kind of melodic writing not reliant on chords and chordal progressions, but evolved from the alliances and oppositions of leaps and steps, ascents and descents, long and short values, indeed a kind of structure of pitch and rhythm representing a 'state of energy' (Kurth) and striving towards an equilibrium which, however, it can only achieve at the very last, so that the melodic movement will not come to a standstill before the final cadence. Counterpoint, however, is in this style nothing more than multiple melody, and is subject to the same criteria of energy as is a single melody: the parts support, enhance

or contradict each other; they cross or complement each other.

Countersubject. In a fugue, a second theme that figures prominently but is subordinate in importance to the SUBJECT. A countersubject proper is presented in the exposition in orderly fashion, that is, each voice immediately follows its opening statement of the subject by stating the countersubject in counterpoint with the next statement of the subject in the next voice to enter. In order for the combination of subject and countersubject always to produce good counterpoint, the two must be composed in INVERTIBLE COUNTERPOINT so that they work properly together no matter which is above the other. After the exposition is finished, there is no standard procedure for handling the countersubject and it may be dealt with as the composer wishes (for further detail *see* FUGUE, §1). Most musicians agree that the presence or absence of a countersubject is not a defining feature of fugue, although its presence is requisite in the FUGUE D'ÉCOLE. The idea of a standard countersubject can be traced to an interest in combining fugue with invertible counterpoint on the part of a circle of German musicians working in Hamburg and Lübeck in the 1660s and 70s that included Matthias Weckmann, Reincken and Buxtehude. (P. Walker: 'Zur Geschichte des Kontrasubjekts und zu seinem Gebrauch in den frühesten Klavier- und Orgelfugen Johann Sebastian Bachs', *Das Frühwerk Johann Sebastian Bachs: Rostock 1990*, 48–69)

PAUL WALKER

Countertenor. A male high voice, originally and still most commonly of alto range, though the title is increasingly employed generically to describe any adult male voice higher than tenor. Historically, it derived in England from the CONTRATENOR line in late medieval and Renaissance polyphony, via *contratenor altus* ('high contratenor'), which – used interchangeably – became 'countertenor' and 'altus', then alto (as in Italian nomenclature) and, later still, even 'male' alto (*see* ALTO (I), ALTUS and CONTRALTO; *see also* HAUTE-CONTRE).

1. The term. 2. The voice. 3. The revival.

1. THE TERM. From the late 13th century onwards, manuscript and later printed sources of French, Netherlandish and (eventually) English music almost invariably used the original Latin form 'contratenor' for this vocal line which, into and throughout the Renaissance, rose gradually in range and tessitura. In England, the anglicized form 'countertenor', or 'counter-tenor', seems to have become common spoken usage by the early 16th century (*Oxford English Dictionary*), though the part (and by implication broadly the vocal range) was also called 'contra', or 'counter'. The vocal range required also suited many 'meane' parts. Morley, in *A Plaine and Easie Introduction* (1597, pt 3), frequently employed the term 'countertenor' (though regularly cut to 'Counter') to denote a line of instrumental or vocal polyphony which lies slightly above the tenor and is usually written in a clef a 3rd away from that part. In these and still later examples, the original 'contratenor' character persists to some extent, in that the part occasionally crosses, 'counters' or repeatedly 'encounters' the tenor. When there were two countertenor parts, mostly of about equal range, they tended to cross each other frequently; this persisted well into the 18th century. Boyce's *Cathedral Music* (1760–73) continued to print the ancient term 'contratenor' against the countertenor/alto line(s), e.g. *contratenor cantoris primus*.

Repertory, sacred and secular, was written for male high-voice soloists, who usually employed FALSETTO (a colloquial, erroneous and misleading term for second-mode phonation or pure head register), exclusively or in part. In different countries and periods they became titled, variously, 'countertenor', 'Alto', 'altist', 'falsettist', 'Contralto', or 'Haute-contre'.

2. THE VOICE. Contrary to popular understanding, the male high voice employing 'falsetto' was never an exclusively English phenomenon. It has been cultivated variously, worldwide, and played an important part in the earliest and middle development of Western music, especially in the Low Countries, Germany, Spain, Italy, France and England. It has however been argued that this second-mode use came to Britain only in the late 17th century, roughly parallel with the extended visit of the first ecclesiastical castrato, and about 20 years before the arrival of the operatic castratos, *c*1707. During the height of the CASTRATO period in mainland Europe, second-mode users, while flourishing in choirs, suffered near extinction as secular soloists, especially as some seem to have counterfeited for castratos. In England, visiting stage and oratorio castratos were deputized for by indigenous countertenors and women. Handel, for example, sometimes exploited this and made his final choice to suit the circumstances.

By the 19th century, although the second-mode specialist had faded as a soloist in mainland Europe, the mode itself survived as an option in the male voice, as in, for example, the 'contralto tenors' of the Capella Sistina. In England, the second-mode tradition continued to thrive in cathedral and church music, academia and the numerous glee clubs although, as the female contralto began to predominate everywhere else, the countertenor/alto gradually lost ground to her in the oratorio chorus. Already, he featured ever more rarely as an oratorio and concert soloist, having come increasingly to be known only as alto, later 'male alto' (the prefix came to be affixed when women started to sing alto parts in public performance in which vocal titles were used).

The triumphant re-emergence of the solo countertenor came primarily from England. The artistry of Alfred Deller (1912–79) was largely responsible, from the mid-1940s, for the renaissance of the title 'countertenor' and the presence of the voice in a secular, solo capacity on the mainstream concert platform and the stage. Deller was followed closely by John Whitworth and, in America, Russell Oberlin. It has not been fully acknowledged, however, that the countertenor survived both in title and employment in early British and American recordings (*c*1904 – late-1930s) of popular ballads and ephemeral material.

Like all voice-types, the countertenor's vocal style, timbre and character have adjusted to suit changes in musical fashion. This caused confusion and controversy during the late 20th century when the perceived 'correct' vocal type was sought for music of a particular genre or period. Although some writers have tried to avoid all titles except the generic though ambiguous 'falsettist', traditional opinion argues that the countertenor is simply the historical (male) alto who employs, almost exclusively, highly developed second-mode phonation, the pure head register. A more specific definition is that the countertenor must always have a tenor or light-baritonal first-mode with a second-mode extension. Another view is that alto and countertenor voices are distinct, and distinguishable, in that (it is claimed) the alto is merely a falsetto from a bass or baritone's fundamental register, while the true countertenor has a 'natural' tenor first-mode – i.e. not 'falsetto' – with an abnormally light, high range and able to maintain an unusually high tessitura like, it is argued, the French *haute-contre* (there is also, however, much disagreement in this regard about the historical *haute-contre*).

Radiographic evidence has been presented (Ardran and Wulstan, 1967) to support the view that both 'countertenors' and 'altos' are 'falsettists', in the sense that both produce their voices by the same physiological means, although Deller added that this was 'an over-simplication . . . no amount of work will produce a clarion sound from what Nature has (inscrutably) designated a bugle'. Both opinions were broadly endorsed by Giles (1982), who further argued that there are several exploitative, different subdivisions of second-mode phonation which produce contrasting timbres; this was supported by conclusions based on xeroradiographic-electrolaryngographic analysis (Welch, Sergeant and MacCurtain, 1989).

Other than the philological aspects of the title 'countertenor', the reason for the quasi-high-tenor tonal quality available to him, so often cited as a vital ingredient, is probably that, in both the countertenor's second-mode and the lyric tenor's upper first-mode phonation, the vocal folds are stretched longer, are thinned and are more elastic. The difference is that in the countertenor's second-mode state, the arytenoid cartilages are closed, resulting in a shorter total length of fold, resulting in a higher pitch.

Nevertheless, current confusion regarding the countertenor voice probably occurs because, before the early 19th century, it was acceptable for male singers of all vocal denominations to employ some second-mode phonation when they wished, and because, in practice, the male voice seems to have been regarded as something of a 'composite' vocal instrument with specialist domains, rather than being pressed into stereotypical categories, as in the view during the mid-19th century and since.

Using these later methods of classification, the countertenor seems to be divisible into three or four groups: High and Ultra-high and two categories of Low (with minor subdivisions): these titles indicate preferences or tendencies in vocal production rather than distinct ranges. Many British high countertenors, reluctant to use first-mode at all, employ exclusively the expertly extended, developed second-mode. But second-mode's antiphrasis, 'falsetto' (a misleading misnomer), is a perfectly natural vocal state, available in undeveloped form in almost every male, and can itself produce two main sub-modes or varieties, upper-second-mode and middle-second-mode/pharyngeal. Most high countertenors normally use both sub-modes; if they wish, they can opt to employ upper-first-mode too, which is usually light baritone- or tenor-toned.

The adult discantus singer of the Ars Nova and Renaissance was, it seems, a rare variety of high countertenor, employing much high range upper-second-mode, as did the Spanish falsettist. Originally largely displaced by the castrato soprano, this species, now sometimes titled 'sopranist', reappeared with distinction in formal music in the 1980s and 90s. Invariably, he needs to use his tenor- or light-baritonal first-mode for lower-pitched notes.

The first category of low countertenor works essentially in middle-second-model/pharyngeal, perhaps adding a little upper-second-mode for special effect, and he often joins his upper-first-mode to middle-second-mode (either tenor-toned or light-baritonal). The second type is the rarely-found tenor-altino, who usually possesses an uncannily light first-mode but frequently sounds as if he uses at the top of his compass much the same mechanism (i.e. second-mode) as other countertenors.

Some commentators argue that *haute-contre* (high-contra) singers originally employed second-mode phonation and were therefore simply French countertenors; and that originally their ranks probably included all three countertenor types. Nevertheless, by the early 19th century, when the *haute-contre* was becoming virtually extinct, they seem to have evolved into singers very like modern, high, lyric tenors. Contemporary accounts however indicate that they used an over-extended *voix-mixte* too high in the range for comfort (theirs or the audience's). In revival, however, *haute-contres* have mostly reverted to using earlier vocal techniques.

The countertenor should therefore be considered a survivor from an earlier, more versatile, male vocal method. The range available through the use of such a technique would appear to have enabled most singers who today are called 'countertenor' to have sung most parts in early polyphony, according to individual vocal

timbre, range and inclination. Historically, to qualify for the title 'countertenor' (when that title finally evolved), a singer would seem to have required unrestricted use of second-mode phonation, with the optional employment of first-mode, in a ratio appropriate to the music being performed; this is still the case.

3. THE REVIVAL. The renaissance of the countertenor voice in the mid-20th century was closely associated with the specially gifted singer Alfred Deller (1912–79), who was an alto in the choir of Canterbury Cathedral, and later that of St Paul's Cathedral. When he began his career as a soloist, he worked closely with the composer Michael Tippett; they agreed that a return to the term 'countertenor' would be appropriate largely because the repertory they were immediately concerned with was drawn from Purcell (himself described as a countertenor) and his contemporaries. In revivals of such works as *The Fairy Queen*, the new generation of countertenors led by Deller played a prominent part. They have continued to take an important role in the early music movement and have increasingly shown an ability to cope with the male contralto and mezzo-soprano roles in the operas of Handel and other Baroque composers, as well as the oratorio roles originally written for the male high voice (such as David in *Saul* and Micah in *Samson*); staged revivals and recordings sometimes prefer women singers in these roles but many have favoured countertenors (for example in *Giulio Cesare*, *Orlando* and *Ariodante*) who have developed the volume and penetrative quality of tone necessary to project the roles in the theatre. This movement began in Britain, with such artists as John Whitworth, Paul Esswood, James Bowman and, later, Michael Chance; there have also been several distinguished American singers, among them Russell Oberlin, Drew Minter, David Daniels and Derek Lee Ragin, the Belgian René Jacobs, and in the 1980s and 90s several Germans, notably Jochen Kowalski and Andreas Scholl.

Modern composers of opera have also shown interest in this newly available voice. Britten wrote the role of Oberon in *A Midsummer Night's Dream* (1960) for Deller; this remains the countertenor's most attractive part and has been sung by Oberlin and, in many further productions, by Bowman. Other modern operas using the voice include Britten's *Death in Venice* and Glass's *Akhnaten*. An imaginative feature of Reimann's *Lear* is the casting of Edgar as a countertenor, particularly effective in the howling of 'poor Tom'. There has also been a movement to extend the countertenor's sphere so as to include such roles as Gluck's Orpheus, Pharnaces in Mozart's *Mitridate*, Orlofsky in *Die Fledermaus* and the Tsar's son in *Boris Godunov*; this has led to a generation of singers who claim for the voice dramatic qualities that dissociate it from the main British tradition emanating from Deller.

Country dance. An English dance widely popular in the 17th century. It spread to the Continent, particularly France, where it became known as the CONTREDANSE.

See ENGLAND, §II, 4.

Country music. A popular music style. It has its origins in not only country dance tunes and archaic ballads of Anglo-Saxon and Celtic origins, but also 19th-century popular songs, black-American blues and gospel songs, and the sacred numbers that stemmed from the successive waves of religious revivals that began in the 18th century. Over a span of 75 years country music has evolved from a folk-derived art form, performed mostly by rural amateurs, into a complex multi-million dollar industry. The earliest country musicians played for country dances, or sang on street corners to earn a living (fig.1). In contrast, the contemporary stars of country have virtually worldwide name recognition and receive large sums for concert appearances.

1. Early developments: the 1920s and 30s. 2. Western swing, honky tonk and bluegrass. 3. The Nashville sound. 4. New Country.

1. EARLY DEVELOPMENTS: THE 1920S AND 30S. The development of commercial country music began in 1922 and the following year, when the Victor and Okeh companies recorded respectively the fiddlers Eck Robertson of Texas and John Carson of Georgia. Carson had a rough instrumental and vocal style but enjoyed considerable popularity among the working class in Atlanta and he, particularly, stimulated a search for other rural musicians of quality. Led by Ralph Peer, who worked first for Okeh and then for Victor, and Frank Walker of Columbia rural artists, based in Virginia, North Carolina, Georgia, and Tennessee, began to make recordings for what were labelled 'old-time tunes' or 'old familiar tunes'. String band music dominated the early years with groups such as Gid Tanner's Skillet Lickers, Charlie Poole's North Carolina Ramblers, and Ernest Stoneman's Dixie Mountaineers, along with Carson's band, in the pre-eminent position. Riley Puckett was a popular vocalist in his own right and the singer and banjoist Uncle Dave Macon of central Tennessee popularized a minstrel-derived style. Numerous amateur and semi-professional performers visited either the permanent recording studios in northern cities or makeshift studios in the South. Some recorded only once while others returned for repeated sessions, as what might be termed a star system had not yet developed. In addition to these folk-derived recording artists, musicians with a more or less professional background, such as Texas-born Marion Slaughter (most commonly known on record as Vernon Dalhart), began

1. 'The Sources of Country Music', including players of the Appalachian dulcimer, fiddle, banjo and guitar: mural by Thomas Hart Benton, completed 1975 (Country Music Hall of Fame and Museum, Nashville)

recording country-oriented material and had the first large-scale success with a two-sided Victor disc, *The Prisoner's Song* and *Wreck of the Old '97*. Others who followed in the Dalhart style included the vocalist and songwriter Carson Robison and Frank Luther.

In 1927 Ralph Peer of the Victor firm conducted recording sessions in Bristol, Tennessee, for both established performers like Ernest Stoneman and newer acts, of whom two soon rose to prominence. The Carter Family of Scott County, Virginia, consisting of A.P. Carter, his wife Sara and sister-in-law Maybelle, made more than 250 recordings over 14 years and have exercised a continuing influence in the music, partly through their children and grandchildren. The other Bristol discovery, Jimmie Rodgers, a Mississippi-born former railroad brakeman, sang in a style largely derived from black-American blues performers augmented by his distinctive blue yodels. Rodgers died prematurely in May 1933 from the effects of tuberculosis, leaving a legacy of some 110 songs and a number of other significant protégés who began their careers by emulating his style. This latter list includes Cliff and Bill Carlisle, Gene Autry, Jimmie Davis, Hank Snow and Ernest Tubb.

Alongside recordings the genre also spread through the medium of live radio broadcasts. The two most significant early stations, WLS Chicago and WSM Nashville, both developed Saturday night live audience programmes that became mainstays of network radio. 'The National Barn Dance' in Chicago produced the first person to achieve major stardom via radio in Bradley Kincaid, and then western cowboy-styled singers, first with Autry and later Rex Allen, who both went on to experience notable careers in motion pictures. They also developed the first husband and wife duo to become stars in the North Carolina-born Lulu Belle and Scotty (Wiseman). 'The Grand Ole Opry' in NASHVILLE utilized the services of several Tennessee string bands typified by the Possum Hunters, Uncle Dave Macon, the Delmore Brothers and, from 1938 onward, Roy Acuff who would be the leading country artist in the 1940s. Although 'The National Barn Dance' died out in the 1960s, 'The Grand Ole Opry' continues to thrive, and it became the major factor in the development of Nashville as the principal centre of the country music industry in the immediate years after 1945.

Two musical subtypes of country that developed in the 1920s included cowboy or western and Cajun, which developed in the French speaking portions of southern Louisiana. Victor recorded the first COWBOY SONGS in August 1925 by Carl T. Sprague; *When the Work's all Done this Fall* became the hit of the session and Sprague returned three more times to the studio. Other early purveyors of cowboy songs included Jules Allen, Harry McClintock, and the Cartwright Brothers. By the 1930s, however, either movie cowboys such as Autry, Tex Ritter, and Roy Rogers or smooth vocal trios such as the Prairie Ramblers or the Sons of the Pioneers came to dominate the field. Female performers made inroads here too typified by yodelling cowgirl Patsy Montana and the duo of Milly and Dolly Good (the 'Girls of the Golden West'). CAJUN MUSIC had only a small audience in the 1920s but its earlier sounds, dominated by accordion and fiddle, had a special quality that eventually influenced the country mainstream. Pioneers in this music included Joe Falcon, Leo Soileau, Dennis McGee and, from the mid-30s, the Hackberry Ramblers.

The Great Depression hit country record sales hard as incomes plummeted, for it was the agrarian and working classes who bought the records. Many artists ceased recording and some companies went into bankruptcy, receiverships and reorganizations. By the mid-1930s a

modest recovery began, one new firm Decca entered the market in 1934, and sales began to increase. In the Southeast, duet acts with two guitars, typified by the Delmore Brothers, or mandolin and guitar, by the Monroe Brothers and Blue Sky Boys, did well. A somewhat updated version of the older string band persisted, most successfully developed by the North Carolina group Mainer's Mountaineers.

2. WESTERN SWING, HONKY TONK AND BLUEGRASS. In Texas and westward a country version of the big band sound evolved into what would eventually become known as WESTERN SWING, a style that featured multiple fiddles, electrified instruments, smooth pop sounding vocals, and sometimes horns. After briefly working together Bob Wills's Texas Playboys and Milton Brown's Musical Brothers pioneered the style, although Brown's early death in 1936 limited his fame. The Wills and Brown parent group, the flour company-sponsored Light Crust Doughboys, also adapted this sound, as did Bill Boyd's Cowboy Ramblers. Numerous other Texas swing bands flourished in the late 1930s, including the Tune Wranglers, Jimmie Revard's Oklahoma Playboys, and those led by Cliff Bruner and Adolph Hofner. By the 1940s western swing began to flourish on the West Coast, and Wills migrated there leaving his younger brother in Tulsa to form a new group, Johnny Lee Wills and his Boys. Spade Cooley also developed a fine California-based band and actually gave the name 'western swing' to the music. While the popularity of the music faded by the early 1950s (except for Hank Thompson and his Brazos Valley Boys), its influence remained and eventually enjoyed a revival of sorts in more recent years.

In part the popularity of western swing reflected the increasing importance of the juke box trade in determining the record market: jukebox distributors became major purchasers of records. The saloons and cafés that dotted the rural South and Midwest as well as working-class sections of cities had tens of thousands of customers who listened to country songs while relaxing there. Texas swing music had considerable impact on the jukebox trade and so did the style that in a sense developed for it, which came to be known as HONKY TONK music.

Honky-tonk music, so called from the nickname for the taverns where its listeners gathered, usually consisted of a strong vocal with instrumentations generally provided by an electric steel guitar and a fiddle, with some rhythm support. Song topics increasingly dealt with unfaithful love, broken hearts and rowdy lifestyles to a greater degree than earlier. Early practitioners of the type included Louisianans Jimmie Davis, as he moved away from Rodgers stylings, and Buddy Jones, a Shreveport policeman who performed the more rowdy material while Davis moved more in the direction of middle-class respectability as his political career advanced. The first real honky-tonk widespread hit, however, was Ernest Tubb's *Walking the Floor Over You* in 1941, which the so-called Texas Troubadour followed with numerous others over the next several years. Honky-tonk stylings had become dominant by the end of World War II, when a new wave of major recording artists burst upon the national scene led by Hank Williams (fig.2), whose hundred or so original songs included many that became standards. Other major figures in this style included Hank Snow, Hawkshaw Hawkins, Lefty Frizzell and Eddy Arnold. The latter eventually moved toward a more middle-of-the-road style, alienating some hard country fans, but on the whole enjoying more long-range success than any other artist in country music history.

2. Hank Williams

World War II helped increase the audience for country music as the young soldiers and other rural dwellers took it with them to military camps and the urban defence plants. The war and its aftermath also spread the country music horizons to northern American cities, Europe and East Asia.

Beginning in April 1948, another major radio barn dance 'The Louisiana Hayride' began broadcasting from KWKH in Shreveport. It soon developed a number of country stars including Hank Williams, Faron Young, Webb Pierce, Red Sovine, Johnny and Jack, Kitty Wells and Johnny Horton. With the exception of Horton, these artists moved on to Nashville and the Opry once they had accumulated a few successful recordings. For a time the Hayride became known as 'the Cradle of the Stars' and even Elvis Presley appeared on it as a regular for a year in the mid-1950s. Somewhat later, a prime time ABC network television programme 'The Ozark Jubilee' from KWTO Springfield, Missouri enticed Opry star Red Foley to become its principal star. The show flourished from January 1955 until September 1960 and helped advance the careers of several younger performers including Wanda Jackson, Brenda Lee (fig.3), Bobby Lord, Norma Jean, Marvin Rainwater, LeRoy VanDyke and Porter Wagoner.

While the honky-tonk style dominated country music through the mid-1950s, countertrends remained in evidence. Opry star Bill Monroe, formerly of the Monroe Brothers, developed a newer up-tempo form of the older string band sound featuring instrumental leads of mandolin, fiddle and, most notably, the three-finger picked five-string banjo initially played by Earl Scruggs; others soon emulated the style of Monroe and his Blue Grass Boys. Scruggs and Monroe's lead vocalist Lester Flatt

3. Brenda Lee

formed their Foggy Mountain Boys and, in the mountain regions of western Virginia, the Stanley Brothers had their Clinch Mountain Boys. Don Reno and Red Smiley led another fine group as did Jim and Jesse McReynolds, Mac Wiseman, Jimmy Martin, Carl Story, and the Osborne Brothers. Although bluegrass numbers seldom appeared on national charts BLUEGRASS MUSIC managed to flourish anyway, especially in the Appalachian region and in cities with large contingents of Appalachian migrants.

Another musical strain clung to the more traditional country sounds that had been brought through the World War II era by Roy Acuff. While sometimes adding electrical instruments, their vocal styles and heavy reliance on sentimental and sacred songs reminded listeners of pre honky-tonk country. Early practitioners of this style included the Bailes Brothers and the husband and wife duo of Lynn Davis and Molly O'Day, the latter of whom emerged as a strong solo vocalist. Songwriter Odell McLeod (known as Mac Odell), Esco Hankins, Grandpa Jones, Jimmie Skinner, and another husband and wife team, Wilma Lee and Stoney Cooper, also exemplified this style. The best, however, were probably the Louvin Brothers who not only had some of the best harmony in the history of country music but also contributed a large number of original compositions to the bluegrass and traditional country genre.

3. THE NASHVILLE SOUND. The emergence of Elvis Presley and his other rockabilly emulators in the mid-1950s (Jerry Lee Lewis, Carl Perkins, Johnny Cash (fig.4), Conway Twitty, Buddy Holly and the Everly Brothers) dealt mainstream and traditional country music a severe commercial blow as much of their youthful audience was lost to the new fads in sound. Hard country musicians often found a slackening demand for their services and a few even made a sometimes futile effort to perform rockabilly material. By the early 1960s country music had begun to recapture much of its old audience and also win new followers, largely through the development of the NASHVILLE SOUND, which consisted of a modification of the older country sound through taking off some of the hard edge by using such techniques as a string section or a choral backing to broaden the audience appeal. Chet Atkins, who had won acclaim as both a solo and session guitarist, along with various other record producers played a major role in the evolution of the Nashville sound.

The popularity of the Nashville sound brought vocalists who had already displayed some appeal to pop audiences (Johnny Cash, Conway Twitty and Marty Robbins) closer to their country roots. Ray Price, who had enjoyed success as a honky-tonk singer with songs like *Crazy Arms* and *Heartaches by the Number*, moved toward the Nashville Sound in the early 1960s with numbers like *Danny Boy* and *Night Life*. Perhaps the most successful purveyor of the new sound, Texas-born Jim Reeves, had strong crossover hits such as *Four Walls* and *He'll have to go*. Others who did well in this styling included the brother and sisters vocal trio The Browns, Ferlin Husky, Eddy Arnold, Hank Locklin, Jimmy Dean and the leading female singer of the early 1960s, Patsy Cline (fig.5), who like Reeves suffered a premature death in a 1963 plane crash. George Jones, another Texan, continued on as a highly successful honky-tonk performer with only slight modernization of his sound.

The 1960s also witnessed a growing number of prominent women in the industry. The earliest female solo performer, Roba Stanley, had recorded in 1924, but the first women to attain renown had been in the forefront of family or vocal groups, such as Sara and Maybelle Carter in the former instance and Patsy Montana with the Prarie Ramblers in the latter case. Women also received attention as part of duos, such as Lulu Belle Wiseman and Wilma Lee Cooper. Molly O'Day, the wife of duet partner Lynn Davis, emerged in the late 1940s as the more dynamic half of the team but her commercial career virtually ended with her 1950 religious conversion. On the West Coast, Rose Maddox likewise became the

4. Johnny Cash

5. Patsy Cline

most salient member of the Maddox Brothers and Rose, but did not really become a solo performer until after Kitty Wells attained stardom in the early 1950s. Since Wells had also emerged from a family group in a sense, Kitty being the wife of Johnny Wright of the Johnny and Jack brother-in-law duet, Patsy Cline could be considered the first to be successful with neither a performing family nor husband.

By the time Cline died the number of country girl singers had begun to increase substantially, including Jean Shepard, Skeeter Davis and Dottie West. Wanda Jackson shifted from hard country to rockabilly and then moved back into the country mainstream while her one-time teenage friend Norma Jean rose to fame on Porter Wagoner's syndicated television program. Melba Montgomery performed both hard country solo numbers and in duet with honky-tonk singer George Jones. Connie Smith emerged as the most likely female superstar in the mid-1960s, but was eventually surpassed by two mountain girls, Kentucky's Loretta Lynn and Tennessee's Dolly Parton, who joined Wagoner's TV show in 1967. Tammy Wynette and Barbara Mandrell did quite well for some years, but never quite had the long-lived appeal of Lynn and Parton.

The 1960s also saw the rise to prominence of a number of vocal groups. The trend started with the Statler Brothers in the middle of the decade, continuing in later years with the Oak Ridge Boys and Alabama. Family groups such as Larry Gatlin and the Gatlin Brothers, the Forrester Sisters and the Bellamy Brothers have also made their mark along with the duo of Brooks and Dunn. At the start of the decade the West Coast centre of musical activity had shifted from the greater Los Angeles area to the smaller interior city of Bakersfield: earlier artists such as Ferlin Husky and Tommy Collins had been based there. The moderate success of Wynn Stewart, augmented especially by tremendous popularity of Buck Owens and his Buckaroos, followed by that of Merle Haggard, later firmly established the city's importance. The partial move of Owens to Nashville to star alongside Roy Clark in the popular television variety-comedy programme 'Hee Haw' may have ended Bakersfield's chances of becoming a second Nashville, but the city's musical scene still made a significant impact.

The sound of country music through the 1970s seemed to move towards an accommodation with popular styles. New artists such as Ronnie Millsap and Eddie Rabbitt typified this trend among male singers, as did Donna Fargo and Anne Murray among female singers. Charlie Pride, a black American, attained stardom in what had hitherto been an exclusively white genre. Practitioners of the Nashville sound, like Bill Anderson and Porter Wagoner, seemed dated by the end of the decade: country traditionalists commented that the music appeared doomed to extinction, yet a countertrend soon set in.

As Bakersfield threatened Nashville's dominance in the mid-1960s, Austin, Texas, made an indentation on Nashville's dominance in the later 1970s. Willie Nelson and Waylon Jennings, native Texans who had enjoyed some success in Nashville but who also acquired reputations as rebels, led what was sometimes also termed the outlaw movement. Forsaking Nashville's 'rhinestone cowboy' image for hippy garb, Nelson revived country standards, such as *Blue Eyes Crying in the Rain*, *Remember me*, *If You've Got the Money*, sacred standards, like *The Uncloudy Day* and pop hits, typified by *Georgia On My Mind* and *Blue Skies*. He also had new song hits, such as *You're always on my mind*, *On the Road Again*, and *My heroes have always been cowboys*. Jennings's hits from this period included *Luckenbach Texas*, *I've always been crazy*, *Amanda*, and *Good Ol' Boys*. Together they turned out such classic hits as *Good Hearted Woman*, and *Mama, don't let your babies grow up to be cowboys*. Lesser figures associated with the outlaw movement included Tompall Glaser and David Allen Coe. Nashville managed to co-opt the Austin Sound and the outlaw movement after a few years, as did its rival musical centres. Although not part of the Austin scene, Hank Williams jr also tended to identify with the outlaw movement, remoulding his image after 1975 from earlier success as a Nashville sound version of his father.

4. New Country. The new country that emerged in the 1980s from the 'countrypolitan' prevailing winds in the 1970s contained strong elements of both the western swing and bluegrass styles of a prior generation. The band Asleep at the Wheel had pioneered a western swing revival that reached full fruition in the vocal efforts of performers like George Strait and Reba McEntire. Ricky Skaggs came from a bluegrass background and retained strong elements of it along with the smooth multiple fiddles reminiscent of Texas swing in a series of hits that ranged from old bluegrass numbers, like *Don't cheat in our hometown* and *Uncle Pen*, to honky-tonk classics, typified by *I don't care*, *Honey, won't you open that door* and *I'm tired*. Skaggs also had hits with new songs such as *Highway 40 Blues* and *Heartbroke*. In the mid-1980s Randy Travis, another neo-traditionalist, dominated the field for a time with such hits as *On the Other Hand* and *Forever and Ever, Amen*. Skaggs's boyhood friend Keith Whitley also had major hits before his death in 1989.

Somewhat independently, Dwight Yoakam also personified this sound from his far-western base, reminding Nashville of the Bakersfield influence. Among female performers Emmylou Harris displayed a continuing respect for country music's roots, while Patsy Loveless provided an equivalent of the neo-traditional approach among women. Another phenomenal but unlikely success came from the mother-daughter duo of the Judds (Naomi and Wynonna), whose harmony seemed both highly contemporary yet reminiscent of a bygone era. After Naomi withdrew from country music in 1991, Wynonna continued to perform and remained popular.

In the 1990s Georgian Alan Jackson probably best personified the continuing tradition of the honky-tonk vocalists with hits like *Chattahoochee* and *Who's cheating who*, seconded by performers like Joe Diffie, Clint Black and Travis Tritt. Popular duos included *It's your love*, by husband and wife Tim McGraw and Faith Hill, and *In Another's Eyes*, a Garth Brooks and Trisha Yearwood hit. Marty Stuart displays both rockabilly and bluegrass influences in his music and Vince Gill also shows bluegrass roots. West Virginian Kathy Mattea utilized a styling somewhat similar to folksingers of the 1960s. Others continued to exemplify the 'countrypolitan' approach such as Lee Greenwood and Tanya Tucker. It is arguable that the musical trends in the industry had begun to reflect a degree of diversity not witnessed since the 1950s.

The most prominent country stars of the 1990s appear to be those who exhibit crossover appeal. Garth Brooks, with 17 number one hits in America up to 1997, has emerged as a major figure, most notably with *Friends in Low Places*. Billy Ray Cyrus became an international phenomenon in 1992 with his hit *Achy Breaky Heart*. Lorrie Morgan's *What Part of No*, Trisha Yearwood's *She's in Love with the Boy*, Faith Hill's *It matters to me*, Shania Twain's *Love Gets Me Every Time*, Deana Carter's *Strawberry Wine*, and Lee Ann Rimes' *Blue* (in which she commendably imitates Patsy Cline) have all gained wide popularity. With new figures constantly appearing and record companies always promoting new talent, each new star is soon replaced with another after an all-too-brief period at the top, and sustaining a lengthy career on the pinnacle of success seems increasingly difficult.

6. Shania Twain

Country music through some 75 years of commercialism has witnessed both continuity and change: what sometimes seems like new innovations are often revivals of nearly forgotten traditions or borrowings from other musical types. Technological changes of the last decade include the rise in popularity of country music videos first seen on the Nashville Network and the increased appeal of CMT (Country Music Television). Potential TV charisma has come to rank with talent as a factor in determining potential for stardom. The more recent phenomenon of Shania Twain (fig.6) having a record that sold nine million copies without her touring may be the wave of the future. The early 1990s also saw the rise of Branson, Missouri, with its numerous theatres as a popular attraction particularly for established name acts whose recordings no longer dominate charts.

IVAN M. TRIBE

Country rock. A style of popular music in which the sound and subject matter of country music are combined with a rock beat and instrumentation. It was foreshadowed in the 1950s and 60s by singers such as the Everly Brothers, Roy Orbison (*Only the Lonely*, Monument 1960) and Bobbie Gentry (*Ode to Billy Joe*, Capitol 1967). In the late 1960s a number of folk-rock performers, notably Bob Dylan (*John Wesley Harding*, Col 1968) and Joan Baez (*One Day at a Time*, Vanguard 1970), began to turn away from the protest songs of the urban folk music revival and incorporate references to the traditional concerns of country music (the simple life, the warm South, nostalgia for the rural past, etc.) in their lyrics. Such themes and the country-style melodies to which they were set were developed in different ways by the Eagles, The Band, the Byrds, Gram Parsons (at first with the

Byrds, then with the Flying Burrito Brothers, then as a soloist), Linda Ronstadt and Crosby, Stills and Nash. Other performers whose work includes songs in the country-rock style are Dolly Parton, Kenny Rogers, Waylon Jennings, Loretta Lynn, Garth Brooks and K.D. Lang.

Coupar, Robert. *See* COWPER, ROBERT.

Coup d'archet (Fr.: 'bowstroke'). A term used in 18th- and 19th-century French treatises for a bowstroke in general. It is occasionally found in such qualified forms as *coup d'archet articulé* (*see* BOW, §II, 2(iv)). The special term *le premier coup d'archet* was used in the late 18th century to refer to the loud tutti passage (often in unison) with which so many symphonies began. The device was thought to have been invented by Lully. Mozart made use of it several times, notably at the beginning of his 'Paris' Symphony about which he joked in a letter to his father (12 June 1778): 'I have been careful not to neglect the *premier coup d'archet* – and that is quite enough. What a fuss the oxen here make of this trick! The devil take me if I can see any difference! They all begin together, just as they do in other places'. For further information, see N. Zaslaw: *Mozart's Symphonies: Contexts, Performance Practice, Reception* (Oxford, 1989).

DAVID D. BOYDEN/PETER WALLS

Coup de glotte (Fr.: 'stroke of the glottis'; Ger. *harter Einsatz*; It. *colpo della glottide*). A term used by Manuel García, the inventor of the laryngoscope, to describe physically how the sung sound should be initiated. García writes that 'the object of this [technique] is that at the start sounds should be free from the defect of slurring up to a note or the noise of breathing' (*Hints on Singing*, 1894). That is, of the three ways of starting a vocalization that he enumerates, García rejects two. One, involving the aspiration of air (as if beginning with an 'h' sound) had always been criticized. Quantz (1752), for example, complains about 'disagreeable, forced and exceedingly noisy chest attacks, in which vigorous use is made of the faculty of the Germans for pronouncing the *h*, singing ha-ha-ha-ha for each note'. The other, however, a 'slurring up to a note', was a technique that had been described enthusiastically by singers and tutors from at least the end of the 16th century (*see* CERCAR DELLA NOTA), but García described this practice as the result of 'negligence or a lack of taste'.

The *coup de glotte* is difficult to describe but, as García writes, it is a 'delicate action'. Later writers who misunderstood or exaggerated the technique equated the technique with 'glottal attack', which is an explosive action and damages the voice if used habitually. Franklyn Kelsey (*The Foundations of Singing*, 1950) argued that the stroke of the glottis, if used as García intended, was 'essentially a gentle and skilful gesture into a light pressure' rather than an 'explosive release from heavy pressure'. C.L. Reid (*A Dictionary of Vocal Terminology*, 1983) helpfully suggests approaching the *coup de glotte* by [softly] singing a staccato, which provides the experience of a clear, initial attack without breathiness or slurring.

ELLEN T. HARRIS

Coup de langue (Fr.: 'stroke of the tongue'). The movement of the tongue by which the playing of wind instruments is articulated.

Couper [née Cooper], **Mildred** (*b* Buenos Aires, 10 Dec 1887; *d* Santa Barbara, CA, 9 Aug 1974). American composer and pianist. She studied in Karlsruhe, Paris and Rome; her teachers included Moszkowski, Cortot and Sgambati. In 1915 she went to New York where she taught at the Mannes School until 1927. She composed several works for quarter-tone piano, starting with *Xanadu*, written for a 1930 production of Eugene O'Neill's play *Marco Millions* in Santa Barbara. *Dirge* appeared in Cowell's New Music Edition in 1937; *Rumba* was performed at a concert organized by John Cage in 1941 and at the Evenings on the Roof concerts in Los Angeles in 1951.

CATHERINE PARSONS SMITH

Couper, Robert. *See* COWPER, ROBERT.

Couperin. French family of musicians. One of the great dynasties of music, the Couperins were active in and around Paris as professional musicians from the late 16th century to the mid-19th. They were particularly linked with the church of St Gervais, where for 173 years members of the family occupied the organ loft.

Much precise biographical detail is known about members of the family, derived from the wealth of legal documents with which the *ancien régime* registered every slightest action. But there are gaps, and the scholar to whom is due more knowledge of the Couperins than to any other, Charles Bouvet, was the most reckless in plugging lacunae with speculation. Although he was the first to correct himself when he found new evidence, he was also the most voluble in elaborating his guesses when there was nothing to refute them, and his mistakes still haunt writings on the family. Since Bouvet, a wealth of new archival data has come to light (fig.1). Several dates of birth, however, are known only from Jal (1867), who apparently worked from documents that perished with the destruction of the Hôtel de Ville in 1871. The parish registers of Chaumes have a gap that almost certainly conceals the birthdates of two key members of the family, (1) Louis and (2) François (i), from 22 February 1626 to 14 October 1632 (except for part of February 1632).

Brie, whose musical life was described in detail by Pirro (1920), was the cradle not only of the Couperins but also of the Forquerays and other lesser musical families. Until the Fronde laid waste to the region in 1652, Brie teemed with musicians at every level from bands of minstrels to the establishments of nobles. The name Couperin occurs as early as 1366 in connection with a plot of land at Villiers. 200 years later, numerous Couperins are mentioned in the registers of Chaumes (1562–94), and Jehan Couperin, progenitor of the musical dynasty, is referred to in documents from the 1580s as a tiller of the soil, a merchant and the owner of about 4 hectares of land in plots about Beauvoir, where he lived; he died in 1591, never having learnt to read. It was apparently his son, Mathurin Couperin (i), who planted the borders of the

1. The Couperin family tree

modest field 'opposite the château, on the road to Courgousson' (Thomas, 1968) that placed his descendants on a rung in the feudal hierarchy. 'Le dix-mage de Crouilly' was cited in an agreement of 1552, and an act of homage in 1644 by Charles (i) to the Seigneur de Beauvoir attests his right to be called 'Sieur de Crouilly' (facsimile in Thomas, 1963) – not a title of nobility but a label of proprietorship, to be passed on with the land itself. Plot and label went to (3) Charles (ii) and on to (4) François (ii) *le grand*, who ultimately disposed of it, along with the rest of the land at Beauvoir, for 400 livres (1732). Neither used the name often; it is found in documents associated with Charles in 1677 and 1682, and François used it on his marriage contract and his organ pieces.

The earliest member of the family to show musical proclivities was Mathurin Couperin (i) (*b* Beauvoir, *c*1569; *d* 4 March ?1640). He was sometimes listed as a merchant, and became involved in legal and financial matters. He studied music as a child, and in 1586 was already sufficiently accomplished to be received into the company of Ménétriers as 'maître joueur d'instruments', with licence to play in the Melun district (though not in the town itself or its suburbs) as long as he kept up his corporation dues. He married into another family, Tisserant or Tixerrant, that combined music with legal functions, and taught music to his sons Charles and Denis. He seems to have given up playing in 1619, and no works by him are known. His son Charles Couperin (i) (*b* ?Beauvoir, *c*1595; *d* Chaumes-en-Brie, before 27 Jan 1654), is first recorded as a 'joueur d'instruments' in Beauvoir. In about 1620 he married Marie Andry (bap. 25 July 1601), and about the same time settled in Chaumes, establishing the Couperin dynasty in this walled town about 2 km from Beauvoir and 50 km south-east of Paris. He eventually became organist of the Benedictine abbey of St Pierre (not the parish church). He had at least eight children, three of them musicians. From time to time he bought plots of land in the area. In the marriage contract of his son (3) Charles (ii), dated 11 February 1662, he is referred to as 'deffunt honnorable homme Charles Couperin, vivant aussy organiste' ('aussy' because his son had just been identified as organist of St Gervais). No works are known. His daughter Elisabeth married Marc Normand and was the mother of MARC-ROGER NORMAND, called Coprino, Cuoprin etc.

(1) Louis Couperin (*b* Chaumes-en-Brie, *c*1626; *d* Paris, 29 Aug 1661). Composer, harpsichordist, organist and viol player, son of Charles Couperin (i). He was the greatest of the Couperins after (4) François (ii) and one of the best keyboard composers of the 17th century.

1. LIFE. If Titon du Tillet was correct in saying that he died at the age of 35, he must have been born in 1626, a year for which the Chaumes parish registers are lacking.

All that is known of his first 23 years is limited to a few official documents (Thomas, 1978): in 1639 he stood godfather to a cousin; he appeared twice in 1641 as a witness before a notary and was identified as a *clerc* living in Chaumes; a third, incomplete notarial act of the same year has his signature. In May 1645, he was still a *clerc* living in Chaumes, but in January of 1646 he was exercising the same function at Beauvoir, about 2·5 km to the south-east; it is possible that he may have been contemplating a career in law. Of his training in music nothing is known but what can be inferred from his career and productions. An organ fugue dated 1650 shows that he knew by then how to compose a tonal answer to a subject and bring in the remaining voices of a four-part exposition, but not without two pairs of egregious parallel 5ths and some ugly clashes at the fourth entry. Nevertheless, he was able to make seven further entries of the subject with no worse disaster than losing track of his voices, and he demonstrated, perhaps more often than he needed to, that he could handle suspensions. But the evidence of 29 more dated fugues is that he achieved real mastery of imitative polyphony only in mid-1656, when he was about 30. Some acquaintance with Italian keyboard music is demonstrated by his *Duretez* of 1650, an imitation of the genre known as *durezze e ligature* of which an otherwise unknown example ascribed to Frescobaldi appears in the same source as Couperin's piece (see §2 below). As noted above, there would have been no lack of possibilities of contact with good music and musicians in the region around Chaumes, and Paris was no more than a day's journey away, even on foot. Couperin's skill on the harpsichord, the organ and bowed instruments can be judged from the considerable demands of his music and from the major appointments he later received. Titon du Tillet is again our witness that some of his ensemble pieces were sufficiently impressive to have moved Chambonnières to launch him on a Parisian career. The account, often paraphrased and embroidered, deserves to be given in full:

[Louis, François and Charles Couperin] with some friends, also violinists, decided on Chambonnières' nameday [St James, probably 1650 or 1651] to go to his château [*see* CHAMBONNIÈRES, JACQUES CHAMPION] and serenade him. They arrived and took positions at the door of the room where Chambonnières was dining with several guests, persons of wit and a taste for music. The master of the house was agreeably surprised, as were all his company, by the fine piece that was presented. Chambonnières invited the players in and asked them first who had composed the *airs* they had played. One of them said it was Louis Couperin, whom he introduced. Chambonnières immediately presented his compliments and urged him and all his comrades to sit down at the table. He displayed great kindness to him and told him that a man like himself was not made to stay in the provinces, and that he absolutely must come with him to Paris. This Louis Couperin accepted with pleasure. Chambonnières presented him in Paris and at court, where he was appreciated.

Whether or not this anecdote, whose author was born a quarter of a century after the events it relates, is accurate in all details, its substance explains what would otherwise be puzzling, namely the sudden rise to fame of a country boy without connections in the great world.

Our knowledge of Couperin's movements from 1650 on comes largely from 32 dated organ pieces which are also labelled with the places of composition. The earliest pieces mentioning Paris are from 12 August and 15 October 1651, suggesting that he had taken up residence there by that time, perhaps very recently since his signature on the marriage contract of his sister Anne on 2 May suggests that he had not yet left Chaumes. An event of capital importance for Couperin's development as a composer was the presence of J.J. Froberger in Paris about 1651 and 1652 (Rampe, p.xxiv); quotations from Froberger's toccatas in Couperin's great unmeasured preludes are proof of the impact of the German master on the young Frenchman. Couperin's appointment as organist of St Gervais is dated 9 April 1653; it took effect on Easter Sunday and paid 400 livres a year plus lodgings. On 22 October 1655 he stood godfather to his sister Elisabeth's child in Chaumes. From July to October 1656 and again around November 1658 he was shuttling between Paris and Meudon (now a suburb of Paris), where he was probably employed by the diplomat and statesman Abel Servien, whose heirs owed him money at the time of his death. He was in Toulouse, probably with the court, in autumn 1659; all the other organ pieces that mention a place of composition have him in Paris.

At some time, probably after his appointment at St Gervais, he entered the royal service as *ordinaire de la musique de la chambre* for the treble viol, in which capacity he played in at least four ballets: *Psyché* (1656), *L'amour malade* and *Les plaisirs troublés* (1657) and *La raillerie* (1659). According to Titon du Tillet, the post was created for him after he declined an offer to replace Chambonnières as *joueur d'espinette*, Couperin having refused out of loyalty to his mentor, who was dismissed reportedly because he could not accompany from a figured bass. He may have played the organ occasionally for the royal chapel, but there is no record of the appointment that Titon claimed for him.

Couperin lived with his two brothers in the organist's lodgings of St Gervais, and it was to them that on 27 August 1661, two days before his death, he made over his few belongings – 'more onerous than profitable'. The proprietary value placed on compositions is strikingly demonstrated by the fact that his brothers felt it necessary to spell out in a legal agreement the conditions under which his music should be shared:

the said Charles Couperin to furnish in the next three months to said François Couperin copies of all the books of music left after the death of Louis Couperin and written in his hand, during which time and until said furnishing and delivery said Charles Couperin obliges himself to make available the originals to said François Couperin for him to copy in the house of said Charles Couperin whatever pieces he chooses.

2. WORKS. That Couperin never published any of his music is not surprising, since his entire career, as far as it is known, spanned hardly more than a decade. There are three principal sources for his music: the 'Bauyn' manuscript (*F-Pn* Rés.Vm[7] 674–5), copied by an unknown hand not before 1676, containing 122 pieces for harpsichord, four for organ and five for ensemble; a late 17th-century manuscript (*US-BEm* 778) of unknown provenance, known as 'Parville', with 50 of the harpsichord pieces in Bauyn and five *unica* for the same instrument; and a manuscript privately owned by Guy Oldham (London; see Oldham) – the only one to have originated in the composer's circle and perhaps partly in his lifetime. The last-named source contains what appears to be a suite consisting of an allemande, two courantes and a sarabande for harpsichord, all but the last unique; four five-part *fantaisies* dated 1654 and 1655, two of them probably for strings and two *sur le jeu des haubois* for shawm band; and, most important of all, 70 organ

pieces of which only two were previously known. The importance of this manuscript is compounded by the fact that in addition to Couperin's works are some 15 pieces in a hand that is almost certainly that of Chambonnières and two more known to be in D'Anglebert's hand. Thus what is documented elsewhere concerning the close relations between these three greatest masters of 17th-century French keyboard music is confirmed in a musical source. There are good reasons for not accepting Oldham's assertion that all the organ pieces, and a number of others as well, are in Couperin's hand, but these in no way impugn the authenticity of the music.

The organ pieces in the Oldham manuscript appear to have been copied from, or intended for, at least two 'grands livres d'orgue'; the choice of pieces and the order in which they were copied appears arbitrary, however, being neither chronological nor conformable to any readily identifiable pattern of liturgical use. The contents are unlike those of any other French organ collection of the 17th century. Couperin's music constitutes a true 'missing link' between the old-style counterpoint of Titelouze (1623–6) and the varied, colouristic style that reigned for a century after Nivers (1665–75). Couperin was the first to write for particular organ registrations, as one might write for particular chamber music combinations: five pieces are for the *jeu de tierce*, with or without a slow tremulant, and three for the Cromorne. He was also the first Frenchman to compose leaping division basses in the style of divisions for the bass viol; six of his *fantaisies* are of this type (ex.1). Both innovations would characterize French organ music for the next century. Of the 70 pieces, 33 are fugues and 27 are plainchant settings, 14 of the latter being busy trios, all but one with the cantus firmus in the middle voice. There are also ten four-part pieces with the cantus firmus in the bass. For the rest, as well as the division basses there are two duos, a *prélude autre livre Grand livre d'orgue* and the *Duretez* mentioned above.

The most extraordinary feature of this collection is the dates attached to the pieces, 35 of them even specifying the day of the month. These make it possible to follow Couperin's development, sometimes almost day by day, from 8 October 1650 to 5 December 1659. On the broadest scale, for example, we can observe that his

Ex.1 Fantaisie (division bass) no.12 (undated)

Ex.2 Fantaisie sur le cromhorne no.57 (1655)

activity in organ composition was centred on 1656, when half of all the dated pieces were written, and that this activity tapered off towards both ends of the decade. There were no compositions in 1652 and only one in 1653, perhaps because of the presence of Froberger and a concentration of Couperin's interest on the harpsichord. One can also observe an abrupt change in the direction of compositional effort in autumn 1656: there is but one piece based on plainchant out of 26 dated before October 1656, and that is a fugue, not a cantus firmus piece; after October, 18 out of 23 pieces are cantus firmus plainchant settings. October corresponds to the end of the first Meudon period. In July 1656, when he was first at Meudon, Couperin suddenly began using the term 'fugue' for the kind of pieces that had formerly been headed 'fantaisie', with no corresponding change in technique; only three of the 19 earlier pieces were called 'fugue'.

It is these 30 dated fantasy-fugues that afford the deepest penetration into Couperin's art. Certain broad trends can be observed, the most important being the growing mastery of contrapuntal technique alluded to earlier, which included a gradually increasing care in maintaining the integrity of the voices throughout a piece, instead of letting voices disappear to be replaced by new ones coming from nowhere (see ex.2 for two instances of this phenomenon). Another trend was a growing tendency to vary the subject in its later entries, sometimes radically, with added notes and rhythmic changes. An experiment in form occurred in 1656–7: three pieces are divided in half by important cadences, followed in one case by a complete transformation of the subject. Four fugues from 1650–51, dating from after the earliest one described above, are mainly in three parts and take every kind of liberty. They are also light, original and attractive; one is a kind of jig. Then, in 1653, comes a *fantaisie* that can be viewed as a kind of paradigm for the rest of Couperin's fugues. Though circumscribed by a number of narrowly defined parameters, this type of piece nevertheless became a vehicle for extraordinary expressive variety.

Normal playing length varied between just under two minutes and just under three (according to the magisterial complete recording by Davitt Moroney, 1995). There were now always four voices (no.58, undated, has a five-part exposition but continues in four parts) and from 1653 the metre was invariably duple. The most surprising

uniformity was that of key: 26 of the 33 pieces (including three undated ones) are centred on E, with the octave divided at B or A (this may reflect some use of these pieces in the liturgy). Entries of the subject very rarely (and never in the E pieces) occurred on any degrees but the first and fifth (or fourth, depending on the octave division). Every entry was accompanied by different material (no.20 is exceptional in preserving the same 'countersubject' for five of the 13 entries). With a single exception, entries did not overlap (i.e. there was no stretto). The passages, usually short, that linked one entry to the next did not usually have the quality of organized 'episodes', although two such passages can be found in a fugue on *Urbs beata Jerusalem* (no.3, 1654). It was rare that fragments of the subject were used to develop passages. Except for the first fugue and the pieces from mid-1656, when Couperin was visiting Meudon, the entries of the exposition did not alternate regularly between the first and fifth (or fourth) degrees, but were presented in varying order according to convenience. A 'fugue renversée' of 15 July 1656 is the only one to invert its subject, and it furnishes, in the initial pair of entries, the only example of true stretto.

Within this narrow set of parameters – perhaps because of them – Couperin was able to create an astonishing variety of style and expression. The variety came partly from the inventive, often tuneful, often chromatic and sometimes rhythmically complex subjects, but more than anything from his fundamental approach to counterpoint. Couperin's fugues have nothing in common with the fantasias and ricercares of Frescobaldi and Froberger, nor are they modelled on the *Octonaires* of Le Jeune (1606) or the *Fantasies* of Du Caurroy or Guillet (1610) – all standard study-models of the period; they have nothing to do with the *Fugues, et caprices* of Roberday (1660), even though Roberday borrowed one of his subjects from Couperin. Couperin's invention did not concern itself with the intellectual conceits of ricercares; indeed, he often seems to repudiate rather than to strive for the disciplines of the strict style. His pieces have no resemblance even to canzonas and caprices. Instead, they show a composer whose imagination operated in the realms of rhythm, harmony and colour, not line. The musical thought is essentially homophonic, not polyphonic, and the fugues lie under the fingers (of a big hand!) in a way that academic counterpoint never does: Couperin must have composed them at the keyboard. In the connecting passages of his fugues one is reminded again and again of the idiom of his harpsichord allemandes. See ex.2 for some of these characteristics.

The two pieces for shawm band (there were probably more; nine leaves were cut from the manuscript at this point) consist of a number of tiny sections in contrasting metres, each of which recalls the style of ensemble dances of 75 years before. The five-part string pieces are broader and more pompous, and were doubtless *entrées de ballet*, perhaps the very ones Couperin played at court.

Courantes, sarabandes, allemandes and gigues (in decreasing order of numbers) constitute nearly two-thirds of Couperin's harpsichord output. These pieces, normal for the period in their morphology, are distinguished from those of Chambonnières by their greater complexity. Although one can hardly speak of a style as free as this in terms of polyphony, the average number of moving parts is closer to four than to Chambonnières' three. Whereas in Chambonnières the musical substance is apt to be concentrated in a single, broad curve of melody, in Couperin it is more often a succession of events – bursts of imitation, striking harmonies, arresting rhythms, intricate chains of suspensions – that claim the listener's attention. The effect is more restless and more intense; there is less of *la douceur françoise* and more, perhaps, of what Froberger may have taught to the Parisians. The most remarkable of Couperin's pieces, however, are the great unmeasured preludes and the chaconnes and *passacailles*; he did not invent the forms but was the first to invest them with substance and grandeur.

Of the 16 apparently genuine preludes, 12 are *préludes non mesurés*, written entirely in undifferentiated semibreves threaded with long, sensuous curves that show which notes are to be held. Graceful but baffling to the eye, they demand a player with the talents of a composer to sort and shape the gestures, and they tolerate no medium but the harpsichord; yet, given these requisites, melodic lines and motifs emerge, part-writing is suggested and the textures coalesce into luxuriant suspended harmonies. Two of the preludes are in three distinct sections, the middle one a fugue comparable to the organ fugues but with a subject in the style of a gigue; in another the fugue dissolves gradually into an unmeasured coda, while a fourth has a shorter measured section that is not fugal. It is in his preludes that Couperin does homage to Froberger: one of them (no.6 in Moroney's edition), in A minor 'a l'imitation de Mr Froberger', borrows its opening from Froberger's Toccata no.1 in A minor (1649); another (no.13 in Moroney's edition), in F, borrows a passage from bars 7–8 of Froberger's Toccata no.5 in D minor from the same set. In both cases Froberger's conventional notation is exploded into elaborately arpeggiating semibreves that may well reflect the way Froberger himself played them. Other borrowings, which can be discovered only by one who has the relevant pieces by memory, are probably buried in the preludes. The indebtedness of these preludes to Froberger and to lute music has been analysed by Ledbetter, their construction by Prévost and matters concerning their performances by Tilney and by Gustafson (forthcoming), and in the edition by Moroney.

There are 12 apparently genuine chaconnes and *passacailles*, a 13th with a second attribution to Chambonnières, and a 14th which Dart printed from a manuscript in his possession but which on stylistic grounds would appear to be corrupt, unauthentic or both. Nine are in strict rondeau form, with the *grand couplet* recurring unchanged except occasionally at the end. There are two free rondeaux, two on an ostinato, and one *sui generis*. In a style whose emphasis on the distinctive, unrepeated event generally inhibits the formation of long spans of accumulating energy, the chaconnes, with their inexorable progress of four-bar phrases and their insistent repetition of a *grand couplet* or an ostinato pattern, supply the repertory with a welcome breadth and drive to contrast with the extravagance of the preludes and the concentrated detail of the dances. Not that the chaconnes lack detail, however; Couperin's invention is fertile in every form, and the variety among these pieces is greater, if anything, than elsewhere. It is in the great C major *Passacaille* that the composer carries off his most theatrical coup: the *grand couplet* on its final appearance shifts without warning to the minor mode, transforming – by hindsight, as it were – the whole expressive message of the work.

WORKS

HARPSICHORD

Principal sources: *F-Pn* Rés.Vm[7] 674–5, *US-BEm* Parville (see Curtis); a few pieces also in *F-Pc* Rés.89ter, Rés.476, *Psg* 2348, 2356, Oldham MS

Edition: Louis Couperin: *Pièces de clavecin*, ed. D. Moroney (Monaco, 1985)

16–18 preludes, 17 allemandes, 32 courantes, 31 sarabandes, 5 gigues, 12–14 chaconnes and passacailles, 3 galliards, 3 titled pieces, 1 tombeau, 1 pavane, 1 canarie, 1 volte, 1 branle, 1 gavotte, 1 minuet, 5 doubles to pieces by other composers

ORGAN

2 preludes, 33 fugues [fantaisies], 6 division basses, 2 duos, 27 plainchant versets: G. Oldham's private collection, London; ed. G. Oldham (Monaco, forthcoming)

2 psaumes, 1 duo, 1 fantaisie [division bass], some concordant with above: *F-Pn* Rés.Vm[7] 674–5 (Bauyn); ed. P. Brunold (Paris, 1936)

2 carillons (1 in 2 versions), doubtful, *B-Bc*, *F-Pn*, *V*(Philidor)

ENSEMBLE

2 fantaisies for 2 viols; 1 simphonie, 1 inst, bc; 2 simphonies, 2 insts, bc [1 inc.]: *F-Pn* Rés.Vm[7] 674–5 (Bauyn)

2 fantaisies a 5 for shawm band; 2 fantaisies a 5, ?str: G. Oldham's private collection, London

(2) François Couperin (i) (*b* Chaumes-en-Brie, *c*1631; *d* Paris, 1708–12). Keyboard player, brother of (1) Louis Couperin. His birthdate can be deduced from lacunae in the baptismal registers and from the closely spaced arrival of other children in the family; he apparently died between a tax payment on a house in the rue Anastase (1708) and its sale by his heirs (1712). Titon du Tillet, however, asserted that he died in his 70th year when he suffered a fractured skull in a traffic accident. He is said to have played the violin with his brothers in the famous serenade to Chambonnières, but he was active as a tailor until about 1656, after which he was identified as a musician; documents refer to him as an organist, harpsichordist or music master. In the marriage contract of his godchild (4) François Couperin (ii) *le grand* (1689) he is 'maistre joueur d'instrumens de musique et bourgeois de Paris'. There is no record of any employment, and he evidently made his living by teaching and deputizing for his brother or nephew; he may also have had a useful inheritance from his father (probably including land at Chaumes that he sold to Louis in 1657).

Titon du Tillet said that he did not have the same talent for the organ and harpsichord as his two brothers but was an excellent teacher of their music. The only record of payment from a pupil is for the Count of Mongiron. Titon described François as 'a little man who dearly loved good wine and who gladly prolonged his lessons if one saw to it that a carafe of wine and a bit of bread were brought near the harpsichord; and a lesson ordinarily lasted as long as one was willing to refill the carafe'. A note on a copy of his nephew's harpsichord pieces calls him 'a great musician and a great drunk'.

When he moved to Paris François lived with his two brothers in the organist's lodgings at St Gervais. In 1662, when Charles married, François stayed with Simon Bongard, an instrument maker and the father of his second wife. On 25 June 1662 he married Madeleine Jouteau and moved to the rue de Jouy, near St Gervais; they had a son Jean about 1665, of whom nothing is known after his mother's death in 1671. François then married Louise Bongard, by whom he produced four children. No compositions are known. He was long credited with the organ works of his nephew, but the attribution has been decisively disproved along with his right to the appellation 'Sieur de Crouilly'.

(3) Charles Couperin (ii) (*b* Chaumes-en-Brie, bap. 9 April 1638; *d* Paris, between 15 Jan and 26 Feb 1679). Organist, brother of (1) Louis Couperin. He must have been the Couperin *le jeune* who took part in the *Ballet de la raillerie* in 1659; that is the first that is heard of him after his baptism, except for the serenade to Chambonnières, at which he must have been one of the youngest present. On Christmas Day 1661 he received a six-year contract to succeed his late brother (1) Louis Couperin at St Gervais. On 20 February 1662 he married Marie Guérin, daughter of a barber in the Grande Ecurie du Roi, in that church; their only child, (4) François (ii), one of the greatest composers of France, was born in 1668. Six years after signing his first contract, the church wardens renewed it for an equal period. On 15 January 1679, when he stood godfather to a child of his wife's family, the register called him 'organiste de St Gervais et officier de Madame la Duchesse d'Orléans'; by 26 February he was called 'the late' Charles Couperin, in a document recording the St Gervais wardens' intention to keep the organist's post for Charles' son, a pleasant and loyal gesture, by engaging Lalande as stand-in.

Titon du Tillet is the authority for Charles' having composed – (2) François (i) is said to have excelled at teaching the pieces of his two brothers – but if any of his music has survived it has not been identified. According to Titon, he was known for the learned manner in which he played the organ.

His widow continued the education of their ten-year-old son. On 14 July 1687, when François Couperin (ii) had taken over his father's duties at St Gervais, she petitioned the courts for permission to break into capital to relieve the state of want into which she had fallen by reason of the expenses for the 'differends maistres de musique, de clavecin, et d'orgues qui ont appris a sondit fils pour le rendre capable du remplir dignement la place d'organiste'.

(4) François Couperin (ii) [*le grand*] (*b* Paris, 10 Nov 1668; *d* Paris,11 Sept 1733). Composer, harpsichordist and organist, son of (3) Charles Couperin (ii). He is the most important member of the Couperin dynasty. He wrote some of the finest music of the French classical school, and may be reckoned the most important musical figure in France between Lully and Rameau.

1. Life. 2. Style. 3. Organ music. 4. Instrumental chamber music. 5. Sacred vocal music. 6. Secular vocal music. 7. Harpsichord music. 8. Theoretical works.

1. Life. He was born into an organist's milieu: most immediately, that of St Gervais, where his uncle (1) Louis Couperin had been organist, and where since 1661 his father had held the post. It seems reasonable to suppose that he received his first musical instruction from his father. Charles died in 1679, when François was ten; according to Titon du Tillet, Jacques-Denis Thomelin, the famous organist of St Jacques-de-la-Boucherie and *organiste du roi*, took the young but promising François under his wing and became 'a second father to him'. The church council of St Gervais agreed that François should inherit his father's post on his 18th birthday, securing Lalande's services for the interim. During this period François probably often deputized at St Gervais for Lalande (who held three other church appointments in Paris); by 1683,

the year of Lalande's appointment as *sous-maître* of the royal chapel, François must have been organist of St Gervais in all but name. On 1 November 1685 the church council decreed that he should receive 300 livres a year until a formal contract was made with him.

Since François was to inherit his father's post, the churchwardens of St Gervais permitted him and Marie (his mother) to continue to live in the organist's house attached to St Gervais after Charles' death. Marie died in 1690. However, Couperin's domestic circumstances had already changed in the previous year upon his marriage to Marie-Anne Ansault (in the contract, dated 26 April 1689, he is styled 'Sieur de Crouilly'; he also used the title on his *Pieces d'orgue* of 1690). Marie-Anne had influential family connections in the business world by which Couperin was subsequently able to profit: the dedicatees of the first two of his harpsichord books, C.A. Pajot de Villers and F. Pratt, both held important and lucrative administrative positions in government departments. There were at least four children of the marriage: Marie-Madeleine, also known as Marie-Cécile (*b* Paris, bap. 11 March 1690; *d* Maubuisson, 16 April 1742), a nun, possibly organist at Maubuisson; (7) Marguerite-Antoinette (see below); François-Laurent (*b* before 1708, *d* after 1735), who according to an inventory taken after Couperin's death deserted his parents; and Nicolas-Louis (*b* Paris, bap. 26 July 1707; *d* probably in infancy). Another child (probably the first of the marriage), François, has been identified (Baffert, 1994); he died at Saint-Leu in 1692.

In the year after his marriage Couperin obtained his first royal privilege to print and sell his music. This licence was valid for six years, and he used it to issue a collection of *Pieces d'orgue*, consisting of two organ masses. Only one copy of the original publication is known to exist (*F-C*): it takes the form of a manuscript bound with an engraved title-page, *approbation* and *privilège*, a not uncommon procedure for limited editions (the expense of having the music pages hand-copied, even several times, was considerably less than having them engraved). Another manuscript version of the masses (*F-V*) may predate the 1690 issue, possibly representing the state of the music before its final revisions for publication (perhaps under the guidance of Lalande; see Gilbert and Moroney, 1982). If the form of the publication speaks of Couperin's fairly straitened financial circumstances at the time, a less parsimonious note is sounded in Lalande's *approbation*, which describes Couperin's pieces as being 'fort belles, et dignes d'être données au Public'. This and other evidence suggests that Lalande played an important role in Couperin's early musical development, not only as mentor but also as a powerful advocate of his work (Corp, 1995).

The organ music in this collection is both the first and the last that Couperin is known to have written. But, following a centuries-old tradition in which such music was improvised, he was active as an organist for many years to come, almost until his death. It was as an organist, with duties for the first quarter of each year, that he first gained a foothold at court, being Louis XIV's choice in 1693 as successor to his former teacher, Thomelin: an appointment that surely must have satisfied the sentimental as well as pleasing the musically discerning. His fellow royal organists were Buterne, Nivers and Lebègue.

About this time Couperin seems to have been at work on a set of trio sonatas, three of which, under different names, were later incorporated in the publication *Les nations* of 1726. These three – their original titles are *La pucelle*, *La visionnaire* and *L'astrée* – appear in score with a fourth sonata, *La Steinquerque*, in a manuscript in the Brossard Collection (*F-Pn*); two others, *La sultane* (actually a sonata *en quatuor*) and *La superbe*, are to be found in manuscript partbooks (*F-LYm*) which also contain the four sonatas in the Brossard manuscript.

The four Brossard sonatas are thought to date from about the same year, 1692, partly on account of topical allusions (*Steinquerque* probably commemorates the French military victory of that year), and partly on account of the group's stylistic unity. Opinions differ on the dating of *La sultane* and *La superbe*: Tessier (1926) favoured *c*1695, while Citron (1956) suggested a date as late as 1710 for *La sultane*; Gilbert and Moroney (*François Couperin: Oeuvres complètes*, IV/iii) concur with Tessier rather than with Citron. Neither manuscript is in Couperin's hand.

To appreciate the motive behind the composition of the earliest sonatas, and their significance, it is necessary to look ahead a number of years and examine the preface to *Les nations*:

> It is now a number of years since some of these trios were composed. There have been several manuscript copies in circulation, though untrustworthy through the negligence of copyists. From time to time I have added to their number; and I believe they will please the discriminating. The first sonata in this collection is also the first that I composed, and the first composed in France. Its history is curious:
>
> Charmed by the sonatas of Signor Corelli, whose works I shall love as long as I live, just as I do the French works of Monsieur de Lully, I attempted to compose one myself which I [then] had performed in the concert series where I had heard those of Corelli. Knowing the keen appetite of the French for foreign novelties above all else, and being unsure of myself, I did myself a very good turn through a little 'technical' deceit. I pretended that a relation of mine [his cousin Marc-Roger Normand], in very truth in the service of the King of Sardinia, had sent me a sonata by a new Italian composer. I rearranged the letters of my name to form an Italian one, which I used instead. The sonata was devoured with eagerness, and I need not trouble to defend myself. However, I was encouraged. I composed others, and my italianized name brought me, in disguise, considerable applause. My sonatas, fortunately, won enough favour for me not to be in the least embarrassed by the subterfuge.

These early sonatas are thus the first fruits of Couperin's admiration for the Italian Baroque masters, and for Corelli in particular. Contact with Italian instrumental music may have been made through an involvement with the musical life of the court of the exiled James II in Saint Germain-en-Laye, where things Italian were much prized. There is certainly clear evidence for Couperin's participation in the music of the Stuart court during the following decade (Corp, 1995). Couperin's admiration for the Italian style was eventually expressed in overt terms in his *Apothéose de Corelli* of 1724, but a much earlier ambition, sustained throughout his life, was to unite the complementary strengths of the Italian and French styles.

Couperin's appointment as an *organiste du roi* (26 December 1693), with a salary of 600 livres for the quarter, was perhaps the most important event of his career, for it opened up opportunities and emoluments available nowhere else. Shortly after his arrival at court he was engaged to teach the harpsichord to the Duke of Burgundy and several other princes and princesses, including the Count of Toulouse (from whom Couperin

eventually received a generous annual pension of 1000 livres), the dowager Princess of Conti, and Mlles de Bourbon and de Charolais, daughters of the Duke of Bourbon. Couperin acquired his own coat-of-arms after only three years at court, taking advantage of Louis XIV's edict of 1696 offering ennoblement to persons in respectable employment who could afford to pay for the privilege. A further honour followed about 1702, when he was made Chevalier de l'Ordre de Latran. His rising fortune is also evident in his move in 1697 from the organist's house at St Gervais into a larger apartment in the rue St-François.

The range of Couperin's musical activities during the early part of his career was extensive: in addition to his many duties at the French court, he appears to have been involved in musical events at the exiled Stuart court in Saint Germain-en-Laye (where in 1710 he rented a country home). *Les plaisirs de Saint Germain en Läye* and *La Milordine* from the *Pieces de clavecin* of 1713 point unambiguously to contact with the Stuart court. Couperin may also have been acquainted with the circle of italophiles grouped around Nicolas Mathieu, *curé* of St André-des-Arts in Paris. The church was close to St Gervais, and it may be surmised that the weekly concerts of Italian sacred and instrumental music attracted the young composer in the 1690s. From about 1700 there are several references to his participation in concerts at Versailles, Fontainebleau and Sceaux, and probably he stood in for the younger D'Anglebert, officially *ordinaire de la musique de la chambre du roi pour le clavecin*, with increasing regularity as D'Anglebert's eyesight failed. By now Couperin was also active as a court composer, not only of chamber music, some of which appeared in print much later in the *Concerts royaux* (1722) and *Les goûts-réünis* (1724), but also of sacred music for use in the royal chapel. In 1703, 1704 and 1705 Ballard published three sets of psalm versets composed by order of the king; other *petits motets*, probably written for the most part in the late 1690s, are extant in manuscript copies. During the first decade of the 18th century Couperin was also engaged in writing for the harpsichord. Several of the pieces in his first harpsichord book (1713) were clearly in circulation in manuscript long before that date; a few were even printed anonymously in Ballard's *Pièces choisies pour le clavecin* (1707).

During this period, covering the last 15 or so years of Louis XIV's reign, Couperin established himself as one of the leading French composers of his day, earning the admiration of his contemporaries and finding himself the dedicatee of several of their works. Yet he received none of the eight most important musical offices that fell vacant at court between 1693 and 1715. Perhaps Lalande, who took six, and who was once so disinterested a mentor to Couperin, was now too much his rival. Perhaps Couperin refused to play the courtier; or perhaps he was simply unwilling to take on new responsibilities. However, in 1717 it was finally recognized that D'Anglebert was unable to fulfil his duties as king's harpsichordist, and Couperin was offered the right to inherit the post on D'Anglebert's death, in effect replacing D'Anglebert as *ordinaire de la musique de la chambre du roi pour le clavecin* from that year.

At the height of his career, Couperin was considered second to none as a harpsichord and organ teacher, with the possible exception of Louis Marchand; even before the turn of the century, Du Pradel's *Le livre commode contenant les adresses de la ville de Paris* (1692) had placed him third among Parisian harpsichord and organ teachers (the first two were Lebègue and Thomelin). But these activities were a considerable drain on his time and energies. He blamed the tardy appearance of his first harpsichord book partly on his teaching commitments at court and in Paris. As for his duties as organist, although his royal appointment was only for the first quarter of the year, for the rest of the time he was of course expected back at St Gervais.

It was alongside these commitments that Couperin had to find time to compose his music and to prepare it for the engravers. In 1713 he took out a printing licence for 20 years which, as it turned out, was to cover the publication of his music up to the end of his life. The dissemination of his harpsichord pieces was his first concern, beginning in 1713 with his *Pieces de clavecin … premier livre*, and then proceeding to a treatise on playing the harpsichord, *L'art de toucher le clavecin*, first published in 1716, and followed by a second, substantially revised edition in 1717. His *Second livre de pieces de clavecin* also probably dates from that year. In addition, some important sacred vocal music, *Leçons de tenébres*, came out during this phase of printing. Only the first three lessons are set of a projected nine; the last six were never published, nor have they survived in manuscript.

How far circumstances changed for Couperin after the death of Louis XIV in 1715 is uncertain. It is reasonable to suppose that he preferred the seriousness of the old regime to the relative flippancy of the new, and although he still had duties to perform at court (among his royal pupils in the early 1720s was the Polish princess Marie Leczinska betrothed to Louis XV), it is probable that he was less involved in the musical activities of the regency than he had been in those of the court of Louis XIV. More or less coincident with the regency, within the space of 11 years, Couperin moved house three times before settling in a spacious apartment in the rue Neuve des Bons-Enfants in 1724 (it still exists, on the corner of the rue Radziwill and the rue des Petits Champs). The year before, his health becoming increasingly fragile, he sought help with his duties at St Gervais by arranging for his cousin (6) Nicolas Couperin to be his assistant, and eventually his successor.

Meanwhile the publication of his music continued, a steady stream of prints being issued between the appearance of the third (1722) and fourth (1730) harpsichord books. The *Concerts royaux* (comprising four works) were sold as the second part of the *Troisième livre de piéces de clavecin*; *Les goûts-réünis, ou Nouveaux concerts* came out in 1724 as a sequel to the *Concerts royaux*, taking the numbering already begun in the earlier publication as far as 14, and finishing with a 'grande sonade en trio' entitled *Le Parnasse, ou L'apothéose de Corelli*. In the following year appeared the natural successor to the Corelli sonata: *Concert instrumental sous le titre d'Apothéose composé à la mémoire immortelle de l'incomparable Monsieur de Lully*. We know that the *Concerts royaux* were in use at court during Louis XIV's declining years (Couperin's 1722 preface refers to performances in 1714 and 1715). Several years separate their composition from their eventual appearance in the publications of 1722 and 1724. The *Apothéose de Corelli* sonata may have been composed rather closer to the year

of its publication (1724). However, it is reasonably certain that the *Apothéose de Lully* was written within months of its publication in 1725: in the preface to the Corelli sonata Couperin stated his intentions to compose a work in memory of Lully should his Corelli sonata meet with success.

The publication *Les nations* (1726), described on the title-page as 'Sonades et suites de simphonies en trio', has already been mentioned in connection with the early trio sonatas: three of them, *La pucelle*, *La visionnaire* and *L'astrée*, are incorporated in this publication under the titles *La Françoise*, *L'Espagnole* and *La Piemontoise* respectively. But each forms only the first half, the Italian half as it were, of a diptych, the second half of which is in each case a suite (or *ordre*) in the French style, for which we have no pre-existing manuscripts. A fourth diptych, *L'impériale*, contains a trio sonata which is also missing from earlier manuscripts, and which may be a much later work.

Last to appear before the *Quatriéme livre de piéces de clavecin* of 1730 were Couperin's *Pieces de violes* (1728).

In the preface to his fourth harpsichord book Couperin wrote of his health failing him 'day by day'. In the same year he gave up both of his court appointments, arranging for his talented daughter (7) Marguerite-Antoinette to take over as harpsichordist (she was to inherit D'Anglebert's post in 1736), and for Guillaume Marchand (i) to replace him in the royal chapel. Three years later Couperin died.

Shortly before his death, he took out a new privilege for ten years (that of 1713 being on the point of expiring) to cover the printing of his remaining unpublished work. Unfortunately no-one in Couperin's family, to whom the task fell, showed sufficient interest or acumen to carry through the project. This inaction has almost certainly occasioned the loss of the six *leçons de ténèbres* referred to in the 1713 publication of *Leçons*, probably some other vocal music (Titon du Tillet referred to manuscript motets 'à grand choeur' and cantatas) and quite possibly also some unpublished chamber music. Since the fourth harpsichord book has the appearance of assembling what remained, it is less likely that much keyboard music has been lost.

Biographers of Couperin – those at least who wish to penetrate the composer's personality – have to work from surprisingly little material. None of his correspondence has survived: letters he is supposed to have exchanged with Bach were allegedly used as jampot covers some years later. Contemporary and near-contemporary accounts of him are rare, and he clearly did not cut the same kind of dashing figure in public life as did his colleagues – among them Louis Marchand and Antoine Forqueray. From Couperin's prefaces, and his work, one may gain an impression of a man untainted by national prejudices, careful in his work, capable of forthrightness, and not lacking in self-esteem. His lack of formal education may account for the diffidence with which he approached the task of writing his prefaces. However, he was no fool. A careful reading of his harpsichord music reveals an extraordinarily keen and intelligent observer of his times. The engraving by Flipart after a portrait by André Bouys (fig.2) gives him an air of quiet confidence; his features are solid and composed; in his large eyes one may perhaps catch a trace of that wistfulness and irony which are also found in the restrained expressiveness of his music.

2. François Couperin (ii): engraving by (?Jean-Charles) Flipart after André Bouys, 1735

Nothing in this portrait betrays the illness that Couperin mentioned several times in his prefaces, and which appears to have tried him sorely in his old age.

Of his high standing among his contemporaries there is no doubt. Siret, Dornel and Montéclair dedicated works to him; Robert de Visée, the renowned theorbo player, made transcriptions of some of his harpsichord pieces; Dagincourt paid him tribute in the preface to his *Premier livre de clavecin* (1733); Titon du Tillet (1755) told how Calvière expressed his indebtedness to Couperin's art; and numerous contemporary poetasters reflected the popularity of his harpsichord music in their parody settings. If the currency of the epithet 'le grand' during Couperin's lifetime is uncertain, La Borde's reference (1780) to 'François Couperin, surnommé le grand' has the ring of established usage.

According to Titon du Tillet, Couperin's harpsichord music was well known abroad, in Italy, England and Germany. Gerber claimed that in his playing Bach used many of Couperin's mannerisms; Bach certainly knew Couperin's music, as may be judged from his copy of *Les bergeries* (*ordre* no.6) in Anna Magdalena's notebook and (if authentic) his arrangement for organ of the F major rondeau from *L'impériale* (BWV587). As to his posthumous reputation, both Debussy and Ravel felt a close affinity with his music, which seemed to them to epitomize the spirit of French art: the first contemplated dedicating his *Etudes* to Couperin, and the second paid a more open tribute to Couperin's clarity, poise and refinement in his *Le tombeau de Couperin*. More surprising is the interest shown on the one hand by Brahms, who with Chrysander prepared the first complete edition of Couperin's harpsichord music (1871–88, following partial ones by Laurens in 1841 and Farrenc in 1862–9), and on the other by Richard Strauss, who freely

arranged some of the harpsichord pieces in his Tanzsuite for small orchestra (1923) and returned to the same source for material for his Divertimento (1940–41). The publication of Couperin's collected works in 1932 (by L'Oiseau-Lyre) came late by comparison with the first modern editions of Bach and Handel; but its sumptuous presentation was an appropriate act of homage to one of France's greatest composers. The revised complete edition begun in 1980 by Gilbert and Moroney has brought a more rigorous and scientific method to the editorial task.

2. STYLE. Couperin's art comes from several sources. His early training as an organist equipped him above all with solid contrapuntal skills, and although he was never to equal Bach or Handel as a contrapuntist – such an idea would in any case have been abhorrent to French taste – his competence contributed significantly to the firm linear qualities in much of his writing. He was also heir to the qualities of *douceur* and naturalness that the French considered the hallmarks of their style. Nor could any French composer at that time avoid being influenced by that cynosure of French music, Lully: by the intensely pathetic but discreet vocal writing of his *tragédies en musique*, the imposing orchestral style of his overtures or the beautifully turned dance music of his ballets.

Couperin's enthusiasm for Italian music, in particular the trio sonata, throws these French qualities into relief. Late in his career he made clear his intention to effect a union between French and Italian music. His collection *Les goûts-réünis* and his celebration of the reception of Corelli and Lully on Parnassus in the two *Apothéose* sonatas appear as a bold affirmation of that purpose. But the fertilization of his style by Italian elements dates from the earliest stages of his career, bearing most immediate fruit in his first trio sonatas.

Conservative French opinion was unconvinced that such a union of French and Italian styles could be achieved. Le Cerf de la Viéville took the view that they were 'so different that it is difficult to link and intermingle them without spoiling the two'. But he was unwilling to be sympathetic to the cause of Couperin, whom he considered a 'serviteur passionné de l'Italie'. Despite these censures, Couperin can be said to have achieved a synthesis. But while he adopted the outward forms of the Italian sonata, using for instance sequences to expand and reinforce his musical argument and introducing a more idiomatic instrumental style, he never deserted the basic canons of French art: a natural and flowing melody, a richly expressive but not excessively chromatic harmony (Neapolitan 6ths, for example, are rare in his music) and a basic simplicity in musical design that generally avoided virtuosity, whether in performance or in composition.

The 'paradox of sensuous purity' (Mellers, 1950) in Couperin's music springs from the conjunction of a restrained and simple melodic style with a rich and diversified harmonic vocabulary. The poignancy in Couperin's music derives more often from expressive dissonances, particularly 7ths and 9ths, than 'affective' melodic intervals. Mellers has also emphasized the close connection between Couperin's music and the poetry and painting of his contemporaries. They all fell under the tenets of 'imitative art', seeking to illuminate and deepen experience by reference to nature – natural phenomena and the human condition. For Mellers the close links between Racine, Watteau and Couperin represent a triumph of the civilization to which they belonged.

3. ORGAN MUSIC. Couperin's early maturity as a composer is astonishing and parallels that of Purcell, his great English contemporary. He was only 21 when his *Pieces d'orgue* (1690) were offered to the public; and yet they show every mark of a thoroughly assured compositional technique, and stand with de Grigny's *Premier livre d'orgue* (1699) at the apex of the French classical organ tradition.

The *Pieces d'orgue* consist of two masses: a collection of relatively short pieces designed to be used in alternation with the plainchant of the Ordinary of the Mass (*see* ORGAN MASS). The first, 'à l'usage ordinaire des paroisses', is the more majestically conceived, intended for use on principal feasts in churches when the plainchant setting *Cunctipotens genitor Deus* was sung for the Ordinary. Couperin, following in part the stipulations of the *Caeremoniale parisiense* (1662), set this plainchant as a cantus firmus in the opening versets to each item, the Kyrie, Gloria, Sanctus and Agnus Dei (the last Kyrie verset is also a cantus firmus setting). The Mass 'propre pour les convents', which has no cantus firmus settings, is more intimate in character: its key structure suggests that it was used with one or more of the many *messes en plainchant musical* composed in France towards the end of the 17th century, and popular in religious communities. Nivers was actively involved in the editing of such new liturgical chant books: his setting of the Ordinary for use at feasts of the first class (published in his *Graduale romano-monasticum*, 1658) is an obvious example of the sort of chant that may have been used with Couperin's organ versets, being compatible both in key and in musical effect.

The skills in composition that Couperin acquired during his organist's training covered a wider range of formal possibilities than traditional contrapuntal techniques. In the works of Nivers and Lebègue, particularly, concertante forms such as the 'Récit en taille' and the 'Basse de trompette' had become an established part of the repertory; in Couperin's work they tend to take pride of place by virtue of his gift for characterful melodic lines, sometimes poignantly expressive as in the beautiful 'Récit de Tierce en taille' from the Gloria of the Mass 'des paroisses', sometimes irresistibly ebullient as in the 'Dialogue sur les trompettes' from the preceding Kyrie. At the same time Couperin could sport his contrapuntal skill in the canonic statement of the cantus firmus in the first verset of the 'paroisses' Sanctus. The offertories of both masses are written on a grand scale; Couperin took full advantage of the lengthy liturgical ceremonies at this point. The C major 'Offertoire sur les grands jeux' of the 'paroisses' Mass is an impressive tripartite piece, passing from the pomp of a movement alluding to French overture style to the gravitas of fugue, and then the high spirits of a gigue.

These pieces reveal Couperin's musical range: the *récits* bear testimony to his melodic gift, and the cantus firmus settings and fugues bring to the fore his contrapuntal skills, which he always wore lightly and which were firmly controlled by his melodic instinct. If his harmonic vocabulary was not yet fully developed, it is at times quite audacious.

4. INSTRUMENTAL CHAMBER MUSIC. Couperin's instrumental chamber music falls into two categories: the trios (*à* 3) and the solo pieces (*à* 2). The first category includes all the early trio sonatas (including for convenience the

four-part *La sultane*), the *Apothéose* sonatas and *Les nations*; the second category comprises the *Concerts royaux*, continued in *Les goûts-réünis* as 'nouveaux concerts', and the *Pieces de violes*. Couperin was not usually specific about the instrumentation of his chamber music. He wrote that the *Concerts royaux* might be played on the harpsichord, or on the violin, oboe, flute, viol and bassoon. The trios, according to the preface to the *Apothéose de Lully*, might be played either on two harpsichords or on 'tous autres instrumens'; violins would have been the norm, but flutes and oboes were not excluded.

Brossard, writing in the mid-1690s, observed that 'every composer in Paris, and above all the organists, was madly writing sonatas in the Italian manner'. Couperin was no exception; in the preface to *Les nations* he claimed priority in the field. In the same preface he cited Corelli as his principal source of inspiration. By the early 1690s, the date of Couperin's first essays in sonata writing, three of Corelli's sets of sonatas had appeared in print. Of these, opp.1 and 3 were collections of *sonate da chiesa*, the genre that Couperin chose to follow in his trios, renouncing binary dance forms for a sequence of contrasted movements composed for the most part in unitary structures.

However, the composition of three-part instrumental music was not without its difficulties: Couperin's first efforts reveal a certain strain in handling the idiom. Part of the problem was textural: the common tessitura of the upper two parts was not in keeping with the basic approach of French compositional practice to allow a single *dessus* (upper voice) to predominate, reflecting the 'imitative' purpose of music. Often, in the early trios, the second *dessus* plays a subservient role, rarely rising above the first, and seldom assuming equal importance in the texture. Raguenet complained that in French trios 'the first upper part is generally beautiful enough, but then the second descends too low to deserve our attention'; he might have been thinking of certain movements in *La pucelle* or *La visionnaire*.

The nature of Corelli's trios is also defined by the balanced interplay of musical ideas between the three voices, this interplay deriving much of its force from its motivic consistency; this too was not easily grasped by Couperin. Nor was the central role of tonality in shaping the unitary structures of *sonata da chiesa* movements. Indeed, of all Couperin's trio sonatas, perhaps only *L'impériale* (clearly a work of his maturity) shows a complete understanding of the mechanics of the Italian trio sonata style: its last movement in particular, with its athletic seven-bar theme, its lively interplay of ideas and firm tonal logic, stands with the trios of Bach and Handel as one of the 18th-century works closest to the Corellian ideal.

It would, however, be foolish to judge Couperin's achievements solely by comparison with those of Corelli. He was heir to a musical aesthetic where priorities were different. In treating the trio texture as more in two parts than in three, with the second *dessus* added somewhat in the manner of a *contre-partie*, providing harmonic depth as well as the occasional rhythmic and melodic variety, he worked in an idiom in which melody was paramount. The *air* that stands as the third movement of *La visionnaire* provides a model of such an added part, inserted by Couperin for the publication of this sonata (as *L'Espagnole*) in *Les nations*. More to the point, however, is the type of writing encountered in the second movement (Vivement) of *L'astrée*: it purports to be three-part, but for substantial stretches the second *dessus* consistently shadows the first in 3rds or 6ths, enriching the texture and harmony but not substantially inflecting the melodic character of the piece. This technique appears even more strikingly in the *ordres* of *Les nations*.

There are also other ways in which the early sonatas (*La pucelle*, *La visionnaire*, *L'astrée*, *La Steinquerque*, *La superbe* and *La sultane*) do not slavishly strive to imitate Corelli. For instance, as well as tempering the Italian instrumental style, Couperin included in each sonata at least one typically French *air*. He also avoided being too clearcut in design (as opposed to expression): the final movement of *La visionnaire*, with its rattling harpsichord 'badinage' added for *Les nations*, offers an excellent example of an attempt to suggest clear formal structures while in fact avoiding them: the piece constantly alludes to the chaconne but remains free of a strict ground-bass structure.

The sonatas *La pucelle*, *La visionnaire* and *L'astrée* (respectively *La Françoise*, *L'Espagnole* and *La Piemontoise* in *Les nations*) were seen by Couperin, along with the sonata *L'impériale*, to serve merely as preludes or 'espèces d'introductions' to the ensuing *ordres* specially composed for *Les nations*. If this seems to minimize the importance of the *sonate da chiesa*, particularly that of *L'impériale*, it accurately reflects the greater length of the *ordres*. These, distinctly French and conservative in style, balance out the ultramontane influences at work in the sonatas. The dances themselves are Couperin's most beautifully worked in the old style: discreet and flowing, but with a wealth of expressive detail, and at times a force that belies their surface charm. The chaconnes of the first two *ordres* (*La Françoise* and *L'Espagnole*) are superb examples of Couperin's treatment of the form, grandiose in design but still tender in expression, rich in detail but forceful in their drive.

In the two *Apothéose* sonatas Couperin was perhaps at his most authentic in the trio medium. While in *Les nations*, published just after the *Apothéose* sonatas, he sought to counterbalance the italianisms of his earlier *sonate da chiesa* by accompanying each with a French *ordre*, in the *Apothéose* sonatas the balance is, as it were, achieved internally. The programmatic element, particularly in the *Apothéose de Lully*, is a powerful factor in this synthesis, since in the final stages of Lully's reception on Parnassus he and Corelli play respectively first and second *dessus* in a French overture, and in the four-movement 'Sonade en trio' that follows. This partnership is at the instigation of Apollo, who persuades the two musicians that 'la réunion des Goûts François et Italien doit faire la perfection de la Musique'. The reunion, however, does not exclude a telling juxtaposition of their styles: first in the welcome accorded to Lully by Corelli and the former's gracious acknowledgment, and even more neatly in two duos where, with all the appropriate modifications in the style, first Lully takes the *premier dessus* with Corelli accompanying, and then the roles are reversed. The programmatic nature of this sonata led Couperin to draw heavily on French opera conventions. *L'apothéose de Corelli* relies less heavily on such conventions, being cast, appropriately enough, in the mould of a seven-movement *sonata da chiesa*.

The distinction made above between *à* 3 and *à* 2 textures should not be seen to imply the use of a radically different compositional technique in Couperin's *Concerts* and *Pieces de violes*. Even in the two textures the essentials may often be reduced to a treble and bass; but in renouncing them Couperin found himself speaking with a more pronounced French accent. The 14 *concerts* of the *Concerts royaux* and *Les goûts-réünis* are among Couperin's most naturally conceived instrumental compositions, attempting little that is profound, striving to accommodate civilized tastes at a high artistic level. Some at least were written to entertain an aging and highly conservative Louis XIV in 1714 and 1715. Although they are for the most part written out on two staves, and although Couperin mentioned the possibility of performing them on the harpsichord (the *Concerts royaux* did after all appear in the same publication as the third harpsichord book), there is no doubt from the texture, the right-hand compass, and some specific indications concerning instrumentation (including a reference to the original performers), that they were intended primarily for performance on treble (violin, oboe or flute) and bass (viol or bassoon) instruments with continuo. The *Concerts royaux* are *ordres* of five to seven pieces for such instrumental combinations. The 'nouveaux concerts' of *Les goûts-réünis* continue on the same lines, with substantially more ambitious schemes only for the eighth and ninth *concerts*.

The preface to *Les goûts-réünis* carries what might be considered Couperin's clearest statement on his approach to national styles:

> The Italian and the French styles have for a long time shared the Republic of Music in France. For myself, I have always highly regarded the things which merited esteem, without considering either composer or nation; and the first Italian sonatas which appeared in Paris more than 30 years ago, and which encouraged me to start composing some myself, to my mind wronged neither the works of M de Lully, nor those of my ancestors, who will always be more admirable than imitable. And so, by a right which my neutrality gives me, I remain under the happy influence which has guided me until now.

French and Italian interests are clearly represented in *Les goûts-réünis* but, partly because of the two-part texture, a preference is often shown for busy contrapuntal writing in which bounding quaver figures and regular semiquaver patterns predominate. The allemandes are almost without exception treated in this way. Only in the 11th *concert* is there a typically French version of this dance, measured and aristocratic; in the others the tempo is fast, the mood airy and gay, and the musical gestures, often including developed imitative writing, distinctly Italian.

The eighth *concert*, 'dans le goût théatral', is the most impressive – an undisguised tribute to Lully, beginning with a French overture and 'Grand ritournéle', and continuing with a rich diversity of veritable *airs à danser*. Of this *concert* Holman (1986) has argued persuasively that the published version represents a reduced scoring of a lost fully orchestrated setting (*à* 5), similar in design to the orchestral dance suites of Georg Muffat and Lalande. The immediate juxtaposition of the ninth, 'Ritratto dell'Amore', might lead one to expect a sequence of pieces as Italian as those of the previous *concert* are French. But Couperin did not attempt a consistently Italian style. This *concert*, with its descriptive titles (the only one to have them consistently), recalls the more stylistically balanced world of his late harpsichord *ordres*, and some pieces, *La douceur* and *L'et coetera* in particular, employ a distinctly harpsichord-like texture.

The 1728 *Pieces de violes*, for solo viol and continuo, are among Couperin's last works; indeed they may represent his final compositional activity, even though the fourth harpsichord book was to follow in 1730. Knowing that Couperin's health was failing at this time, we may ascribe to them an elegiac note. Curiously, Couperin referred to himself on the title-page as 'Mr F.C.'. The arguments for this to be read as 'Monsieur François Couperin' are very strong; what is puzzling is Couperin's decision to cloak his identity. That he should turn to the bass viol so late is interesting in itself, and seems to indicate a wish to pay homage to a glorious but waning tradition; 1728 had witnessed the death of Marin Marais, alongside Antoine Forqueray the greatest viol player among Couperin's colleagues at court. The *Pieces de violes* are arranged in two suites, the first a traditional French *ordre*, the second (consisting of only four pieces against the seven of the first suite) a remodelled *sonata da chiesa*. The first suite is retrospective in character, strongly expressive in the accentuated dissonances of the Gavotte, and richly varied in the glorious concluding *Passacaille*. The second suite is more italianate: the *Pompe funèbre* (recalling the 'Pompe funèbre' in Lully's *Alceste*) is unusually lucid in its sense of tonal direction, almost Handelian, but still French in its quiet intensity; and the enigmatic *La chemise-blanche* is a *moto perpetuo* piece carried to audacious lengths and demanding virtuoso playing of a high order. Couperin's writing for the seven-string Baroque viol makes use of its harmonic resource as well as its 'jeu de mélodie'. It constitutes a fitting end to Couperin's composing career and stands with Marais' work as the highest achievement in the French viol school.

5. Sacred vocal music. Couperin's output of sacred vocal music occupies a place between his appointment as *organiste du roi* in 1693 and the death of Louis XIV in 1715. Some of it is explicitly connected with the royal chapel; other works are more difficult to place. The grandiose chapel of Versailles designed by Mansart, which so impresses the modern visitor to the château, was completed only in 1710. Before that Couperin's sacred music performed for the royal household at Versailles would have been heard in a smaller room in the palace, now called the Salle d'Hercule.

Much of Couperin's sacred music is found only in manuscript (except for the early trio sonatas the only important body of his music to be extant other than in printed form). The two principal sources are a collection of 13 motets in score (*F-V* 59) and a score and set of partbooks containing 25 items (*F-Pn*, formerly at St Michael's College, Tenbury). According to Oboussier (1971–2) these two sources, whose contents largely overlap, are in the same hand. The Tenbury partbooks (referred to in the revised *Oeuvres complètes* as the Toulouse-Philidor manuscripts after their original owner and copyist respectively) are believed to have been copied between 1702 and 1706. *Laudate pueri Dominum*, one of the motets in this collection, also appears in another source, copied in 1697 (*F-V* 18). It is in fact likely that most of these pieces were composed in the 1690s, and probably none after 1703, the date of Couperin's first published sacred music.

The predominant influence in these *petits motets* is Italian, Couperin leaning more towards the small-scale

vocal forms used by Carissimi and his French pupil M.-A. Charpentier than to the massive style cultivated by Du Mont and Lully in their *grands motets*. The scoring is mostly for one to three solo voices and continuo, often with concertante instruments (mainly violins). The dozen motets 'à grand choeur' which according to Titon du Tillet were sung in the royal chapel to Louis XIV's great satisfaction, and which are likely to have been more in the French style, have not survived. In his Italian leanings Couperin may have been influenced not only by Abbé Mathieu's circle at St André-des-Arts but also by the activity of the Roman church composer Paolo Lorenzani, who lived in Versailles and Paris between 1678 and 1694. Couperin's understanding of Italian idioms can be seen to have matured since the early trio sonatas. He is now more assured in his treatment of sequences, in moving from one tonal centre to another, in the handling of instrumental ritornellos and in enriching his harmonic vocabulary with such chords as diminished 7ths as well as other extremes of chromatic harmony (see for instance the section 'O mors coeca' from *O Jesu amantissime*). In the light of this and other stylistic traits (for example his florid and regular ground bass for a section of *Quid retribuam*, his vocal virtuosity at the opening of *Victoria: Christo resurgenti*, his entirely instrumental treatment of the voice in *Regina coeli laetare*), Le Cerf's description of him as 'un serviteur passionné de l'Italie' does not seem all that wide of the mark. The motet *Regina coeli laetare* might almost have been written as an exercise in eliminating everything French; certainly its central recitative is without parallel in Couperin's music, completely instrumental in conception, its concluding phrase somersaulting from *g″* to *d′* in less than a bar. That, however, is an extreme case. Much of Couperin's vocal writing remains discreet and syllabic, the phrases generally short, and much of the instrumental writing nicely balanced between vocal and instrumental idioms. The opening 'simphonie' of *Laudate pueri Dominum* is a good example of instrumental writing controlled by the vocal line of the solo soprano entry.

The published church music consists of three sets of versets that appeared in successive years, 1703, 1704 and 1705, and the *Leçons de tenébres*. If some of the manuscript motets were written for use at court, the courtly function of the versets is indisputable; they were written 'by order of the king', so the title-page proclaims, and were doubtless performed in his presence. The printed score also gives the names of the soloists who took part in the first performances in the royal chapel. Three of the *Quatre versets* (1703) are scored for two soprano soloists – one of them specifically Couperin's cousin (5) Marguerite-Louise Couperin – with flutes, violins and two-part soprano chorus. They begin unusually enough with a duet for the soloists 'sans Basse Continüe ny aucun instrument'. The verset *Adolescentulus sum* is no less remarkable in sonority, being for soprano solo and flutes, with *dessus de violons* playing the continuo line. The consistently high tessitura and the limpid interweaving phrases of the flutes and voice create an unforgettably ethereal effect.

In contrast, the solos in the *Sept versets* of the next year are almost exclusively for men's voices (including *haute-contre*) with tenor and baritone chorus, transverse flutes, oboes and violins; only the last two versets include a soprano solo. The verset *Ostende nobis* must be mentioned for its chains of parallel 6ths, including a long sequence of 6-4 chords, a harmonic gesture that Couperin often made to invoke gentle pathos but nowhere else on this scale. The French idioms are stronger in several of the versets in this collection, tempering the Italianisms. The *Sept versets* of 1705 strike a balance in the disposition of forces. At the same time they are much more wrought: the 'symphonies' include a fiery French-overture movement, and in the bass verset *Dux itineris* a 'symphonie à deux choeurs' provides sharp contrasts in instrumental colour. Contrasts are also sought in the solo soprano verset *Operuit montes*, with the accompaniment divided between rapid violin scales and gently caressing phrases for two flutes.

The three *Leçons de tenébres* are arguably Couperin's finest vocal works, indeed among his finest in any medium. They appeared in print between the publication of the first and second harpsichord books (1713–17). The first two *leçons* are for soprano solo (and continuo), the third for two soprano soloists. The text, from the *Lamentations of Jeremiah*, was traditionally sung at Matins on Maundy Thursday. Other sections of the *Lamentations* were sung at Matins on Good Friday and Holy Saturday, making a total of nine 'lessons'. The heading 'pour le Mercredy' at the beginning of the published *leçons* refers to the practice, widespread at the time, of advancing the office of Matins on each of these days to the previous afternoon. It is puzzling that Couperin did not publish all nine *leçons*, since in the preface to his extant set he made a clear reference to the imminent appearance of the others; indeed, he disclosed that three *leçons* for Good Friday had been composed some years previously. The preface to his second harpsichord book, which mentions the recent publication of the Wednesday set, also refers to the composition of nine *leçons*. The lost Good Friday set was composed for the nuns of the abbey of Longchamp, just outside Paris, which enjoyed a fashionable reputation for its Holy Week Offices, not least because the leading singers of the day were invited to perform at the services. Le Cerf disapproved of this practice on the grounds that celebrities from the Opéra could not be relied on to maintain the decorum appropriate to such occasions; Couperin, in scoring his extant *leçons* for soprano soloists and continuo, clearly did not share Le Cerf's misgivings.

The emphasis on solo declamation in Couperin's settings, however, transcends whatever superficial attraction this may have held for the fashionable, and carries the music to the heart of Jeremiah's anguish. The exterior brilliance and sensuous charm of the versets are left far behind. In this intensely personal world Couperin had recourse to the declamatory recitative and arioso of the *tragédie en musique*. But he conformed to convention in adopting the traditional plainchant formula as the basis for the opening phrase 'Incipit Lamentatio Jeremiae'. This, and the no less traditional melismas on the initial Hebrew letters that punctuate the text (only the first melisma of each *leçon* is based on plainchant), are set to easily flowing but highly decorative lines which, juxtaposed with the settings of the main text, sound almost abstract. The contrast is intended: the two-soprano vocalise of the letter 'Jod' at the beginning of the third *leçon*, with its interweaving lines, crushed 2nds and regular crotchet tread in the bass, evokes the relatively impersonal idiom of Corelli's sonatas precisely in order to act as a foil to the overt expressiveness of the ensuing recitative.

The main sections of the *leçons* are set either in a measured but freely declamatory style, which Couperin indicates as 'récitatif', or in more tightly organized *airs*. The latter form the emotional core of each *leçon*. The most rigorously organized is 'Recordata est' of the second *leçon*, a ground bass in B minor – Couperin's most passionate key – in which rising diatonic movement is balanced against a descending chromatic tetrachord. The technique of approaching the dominant alternately from one direction and then the other is common enough in Couperin's chaconnes; but nowhere else did he treat the form in so disciplined a manner, and it is that discipline that makes the movement, with its intense sequences of 7ths and 9ths, cunning examples of cadence evasion, and finely judged melodic line, so emotionally charged. Within its slender resources this piece achieves a truly Purcellian power. Of the other arioso movements, 'Plorans ploravit' (first *leçon*) is in an *ABACC* form, while 'O vos omnes' (third *leçon*) has no distinct returns. In the latter the impassioned cry 'attendite et videte' for the two sopranos seems to owe something to Monteverdi in its emphasis on simple vocal declamation and sonority, and in the heightening of drama through transposed repetition. The 'Jerusalem convertere' sections that conclude each *leçon* are also set to superbly expressive music. The final two-part setting has an inexorable drive perhaps unique in Couperin's music.

The language of this music is not only rich in dissonances but also in chromatic harmony. In spite of the highly charged atmosphere this creates, the *Leçons de tenébres* remain an exquisitely civilized expression of the grief and bitter anguish of the prophet.

6. Secular vocal music. The extant secular vocal music is found mainly in the popular *Recueils d'airs sérieux et à boire* published by Ballard between 1697 and 1712. It includes eight *airs sérieux*, among them *La pastorelle* and *Les pellerines*, which appeared in 1713 as harpsichord pieces, and a two-part *air à boire*. While these *petits riens* occupy a humble place in Couperin's canon, they reveal much about the sources of his melodic style. Overtly more popular, less recherché than the 17th-century *air de cour*, they are nevertheless closely related to that tradition in their discreetly flowing vocal lines and simple phrase structure. Moreover, *La pastorelle* and *Les pellerines* emphasize just how far the melodic style of Couperin's instrumental music was derived from the vocal. The intimacy of this relationship is also revealed in the number of parody settings of his popular harpsichord pieces, a practice to which Couperin alluded – not without some satisfaction – in the preface to his third harpsichord book.

In addition to the printed music, three three-voice catches, two of them in canon, are extant in manuscript. They reveal a scatological side to Couperin's work. A plainly humorous side is brought to life in a five-part canon, *Les agroteurs au désespoir*, copied in 1720 by La Serre; it is a plangent lament on a crash at the Paris bourse. Tessier (1926) located a reference to an otherwise unknown cantata, *Ariane abandonée*, in an Amsterdam catalogue of 1716. Titon du Tillet referred to cantatas among the works of Couperin left in manuscript at his death; they have not subsequently come to light. An 18th-century attribution to Couperin of the *intermèdes* from *Myrtil et Melicerte*, published anonymously by Ballard in 1698 (see Coeyman, 1987), may substantially increase his secular vocal output, but the attribution is difficult to corroborate on stylistic grounds.

7. Harpsichord music. Couperin's four harpsichord books (some 220 pieces, excluding the separate movements to some of the titles and the eight preludes in *L'art de toucher le clavecin*) represent his crowning achievement. Part of their stature must be attributed to a particularly happy union between the composer's personality and the harpsichord as a musical medium. It was a medium he understood and loved deeply; and it was natural for him to grace his worldly progress with music for the instrument which had, so to speak, made his fortune. When Couperin published his first book of harpsichord pieces in 1713, most of the important harpsichord collections of the French classical school had already appeared. The first decade of the 18th century in particular, when Couperin was assembling material for his own publication, witnessed a striking proliferation of harpsichord books, those of Louis Marchand, Clérambault, J.-F. Dandrieu, Gaspard Le Roux, Rameau and Elisabeth Jacquet de La Guerre appearing within five years (1702–7).

These collections consolidated the external characteristics of the French keyboard suite: a sequence of seldom more than ten dances arranged in a fairly predictable order in the same key. It is thus surprising that Couperin's first collection, the *Pieces de clavecin* of 1713, reverted to the motley nature of D'Anglebert's 1689 publication: so much so that Couperin seems to have felt constrained to adopt a new term, *ordre*, to designate the groupings of pieces within the book. The first *ordre* contains no fewer than 18 items, the second a record 23, the third 13, the fourth 4, and the fifth 14. In his second book (*ordres* 6 to 12) the average number of pieces in an *ordre* falls from 15 to eight. It is abundantly clear that in his first book Couperin was simply ridding himself of a backlog of harpsichord music. This impression is reinforced by the increased sensitivity he showed in his second book and thereafter towards maintaining a certain homogeneity of mood throughout each *ordre*. In the remaining two books the average number of pieces in an *ordre* drops to six.

The second book shows a decisive move away from the traditional sequence of dance movements. Even in the first collection the sequence is distorted by the inclusion of many 'optional' dances. In the second book only the eighth *ordre* retains the Allemande-Courante-Sarabande grouping in any recognizable form. This rupture with tradition is reflected in the increasing emphasis on character-pieces. It is not that a significant number of the 1713 *Pieces de clavecin* lack descriptive titles, but rather that, from the second book onwards, Couperin abandoned many of the stereotyped gestures of dance pieces in an attempt to diversify and enrich the character of his music.

Couperin wrote about the use of descriptive titles in the preface to his 1713 collection:

> In composing these pieces, I have always had an object in view, furnished by various occasions. Thus the titles reflect my ideas; I may be forgiven for not explaining them all. However, since among these titles there are some which seem to flatter me, it would be as well to point out that the pieces which bear them are a kind of portrait which, under my fingers, have on occasion been found fair enough likenesses, and that the majority of these flattering titles are given to the amiable originals which I wished to represent rather than to the copies which I took from them.

This was a natural enough habit of mind in a tradition which saw the role of music as that of arousing specific feelings and thoughts in the hearts and minds of listeners. Nor, of course, was Couperin an innovator in this respect. Where he did contribute in a new way was in the force and intensity of his musical characterizations, and in the manner in which his pieces were freed from dance prototypes.

When Charles Batteux (*Les beaux-arts réduits à un même principe*, 1746) discussed the theory of imitation as it related to music, he distinguished between imitations of sounds which were 'animés' and those which were 'non-passionnés'; the distinction is between qualities attributable to people and those attributable to natural phenomena, or events. An examination of Couperin's use of descriptive titles and their relation to his harpsichord music may usefully employ this distinction. Foremost in the category of 'sons animés' come the musical portraits of Couperin's friends, pupils, patrons and royal masters. There are a number of readily identifiable sitters: Gabriel Garnier, Couperin's colleague at the royal chapel (*La Garnier, ordre* no.2); Antoine Forqueray, the great viol player (*La superbe, ou La Forqueray*, no.17); Mlle de Charolais, one of the daughters of the Duke of Bourbon and pupil of Couperin (*La Charoloise*, no.2); the Polish princess Maria Leczinska, another pupil of Couperin and fiancée of Louis XV (*La Princesse Marie*, no.20). There is even what may be a self-portrait, *La Couperin* (no.21). These, and many other portraits, make their point by reflecting the personal qualities of their subjects in appropriate musical gestures. *La Garnier*, in its apposition of dark-hued textures and expressive *ports de voix*, combining solemnity with tenderness, conjures up a personality at once noble and sensitive. Forqueray, self-assured and brilliant, is epitomized in a proud Allemande movement, a firmly treading bass against an alert, driving treble. And turning to *La Couperin*, one may read into its spacious sequences, its firm linear quality and strong tonal architecture a high seriousness and dedication to music.

Other portraits not immediately connected with the musical world seem more obscure in origin. However, Clark (1980) uncovered a number of plausible identities which demonstrate how closely Couperin attached his work to the artistic and social milieu of his day. For example, *La fine Madelon* and *La douce Janneton* (*ordre* no.20) may refer to the celebrated actress Jeanne de Beauval, who was generally known as Jeanneton and would be known also for her playing of Madelon in Molière's *Les précieuses ridicules*. Both pieces mirror feminine lightness and grace in their high tessitura and triple metre; the first is delicate, the second – portraying Beauval herself and marked 'plus voluptueusement' – distinctly more sensuous in its melodic line and texture. Contrasting personalities provide an obvious opportunity for neat musical antitheses: *Les vieux seigneurs* and *Les jeunes seigneurs* (no.24) counterpose halting gravity and nimble high spirits, the first a 'sarabande grave', the second a leaping and agile movement in two-part writing. But there may be a sharper edge to Couperin's wit to be found in these pieces. *Les nonètes: Les blondes – Les brunes* (no.1) may be intended in its burlesque sense: nuns were not all disdainful of a young man's advances. Satire is more obvious in *Les fastes de la grande et anciénne Mxnxstrxndxsx* [*Ménestrandise*] from *ordre* no.11 where the company of Ménétriers is mercilessly portrayed as a disreputable rabble of street entertainers finally routed by their own bears and monkeys. (This guild of musicians had previously attempted, unsuccessfully, to place the king's organists, including Couperin, under the jurisdiction.) *Les folies françoises* (no.13) reveals a more refined satirical art, but still barbed. The work comes at the end of an *ordre* which Clark interprets as Couperin's commentary on the moral state of the Regency; these are *les folies françoises* rather than *les folies d'Espagne*. Each piece in this set of variations is a character study, brilliant in its precision and conciseness, delineating Virginity, Modesty, Ardour, Hope, Fidelity, Perseverance, Languor, Coquetry and so on. The characters in this masked ball 'work their way to their inevitable doom' (Clark, 1980), the *ordre* ending with *L'âme-en peine* ('The soul in torment'), a piece which, with its enriched B minor harmony and drooping phrases, evokes intense melancholy.

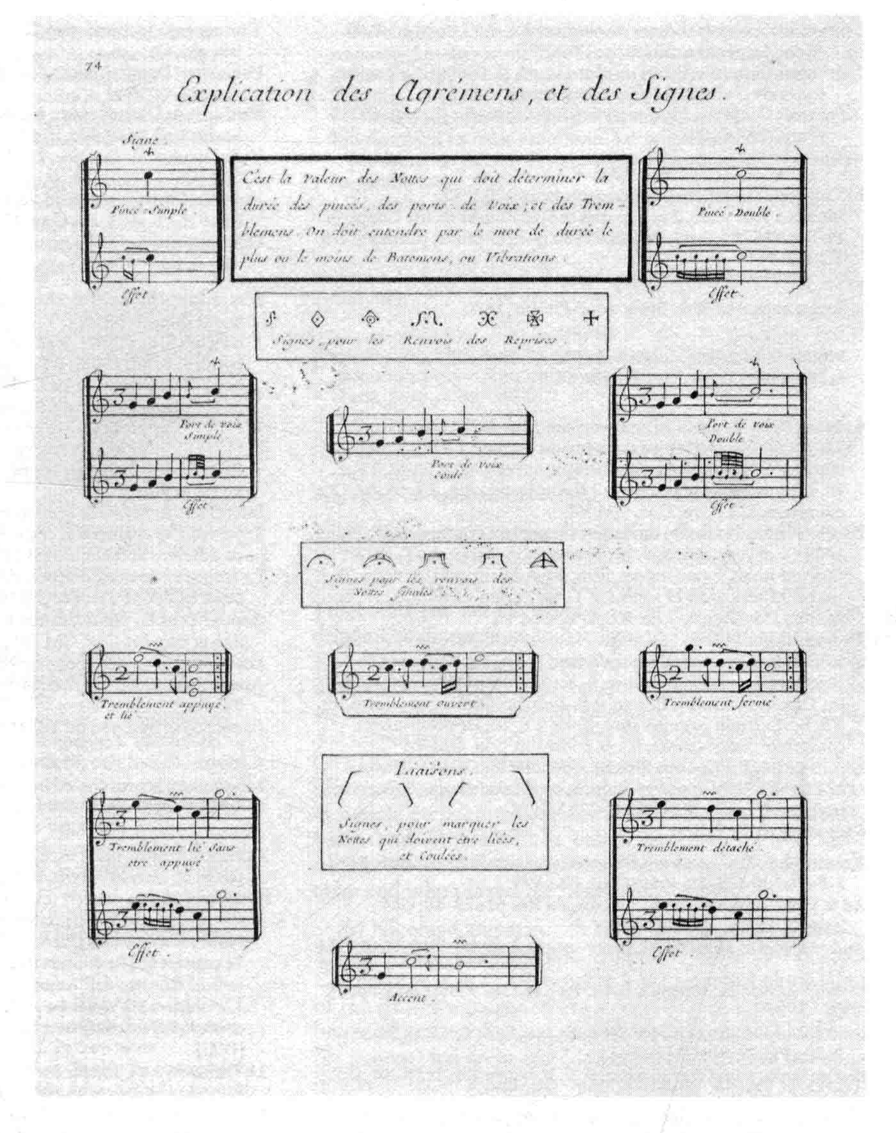
The second category of descriptive pieces, those which imitate 'les sons non-passionnés' (natural phenomena, events and ideas rather than humanity), ranges from the bluntly naive description of *Les petits moulins à vent* (*ordre* no.17), with its whirling semiquaver scales, to *L'amphibie* (no.24), whose title seems to play on the notion of the transformations inherent in its loose ground bass structure. But things are not always what they seem. *Moulins à vent* may refer to chatterboxes, *Les papillons* (no.2) to a fashionable ladies' hairstyle (rather than butterflies), and *Le rossignol-en-amour* (no.14), along with the other birds in this *ordre*, may have more to do with anthropology than with ornithology. On the other hand, pieces such as *Le réveil-matin* (no.4) and *Le moucheron* (no.6) are no doubt what they appear to be: a musical portrayal of a couple of life's irritations. If with *Les baricades mistérieuses* (no.6) we seem to enter the world of metaphor (or perhaps of masks), Couperin had on another occasion the directness of mind to call a favourite piece – indeed the one he held for his portrait by André Boüys – quite simply *Les idées heureuses* (no.2).

A greater understanding of the topicality of these titles, and of the burlesque or satirical tone that lies behind some of them, sharpens the music's effect on our senses. These pieces are not all benign and charming portraits, agreeably presenting the sitters. From them Couperin emerges as a keener critic of his age than at first sight he would appear. The tone of irony and satire creates an altogether more complex picture of his musical language, and in these portraits we may glimpse much that is missing from conventional sources about Couperin's milieu (Clark, 1992).

Structurally, Couperin's harpsichord pieces divide into three main types: the binary movement, the rondeau and the chaconne. (He never felt confident enough of the abilities of his public to leave any unmeasured preludes, a semi-improvisatory genre which went back to the beginning of the French harpsichord tradition.) His use of binary form in his harpsichord music is interesting in several respects, some of them typifying the distinctions between French compositional techniques and those of German and Italian early 18th-century composers. First sections are often markedly shorter than second (*La Florentine* and *Les papillons*, *ordre* no.2); and initial (or final) bars of sections may be unrelated motivically. Indeed, rather than underline structure through motivic

references, Couperin often favoured a flexible development of musical ideas (articulated at the double bar) in which motifs acquire definition only as the piece progresses. Occasionally this leads to a second section that introduces new material, sometimes making no further motivic reference to the first half of the piece (e.g. *La ténébreuse*, no.3). This technical procedure finds a resonance in Charles Batteux's dictum (1746) that 'expressive gestures should always be new ... a second impression is practically useless, leaving our soul inactive and indifferent'.

The rondeau form, along with the chaconne, permitted the composition of pieces of greater length and diversity than was possible with simple binary structures. The rondeau was evidently a form that Couperin found congenial; many of his most striking and popular pieces such as *Les baricades mistérieuses* and *Les bergeries* (no.6) conform to it. The rondeau section itself is normally a regular four- or eight-bar theme, the episodes (*couplets*) being distinctly freer, sometimes contrasted in other senses too, but also sometimes texturally and motivically undifferentiated. The episodes in *Soeur Monique* (no.18) strike a nice balance between unity and contrast, the later episodes gaining increasing independence. (At the same time the portrait takes on a richer hue as the voluptuousness of the episodes threatens to overwhelm the rondeau theme and reveal Monique for what she is.) This process is also at work in *La tendre Fanchon* and *Les ondes* (no.5).



Two of the three pieces that carry the title 'chaconne' or 'passacaille' are in fact in rondeau form, a treatment often met in earlier French harpsichord chaconnes (for example in those of Chambonnières and Louis Couperin). They are the superbly intense B minor *Passacaille* of *ordre* no.8 and the chaconne *La favorite* (no.3). While the episodes of the *Passacaille* are strongly and individually characterized, those of *La favorite* hark back in allusive fashion to the descending tetrachord bass of the opening bars. The art of allusion achieves its greatest expression in *L'amphibie* 'mouvement de passacaille' (no.24). Various sorts of bass are heard with strong ground bass associations, the sections being of various lengths and highly differentiated: the object appears to be to convey the sense of a chaconne rather than its outward and visible form, the spirit rather than the letter. Behind this suggestive art and chameleon structure lies a piece of immense poise and strength. Only in one piece, *Les folies françoises* (no.13), does Couperin adopt the format of a series of pieces 'en variation' (the allusion to modish sets of variations on *La folia* is clear); these variations take the harmonic scheme of the opening piece rather than its melodic contour.

The textures Couperin used in his harpsichord pieces are no less important than the formal structures. Pride of place goes to the *style luthé*. Some of his best pieces are built exclusively on this 'broken style': *Les idées heureuses* (no.2), *Les charmes* (no.9), *La Mézangére* (no.10) and of course *Les baricades mistérieuses* (no.6). It is also the predominant stylistic feature of many of his allemande-type movements. The technique is finally sublimated in such pieces as *La convalescente* (no.26). This texture played an important role in the formation of Bach's mature keyboard style; Couperin came closest to Bach in his keyboard writing when he supported the *luthé* style with firm contrapuntal lines. Simple two-part textures constituted no less critical a part of Couperin's technical vocabulary. He recognized that they were less idiomatic but believed them adaptable to the harpsichord provided 'le dessus, et la basse travaillent toujours' (*L'art de toucher*). The high motivic consistency in most of his two-part pieces springs from Italian roots. Several good examples of this style of writing are to be found in the second book, in particular *La Bersan* and *La commére* (no.6), and *La coribante* and *L'Atalante* (no.12); it was generally associated with brilliant and fast pieces. But the significance of Couperin's two-part technique extends beyond the examples cited, since a firm grasp of the contrapuntal relationship between treble and bass parts underpins his whole style. The solo line against accompaniment, as used in such pieces as *Les bergeries* (no.6), represents a third important type of texture. In some examples, like *Le moucheron* (no.6), the lower part gains independent status through its strong linear character in spite of a musically predominant right hand. Couperin's use of texture shows his keen awareness of the particular sonorities of the harpsichords produced by French workshops of this period: his second book is remarkable for the number of pieces (see *ordre* no.7) using only the lower half of the keyboard, which was specially full and sonorous on French instruments.

Couperin's use of keyboard ornaments shows another important aspect of his handling of the harpsichord (fig.3). He took infinite pains over the notation of his ornaments (expecting the performer to respect his signs to the letter); and in 1733 he was credited by Dagincourt (in the preface to his harpsichord book of that year) with the standardization of a system that had by that time gained general currency in France.

In its wealth of ideas, range of expression, and relationship to the culture from which it sprang, Couperin's harpsichord music stands unequalled in 18th-century France. At the same time it is an intensely personal testimony, revealing not only the most telling aspects of his art but also, and intimately, his relationship with French society. The harpsichord music is a sort of social commentary, rich in humour, wit, irony, satire, charm, compassion and disdain. In this music Couperin observed his age as few composers have done or since.

8. THEORETICAL WORKS. Couperin spent much of his time teaching the harpsichord (perhaps too much, if one is to judge from the delays in the publication of his music). But it is precisely the immersion in the daily routine of teaching that makes his *L'art de toucher le clavecin* (1716, rev. 2/1717) so valuable a document. Unlike Saint Lambert in *Les principes du clavecin* (1702), the only previous French keyboard tutor of any pretension, Couperin did not set out to cover the subject methodically from beginning to end. Rather his treatise is a series of reflections on certain aspects of teaching, and on certain aspects of performing the pieces from his first two harpsichord books. The layout of his remarks is somewhat haphazard but, broadly speaking, they begin with comments on the initial stages in a pupil's training; a central section touches on fingering, ornamentation and other questions related to performance; and finally, suggested fingerings are given for difficult passages in the first and second harpsichord books. Eight preludes are included as teaching material. Couperin seems to have been diffident about his literary skills. However, this admirable directness makes his observations on harpsichord touch

3. Part of the table of ornaments from François Couperin's 'Pieces de clavecin ... premier livre' (Paris: Ballard, 1713)

and demeanour at the keyboard essential reading for anyone who plays the instrument. His comments on fingering reveal him faithful to the old system of crossing the third finger over the second or fourth in scale passages, but enthusiastic about certain innovations that had come into use in his day – principally the change of finger on the repeated note of a prepared *port de voix*, and the use of legato fingering for double 3rds. The most widely quoted passages of *L'art de toucher* have been those on the use of ornaments, *notes inégales* and general stylistic conventions in performance. These are valuable remarks, but general laws should not too readily be adduced. Too much is left unsaid. No less valuable as insights into Couperin's world are his comments on the harpsichord as a medium, its capabilities, and the music which best suits it. He even took the trouble to compose a two-voice Allemande to illustrate the manner in which that idiom could best be adapted to the harpsichord. The eight preludes are designed not only as teaching material but also as introductory preludes to the *ordres* of the first and second harpsichord books; Couperin did not conceal his lack of faith in the ability of harpsichordists to improvise such pieces. In order that the improvisatory flavour of his notated preludes be retained, he instructed the performer to be rhythmically flexible, at least where the piece was not marked 'mesuré'. The general impression gained from this tutor is of Couperin's love for the harpsichord, his enthusiasm for its precision, neatness, brilliance and range, his wish to make it as expressive as other instruments (for example through introducing the *aspiration* and *suspension*), and his earnestness in attempting to convey to others a sensitivity about its use. The care he took over the printing of his harpsichord music reflects the same dedicated spirit.

A short manuscript *Règle pour l'accompagnement* is Couperin's only other extant theoretical work: it is a concise exposition of the rules of figured bass and of the treatment of chromatic dissonances. Its principal interest lies in the richness of the harmonic vocabulary demonstrated, a richness Couperin fully exploited in his music.

THEORETICAL WORKS

L'art de toucher le clavecin (Paris, 1716, 2/1717/*R*); ed. M. Halford with Eng. trans. (New York, 1974), GM [I]

Règle pour l'accompagnement (MS, *F-Pn*), C i, GM [I]

(5) Marguerite-Louise Couperin (*b* Paris, 1675–6 or 1678–9; *d* Versailles, 30 May 1728). Singer and harpsichordist, daughter of (2) François Couperin (i). Titon du Tillet and the act of decease agree on the year of her death, but disagree as to her age, the former giving it as 52, the latter as 49; her date of birth is otherwise undocumented. On her reception as *ordinaire de la musique de la chambre*, in February 1702, she sang *Qui dat nivem* from *Quatre versets* by (4) François Couperin (ii). There are more reports of her singing music by her illustrious cousin and by Bernier at Mass, and of concerts in which she was accompanied by Couperin, Forqueray, Visée and others. Titon called her 'one of the most celebrated musicians of our time, who sang with admirable taste and who played the harpsichord perfectly'.

(6) Nicolas Couperin (*b* Paris, 20 Dec 1680; *d* Paris, 25 July 1748). Organist and composer, son of (2) François Couperin (i). On 22 November 1722 he asked permission of the churchwardens of St Gervais to rent a room in the house adjoining the church which (4) François Couperin (ii) had yielded up in 1697 (except for one room to use as a pied-à-terre when he was working at St Gervais). Probably Nicolas had already begun taking over the function of organist, and indeed on 12 December 1723 he was granted the reversion of François' charge at the latter's request. Taskin said that his talents had been noted by the Count of Toulouse (son of Louis XIV and Mme de Montespan), who engaged him as chamber musician; this may well have been his first post. No doubt he had also begun teaching: in 1728 he was owed 975 livres for lessons to three people, including the daughter of the Prince of Guise. In his marriage contract of 25 June 1723 he is identified simply as 'maistre de musique'. His bride, Marie-Françoise Dufort de La Coste, brought a substantial income, but lived to enjoy it only until 12 July 1728. The inventory after her death shows that they had an astonishing collection of instruments: two double and two single harpsichords and four spinets, as well as the accoutrements of a comfortable, middle-class existence. Rent-free occupancy was restored in 1725, and during the period 1732–4 the block of buildings was replaced by the substantial one now standing. On 12 December 1733 Nicolas formally succeeded François at St Gervais, and he must have carried on the family tradition with honour, for he was the first to be buried under the organ. No details of his musical activities during his last 20 years are

known, however, and only one work has been attributed to him, a four-voice motet, *Ad fontes amoris venite fideles*, signed 'C' and dated 1735, which Brunold (1932) found among manuscripts apparently from St Gervais.

(7) **Marguerite-Antoinette Couperin** (*b* Paris, 19 Sept 1705; *d* Paris, *c*1778). Harpsichordist, daughter of (4) François Couperin (ii). On the evidence of the few surviving documents, she shared both her father's talent as a harpsichordist and his precarious health. She was active at court from at least 1729. In 1717 her father had been granted the reversion of the post of *ordinaire de la musique de la chambre du roi pour le clavecin*, because its holder (J.-B.-H. D'Anglebert) was no longer well enough to execute the duties attached to it; on 16 February 1730 the reversion passed to Marguerite-Antoinette for the same reason. In 1736, D'Anglebert and Couperin having died, the post was theoretically suppressed, but was in fact transformed into a 'commission' exercised by Marguerite-Antoinette, who on 25 November 1741 sold the reversion for 6000 livres to Bernard de Bury, again for health reasons. As Titon du Tillet pointed out, she was the first woman to hold this position, and she was also harpsichord mistress to the king's daughters. Her date of death has been deduced from records of Bury's life (Bouvet, 1919, pp.121ff). She never married, and there are no works.

Her sister Marie-Madeleine [Cécile] (*b* Paris, bap. 11 March 1690; *d* Maubuisson, 16 April 1742) was a nun and possibly organist at the royal abbey of Maubuisson; her name was incorrectly given by Taskin, Titon du Tillet and others as Marie-Anne, which has led to the mistaken inclusion of the real Marie-Anne among the musicians of the family.

(8) **Armand-Louis Couperin** (*b* Paris, 25 Feb 1727; *d* Paris, 2 Feb 1789). Composer, organist and harpsichordist, son of (6) Nicolas Couperin. Nothing is known of his education, but it may safely be taken that his father and perhaps other relatives provided for the musical side, and he may have received his schooling as a choirboy at St Gervais. His library, which amounted to 885 books at the time of his death, was unusual for a professional musician, and speaks for a lively intellectual curiosity. As his mother died when he was only 17 months old, he was brought up by his father and a maidservant. When he was 21 his father died intestate; as sole heir of both parents, he inherited his father's position at St Gervais and the apartment that went with it. Shortly afterwards (7 February 1752), his marriage to Elisabeth-Antoinette Blanchet, daughter of the best harpsichord maker in France and a first-class professional musician, brought some 40,000 livres.

There were four children, three of whom lived to maturity and became musicians: (9) Pierre-Louis, (10) Gervais-François and Antoinette-Victoire (*c*1760–1812), a singer at concerts and churches, and an organist, who was playing at St Gervais by the time she was 16. With their parents, they formed a kind of family corporation which, together with pupils, was able to assure the functions in the many posts that Armand-Louis accumulated: in addition to St Gervais there were St Barthélemy (to 1772), St Jean-en-Grève, the convent of the Carmes-Billettes (now a Protestant *temple* in the rue des Archives), a trimester at Notre Dame (from 1755), the Ste Chapelle (from 1760), Ste Marguerite, and a semester in the royal chapel (from 1770). Further, he and his wife gave harpsichord lessons and she was organist and teacher at the abbey of Montmartre. Throughout his life, Couperin must have moved within an area tightly circumscribed, both geographically and culturally. No journeys are known, no activities other than those of an organist and harpsichord teacher, no appearances at the Concert Spirituel. He refused to write for the theatre and he was not moved to publish his church music. When he was mentioned by his contemporaries (e.g. Burney), it was nearly always in connection with his improvisations on the *Te Deum*, which by all accounts were masterful and established his reputation as one of the two best organists of his time.

He was killed in a traffic accident while hurrying from Vespers at the Ste Chapelle to St Gervais, where his son Pierre-Louis had already begun the service. He seems to have been a thoroughly pleasant individual, a beloved husband and father, and singularly free from the contentious, grasping attitudes so often reflected in the notarial acts concerning French musicians of the period. Indeed, he may well have been the victim of too much ease, for his music lacks the muscle and discipline that struggle might have imparted to it. Instead, it drifts along in the wake of the innovations of mid-century, ten or 15 years behind the leaders. Still, however tardy, there is a lively style-consciousness and an experimental impulse that sometimes result in amusing exercises like *Les quatre nations* from the harpsichord pieces of 1751. There is also a strong urge to explore the possibilities of instruments, of which one result is the very gay *Simphonie de clavecins*, the only work in existence that demands two harpsichords with *genouillères* (knee-levers), of the kind that Taskin, Blanchet's successor, was installing in harpsichords in the 1770s and 80s. Two manuals, the new *registre de buffles*, and copious use of the diminuendo lever are required.

WORKS

Editions: *Armand-Louis Couperin: Selected Works for Keyboard*, ed. D. Fuller, RRMCE, i–ii (1975)

Elévation ou Mottet au St Sacrement, 3vv, 1787
Le printemps, La jeunesse et la vieillesse, cantatilles, cited in privilege for L'amour médecin, ?lost
2 motets, ? chorus, orch, cited in 1779 inventory of Concert Spirituel, ?lost
? Domine in templo sancto suo, motet, doubtful authenticity

(9) **Pierre-Louis Couperin** (*b* Paris, 14 March 1755; *d* Paris, 10 Oct 1789). Composer and organist, son of (8) Armand-Louis Couperin. The principal account of his life is Taskin's, in which the details not yet disproved are as follows. He was trained in the organ and composition by his parents. While still young, he had various compositions performed that showed great promise, but poor health

and an early death cut off the flowering of his talent. Nevertheless, several of his motets were sung in different churches. He became organist of the royal chapel, Notre Dame, St Gervais, St Jean-en-Grève, and the Carmes-Billettes. He died of the effects of the shock of his father's death – Taskin had him collapsing at the console of St Gervais on hearing the news and dying 'quelque temps après'. 'Quelque temps' stretched to over eight months, during which he exercised his functions at court and elsewhere (for example at the anniversary feast at St Gervais, 21 June 1789); but the story that he died of grief is corroborated by other sources. On 19 April 1773, shortly after his 18th birthday, he was accepted by the wardens of St Gervais as his father's reversioner at the latter's request, and by 1787 he had the reversion at the royal chapel. He never married. He was buried, along with his father and grandfather, under the organ at St Gervais, but his rest was brief; in 1794 all three were summoned up by the Revolution, which needed the lead of their coffins for bullets. A *romance*, *Dans cet asile solitaire*, reminded Bouvet (1932) of 'the charming production of Dalayrac'; the few other surviving pieces left the impression of a 'mediocre composer'.

Air with acc., announced for Journal de harpe, xi (1782), unpubd, doubtful authenticity

(10) Gervais-François [François-Gervais] **Couperin** (*b* Paris, 22 May 1759; *d* Paris, 11 March 1826). Composer and organist, son of (8) Armand-Louis Couperin. Of his life before the deaths of his father and brother, Taskin said only that he was instructed by his parents and that at the age of 18 he had a 'symphonie à grand orchestre' performed (possibly the *Première simphonie*). He must have taken over the posts left vacant on his brother's death; already on 15 November 1789, he played 'tout l'office' for the Fête de la Providence at St Gervais, and in 1790 the title-page of his *Complainte béarnoise* called him 'organiste du Roi en sa Ste Chapelle de Paris, de St Gervais, de St Jean, de Ste Marguerite, et des Carmes Billettes'. He also took over his father's trimester at Notre Dame. Perhaps in anticipation of disaster, or because St Gervais was under pressure to divest itself of its dependencies, Couperin and his mother moved into a tiny *entresol* in the Palais de Justice, to which his position at the Ste Chapelle gave him the right, about 1791. On the first day of the Republic, 22 September 1792, Couperin married his pupil, Hélène-Narcisse Frey, a fine singer, and that year his mother moved to Versailles, where she became organist of the church of St Louis and lived to her 87th year in full possession of her brilliant musical talent. Couperin himself moved again, to the Marais.

In 1793, for the reopening of the opera, he and Séjan played patriotic *airs* on two small organs in boxes on either side of the stage. This continued for four months, after which the instruments were removed, ostensibly to provide more revenue space (Séjan said the administration was jealous of the 'accueil distingué' that the organists received; see Bouvet, 1932). In one of the most bizarre scenes of the Republican aberration (6 November 1799), Couperin found himself playing dinner music on the greatest organ in Paris, at St Sulpice, while Napoleon and a nervous Directory, which was to be overthrown three days later by its guest of honour, consumed an immense banquet in the nave below, watched over by a statue of Victory (herself about to be overthrown), whose temple the church had become.

When the churches reopened, Couperin took up his duties in those that had not been destroyed. St Jean-en-Grève, demolished in 1800, was joined administratively to St François, and Couperin followed. From about 1810 he may have shared the functions at St Merri with the ancient *titulaire*, Joseph Pouteau (1739–1823). Couperin greeted the Restoration with the same impartial loyalty that he had shown towards the various powers during the interregnum; his 14th opus was *Louis XVIII, ou Le retour du bonheur en France*, and an autograph letter survives in which he begged the wardens of St François (not St Louis) to accept a funeral wreath he had made himself, to be used at the commemoration of the deaths of Louis XVI and Marie Antoinette. He had managed to survive, but the inventory taken on his death suggests that his circumstances were by then modest (the only instruments were two pianos).

Opinion was divided as to his stature. The public flocked to hear the thunder in his *Te Deum* performances, but J.F. Reichardt (cited by Bouvet, 1932, pp.133–4), who heard a mass on St Cecilia's Day 1802, called him 'miserable ... An organist of that ilk has no business calling himself a Couperin ... During the benediction and the distribution of the Host – six immense brioches – Couperin played motifs chosen in defiance of common sense'. Fétis called him 'médiocre', while A.-P.-F. Boëly, by far the best organ composer of the time and a friend of Couperin's, poked fun at 'ce petit coquin de Couperin qui passe de C sol ut en G ré sol sans préparation' (Bouvet, 1919). In fact, Gervais-François may well be the most interesting composer of the family after (1) Louis and (4) François Couperin (ii). Certainly his range was broader than his father's, and at least two writers, Bouvet (1919) and Favre (*La musique française de piano avant 1830*, Paris, 1953/*R*), found something to admire in his *romances* and piano pieces, some of which exist in varying versions and sketches.

His daughter Céleste-Thérèse (*b* Paris, 1792/3; *d* Belleville, 14 Feb 1860) was the family's last musician. She was trained by her father and by Henry Joseph Taskin, filled in for four months at St Gervais after the former's death and continued in another appointment, St Jean-St François, until 1830, when she was forced to leave after parishioners complained about the quality of the organ playing. Mother and daughter retired to Beauvais, where Céleste-Thérèse gave piano and singing lessons until 1843, when they moved to Belleville in Paris. In 1847 the mother offered two family portraits for sale to the state: the two women were 'tout à fait ruinées'; the daughter 'n'a plus un élève'; 'the Couperin family is the only one in France that can count two centuries of fame; shall my daughter, its last scion, have no other consolation than what is in my heart – I, a poor old woman of 73, who may soon leave her?'. They received 500 francs.

WORKS

Coupillet, Nicolas. *See* GOUPILLET, NICOLAS.

Coupler (Fr. *accouplement, tirasse*; Ger. *Koppel, Koppelung*). The mechanism in an organ or harpsichord whereby pipes or strings of one department or manual are made to sound an octave lower or higher, or on the keys of another manual. The most common system until the early 19th century was the *Schiebekoppel* or shove coupler: one set of keys was pushed in or pulled out to enable some kind of wooden protuberance along the key-shafts (dogs, lugs, small vertical battens, etc.) to connect in one way or another with a second set of keys and so cause them to be depressed likewise. Usually a coupler could not be engaged while playing since both hands were required to move the keyboard by grasping blocks at each end and since (even if the motion to engage the coupler is controlled by a pedal or knee lever, as in some late 18th-century French harpsichords) the coupler dog on a key being played would, if one attempted to move it into the coupling position, block against the side of the point of contact of the key of the second manual. During the early 19th century other more easily manipulated mechanisms came into common use: (*a*) the function of the protuberances attached to the keys was taken over by sets of stickers or other pieces held by a movable batten that was connected to a stop knob or pedal, or (*b*) connections were made between the internal elements of one division's action with those of a second division (thus in most cases not moving the actual keys of the coupled division). Octave couplers, requiring a set of diagonal backfalls to connect a key or its action with the key or action an octave lower or higher, appeared in Italy by the 18th century, where they were called *terzo mano* ('third hand'). They became relatively common throughout Europe during the 19th century.

In organs, couplers were probably known in the 15th century. At the Oude Kerk, Delft, in 1458, it was specified that the Chair organ might be joined to the Great organ when the organist desired. Henri Arnaut de Zwolle (*c*1440) described a coupler based on lugs that could be brought into play. Pedal-to-manual couplers were probably also made at the same period, but as in the case of other accessories like Tremulants, builders' contracts did not always specify couplers. From the 16th century onwards, especially in organs without separate pedal pipes or with only one or two ranks of low-pitch pipes, pedals were often permanently coupled to manuals, usually to the main keyboard (Great organ). This was accomplished by linking the pedals to the manual keys or action via a pull-down system (Ger. *angehängtes Pedal*) or by providing the manual wind-chest with a second set of pallets controlled by the pedal keys (Ger. *Ventilkoppel, Windkoppel*). The latter system is found in the organ by Jörg Ebert in the Hofkirche, Innsbruck (1555–61) and in most of Gottfried Silbermann's smaller instruments. A further system known as the transmission or communication system also apparently existed by the 16th century; this was a more complex arrangement of doubled pallets, grooves and sliders which allowed individual stops to be coupled from one division to another, often from manual to pedal but also from manual to manual. Before 1820 the permanent coupling of manuals to pedals, via pull-downs, was quite widespread in English organs, but manual couplers were less common. Swell to Great and Octave couplers emerged during the 1820s and 30s, and a *sforzando* coupler pedal was provided by H.C. Lincoln at St Olave's, Southwark, in 1844. Sub- and super-octave couplers featured in organs displayed in London at the Great Exhibition of 1851 and the rise of pneumatic and electric actions allowed the development of various new coupler mechanisms, including those that enable a rank of pipes to be played at various different pitches in the so-called EXTENSION ORGAN. In organ music, coupled manuals are often implied by the terms *organo pleno, grand jeu* or *grand choeur*.

In string keyboard instruments, the earliest known couplers are in late 16th-century Flemish 'mother-and-child' virginals ('double virginals'), in which the smaller instrument at octave pitch can be placed on top of the larger one at unison pitch, in such a way that the latter's jacks act as coupler dogs to move the small instrument's keys. The earliest known couplers in harpsichords are shove couplers in French two-manual instruments made in the mid-17th century. The shove coupler remained a standard feature in French harpsichords and was also made in Germany. The DOGLEG JACK served as a coupler in some German instruments and seems to have been the only sort of coupler made by English and Dutch harpsichord builders. A remarkable oddity is the octave coupler in a single-manual harpsichord by Giuseppe Maria Goccini (1725; now in the Tagliavini Collection, Bologna), in which the keys from G to *f*♯ are coupled to the lower octave, while the keys from *c*♯′ to *c*″ are coupled to the upper octave.

PETER WILLIAMS/JOHN KOSTER, CHRISTOPHER KENT

Couplet (Fr.). A term used in the late 17th century and the 18th, by François Couperin and his contemporaries, for the intermediate sections of a rondeau, as distinct from the recurrences of the opening section or refrain (which was sometimes called 'grand couplet'). *See* RONDO, §2.
